Kitty's Laundry List

By JESSIE DOUGLAS

(© by McClure Newspaper Syndicate.)

"Never," said Kitty sternly to herself, "never shall I have anything more to do with a man!"

The train came along at this minute and she sprang up the high steps and found an empty seat in the day coach. She sat for a few minutes watching the snowy landscape swim past her and thinking with mortification and anger of the week-end she had just spent.

Helen Saunders had invited her purposely so that she could meet Will Farnsworth. She had heard the virtues of Will, his unexcelled qualities drummed into her ears, until she had almost begun to hate him. But Helen—the inveterate matchmaker—now that she was married, had somehow made her curious about him.

And at the last moment he had telegraphed that he couldn't come! Which might have been forgiven except for the fact that when they were out snow-shoeing Helen had seen a sleigh flash past and had cried, "I do believe that's Will! Of all the—"

He had never come near them and Kitty knew it was on her account. He was an old friend of the Saunders, which left no reason for doubt why he had been so careful to avoid them over this week-end.

"And yet I'm not so horrid. I don't see why he needs to be afraid," Kitty thought, taking out her vanity case and peering into the mirrored face with searching eyes.

Brown eyes. Brown hair that showed chestnut tendrils, a nose that was saucy and a mouth that may have been too wide for beauty, but was bewitching when it showed the dimples at its corners.

Kitty pulled up her veil, opened her bag and drew out a book. A love story, of course,

She lost herself in its pages, lost herself so deeply that she scarcely noticed when the train stopped, was barely conscious when the conductor came down the aisle, and she reluctantly opened with one hand her purse, while continuing to hold the book with the other. She held out her ticket and went on with her story.

Pretty soon it was taken from her and she cuddled back into her corner, until at Chapter VII, she found her eyes were filling with tears—she couldn't go on any more now.

She lifted her head then and saw that someone was sitting in the seat beside her. A man, of course. Kitty turned her face to the window, swallowing her tears as best she could, and hoping the stranger would not notice. If only things would happen the way they did in novels!

"I think this is yours," the stranger said at last.

Kitty turned quickly to look at him. He had nice gray eyes, slightly hollowed cheeks and an engaging smile that showed white, fine teeth.

"Why, yes," Kitty said, looking down at her laundry list in the young man's hand. "It must have slipped out of my purse."

The young man said quite gravely: "You held it toward me such a long time that I thought I ought to take it—"

"I don't understand!" Kitty said haughtily.

Then she felt quickly in her bag and found that her ticket was still there.

The young man was smiling frankly. "Perhaps you thought it was your ticket. You see, I had my pass, so the conductor thought you were my—"

"How perfectly awful!" Kitty ejaculated.

"Yes, I know it would be awful, but you can fix it up with the conductor by giving him your ticket at the next station and freeing his mind forever from any doubts."

Kitty folded her laundry list into a tiny oblong and put it carefully away. The young man watched the delightful contour of the cheek turned from him and saw it flush into rose.

"I say," he said suddenly, dropping that tone of amusement. "I know I haven't any right to say it, but I could see you were in trouble. Is there anything I could do to help you? I know this isn't any way to introduce myself." He felt around in his pocket and drew out a card that bore the name:

"William J. Farnsworth,
General Passenger Agent."

Kitty looked at it for a moment. Then the demon of mischief leaped to her brown eyes.

"You mean you say I was—crying?" she asked.

He nodded sympathetically. "I couldn't help seeing. I hope you won't think I'm the sort that picks up girls everywhere. Why, I run away from 'em! But I'd feel grateful if you would let me be of service."

"It's nice of you," Kitty answered, "but the only thing you could do would be to tell me that the heroine lives happily ever after—" she patted the red-covered book.

"Crying over a story!" he ejaculated. "But that's easy enough." He turned to the last page and began to read the final paragraph in a voice that vibrated pleasantly above the rattle of the train.

"'She held out her hand to him with a little glad cry of surprise. Hugh's eyes met hers with a long look of understanding. "You forgive me, Sonia?" He read the answer in her clear blue eyes, and as he gathered her close into his arms she knew it was for this she had been waiting.'"

"Thank you," Kitty said softly.

Her face burned. Somehow the words that might have been sentimental or meaningless had, with his reading, sprung into life. She stole a look at her gray-eyed companion and thought with regret what good friends they might have been. Never that now.

"I get off the next stop," she said primly.

"I wish you'd tell me your name. I'd do anything—get people to introduce us properly, if it took weeks, if you only would!" he begged.

Kitty looked at him for a moment: Revenge is said to be sweet. But Kitty Tenant felt its taste bitter in her mouth as she answered. "I think we will say good-by here."

The young man struggled for a moment with something he wanted to say, and then laughing light sprang into his eyes again.

"So I'm never to see you again?" he asked mockingly.

Kitty nodded.

"Good-by, then," he said, standing with his hat off and watching her disappear down the aisle.

Kitty could not resist looking back at him from the platform; he was watching eagerly, and she smiled—for the last time.

In the week that followed she found she could not drive him out of her mind. His gray eyes, his engaging smile and his deep masculine voice came back to her again and again when she thought she had forgotten him.

"It would be so easy to meet him," Kitty thought, "and never shall I do it. He didn't choose to meet me in the first place—" She stood washing out her best silk stockings in her wash bowl and wishing that Mrs. Wiggins gave a little more heat to her boarders.

"And I forgot my laundry!" Kitty said.

She hurried into her things, drew out the folded laundry list that brought back swift pictures of a ride in the train and ran around to the Dupont laundry. Opening the door, her heart seemed to stop and then give a wild leap that sent the blood rushing to her cheeks. For there before the counter was Will Farnsworth!

"'She held out her hand to him with a little cry of surprise. Hugh's eyes met hers with a long look of understanding!'" he quoted. "Do you know I've spent two hours and twenty minutes waiting for you in this laundry?" he asked, and then at the question in her eyes. "You see, I had your laundry list. The rest was easy."

As he carried her bundle home, walking beside her, Kitty knew what good friends they were going to be.

BIG SAVING OF FARM LABOR

Hitching Third Horse to Two-Horse Walking Plow Enables Man to Plow Much More Land.

By hitching a third horse to a two horse walking plow a man can plow at least a quarter acre more land each day, say specialists of the United States Department of Agriculture. This makes a difference of about 5 acres in 20 days, or a saving of from two to three day's work—a big item during a busy season, especially a short spring.

And we'll show you some real "neck to neck" finishes when you visit the big

MINNESOTA STATE FAIR

September 3 to 10

DIFFERENT WAYS FOR GIRL TO MAKE MONEY

Poultry, Dairy or Garden Are Good Suggestions.

Parents Should Encourage Young Woman to Establish Herself as Semi-Independent Member of the Farm Family.

(Prepared by the United States Department of Agriculture.)

When a city girl feels the need of money—her own money, to pay for the things girls imagine they must have these days—she goes to work in an office, a store, or a factory, according to her education and opportunity. In the country a girl, with much the same longings for nice things and "good times," looks to the poultry yard, the milk house, or the garden for her spending money. If her parents are the right kind, if they are intelligent enough to help her and encourage her in her work, she will soon establish herself as a semi-independent member of the family. If, as often happens, the parents are not disposed to have such goings-on, and there is no home-demonstration agent, no girls' club, no extension work of any kind in the community, the country girl goes to the city and the farming regions have lost one more potential home and family,

Preparing Vegetables for City Market.

No doubt exists in the minds of men and women of large experience in the extension work carried on by the United States Department of Agriculture in co-operation with state agricultural colleges that the economic appeal is the entering influence needed in getting their clubs or bureaus started in rural regions. Once the young people have learned a way to earn money the desire for the things it will buy asserts itself, and home betterments and improved living conditions follow naturally.

Down in Arkansas a girls' canning club started a contest to determine which of the members could produce the most tomatoes at the least expense, and with the lowest percentage of waste. Annet Sargo, on the Mount Valley route, near Hot Springs, grew 3,140 pounds of tomatoes on one-tenth of an acre, at a cost of $31.40 and net returns of $100. With the same expense her sister, Fannie, grew 3,020 pounds and had a net return of $107.89. Ada Rosamond grew 2,803 pounds, costing $27.42, with a net return of $76.06, and Ruby Waddell, at Bonnerville, had 3,070 pounds, costing $20.91, with net returns of $68.

ST. GEORGE AND THE DRAGON

Why the Patron Saint of England Fought With and Slew the Monster.

St. George's day—April 23—is observed in commemoration of the patron saint of England, who, according to ancient legends, was a prince of Cappadocia, says London Answers. Some writers differ and have doubts concerning St. George, the record having it that he was a native of Cecilia, and was born in a fuller's shop.

However, St. George has long been regarded as the protector and patron of the English, and is commonly represented on horseback, in full armor, with a formidable dragon writhing at his feet.

The drawing, which has become so familiar to us on our coins, and more recently on our pound notes, is founded on the tradition that Aja, the daughter of an ancient monarch, was once met by a dragon, which attacked her and threatened to devour her.

At this fearful moment St. George passed by, slew the dragon and rescued the lady,

The legend has probably come to us from the East, and belongs to the age of the Crusades, when St. George is said to have been honored with the name "Victorious." The ancient Christian emperors bore emblems of this knight upon their standards, and attributed a miraculous power to these sacred banners.

St. George was supposed to have influenced the English warriors at the siege of Antioch and it was at that battle that "St. George" became the English war-cry.

RAISING FOWLS ON INSECTS

Good Plan for Farmers in Grasshopper Infested Regions to Use Turkeys and Guineas.

Turkeys and guinea fowl are voracious insect eaters. Would it not be a good plan for farmers in the grasshopper infested areas of the West to buy, rent or import al the birds of these breeds they possibly can, instead of poisoning the bugs?

THE GOODRIDGE BANNER

VOLUME XV, No. 34. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, AUGUST 26, 1921. $1.50 PER YEAR

Safety for Game

Rocksbury and Smiley townships were declared Game Refuges today following a public hearing held in the court house by Carlos Avery, game and fish warden for the state of Minnesota, no objection appearing while fifty residents and property owers of the two townships had affixed their names to a petition which had been filed with the state commission.

Accordingly these two twnships will be immune from hunters permanently from now on and all kinds of game birds, game and other animals of a similrr nature cannot be killed either by the owners of the land or by an outsider. However, vermin and other animals and birds such as crows and hawks may be killed by the people living on the farms in these protected areas.

A hunter passing through these refu must have his gun taken down or carried in a case, otherwise he is amenable to the laws and can readily be prosecuted on complaint to the game wardens. The farmers have been bothered to such an extent that they desired this action. Many of them stand ready to give all possible assistance to the game warden in the enforcement of Ceapter 400 of the General Statutes of the 1919 session.

Wm. Munch of Crookston, game warden for this session, will shortly meet with the farmers and interested sportsmen and proper signs will be placed around the two townships and also at various places throughout them, thus giving ample notice to all who might be inclined to violate the law.

THE PRICE OF COAL

Soft coal, a year ago this month was selling at Pittsburgh and West Virginia mines at from $10 to $12 a ton is now priced at about $2.50. The higher freight rates have taken effect since then to prevent a corresponding reduction in retail prices. Prices are still high enough to keep the consumers' strike going. The public is reminded that the strike invites a winter coal famine. To no small extent, however, the strike means a resort to other sources of heat. Farmers are planning to clean up their woodlots and old orchards with a view to winter fuel. The big corn crop now assured to Nebraska will furnish no mean quantity of corn cob fuel.—Lincoln Journal.

Better Stock Train Schedules Planned

A committee of shippers, farmers, stockyards and packinghouse representatives and railroad officials has been at work on changes in train schedules for marketing of Minnesota livestock. Heavy losses are suffered by farmers because shipments are not properly distributed on the South St. Paul market, the committee has found. On some days the market is glutted, causing congestion and depressing prices, members said. The committee met yesterday at the state capitol and began planning changes in train schedules, so that an equal supply of stock will arrive on the market every day. The farm bureau and the Central Cooperative Commission association are represented on the committee.

Home Corn Best for Seed

Only by selecting good seed corn at the right time and taking good care of it after it has been selected can the best results in growing be obtained. Farmers long ago found it was not advisable to depend on seedsmen for corn planting stock. In northern Minnesota only corn that matures there is suitable for seed.

The central zone has a somewhat longer season and can grow larger corn than the north and, in an emergency, can use seed from outside states. Southern Minnesota can grow corn almost as large as corn raised in Iowa and Nebrska.

However, it has been the experience of farmers in all three zones of the state that home grown and adapted varieties of seed corn give far better results than can be obtained from imported seed. The movements for seed selection in corn producing districts should become general by Seed Corn Time, Sept. 5 to 15, as recommended by staff men of the division of agricultural extension and station at Ueiversity Farm.

To Look After Soldiers

The traveling board of the U. S. public health service and department of war risk insurance will hold a meeting in Thief River Falls in the near future.

Minnesota State Fair

The most stupendous program ever put on any fair in the world will be presented to the Northwest by the Minnesota State fair, September 3 to 10.

The entertainment features include attractions never seen in this part of the country before. Thriller of thrillers will be the passage of Lieut. Louis James, 19 years old, from a speeding automobile to a low flying aeroplane each afternoon. This is an act never attempted until this spring, and a score of men have lost their lives trying it.

The automobile, with Lieut. James clinging to the back of it, will come racing down the track at sixty miles an hour. A low flying aeroplane will come up from behind. From its landing gears will hang a rope ladder. As the ladder passes over the auto, Lient. James will grab it and swing himself off into the air. Among other things, he hangs by his teeth from a ladder attached to a plane.

The big head-on railroad collision between two engines will be staged one day only, Saturday, Sept. 3. A straight track has been laid inside of the mile track. One engine will be started from one end, the other will be started from the opposite end. Engineers and firemen will jump, after throttles have been thrown wide open, and the two engines will rush to destrustion in the center, in exact line with the middle of the grandstand.

Two stages of vaudeville, auto polo, pony polo, auto races, a dozen bands, a midway of two dozen shows, a gigantic fireworks spectacle, and scores of lesser attractions will entertain the record-breaking crowds expected.

A fare and a half on all railroads will be given fair visitors from September 2 to 10 inclusive; return limit, Sept. 12.

Bill to Halt Gambling in Grain

The Capper-Tincher bill to halt gambling in grain and cotton futures was finally enacted Tuesday. The senate adopted the conference report on the measure soon after the house had taken similar action.

The bill now goes to the president for his signature.

School to Open Tuesday, Sept. 6

Vacation days will soon be over and the school bell will again be ringing. Everything will be in readiness for school to open on Tuesday morning, Sept. 6. A capable teaching staff has been secured for the coming year and and everything points toward a banner school year. A fourth year of high school work will be added to the previous course of study to accommodate students who have already completed the three years of high school work.

The following is a tentative high school course of study scheduled for the ensuing year.

First Year.

Typewriting.

Ford's Dust

When Henry Ford asked the Ohio public utilities commission to reduce to reduce freight rates 20 per cent on his recently acquired Ohio railroad, he made himself about as popplar as a snake with the other railroad executives of the country.

They were smart enough to foresee that the public would ask the very pertinent question: "If Henry Ford can do it why can't you do it?"

That question is now rolling up from all sections of the country, particularly from the farmers, who, as a class, have been hardest hit by the extortionate rates.

That the farmers are not going to confine themselves to asking questions is indicated by the action of the national board of farm organizations. This body, which represents 2,000,000 farmers, has started a drive on Washington to compel all the railroads to follow Ford's example.—Rural Weekly.

IMPROVED CRATE IS URGENT NEED

Manufacturers Should Make a More Rigid Inspection of Materals Put Into Boxes.

NAILING IS BIGGEST FACTOR

Consideration Should Be Given to Methods of Construction Which Will Lessen Possibility of Loss in Shipping.

(Prepared by the United States Department of Agriculture.)

Important factors affecting the successful use of crates in marketing fruits and vegetables were carefully studied by a specialist of the bureau of markets, United States Department of Agriculture, during a recent trip. The first of these is the need of manufacturers making a more rigid inspection of materials used.

While most manufacturers make an effort to have their stock inspected and to use only good material, in some cases this attempt is frustrated by the failure of the workman to understand and appreciate the ideal which is guiding his employer. Many crate-mill employees seem to cherish the old idea that because the crate is a gift package it should be made as cheaply as possible, using any sort of material so long as there is a chance of its holding together, thus reducing the cost to the grower and shipper.

The Grower's Responsibility.

The crate manufacturer having done his part in providing materials free from defects, the grower or shipper should see to it that the crate is not spoiled in being made up in his packing house or field.

Growers and shippers should remember that the nailing together of the crate is one of the biggest factors in determining whether the container is to be strong and substantial or weak and productive of damage claims. Cement-coated nails, not less than four-penny in size, should always be used, and care should be taken to see that they are properly spaced and placed.

Greater care is perhaps necessary in making up crates for express shipments than for car-lot freight shipments, due to the more frequent handling they must undergo. For either method of shipping consideration should be given to methods of construction which will lessen the possibility of loss. An instance of this is the use of the "web" or cleated side for celery crates. The slats are stapled to the cleats in the factory, making but one piece to each side to handle in the field instead of three. It also insures even spacing of the slats and gives an extra thickness for holding the nails, thus counteracting any tendency of the slats to split and come away from the nails.

Showing Results of Poorly Crated Lettuce.

Some celery growers are experimenting with a patent crate which is re-enforced with wire around the ends and the body of the crate. In actual use the end wires were twisted together to close the package, it being found impracticable, owing to the height of the celery, to twist the center wires together. There is no doubt of the strength of this type of crate.

Need of Co-operation.

Whatever the type of crate used, it is the duty of the manufacturer to supply good material, accurately cut and properly put together. This much the purchaser of crates should demand and should expect to pay for. Having secured it, he should do his part by seeing that the crates are made up in a workmanlike manner, and, after packing, that they are properly closed and fastened for shipment. By such co-operation manufacturers and growers can feel better assured that the crate will measure up to the ideal of a fruit and vegetable package; that it shall carry the commodity intact from the grower through the wholesale market to the retailer.

Bessie Changes Her Mind

By WESLEY J. HUNTER

(©, 1921, Western Newspaper Union.)

Bessie Thurston had two lovers, and therefore two rivals, practically enemies. It had come about through a rude disturbing influence in a clear field for Rodney Thorne. He had fondly considered Bessie his own until Willis Gould appeared upon the scene.

Gould was "a jackanapes," according to Rodney's prejudiced ideas. He was the scion of a wealthy family, and never worked a day in his life, and was shortly to go abroad as secretary of a consulate. This gave Gould "high diplomatic ideas," and the apparent right to wear a semi-military coat with two gilt buttons on the neckband, which some of his girl admirers designated as "too cute for anything!"

"It's got to come to an end," said Rodney definitely one balmy evening. "And now's my chance to end it," he added, as he reached the Thurston home to find Bessie alone in the garden.

He ridiculed and censured Bessie's indulgence for "the spoiled society pet," as he denominated Gould.

"I think we had better meet later, when you are more rational," suggested Bessie.

"No, you shall hear me now," declared Rodney.

Rodney's brow darkened.

"I must have my answer—yes or no?" he persevered.

"Later in the evening."

At that moment Gould came sauntering up the walk.

"No—now!"

"Then—no!"

Rejected! Rodney was positively rude as he brushed by the newcomers.

After that he evaded Bessie, and her friends as well. One evening he made a wide detour to evade Gould and Bessie, who were idly drifting in a frail rowboat and, Rodney fancied, looking serene and happy.

It was a rapid, torturing flight. Rodney finally seated himself on the banks of the river three miles down the stream.

Perhaps an hour went by when a cry caused him to look up. Suddenly he saw a boat skim through the channel separating two islands and bear down directly to the spot where he was.

He saw Bessie's shapely hands clinging to either side of the craft. A wayward streak in an eddy whirled the boat around. It tipped, and with a gurgling shriek Bessie disappeared beneath the waters 40 feet distant, but near to the edge of the island.

The fierce, strong current bandied Rodney about as he made a direct plunge. It was a wild, desperate fight with the battling waves. How he made it he never knew, but he caught at a limp body swayed along by the undertow, dragged Bessie ashore and sat down beside her, breathless, exhausted.

At length Bessie stirred. There was a faint moan, she sat up, shuddered and met his gaze.

"You!" she voiced in hollow accents—and his clinging garments told her intuitively how she had been saved.

"Miss Thurston," he said quietly, "we must lose no time. Your mother and your friends—you will not have to stay here for long."

"Come back!" It was a wild, pleading shriek, a call of anguish, of love, as she saw him plunge into the flood, as life and death fought a desperate battle within her sight. But he reached the shore, though nearly stunned and his head bruised and bleeding at contact with a rock, and staggered away out of sight.

She sat moaning, her head buried in her hands, as a slow hour went by. Then a shout from the shore from the midst of friends—a weighted rope cast across the chasm. A strong boatman clasped her and carried her thus to the mainland. Bessie in one swift glance swept the group. Rodney was not there.

"My dear Bessie—" for the first time began Gould, hastening to her side. She turned to him, her eyes blazing contempt.

"I despise you!" she cried out. "Oh, if anything has happened to him I shall hate you!"

When they reached home they pointed to the library room, where Rodney lay upon a couch, his head bandaged, pale, weak, but not seriously injured. She knelt at his side, with no thought of her bedraggled attire.

"Last week," she choked out, and burst into a sob—"I didn't know my own mind, but, oh! tonight—"

"Never mind the yesterdays," he said, with a smile of ineffable peace. "Forget everything except the golden tomorrow!"

Swat Flies on Ceilings.

Flies that take refuge on the ceiling, at night or in cool weather, may be captured without difficulty. The handle is sawed from an old broom, and a tin lid is attached to the end by driving a large tack through it into the stick. The tack should be driven firmly to make the lid rest solidly and prevent leakage. The lid is partly filled with kerosene, and is held for a few seconds against the ceiling, directly under a fly. The insect will be stupefied by the fumes of the oil and will drop into the lid.

South American Possibilities.

It is claimed for South America that it has greater undeveloped resources than any other continent. Its soil can produce any crop grown on the earth, and its mines of gold and silver and coal have been scarcely touched.

Human Nature's Daily Needs.

I am indebted to the Guardian for this story, which comes via the Morning Post: "A certain bishop," says our contemporary, "whose diocese need not be named, was lately presented with a magnificent cope, the result of much labor and money of admiring friends. His lordship naturally expressed his great delight and appreciation of the gift. He is reported, however, to have remarked to a friend (needless to say, not one of those who were responsible for the gift—and very much sub rosa): 'I should ever so much rather have had a dozen new shirts!'"—Scottish Chronicle.

A Compromise.

"How did Bob Hunter come out of his dilemma in regard to those two girls?"

"He decided to love the poor one and marry the rich one."

Cast Iron Research Association.

It is announced that the British Cast Iron Research association has been formed. Its object is to conduct scientific and experimental work in connection with the cast iron trade. The directors, 28 in number, include Lord Weir, Sir George Goodwin Goodwin, Sir George McKechnie and Douglas Vickers. The capital is not fixed, but every member must contribute a sum not exceeding £5, if necessary.

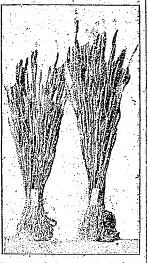
GRAIN OF SUPERIOR QUALITY IN DEMAND

Frequent Use of Cleaning Equipment Is Profitable.

Financial Loss Caused by Presence of Impurities, Foreign Matter or High Moisture Content—Elevator Not at Fault.

(Prepared by the United States Department of Agriculture.)

While equipment for cleaning and conditioning grain is expensive, country elevators will find that its use frequently improves the quality of the grain and increases its market value, say specialists of the bureau of markets, United States Department of Agriculture. Sometimes grain comes to the elevator in poor condition, often being dirty, dusty, or with high moisture content, and unless the quality is improved by cleaning or drying the grain cannot be disposed of advantageously.



An Illustration of the Improvement Which May Result From Treating Seed With Formaldehyde as Smut Often Stunts the Plants.

Moreover, grain containing impurities, foreign matter, or a high moisture content is quite likely to become hot in transit, which greatly reduces its value and frequently results in serious financial loss. If the elevator is not provided with suitable equipment for this process, such grain must be shipped in the condition in which it is received.

The farmer should not place all responsibility for cleaning grain on the elevator, it is believed. It should be remembered that elevator managers do not pay grain prices for the dirt and water found in a farmer's grain. The price should be established by taking into consideration the necessary expense of placing the grain in marketable condition. The farmer who delivers clean, dry, sound grain should receive a premium over the price paid to the more careless farmer who delivers grain of inferior quality, specialists say.

GUINEAS UTILIZE ALL WASTE

Fowls Pick Up Material That Escape Chickens and Turkeys—Are Prolific Egg Layers.

Guinea fowls utilize waste that would escape both hens and turkeys, say poultry specialists of the United States Department of Agriculture. Taking a wider range than chickens, and yet not so wide as turkeys, keeping largely to thickets and weed patches, and committing fewer depredations against field and garden than either chickens or turkeys, requiring little feed at any time, being prolific layers during their season of eggs, that are thought by many to have a richer and finer flavor even than hens' eggs, the guinea fowl is well worth considering on any farm where a serious effort is made to convert all waste into meat and eggs.

AIR CONSERVES BOARD FLOOR

Free Circulation Underneath Prolongs Life of Lumber—Close Openings During Winter.

Board floors usually are short-lived unless air is allowed to circulate under them. This may be provided for by means of openings in the foundation walls, which should be closed during the winter. A board floor covered with one-quarter inch of fine sand, with scratching material on this makes a good floor. The litter and sand can be removed readily when desired, and fresh materials provided. If the wooden floors are constructed within two or three inches of the ground it is essential that the foundation walls be constructed in such a way that rats cannot gain access beneath the floor.

WHAT THE BIRD MAN SAW

By GEORGE E. FULLER

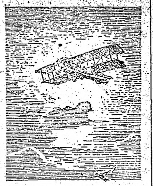
Whiz-zzzzz! A rush of air—a sensation like shooting upward in a speedy elevator—and my plane rose swiftly from the ground at the Fargo farming demonstration.

"Circle the demonstration field where horses and tractors have been plowing," I instructed the pilot, and he pointed his plane over the paddock tents and headed for the extreme corner of the 640-acre demonstration field.

"Zip!" clicked the camera, as we banked for a turn, and here's the picture the camera saw: Right down in the foreground 110 acres striped with giant swaths of green carpet where the horse-drawn outfits, after sixteen hours, were still toiling on their unfinished ten-acre plots. Along side of them, and on either side of the road, like great fields of black velvet, lay 360 acres of soft black ground plowed, disked and harrowed by tractors in less than ten hours.

Convincing? Yes! Mighty convincing, I thought, as I looked over the whole scene and saw the tractors lined up in their paddocks, with their job completed, while the horse outfits were still hard at work, slowly turning furrows from the great swaths of green weeds.

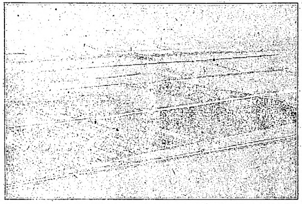
"How can the horse compete with the tractor in the face of such evidence?" I thought. Looking over the side of the airship, I saw thousands of farmers' automobiles streaming in and out of the demonstration grounds, and I realized then and there that it is inevitable that horses will be displaced by tractors in field work just as surely as automobiles have displaced them on the road.



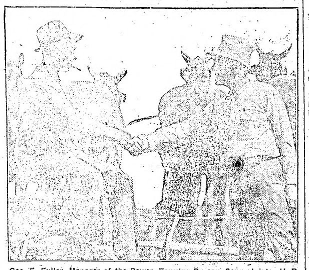
My mind filled with these thoughts, I hardly realized we had circled the demonstration field, and had once more landed on the ground.

"How did the Red river look from the sky?" asked a farmer as I stepped out of the airship. "How did it look?" I repeated. "Well, I never saw it, I saw something much more wonderful that wiped out every other thought." "What was it?" asked the farmer, as the crowd quickly gathered around.

"It was a new view of power farming," I said, "where tractors are taking the place of horses in field work as automobiles have displaced them on the highways." And I wish every farmer in this country could have been up with me in the airplane to get that vision of power farming I got in the flight over the Fargo demonstration field. Power farming is here to stay—and to grow!



AEROPLANE VIEW OF FARGO DEMONSTRATION FIELD. Stripes Show Horses Were Still Plowing. Black Shows Tractor Plot Finished. White Space Is 40-acre Tent Field Headquarters.



Geo. E. Fuller, Manager of the Power Farming Bureau, Congratulates H. R. Jones, Winner of the Farming Contest at Fargo.

"The Best Team in the Northwest" is the claim now made by H. R. Jones, who won the first prize of $400 cash in the recent Fargo farming demonstration.

This claim is based on the records of 11 of the best teams in the Northwest originally started in the recent Fargo farming demonstration. Of these, six teams were compelled to withdraw after starting the work of plowing and seeding 10-acre plots; one of these was a team of thoroughbred Percherons—and the others were seasoned horses, well handled by competent men. In spite of this, it is reported that five horses collapsed and died.

The record of the Jones outfit, therefore, stands out as a surprising achievement, as he completed the job of plowing 10 acres, five inches deep, in 20 hours and 42 minutes—and he disked and harrowed this in 12 hours and 45 minutes.

While Jones was winning the prize for the best horse outfit, 36 tractors were competing against each other in similar work, and the average of the six best tractors shows that they did the same work as the horses in 8 hours and 43 minutes—one-fourth the time.

Every ounce of feed for the horses and fuel for the tractors was carefully weighed by an observers' committee, and the reports show that the Jones 6-horse team ate 250 pounds of hay and 12½ bushels of oats. With hay at $13 per ton, and oats at 40 cents per bushel, which were the Fargo prices, and figuring Jones' time at 40 cents per hour; his total cost for plowing and preparing a seed bed of 10 acres was $20.005. This compares with the cost, $8.97 for the same work with tractors, figuring kerosene at 11.8 cents per gallon, gasoline, 23.1 cents per gallon, lubricating oil 65 cents per gallon, and labor at 40 cents per hour. These costs do not include depreciation or repairs for tractors—and no charge is made for horse shelter or chores.

No effort was made to have horses compete with tractors in this work, but the comparison between the cost of horse power and tractor power under actual farming conditions in Dakota is interesting, not only because tractors did the work so much cheaper and quicker, but because tractor expense stops with the engine, whereas, horses must be fed and sheltered throughout the entire year, regardless of whether or not the horses are working.

The Jones achievement at the Fargo farm demonstration is a record which thousands of horse farmers in the Northwest will "shoot at" next year in summer fallowing where it is necessary to turn under weeds before they have gone to seed and after they have attained considerable growth.

The record of the tractors, which shows they did the work in one-fourth the time, and at less than one-half the cost of horses, will also be a gauge to measure tractor performance, though many tractor owners will far surpass the Fargo tractor records by plowing 12 or 14 hours continuously a day instead of limiting themselves to the 10-hour day provided in Fargo tests.

TRACTORS [illegible] CHEAPER THAN HORSES IN FIELD WORK

Chicago—The first authentic figures ever compiled on the relative cost of horse and tractor power have just been announced by the supervising observers committee in charge of the recent Fargo farming demonstrations.

These figures show that it costs $1.297 per acre to plow and prepare a seed bed by tractors and $2.41 to do the same work with horses under farming conditions in North Dakota plowing five inches.

Both tractors and horse outfits drew ten acre plots by lot and were governed by rules which severely penalized tractors for delays due to mechanical trouble, though horses were permitted to rest as long and as frequently as desired. In spite of this, five horses collapsed and died and seven horse outfits were compelled to withdraw from the demonstration.

Thirty-seven tractors participated in the demonstration, thirty-six of which qualified and plowed and prepared for seeding and seeded a total of 360 acres, divided into ten acre plots. Of these tractors, twenty-five burned kerosene and eleven burned gasoline. The depth of plowing was five inches. Twelve horse outfits entered the tests, but only five qualified and completed the work.

Every ounce of fuel and feed was checked and weighed under the supervision of a committee consisting of H. H. Bates, chairman; E. A. White, president, American Society Agricultural colleges, and O. W. Young, Society Automotive Engineers. Two observers recorded the work of each outfit and reported their findings in writing to this supervising committee.

The general averages of all tractors qualifying are summarized as follows:

Kerosene Tractors.	Plowing.	Preparing and Seeding
Average fuel used per acre (kerosene)	3.01 gals.	1.25 gals.
(Gasoline)	.12 gals.	.034 gals.
Lubricating oil per acre	.11 gals.	.04 gals.
Man hours per acre	.94 hours	.418 hours
Gasoline Tractors		
Average fuel used per acre (gasoline)	2.77 gals.	1.28 gals.
Lubricating oil per per acre	.05 gals.	.03 gals.
Man hours per acre	.95 hours	.43 hours

Average price of fuel in Fargo was:

Kerosene	11.8c per gallon
Gasoline	23.1c per gallon
Lubricating oil	65c per gallon

Feed costs for horses are given as follows:

Average number pounds of hay used per outfit	252.
Average number bushels oats used per outfit	13.[illegible]
Average man hours per acre for plowing	2.61
Average man hours per acre for preparing and seeding	1.43

Fargo prices for feed are as follows:

Hay	$13.00 per ton
Oats	.40 per bu.

Labor in each case was figured at 40c per hour and on this basis the work of the tractors cost $1.297 per acre, and that of horses $2.41 per acre.

These prices cover only the actual time of the demonstration and do not include labor or shelter charge for horses, nor tractor depreciation, or the fact that horse maintenance goes on throughout the year where tractor maintenance stops with the engine.

U. S. GOVERNMENT REPORT SHOWS LONG LIFE FOR TRACTORS.

Just at the time when everybody is analyzing the Fargo Farming demonstration, figures which show that it cost the prize winning team $20.005 to prepare a ten-acre seedbed with horses and that it cost only $8.97 to do the same work with tractors, the U. S. government has issued a report on tractor depreciation which throws some interesting light on the estimated life of the tractor.

This gives nearly ten years as the life of the tractor—an accurate estimate backed up by four and one-half years owners' actual experience.

On this basis, depreciation on a $1,000 tractor would be less than $100 per year, to which, according to the government report, would be added a repair item of about $40, making a total of less than $140 to cover depreciation and all repairs for a year.

Another government report, issued early in June on "Horses and Tractors on Corn Belt Farms," shows that on an average each tractor owner disposed of 2.1 horses when the tractor was purchased, and the same report shows that it cost on an average of $150 a year to keep each head of workstock.

Using these figures, the purchase of a tractor, therefore, meant a saving of $318 a year by cutting off the expense of keeping two horses.

Figuring tractor depreciation and repairs at about $140 per year, on the basis of the government report, and subtracting this from $308 per year saved by selling two horses, figures also based on government report, shows a net saving of over $178 per year in favor of the tractor.

The Fargo Demonstration showed that this $178 saving will many times cover the cost of kerosene, gasoline and oil to operate the tractor and take care of all the farmer's power requirements not only in field work but in belt work and many odd power jobs.

BANTAMS INTEREST CHILDREN

Few of Small Fowls Keep Young People Out of Mischief and Teach Them to Like Poultry.

Bantams are very interesting to children, and even if it does not pay in dollars and cents to keep a small flock of bantams yet many families have found a few of these small fowls useful to interest the children, keep them out of mischief and teach them to like poultry.

FOWLS REQUIRE GREEN FEED

More Important During Summer Months Than in Winter—Give Them Clover and Weeds.

Remember that yarded fowls need greens and vegetable food during the summer months even more than in winter. If their yards are bare, add cut clover to the daily mash, and throw to the birds all the weeds that you pull in the garden as well as lawn clippings, etc.

Loc[illegible]

O. S. Kirkelle spent Sunday at home.

County Agent Mc[illegible] was in town yesterday.

J. A. Sundquist was in Thief River Falls Monday.

Rev. H. Lutz is the owner of a new Ford touring car.

The rains yesterday put stop to the threshing operations.

N. Bundhund was transacting business at Esplee Monday.

Rev. Father Noessen conucted Catholic services here Tuesday.

G. C. Gulrud is making some needed repairs at the school house.

Ed Miller of Esplee was a business visitor at Goodridge Tuesday.

Miss Vivian Thoreson visited friends in Thief River Falls over Sunday.

W. O. Gaylord left Tuesnay morning for a trip to Crookston and Fertile.

H. R. Leslin and family moued into rooms over the Banner office yesterday.

Owen Olson made an auto trip from Gully to Goodridge and return Sunday.

Morgan Christienson was over from Strathcona and spent Sunday at home.

A. T. Olson returned Saturday from a short stay in the vicinity of Grafton, N. Dak.

Mr. and Mrs. Elmer Olson were in Thief River Falls Monday on a business mission.

Newell Nelfon of Brooten has been a guest at the Theo. Gilbertson home this week.

Johnie Erickson returned Saturday from Dakota, where he has been threshing.

D. A. Danielson was looking after business matters in Thief River Falls Saturday.

Mrs. O. S. Kirkelle left Tuesday night for Minneapolis, where she will visit her mother.

Mrs. Carl Lindstrom and her father, A. E. Olson, visited at Theodore Hamm's Sunday.

Miss Christina Bundhund went to Thief River Falls Tuesday evening to have dental work done.

A. B. Mandt is happy over the safe safe arrival of a baby boy at his home on Wednesday, August 24.

Mike Tunick, M. J. Lysbakken and Knute Hegtvedt were in Thief River Falls Wednesday afternoon.

Mr. and Mrs. Elmer Olson autoed to Crookston last Sunday to visit Mrs. Olson's uncle, Ole Tollefson.

Tellef Tellefson and Misses Anna and Babe Tollefson and Hilda Jorgenson autoed to Thief River Falls Monday.

Charles Johnson and Ted Jupperud went to Grygla Tuesday, where they will be employed with a threshing rig.

Miss Myrtle Erickson has resigned her position at the Stephenson cafe and Miss Kathleen Lang has taken her place.

Mrs. Christine Vake returned to her home in Goodridge Monday after spending the summer at her mother's home near Erie.

Harvey Ferdinandsen returned Saturday from Spencer, Iowa, where he spent his vacation visiting a sister, Mrs. Frank Borchert.

Miss Marie Knutson, the county nurse, was in Goodridge Tuesday and took two children to Thief River Falls to have dental work done.

Mrs. Tandberg and daughters, Misses Esther, Agnes and Emma Tandberg, visited the son and brother, Theo. Tandberg, in Goodridge last Saturday.

Bennie Vigen of Thief River Falls has been in town this week making arrangements to have land grubbing and clearing done on his form west of Grygla.

Mrs. N. Jasperson and Miss Leona Christianson, who have been guests of Mrs. J. P. Jensen, left Saturday for their homes at Aberdeen and Brookings, S. Dak., respectively.

Peter Anderson, hardware merchant of Gully, Minn., visited his brother, H. A. Halvorson, Sunday. Maynard Halvorson, who has been staying in Gully for a time, came with him.

Student Chr. Adam closes his German Lutheran summer school at Thorhult today and expects to leave next week for Raton, N. Mex., where he will be engaged in supply work for the coming year.

[illegible], who lives four miles south of Thief River Falls, recently had 38 bushels of wheat ground at the Farmers mill here and received in exchange 12 sacks of flour, 4 of bran, 3 of shorts and 1 of middlings.

Mr. and Mrs. Jay Payne and Mr. and Mrs. V. C. McLeod drove to Thief River Falls Sunday and visited the Kirby "sanitarium," three miles south of the city. They saw a regular little village of tents inhabited by patients and dozens of autos coming and going constantly.

Schol Board Meet

At the meeting of the board of education last Saturday evening John Nystul wos appointed principal of the high school for the next year. The fourth year having been added to the high school, we now have the full high school cours.

The balonce of the evening was mostly spent in discussion of the qualifications of applicants for the other two positions. The board has a number of applications for these positions.

GRASS SEASON QUITE SHORT

Seldom Profitable to Pasture Stock Before May 1 and Pastures Are Dry by September.

Few of us realize how short the grass season really is north of the Mason and Dixon line. It is customary to consider it as six months. But this is stretching it pretty far. It is seldom if ever profitable to turn stock on pasture much before May 1, and almost always pastures are about dried up in September. So, actually, there are only about four months that pastures can be depended upon. This is worth keeping in mind when planning the size of the silo or silage field—figure on eight months of feeding. The man whose stock goes through the winter best is the one that doesn't allow them to become thin before frost.

CHEAP NESTS FOR CHICKENS

Take an Orange Box, Removing Top and Fasten to Wall—Keep Straw Fresh and Clean.

An orange box makes a good nest. Remove the top, put the box on its side, and nail a strip about three inches wide along the bottom in front. It is preferable to fasten this box to the wall as it takes too much room on the floor. Each box, the middle piece being left intact, makes two nests. There ought to be one nest for every four or five hens, say poultry specialists of the United States Department of Agriculture. Straw or other material used for nests should be kept clean and fresh. Be sure to keep enough straw in the box to prevent eggs striking the floor. If an egg breaks, the hen may learn to eat it, and this is a difficult habit to break.

School to Open Tuesday, Sept. 6

High School Registration Monday Afternoon

Everything will be in readiness for school to open Tuesday morning. High school students may register on Monday afternoon and Tuesday forenoon. It is very important that every one who intends to pursue High school studies should register on the first day of schol. The time schedule for the High school program will not always accommodate everybody and alterations can not be made after work has been started. This is equally important for pupils in the grades. Last year we had six pupils who attended school every day during the entire year. Let us try to increase this number the coming year. This can be done if we have a record attendance the first day of school.

Following is the roster of teachers:

Prof. B. O. Norby, principal.

Prof. John Nystul, principal high school.

Miss Teresa Giefer, domestic science and departmental work.

Miss Sarah Vaughan, intermediate.

Miss Joren Hegland, primary grades.

Farmers Business Biggest on Market

The Central Co-operative Commission association, organized by Minnesota farmers to market their livestock, handled more business than any other company on the market here in its first two weeks of operation.

Records of the state railroad and warehouse commission show that in these two weeks, the farmer-owned company handled 11,789 head of livestock; its nearest competitor handled 6,947 head. Total receipts on the market, during the second week in which the farmer company operated, amounted to 58,250 head: the co operative agency handled 7,608. There are more than 30 firms on the market,

W. A. McKerrow, manager, estimates that the new agency is handling 45 percent of the stock shipped in co-operatively by farmers in Minneiota and Wisconsin. Stock also is arriving from South Dakota consigned to the farmers' firm: three South shipping associations joined the Minnesota firm last week without solicitation, according to farm bureau officers.

The farmer-owned company is acting as the direct agent of farmers in stocker and feeder trade, Mr. McKerrow said. During iss second week of business, it shipped 20 carloads of cattle from Minnesota farmers to other farms in this state, and also in Iowa, Illinois and Wisconsin.

Creamery Meeting

Meetings of officers and patrons of the co-operative creameries of the county were held last Friday and Saturday. The meeting here was held Saturday evening at the Farmers State bank. Mr. Jacobson, one of the committee of eight engaged in the organization of the Minnesota Co-operative Creamery association, was present and gave a talk on the benefits to be derived by co-operative creameries from organization. Out of the creameries he has visited 95 per cent have joined the state association.

He showed that better freight aates on shipments of butter and better prices on purchases of supplies could be obtained by the handling of larger quautities that would be made possible by the creameries working together. There will men at the terminal markets to look after the condition in which the butter arrives, and to see that it is handled honestly and sold to the best advantage.

All those present were satisfied that the association is a good thing for the creameries, but on account of the absence of some of the directors no formal action in regard to joining the association was taken.

PLAN TO DESTROY CUTWORMS

Pests Work at Night and May Be Killed With Aid of Paddle and Flashlight.

Cutworms sometimes give considerable trouble if the nights are cool and the weather unsettled. A good way to get rid of cutworms in the garden is to go out in the evening after dark with a flashlight and paddle and kill the pests. They may be found on the surface at work at night. It will take but a short time to get rid of cutworms in the garden. This is a quicker and more reliable way than using poisoned mash.

Attend The State Fair

All loyal Minnesotans are urged to attend the Minnesota State Fair, which takes place from Sept. 3 to 10, by Governor J. A. O. Preus. The governor, in a special proclamation praising the great State Fair and pointing out the benefits to be derived from a visit to the fair, calls for a 100 per cent attendance from all parts of the state. The proclamation:

"The Minnesota State Fair is in many respects the greatest state fair in the country. Minnesota is rich in natural resources and her products excel both in variety and in quality; and the management of the fair, aided and directed by our state legislature, has assembled an exhibition which gives the visitor an excellent idea of the quantity and diversity of our state's products.

"Our fair annually shows growth and progress, and even to the seasoned visitor there is something each year there that is new, interesting and educational. We count the State Fair as an important part of our educational system, because it gives to the people in every trade and profession new ideas and information about what the rest of the state is doing.

"Our fair, however, has a civic value because it brings together people from different communities, gives opportunity for exchange of ideas and helps to make our commonwealth not a collection of counties, but one great united state.

"For these reasons I, J. A. O. Preus, Governor of Minnesota, do hereby urge upon the people of our state to attend the fair to be held Sept. 3 to 10, [illegible] By so doing, they will not only benefit themselves, but they will make possible the continued expansion of this institution. The greater the number who attend, the greater will be the pleasure and profit each one derives.

"In witness whereof I have hereto set my hand and caused the seal of the state of Minnesota to be affixed hereto, this 27th day of August, A. D. 1921.

Attest: J. A. O. PREUS.

MIKE HOLM, Secretary of State.

Wilhelm Michelet Appoined State Supt. of Farm Lands

Wilhelm Michelet of Thief River Falls was yesterday appointed by State Auditor Ray P. Chase to be state superintendent of farm lands. It is a new position, just created, Mr. Chase said, to bring about more efficient handling of the state's land interests. F. A. Wildes will continue as head of the mineral lands department and Otto Diercks head of the state timber land department.

All state land activities are to be centralized at the state capital, Mr. Chase announced. Mr. Wildes will move his office from Hibbing and Mr. Michelet will take hold of the farm lands department as soon as he can close up his present business.

Mr. Michelet's salary will be $3,000 a year. He is a graduate of the college of law of the University of Minnesota, class of 1903. He served as city attorney of Thief River Falls in 1906 and 1907, as county attorney of Red Lake county in 1909 and 1910, as judge of probate of Pennington county from 1910 to 1919. Since that time he has been United States commissioner, dealing largely in land matters. He is familiar with the settlement of northern Minnesota and will co operate in his new post with the state immigration and agricultural department.—Minneapolis Jonrnal.

INCREASED NITROGEN SUPPLY

Element May Be Added by Proper Soil Treatment, Rotation of Crops and Phosphate.

The supply of nitrogen, the most costly element of food for plants, can be increased through proper soil treatment, rotation of crops, the addition of phosphate and limestone and the growing and plowing under of legumes. All stable manure is to be utilized, and on the older, worn soils of the East and South some commercial nitrogen may be profitably used. Following a crop that is a heavy nitrogen consumer with one that is a light user is good farm practice.

SWEET CLOVER IS SENSITIVE

Crop Seldom Makes Profitable Growth on Acid Soil—Proper Inoculation Important.

While it is claimed by some that sweet clover will grow on almost any kind of soil, it seldom makes a profitable growth on an acid soil. It is one of the most sensitive crops to this condition. An application of two tons of ground limestone or from two to three cubic yards of marl is usually necessary to secure a good crop on an acid soil. Proper inoculation is important.

Auto License Law To Be Enforced

Sheriff LaBree and local authorities are to begin immediately the strict enforcement of the new state motor vehicle license law following notice this week from Mike Holm, secretary of state, that virtually all license applications are filed.

"Ample time has been given to all to comply with the requirements," said Secretary Holm, "and it is only fair to those who have paid their just share of the taxes that all should be required to do their part."

Misdemeanor charges are to be made against automobile owners who delay or neglect to register and pay the tax with intent to escape payment; operate a motor vehicle not properly taxed and registered, use a number plate or certificate on another car than that for which it was issued, or who fail to surrender plates or certificates when required by law. Attempt to evade the law is rated the most serious offense.

Letters "A" and "[illegible]" on the license plates indicate that the certificate is for a passenger car [illegible] hearse, the first letter denoting the minimum and the higher tax payment. Truck license plates carry the letters "T" and must be displayed on all machines carrying other things than passengers. Roadsters with boxes are taxed as trucks. Dealers' plates can be used on cars being demonstrated to prospective purchasers.

Fall Rye Controls Sow Thistles

When we are afflicted with a growing ill we naturally grasp at a suggested remedy. The Perennial Sow Thistle is a most serious growing ill. In twenty years of "free distribution" in this Northwest it has become thoroughly established in all Red River Valley counties and can be found in every other county in Minnesota, western Wisconsin, northern Iowa and eastern South Dakota. In certain localities this weed has interfered with crop production to such an extent that farmers have actually sold out at a loss and moved to other localities, only to find that in a few years it is following close "on their heels."

So serious have become the sow thistle, Canada thistle and other noxious weed pests, that Minnesota passed a noxious weed law—Chapter 320, General Laws of 1921, for the beginning of their control. Thus far only a beginning has been made. Over 100 local weed inspectors have been appointed and are working principally in the northeastern part of the state.

A few facts have been established that point to control. Two, at this time, are worthy of mention and recommendation to the farmers as a partial relief. These are the seeding down to grasses, clovers and alfalfa, and the planting of fall rye. Fall rye ripens early and is cut before the weeds get far enough advanced to produce seed. It starts early in the spring and is on its way before the thistles get started. It is the one grain crop that can cope with the thistles and at the same time give a return for labor incurred.

The Minnesota No. 2 rye first, the Rosen rye and Wisconsin Pedigreed rye second are the best varieties to use. But even well graded common rye is better than wheat, oats or barley on thistle infested land.

C. P. BULL,
State Weed Inspector.

FARMING FOR LIVING URGED

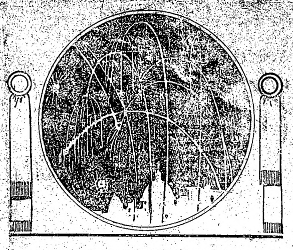
If More Farmers Would Produce What They Need for Home Use Markets Would Be Better.

More farming for a living should be done and there will be less risk of poor markets. If most farmers would produce what they could for home use the markets would be required to take less and as a result there would be less strain on them. The way to have markets is to save and conserve what you have. Use your markets only when it is necessary to sell the surplus you cannot eat or feed.

PAINTS INJURE WOOD SILOS

Use of Preservatives for Coating Not as Much in Favor as Formerly—They Do No Good.

When wood silos were first being introduced great pains were taken in coating them with tar paint, or something of that sort to preserve the wood, but this practically has gone out of use. Experiments show that these paints do but little good, and again, they are somewhat injurious to the silage, says the Michigan Farmer. Without paint a wood silo will last for a great many years.



Ah!!!—Oh!!!—The fireworks spectacle will thrill you again and again at the

MINNESOTA STATE FAIR

September 3 to 10

To Open The Red Lake Reservation

At a recent meeting of the Clearbrook Commercial club the following resolutions were passed and forwarded to Congressman Steenerson urging the opening of a large part of the Red Lake Indian reservation, for settlement. Other sections are holding like meetings and all should do what they can along his line.

Hon. Halvor Steenerson,
Member of Ninth Congressional
District of Minnesota,
Washington, D. C.

Dear Sir:

The moment for material changes in regard to the Indian lands located within the borders of Clearwater and Beltrami counties is at hand and after the most thorough, honest, long and comprehensive consideration of the facts in the case the Clearbrook Commercial club voted unanimously under its session of June 2, 1921, for the opening for settlement of these lands and that the rights of the Indians be safeguarded and protected in every respect. A special committee composed of T. O. Nelson, C. G. Nelson and Albert Anderson were delegated with full powers to look after the details in the above matter as time and conditions would demand. Therefore the following resolution is herewith presented for your consideration:

Whereas, The Indian lands above referred to are known under the territorial division as follows:

The north half of Township 150, Ranges 36 and 37; Township 151, Ranges 36, 37 and 38; Township 152, Ranges 36, 37 and 38; Township 153, Ranges 34, 35, 36, 37 and 38; Township 154, Ranges 33, 34, 35, 36, 37 and 38.

Whereas, The opening for immediate settlement of the above portion of the Red Lake Reservation located in Clearwater and Beltrami counties is hereby asked by the Clearbrook Commercial Club thru its duly appointed committee as represented above, and that among the first important matters to consider is to guard and protect the solemn rights of the Indians in every sense of the word who are and will be affected by the above transaction and that they be given a square deal and every demand made by them in regard to the above lands be given considerate and earnest attention;

Whereas, The above tract comprises approximately 324,000 acres of excellent agricultural lands composed of timber, prairie and meadow lands, which, when developed will average with any other lands in Northern Minnesota and in many instances surpasses in quality and home producing facilities because these lands located within the rich clover belt, which is recognized as one of the leading farm products in the world for building and maintaining the highest standard of production the soil on which it can be grown successfully;

Whereas, The agricultural and dairying lands embraced in the above tract are among the best to be found in the middle west and our country is teeming with young men and women who long for a home of their own, it is a national evil, if not a disgrace, to let these rich lands lay idle, the home of wild roving animals, when our nation cries for more homes—yes more homes;

Whereas, it is a national duty to utilize its public domain in such a manner that our nation may benefit therefrom and especially in these days and under present world conditions, when nations are crying, yes begging for bread, and where America is playing such a wonderful part—giving with a lavish hand regardless of friend or foe.

Whereas, Such are the public conditions which not only affect us as a nation, but as a part of the whole world; not to mention the crying need for more public domain upon which our people may build more homes and help to feed the world which is an absolute necessity under the existing conditions in place of lying idle, such as the above lands lie today, a worthless asset to man and country;

Whereas, The above lands are drained by the Red Lake and Clearwater rivers and borders upon a large section of the magnificent Red Lake, besides the drainage act under which these lands are now being surveyed. This means that good water is within the reach of the whole territory affected and wells sunk to the depth of 10 to 30 feet will produce an abundance of water on every quarter section;

Whereas, The above tract is bordered on the south, west and north by prosperous and well developed communities, while the east is largely on the Red Lake and partly bordering the remaining section of the Reservation, points which speak for themselves and means that this tract in a very short period will rival, if not surpass the older settlements around it;

Whereas, The Soo railway at present is running only a short distance from the southern border with well established and up-to-date towns of which the following the the/closest, viz: Gully, Gonvick, Clearbrook, Leonard and Pinewood and will make excellent trading points until the territory is traversed with a railroad of its own, which will only be a question of months when once opened and settled. The northern section is favored by the Red Lake river which is navigable and connects with such prominent cities as Thief River Falls to the west and over the Red Lake to Redby and from there over the Red Lake railroad to Bemidji;

Whereas, At the 25th anniversary of the opening of the Red Lake Reservation here in 1896, given by the Old Settlers' Reunion and Community Picnic held at Clearbrook on the 11the day of June, 1921, it was unanimously resolved by over 5,000 people present that the opening for settlement of the above tract was an absolute necessity and for the best interests of all concerned;

Whereas, We respectfully and most earnestly ask and plead because of the small amount of public domain remaining for settlement, that in drawing the bill to cover the above lands for settlement that you take into consideration first of all our magnificent soldier and sailor boys who saw service in the World War and that they be given the [illegible] chance to procure a tract of these lands. We mean by this that they should have a prior right above all others to look over and acquire a tract of land direct from the government. This prior right we suggest could be guarded by a clause in the bill which would give our soldier boys the right to acquire these lands during the first six or twelve months after the opening of these lands. If after a certain stated period there still remains any of these lands on the market for settlement then anyone who is a citizen may acquire the same who fulfills the obligation called for by our government;

Whereas, We believe the best interests of all concerned would be served best under present conditions by allotments of lands to all Indians interested when the Indians have taken their allotments, the remaining lands be opened for settlement. In view of these conditions we would suggest that all Indians who take up allotments be granted all the rights and privileges of American citizenship in order to make it applicable to the conditions and create harmonious surroundings, for it would not be a true American community if composed of one-half "wards" and the balance free men;

Therefore, Be It Resolved, That the Commercial Club of Clearbrook by its duly appointed representatives hereby ask you as a member of Congress from Minnesota, and a district in which a large portion of these Indian lands are located, to take immediate steps to promote the opening of these lands for settlement and to use your best judgment in making a deal with the Indians affected, and to work in harmony with and interest your fellow Congressmen in the undertaking that results may be obtained with the least delay possible. We respectfully urge you to get in touch with Congressman H. Knutson from the 6th Minnesota District, and also consult with and get the co-operation of our worthy Senators, Knute Nelson and Frank B. Kellogg, who we rest assured will be of material assistance and influence in getting the bill thru the senate.

Yours for Co-operation.

School to Open Tuesday, Sept. 6

High School Registration Monday Afternoon

Everything will be in readiness for school to open Tuesday morning. High school students may register on Monday afternoon and Tuesday forenoon. It is very important that every one who intends to pursue High school studies should register on the first day of schol. The time schedule for the High school program will not always accommodate everybody and alterations can not be made after work has been started. This is equally important for pupils in the grades. Last year we had six pupils who attended school every day during the entire year. Let us try to increase this number the coming year. This can be done if we have a record attendance the first day of school.

Following is the roster of teachers:

Prof. B. O. Norby, principal.

Prof. John Nystul, principal high school.

Miss Teresa Giefer, domestic science and departmental work.

Miss Sarah Vaughar, intermediate.

Miss Joren Hegland, primary grades.

Farmers Business Biggest on Market

The Central Co-operative Commission association, organized by Minnesota farmers to market their livestock, handled more business than any other company on the market here in its first two weeks of operation.

Records of the state railroad and warehouse commission show that in these two weeks, the farmer-owned company handled 11,789 head of livestock; its nearest competitor handled 6,947 head. Total receipts on the market, during the second week in which the farmer company operated, amounted to 58,250 head: the co operative agency handled 7,608. There are more than 30 firms on the market,

W. A. McKerrow, manager, estimates that the new agency is handling 45 percent of the stock shipped in co-operatively by farmers in Minneiota and Wisconsin. Stock also is arriving from South Dakota consigned to the farmers' firm: three South shipping asssciations joined the Minnesota firm last week without solicitation, according to farm bureau officers.

The farmer-owned company is acting as the direct agent of farmers in stocker and feeder trade, Mr. McKer row said. During iss second week of business, it shipped 20 carloads of cattle from Minnesota farmers to other farms in this state, and also in Iowa, Illinois and Wisconsin.

Creamery Meeting

Meetings of officers and patrons of the co-operative creameries of the county were held last Friday and Saturday. The meeting here was held Saturday evening at the Farmers State bank. Mr. Jacobson, one of the committee of eight engaged in the organization of the Minnesota Co-operative Creamery association, was present and gave a talk on the benefits to be derived by co-operative creameries from organization. Out of the creameries he has visited 95 per cent have joined the state association.

He showed that better freight aates on shipments of butter and better prices on purchases of supplies could be obtained by the handling of larger quautities that would be made possible by the creameries working together. There will men at the terminal markets to look after the condition in which the butter arrives, and to see that it is handled honestly and sold to the best advantage.

All those present were satisfied that the association is a good thing for the creameries, but on account of the absence of some of the directors no formal action in regard to joining the association was taken.

PLAN TO DESTROY CUTWORMS

Pests Work at Night and May Be Killed With Aid of Paddle and Flashlight.

Cutworms sometimes give considerable trouble if the nights are cool and the weather unsettled. A good way to get rid of cutworms in the garden is to go out in the evening after dark with a flashlight and paddle and kill the pests. They may be found on the surface at work at night. It will take but a short time to get rid of cutworms in the garden. This is a quicker and more reliable way than using poisoned mash.

Attend The State Fair

All loyal Minnesotans are urged to attend the Minnesota State Fair, which takes place from Sept. 3 to 10, by Governor J. A. O. Preus. The governor, in a special proclamation praising the great State Fair and pointing out the benefits to be derived from a visit to the fair, calls for a 100 per cent attendance from all parts of the state. The proclamation:

"The Minnesota State Fair is in many respects the greatest state fair in the country. Minnesota is rich in natural resources and her products excel both in variety and in quality: and the management of the fair, aided and directed by our state legislature, has assembled an exhibition which gives the visitor an excellent idea of the quantity and diversity of our state's products.

"Our fair annually shows growth and progress, and even to the seasoned visitor there is something each year there that is new, interesting and educational. We count the State Fair as an important part of our educational system, because it gives to the people in every trade and profession new ideas and information about what the rest of the state is doing.

"Our fair, however, has a civic value because it brings together people from different communities, gives opportunity for exchange of ideas and helps to make our commonwealth not a collection of counties, but one great united state.

"For these reasons I, J. A. O. Preus, Governor of Minnesota, do hereby urge upon the people of our state to attend the fair to be held Sept. 3 to 10. By so doing, they will not only benefit themselves, but they will make possible the continued expansion of this institution. The greater the number who attend, the greater will be the pleasure and profit each one derives.

"In witness whereof I have hereto set my hand and caused the seal of the state of Minnesota to be affixed hereto, this 27th day of August, A. D. 1921.

Attest: J. A. O. PREUS.

MIKE HOLM, Secretary of State.

Wilhelm Michelet Appoined State Supt. of Farm Lands

Wilhelm Michelet of Thief River Falls was yesterday appointed by State Auditor Ray P. Chase to be state superintendent of farm lands. It is a new position, just created, Mr. Chase said, to bring about more efficient handling of the state's land interests. F. A. Wildes will continue as head of the mineral lands department and Otto Diercks head of the state timber land department.

All state land activities are to be centralized at the state capital, Mr. Chase announced. Mr. Wildes will move his office from Hibbing and Mr. Michelet will take hold of the farm lands department as soon as he can close up his present business.

Mr. Michelet's salary will be $3,000 a year. He is a graduate of the college of law of the University of Minnesota, class of 1903. He served as city attorney of Thief River Falls in 1906 and 1907, as county attorney of Red Lake county in 1909 and 1910, as judge of probate of Pennington county from 1910 to 1919. Since that time he has been United States commissioner, dealing largely in land matters. He is familiar with the settlement of northern Minnesota and will co operate in his new post with the state immigration and agricultural department.—Minneapolis Jonrnal.

INCREASED NITROGEN SUPPLY

Element May Be Added by Proper Soil Treatment, Rotation of Crops and Phosphate.

The supply of nitrogen, the most costly element of food for plants, can be increased through proper soil treatment, rotation of crops, the addition of phosphate and limestone and the growing and plowing under of legumes. All stable manure is to be utilized, and on the older, worn soils of the East and South some commercial nitrogen may be profitably used. Following a crop that is a heavy nitrogen consumer with one that is a light user is good farm practice.

SWEET CLOVER IS SENSITIVE

Crop Seldom Makes Profitable Growth on Acid Soil—Proper Inoculation Important.

While it is claimed by some that sweet clover will grow on almost any kind of soil, it seldom makes a profitable growth on an acid soil. It is one of the most sensitive crops to this condition. An application of two tons of ground limestone or from two to three cubic yards of marl is usually necessary to secure a good crop on an acid soil. Proper inoculation is important.

Auto License Law To Be Enforced

Sheriff LaBree and local authorities are to begin immediately the strict enforcement of the new state motor vehicle license law following notice this week from Mike Holm, secretary of state, that virtually all license applications are filed.

"Ample time has been given to all to comply with the requirements," said Secretary Holm, "and it is only fair to those who have paid their just share of the taxes that all should be required to do their part."

Misdemeanor charges are to be made against automobile owners who delay or neglect to register and pay the tax with intent to escape payment; operate a motor vehicle not properly taxed and registered, use a number plate or certificate on another car than that for which it was issued, or who fail to surrender plates or certificates when required by law. Attempt to evade the law is rated the most serious offense.

Letters "A" [illegible] on the license plates indicates that the certificate is for a passenger car [illegible] purpose, the first letter denoting the [illegible] minimum and the higher tax payment. Truck license plates carry the letters "T" and must be displayed on all machines carrying other things than passengers. Roadsters with boxes are taxed as trucks. Dealers' plates can be used on cars being demonstrated to prospective purchasers.

Fall Rye Controls Sow Thistles

When we are afflicted with a growing ill we naturally grasp at a suggested remedy. The Perennial Sow Thistle is a most serious growing ill. In twenty years of "free distribution" in this Northwest it has become thoroughly established in all Red River Valley counties and can be found in every other county in Minnesota, western Wisconsin, northern Iowa and eastern South Dakota. In certain localities this weed has interfered with crop production to such an extent that farmers have actually sold out at a loss and moved to other localities, only to find that in a few years it is following close "on their heels."

So serious have become the sow thistle, Canada thistle and other noxious weed pests, that Minnesota passed a noxious weed law—Chapter 320, General Laws of 1921, for the beginning of their control. Thus far only a beginning has been made. Over 100 local weed inspectors have been appointed and are working principally in the northeastern part of the state.

A few facts have been established that point to control. Two, at this time, are worthy of mention and recommendation to the farmers as a partial relief. These are the seeding down to grasses, clovers and alfalfa, and the planting of fall rye. Fall rye ripens early and is cut before the weeds get far enough advanced to produce seed. It starts early in the spring and is on its way before the thistles get started. It is the one grain crop that can cope with the thistles and at the same time give a return for labor incurred.

The Minnesota No. 2 rye first, the Rosen rye and Wisconsin Pedigreed rye second are the best varieties to use. But even well graded common rye is better than wheat, oats or barley on thistle infested land.

C. P. BULL,
State Weed Inspector.

FARMING FOR LIVING URGED

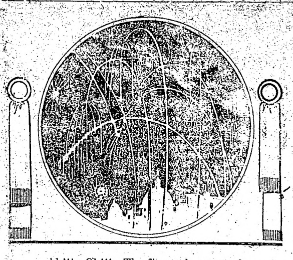
If More Farmers Would Produce What They Need for Home Use Markets Would Be Better.

More farming for a living should be done and there will be less risk of poor markets. If most farmers would produce what they could for home use the markets would be required to take less and as a result there would be less strain on them. The way to have markets is to save and conserve what you have. Use your markets only when it is necessary to sell the surplus you cannot eat or feed.

PAINTS INJURE WOOD SILOS

Use of Preservatives for Coating Not as Much in Favor as Formerly—They Do No Good.

When wood silos were first being introduced great pains were taken in coating them with tar paint, or something of that sort to preserve the wood, but this practically has gone out of use. Experiments show that these paints do but little good, and again, they are somewhat injurious to the silage, says the Michigan Farmer. Without paint a wood silo will last for a great many years.



Ah!!!—Oh!!!—The fireworks spectacle will thrill you again and again at the

To Open The Red Lake Reservation

At a recent meeting of the Clearbrook Commercial club the following resolutions were passed and forwarded to Congressman Steenerson urging the opening of a large part of the Red Lake Indian reservation for settlement. Other sections are holding like meetings and all should do what they can along his line.

Hon. Halvor Steenerson,
Member of Ninth Congressional
District of Minnesota,
Washington, D. C.

Dear Sir:

The moment for material changes in regard to the Indian lands located within the borders of Clearwater and Beltrami counties is at hand and after the most thorough, honest, long and comprehensive consideration of the facts in the case the Clearbrook Commercial club voted unanimously under its session of June 2, 1921, for the opening for settlement of these lands and that the rights of the Indians be safeguarded and protected in every respect. A special committee composed of T. O. Nelson, C. G. Nelson and Albert Anderson were delegated with full powers to look after the details in the above matter as time and conditions would demand. Therefore the following resolution is herewith presented for your consideration:

Whereas, The Indian lands above referred to are known under the territorial division as follows:

The north half of Township 150, Ranges 36 and 37; Township 151, Ranges 36, 37 and 38; Township 152, Ranges 36, 37 and 38; Township 153, Ranges 34, 35, 36, 37 and 38; Township 154, Ranges 33, 34, 35, 36, 37 and 38.

Whereas, The opening for immediate settlement of the above portion of the Red Lake Reservation located in Clearwater and Beltrami counties is hereby asked by the Clearbrook Commercial Club thru its duly appointed committee as represented above, and that among the first important matters to consider is to guard and protect the solemn rights of the Indians in every sense of the word who are and will be affected by the above transaction and that they be given a square deal and every demand made by them in regard to the above lands be given considerate and earnest attention;

Whereas, The above tract comprises approximately 324,000 acres of excellent agricultural lands composed of timber, prairie and meadow lands, which, when developed will average with any other lands in Northern Minnesota and in many instances surpasses in quality and home producing facilities because these lands located within the rich clover belt, which is recognized as one of the leading farm products in the world for building and maintaining the highest standard of production the soil on which it can be grown successfully;

Whereas, The agricultural and dairying lands embraced in the above tract are among the best to be found in the middle west and our country is teeming with young men and women who long for a home of their own, it is a national evil, if not a disgrace, to let these rich lands lay idle, the home of wild roving animals, when our nation cries for more homes—yes more homes;

Whereas, it is a national duty to utilize its public domain in such a manner that our nation may benefit therefrom and especially in these days and under present world conditions, when nations are crying, yes begging for bread, and where America is playing such a wonderful part—giving with a lavish hand regardless of friend or foe.

Whereas, Such are the public conditions which not only affect us as a nation, but as a part of the whole world, not to mention the crying need for more public domain upon which our people may build more homes and help to feed the world which is an absolute necessity under the existing conditions in place of lying idle, such as the above lands lie today, a worthless asset to man and country;

Whereas, The above lands are drained by the Red Lake and Clearwater rivers and borders upon a large section of the magnificent Red Lake, besides the drainage act under which these lands are now being surveyed. This means that good water is within the reach of the whole territory affected and wells sunk to the depth of 10 to 30 feet will produce an abundance of water on every quarter section;

Whereas, The above tract is bordered on the south, west and north by prosperous and well developed communities, while the east is largely on the Red Lake and partly bordering the remaining section of the Reservation, points which speak for themselves and means that this tract in a very short period will rival, if not surpass the older settlements around it;

Whereas, The Soo railway at present is running only a short distance from the southern border with well established and up-to-date towns of which the following the the/closest, viz: Gully, Gonvick, Clearbrook, Leonard and Pinewood and will make excellent trading points until the territory is traversed with a railroad of its own, which will only be a question of months when once opened and settled. The northern section is favored by the Red Lake river which is navigable and connects with such prominent cities as Thief River Falls to the west and over the Red Lake to Redby and from there over the Red Lake railroad to Bemidji;

Whereas, At the 25th anniversary of the opening of the Red Lake Reservation here in 1896, given by the Old Settlers' Reunion and Community Picnic held at Clearbrook on the 11the day of June, 1921, it was unanimously resolved by over 5,000 people present that the opening for settlement of the above tract was an absolute necessity and for the best interests of all concerned;

Whereas, We respectfully and most earnestly ask and plead because of the small amount of public domain remaining for settlement, that in drawing the bill to cover the above lands for settlement that you take into consideration first of all our magnificent soldier and sailor boys who saw service in the World War, and that they be given the first chance to procure a tract of these lands. We mean by this that they should have a prior right above all others to look over and acquire a tract of land direct from the government. This prior right we suggest could be guarded by a clause in the bill which would give our soldier boys the right to acquire these lands during the first six or twelve months after the opening of these lands. If after a certain stated period there still remains any of these lands on the market for settlement then anyone who is a citizen may acquire the same who fulfills the obligation called for by our government;

Whereas, We believe the best interests of all concerned would be served best under present conditions by allotments of lands to all Indians interested when the Indians have taken their allotments, the remaining lands be opened for settlement. In view of these conditions we would suggest that all Indians who take up allotments be granted all the rights and privileges of American citizenship in order to make it appliable to the conditions and create harmonious surroundings, for it would not be a true American community if composed of one-half "wards" and the balance free men;

Therefore, Be It Resolved, That the Commercial Club of Clearbrook by its duly appointed representatives hereby ask you as a member of Congress from Minnesota, and a district in which a large portion of these Indian lands are located, to take immediate steps to promote the opening of these lands for settlement and to use your best judgment in making a deal with the Indians affected, and to work in harmony with and interest your fellow Congressmen in the undertaking that results may be obtained with the least delay possible. We respectfully urge you to get in touch with Congressman H[illegible] Knutson from the 6th Minnesota District, and also consult and get the co-operation of our worthy Senators, Knute Nelson and Frank B. Kellogg, who we rest assured will be of material assistance and influence in getting the bill thru the senate.

Yours for Co-operation

CANTALOUPES OF FINEST QUALITY

Early Picking Is Reason Given for Melons Reaching Market in Inferior Condition.

AVOID BRUISING IN PACKING

Load Immediately in Iced Refrigerator Cars and Furnish Ample Ventilation—Floor Racks Are Also Recommended.

(Prepared by the United States Department of Agriculture.)

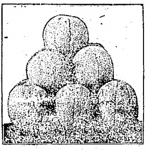
Fully 10 per cent of the cantaloupes produced in the western states reach the consumer so green that they are practically worthless for food. If only 1 per cent were picked and shipped unripe it would mean transporting and marketing more than 40,000 crates, for more than 20,000 carloads—or four-fifths of the production of the United States—are harvested in Colorado, New Mexico, Arizona, Nevada, and California, and shipped on a six to twelve-day journey to middle western and eastern markets.

During three recent shipping seasons specialists of the United States Department of Agriculture conducted investigations in the western producing sections and chief eastern consuming centers, in order to determine the most satisfactory methods of handling cantaloupes for long-distance shipments. It was found that too early picking was one of the chief reasons why melons reached the market in an inferior, tasteless condition.

When to Pick Melons.

Green melons have a depressing effect on both demand and prices. While it is necessary that they be picked before they are entirely ripe, in order to provide the essential keeping qualities in transit, they may be picked at a stage of maturity that will afford good flavor as well as keeping quality when they reach consumers, cantaloupes should be picked just after they will slip cleanly from the stem; that is, at the full-slip stage of maturity.

If properly handled and promptly loaded they will carry in satisfactory condition, even to long-distance markets. Allowance must be made, however, for a certain amount of rough handling and for some delay in transit. As a general rule, therefore, cantaloupes should be picked just before they reach the full-slip stage. Such melons possess not only the desirable eating quality, but also the necessary carrying quality.



Unwrapped Melons Cool Quickly, Thus Preventing Mold.

The keeping and carrying qualities of cantaloupes are directly dependent on the care exercised to prevent mechanical injuries in harvesting and preparation for shipment.

Use Care in Packing.

During the operation of packing, melons should be placed carefully in the crates, and not dropped or tossed into place, as is frequently done. Injury caused by squeezing can be prevented if packers are careful not to force in over-sized melons when finishing the crates.

The reduction of serious market losses from over-ripe and decayed melons is dependent to a large extent upon the promptness with which they are placed under refrigeration. They should be loaded immediately in iced refrigerator cars, and, while being hauled from packing shed to the car-loading platform, should be covered to protect them from the sun.

Cantaloupes should preferably not be wrapped. They do not refrigerate so well in transit nor do they reach the consumer in so good condition as unwrapped melons. Loading different types of packages may obstruct air circulation and thus seriously retard refrigeration. In cars equipped with these racks, as well as basket bunkers, salt may be effectively employed to hasten refrigeration. The ability of refrigerator cars to cool melon shipments quickly and to maintain desirable temperatures in transit depends directly upon proper bunker and bulkhead construction, and upon the quantity and quality of the insulating material used.

EXPERIENCE NEEDED WITH ALFALFA CROP

Farmer Soon Learns Best Time for Cutting Plant.

Government Experts Lean Strongly Toward Fewer Crops During Year, Holding That Larger Tonnage Can Be Secured.

(Prepared by the United States Department of Agriculture.)

Just when to cut alfalfa and how many times to harvest a crop in one season are questions which have received studied attention from experts in the United States Department of Agriculture and the various experiment stations in alfalfa-producing states. Ordinarily it is a good time to cut alfalfa for hay when the new shoots have started from the crown, and from one-tenth to one-fifth of the plants are in flower. But these two conditions do not always occur at the same time. However, the farmer with a little experience, and keeping in mind the flower and new shoots, soon is able to tell when his alfalfa crop should be cut. The farmer's best judgment will be called into play, with preference given to the welfare of the plant rather than the size of the crop.

Experiments on government plats seem to prove that cutting is not essential to the welfare of the plant, but is only a means of getting hay. Plats of alfalfa that have not been cut

An Excellent Stand of Alfalfa.

in six years are in better physical condition today than those that have been cut regularly. Government agricultural experts lean strongly toward fewer crops of alfalfa a year, holding that as large tonnage can be secured, for example, with three as with four cuttings, and with less labor. Emphasis is laid on the necessity of leaving time enough after the last harvest to permit the plants to get a healthy growth, approximately four inches, before frost.

MOLTING PERIOD IS TRYING

Feathers That Must Be Made Are Rich in Nitrogenous Substance—Coated With Oil.

Many owners of hens think that because the hens are not laying during the molting period, they do not need feed. This period is harder on a hen than heavy laying for the feathers that must be made are rich in nitrogenous substances and are coated with an oil.

Made of Good Leather and Heavy Enough, Set Will Last for at Least Fifteen Years.

Harness made of good leather and heavy enough for the work required of it will last for many years if cared for properly. It is more economical to buy harness that is too heavy than to buy that which is too light for the work. With good care, harness of the proper weight and quality will last at least 15 years, and in many cases harness used on the farm has been in service for 25 years or longer.

CULL POOR PRODUCING HENS

Work Should Be Started in Summer and During Early Fall Months—Comb Is Indicator.

The hens should be culled out during the summer and early fall months, beginning to cull out the poor producers just as soon as they stop laying, which is usually in July and August. When a hen is laying her comb will be large, full of blood, and bright red in color. As she stops laying, the comb becomes small and shrunken, pale or dull in color, and is usually rather hard. Another good indication to use in selecting those hens which stop laying early is molting, as the hens that start to molt early—that is, in July and August—are usually the poorest producers.

While a hen which has molted most of her feathers is very easy to pick out by sight without examination, the only way to ascertain accurately when the hens begin to molt is to handle them. Before the body and wing feathers are molted in any great number you will find short pin feathers growing thickly on the back and in the feather tracts running back from the breast, indicating that these hens have started to molt and probably have stopped laying if their combs and general appearance indicate nonproduction. The pelvic bones are also helpful in making this test as these two bones tend to close up when the hen stops laying. If the spread between these bones measures two fingers or less the probability is that the hen is not laying, while if the spread is greater, together with other indications mentioned, she is probably laying.

PROPER DRAINAGE ESSENTIAL

Heavy Application of Manure Will Go Long Way Toward Correcting Alkali Condition.

Drainage is the most important factor in alkaline soils in nearly all cases. Good drainage is an absolute necessity in alkali correction. When drainage is assured, a heavy application of horse manure will go a long way toward correcting the alkali condition. It may be necessary to apply some fertilizer carrying large amounts of potash. Corn is not the best crop to consider in handling alkaline soils, and oats or rye bring better results until the soils are completely brought back to normal conditions.

BIG VALUE OF FOREST TREES

Material Supplied for Use on Farm, Such as Poles and Wood—Protect Live Stock.

Forest trees grown on the farm add to its value and beauty. They supply material for farm use, such as poles, posts and cordwood; and they afford shelter for live stock, and protect crops and buildings from the hot winds of summer and the cold winds of winter. Moreover, they often can be grown successfully on soils too poor or on slopes too steep for the successful production of the ordinary agricultural crops.

APPLY LIMESTONE ANY TIME

Usually Done to Best Advantage in Late Summer When Teams and Men Are Available.

Limestone may be applied at any time when men and teams are available, but this usually is done to best advantage in late summer, fall or early winter. It will seldom, if ever, pay to put on less than a ton to the acre, and more should be used if the soil is very sour. Applications usually are not made more frequently than once in four to six years. The usual application varies from one to two and one-half tons an acre.

"Yes," said the New York publisher, "and we even try to anticipate a few."—Louisville Courier-Journal.

"Bravest Man on the Force"

By FREDERICK CLARKE

(©, 1921, Western Newspaper Union.)

The chief had sent for John Harrigan. John knew why he was summoned. He left the fire station under the disapproving looks of his companions. Nobody spoke to him; that was far harder than if they had reproached him. Reproaches are forgotten, but they had given him the silence.

The old chief turned round at his desk.

"Sit down, Harrigan," he said, glaring at him under his bushy eyebrows. There was a tense silence. Harrigan sat upon the edge of his chair, fingering his cap.

"What's this I hear about your being a coward, John?" asked the chief, yet so mildly that Harrigan took courage to glance up at him.

"They say," said Bethany mildly, "that at the fire in Wimpole street last night you hung back instead of going up the ladder."

"Yes, sir," said John and began stammering out his excuses. It was his first big fire, and the sight of that flaming hell had paralyzed his limbs, although his heart was brave enough. He had only wanted someone to lead him, some word of encouragement to do heroic deeds. But alone, he could not take the initiative.

"John Harrigan," said Bethany, "I've been on the force for seven and thirty years. When I was a youngster I was a coward. At my first fire I hung back. Because of that a woman died. I've never told anyone but you, Harrigan, because I've never met another coward but you. John," he continued, "go back to your company and act like a man."

The firemen received the news of his reinstatement badly.

Harrigan could endure their silence. He knew that if only his chance came, he could redeem himself. But Mary Connor, his sweetheart, was told of the affair by a rival. She wrote him a curt little note of dismissal. "I don't want to marry a coward," she said. Soon he heard that she was engaged to another.

And his chance never came. That was the crown of his tragedy. He was put on detail work, set to copying documents in the sub-chief's office. He was never allowed out again.

One day he walked into Bethany's office.

"Chief," he said, "I haven't had my chance. I have been doing a clerk's job. Give me my chance to show that I'm a man."

Bethany looked at him, looked under his beetling eyebrows clear into his heart.

"You'll have your chance now. Report back for duty."

For a whole year he had seen nothing of Mary. Somebody told him that she was married.

His chance did come, about three months after his talk with Bethany. It was a little fire at first, but it spread swiftly, and by the time that the call came to his company, from the other end of the town, a whole block of tenement buildings was ablaze.

The hose was playing upon the fire; it might as well have been a child's squirtgun for all the effect it had. Above him—far above—he saw white faces of women at the windows. He heard their cries faintly in his ears.

A ladder was being raised. Harrigan sprang forward and began to ascend. He heard shouts beneath him. The captain was ordering him down. This was not for him; he was a coward and this was no coward's work.

He swung from the ladder to the narrow coping, just out of the reach of the flames. He did not dare look down. Above him—only one story above, he saw those women's faces. Even as he looked two disappeared. They had run back into the room, seeking madly for an outlet. One, immediately above, looked down. He choked. It was Mary.

Now he had no more fear. In another moment he was on the ledge by Mary's side. He clasped her in his arms.

They clung together on the ledge, fire over and under them. One minute of life remained.

"Mary—my love!" he whispered, pressing his lips to her cold cheek.

She opened her eyes. "John!" she answered, smiling.

"You are married, dear?"

"No, John. I was—waiting," she answered.

"For me?" he cried.

"To show that you were a man, John. And you have shown me."

Shouts came to him. The men were bracing ladders. An elongated snake of wood crawled up the side of the wall. The fiery tongues beneath were quenched. John felt for the ladder top with his feet and found it. He placed his feet upon the topmost rung, supporting Mary in his arms, and fainted in the arms of the man who had climbed to save him.

"Well done, John Harrigan," a voice was murmuring far away. He listened in amusement. What was the voice saying—"Bravest man on the fire force?" He opened his eyes. He looked into the keen blue eyes beneath the thick eyebrows of Fire Chief Bethany.

Drew an Inference.

"I've often heard," said Mrs. Boston, "that there isn't any money in literature, and now I'm convinced of it."

"How?" inquired the caller.

"Because Charley never seems to have a penny since he got acquainted with those men who make books."

Pierre Rideau's "Treachery"

By CELIA ROSE

(©, 1921, Western Newspaper Union.)

Helene sat in her little room in the convent, straining her ears for the sound of the owl's hoot without. She had packed her few possessions in a bag; everything was ready for her secret departure from the only home that she had known during the past eight years of her life.

Bereft of her mother at the age of twelve, her father, a wealthy manufacturer of Montreal, had placed her in the care of the nuns of St. Anne. True, twice a year he had paid her a flying visit.

So the years had rolled by happily, and then, ten months before, her father had appeared some weeks before he was due.

"Helene," he said to her, "you are a woman now and ready to take your place in society. I have arranged a wealthy marriage for you."

Then he went on to tell her that she was to marry Pierre Rideau, the only son of his great business rival, within a year. His firm had been hand, and he evidently falling more and more deeply in love with her. And then one day he had been unable to restrain his emotions, and, falling upon his knees, pressed her hands to his lips and covered them with kisses, and begged for permission to tell her of the sentiments in his heart.

When she had timidly bidden him arise, and he, growing more bold, had taken her in his arms and kissed her, Helene, falteringly, told him her story.

"Why, that is easy," he cried. "Come with me and I will take thee on my sledge to Montreal, and there we will be married.

Then he made the proposition which thrilled her with its daring. What ties bound her? he asked. Was not their love the most precious thing in the world?

And suddenly, as she recalled this, and waited, half hoping, half dreading, she heard the call. Then she fastened the cord to the bed, as he had told her, and, taking her little bag, she flung it down on the soft snow. A moment later, desperately daring, Helene found herself swinging out into space and down to two arms upstretched to her.

Then, lying in his arms, all the past became a blank to her.

At the bend of the road his sleigh was waiting. Her lover placed her in the sleigh and leaped in beside her, and soon they were traveling merrily over the frozen ground.

The forest ended; now they traveled more swiftly. A delicious drowsiness overcame Helene.

She awoke with a start to find that they were entering the suburbs of a large city. She had not even asked where he was taking her until the sleigh stopped at the door of a mansion, brilliantly lighted, set in a large garden. Then her lover leaped from his seat and the bell pealed; the door flew open and on the threshold her father stood.

She sprang to the ground, terrified, overcome with anguish at this treachery. But, returning, her lover took her gently in his arms once more and kissed her.

"I am Pierre Rideau," he said.

Winton-Nichols Lumber Company

forced into a tight position, he confessed, old Rideau held the trump cards; nevertheless, Rideau was willing to make an alliance between the two houses and thus convert enmity into friendship. So it was all arranged.

Then Helene burst into tears, begged to be allowed to spend her life in the convent that was so dear to her, and finally indignantly refused to be bartered thus. Her father went away in a fury.

That was three weeks before, and now the last week of her stay at the convent was drawing near. And meanwhile a wonderful thing had happened, so wonderful Helene could hardly convince herself that it was true. She was in love and she was loved.

It had come about in the strangest way. Helene had been gathering wintergreen in the great forests, and suddenly she had come upon a young man, bent on the same errand, in the same path. And, seeing her, he approached respectfully and asked her to direct him to the Point St. Charles, since he was lost. It turned out that he was an artist from Quebec, and was spending the late fall there, to recover his health. Helene showed him, and when she had done so he must needs walk back with her again.

So they met again and again, Helene reckless now, with her departure at

Just to Be Neighborly.

"My dear," said Mr. Bibbles, "I don't want to object to your friends, but Mrs. Woppit is quite impossible. "I thought so, too, before I got well acquainted with her," replied Mrs. Bibbles, "but she is really quite a charming woman, and she tells me Mr. Woppit is an expert in making home brew." "Well, well, I guess we ought to be neighborly. We'll run over together this evening and ask how they are."—Birmingham Age-Herald.

Under Radio Guidance.

It is now possible to send a crewless vessel as far as radio impulses will carry. The same means can be used in sending a giant torpedo against a foe regardless of how far distant the enemy might be, provided he is within reach of the radio. In vessels the device is attached to the fuel engine, the water engine and the steering mechanism making it possible to guide, fuel and water by radio.

Where Space Is Limited Youngsters Become Overheated, Causing Outbreak of Colds.

Growing chicks must not be confined to crowded quarters at night. If they are, they will become overheated and this, in turn, will lead to the development of colds of which it is very difficult to rid the flock and which may be carried along through the summer and fall, causing a serious outbreak of colds in the laying flocks the following winter.

How can one tell whether or not the chickens have enough room? One of the best indications is the condition of the plumage. If the plumage is bright and clean it is a good sign that the birds are doing well and have room enough. If the plumage is soiled by droppings, it is an indication that there is not room enough for all of them on the roosts, with the result that some are compelled to rest on the floor beneath the roosts and thus become soiled.

A trip to the growing houses after dark will also determine whether enough room is being provided. If there is not space enough so that all the chickens can find room on the roosts, the quarters are too crowded and some of the chickens must be taken out. If all can find room on the roosts comfortably and if the house is well ventilated, the quarters are not crowded and the youngsters should do well.

CONCRETE FLOORS ARE BEST

Promote and Protect Health of All Farm Animals and Increase Profits for Farmer.

A concrete barnyard makes a fine exercise lot in all kinds of weather and always affords a dry spot for the animals' bed. Every shower washes the surface clean and flushes the droppings into the manure pits. Concrete yards lighten the work of the housewife, as there is no mud to be tracked on the walks and kitchen floor. The use of rubber boots is unnecessary. On concrete floors not a particle of grain need be wasted. The way to the water trough is always dry, smooth and passable. Concrete floors promote and protect the health of farm animals and increase the profits of farming, stock raising and dairying.

Profit in Home Grinding

A. E. Anderson, who lives 4 miles south of Thief River Falls, ground his second grist at the Farmers mill recently. From 37 bushels of wheat he received 13½ sacks of flour, 125 pounds of middlings, 4 sacks of bran and 3 of shorts.

A. Svansgaard ground 27 bushels of wheat and received 9 1-3 sacks of flour, 4 of bran, 2 of shorts and 75 pounds of middlings.

USING GUINEA FOWLS AS GAME SUBSTITUTE

Birds Need Large Range for Most Profitable Results.

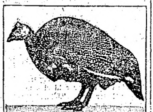
Pearl Is Most Popular of Three Domesticated Varieties—They Will Weigh From 1 to 1½ Pounds When About 2 Months Old.

(Prepared by the United States Department of Agriculture.)

Guinea fowl are growing in favor as a substitute for game birds, with the result that guinea raising is becoming more profitable. Guinea fowls are raised, usually, in small flocks on general farms, and need a large range for best results.

Domesticated guinea fowl are of three varieties, Pearl, White and Lavender. The Pearl is by far the most popular, say specialists of the United States Department of Agriculture.

Guinea fowl have a tendency to mate in pairs, but one male may be mated successfully with three or four females. The hens begin to lay, usually, in April or May, and will lay 20 to 30 eggs before becoming broody. If not allowed to set they will continue to lay throughout the summer, laying from 40 to 60 or more eggs. Eggs may be removed from the nest when the guinea hen is not setting, but two or more eggs should be left in the nest.



Pearl Guinea Fowl.

Ordinary hens are used commonly to hatch and rear guinea chicks, but guinea hens and turkey hens are used successfully, although they are more difficult to manage. Guineas are marketed late in the summer, when they weigh from one to one and one-half pounds, at about two and one-half months old, and also through the fall when the demand is for heavier birds.

MINNESOTA HISTORICAL SOCIETY

THE GOODRIDGE BANNER

VOLUME XV, No. 35. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, SEPTEMBER 9, 1921. $1.50 PER YEAR.

Fair at Bemidji

The Northern Minnesota Fair, to be held at Bemidji September 20-23, will will contain the largest and most varied program ever offered the people of northern Minnesota. Preparations have been in progress for months, erecting new buildings, booking attractions and securing exhibits. An additional ten acres of land was purchased to make possible the enlarged program of the fair.

September 20 is Entry day. There are to be three big afternoon and evening programs. The St. Paul Flying Circus, with its death-defying stunts, a horse-racing program on the newly constructed track, livestock displays that will be second only to the state fair, a new modern grandstand, capable of seating 2,500 people, with 48 exhibition booths, all included under one roof.

There will be merry-go-rounds, ferris wheels, and many other amusements for the public—horse-shoe pitching contests, and vaudeville acts in front of the grandstand afternoon and evening of every day on a specially constructed stage.

A real fashion show, with 35 beautiful models displaying the season's latest modes, will be given in the evening of two days. There will be half a dozen bands to contribute music during the entire fair, included in which will be Bemidji's celebrated Juvenile Boys' band of 100 pieces.

Military parades by the Naval Militia and National Guard, auto polo contests, chamdionship football game, and many other sports will keep every day brim full of interest.

Liberal purses have been provided for premiums. Boys' and Girls' club exhibits will be a big feature. The machinery display will be the best ever shown—and of industrial exhibits there will be plenty. Every day will be crammed with features.

Exhibitors who have been in the habit of exhibiting only at the large fairs have advised the management that they will have their exhibits at Bemidji on these dates. It will be a great community gathering.

KEEPING DOWN STABLE FLIES

Give Stable Refuse Proper Care and Stack Straw So That It Will Not Be Breeding Hole.

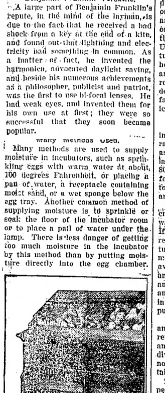
The numbers of stable flies can be kept down by caring properly for stable refuse and by properly stacking or otherwise disposing of straw in a way that will not make it attractive as a breeding place for the flies. Flies cause much distress among animals and at times heavy losses. Control measures are described in Farmers' Bulletin 1097. It can be had free of charge by writing Division of Publications, Washington, D. C.

Benjamin Franklin Versatile.

A large part of Benjamin Franklin's repute, in the mind of the layman, is due to the fact that he received a bad shock from a key at the end of a kite, and found out that lightning and electricity had something in common. As a matter of fact, he invented the harmonica, advocated daylight saving, and beside his numerous achievements as a philosopher, publicist and patriot, was the first to use bi-focal lenses. He had weak eyes, and invented them for his own use at first; they were so successful that they soon became popular.

Many Methods Used.

Many methods are used to supply moisture in incubators, such as sprinkling eggs with warm water at about 100 degrees Fahrenheit, or placing a pan of water, a receptacle containing moist sand, or a wet sponge below the egg tray. Another common method of supplying moisture is to sprinkle or soak the floor of the incubator room or to place a pail of water under the lamp. There is less danger of getting too much moisture in the incubator by this method than by putting moisture directly into the egg chamber.



50 New Creameries Join Central Body

Every co-operative creamery in at least 20 Minnesota dairying counties will be a member of the new state marketing and service association within the next three weeks, officers of the Minnesota Farm Bureau federation are predicting. Every co-operative creamery in Mille Lacs and Brown counties has joined the central agency. In Pine county every co-operative creamery but one has joined, and many other counties are close to the 100 per cent mark. One hundred and fifty creameries are already members of the central body.

"The Minnesota Co-operative Creameries' association, Inc., was organized to serve all the co operative creameries in the state," H. S. Nickerson, president, said. "The time is coming when every co-operative creamery will be a member. The expense of maintaining central service organization and terminal marketing agencies, as well as the cost of operation of the individual creamery, will decrease as the membership of the state organization increases."

Garnes Boy Raises Peanuts

Red Lake county merchants will have an opportunity this year to buy home grown peanuts. Last spring Joseph Foldoe, residing six miles northeast of Plummer, planted two rows about seventy-five feet in length of peanuts and now has a crop that promises to be a hummer. Two vines, each bearing more than twenty-five peanuts, are now on display at the Healy land office, where all who are interested can see them.—Red Lake Falls Gazette.

HOW TO FIGURE COST OF CROPS

Farmer Enabled to Compute for Himself Expense of Producing Various Crops.

REQUIREMENTS OF EACH CROP

If Precise Records Are Not Available on Labor and Material Expenditures Close Estimate Can Be Made of That Section.

(Prepared by the United States Department of Agriculture.)

Figures from which the farmer can compute for himself the cost of production of corn, corn for silage, wheat, oats, and hay, under given conditions, are presented in a preliminary report on labor and material requirements of those crops recently issued by the United States Department of Agriculture. These figures cover the normal hours of man labor and horse labor, and quantities of seed, fertilizers, etc., required per acre for each crop, as determined by surveys by the office of farm management and farm economics.

Apply Basic Factors.

The money cost is found by applying to these basic factors the current rates for labor, seed, etc. Inasmuch as it has been found that, in general, labor and material costs approximate 80 per cent of the total operating cost for these crops, it is easy to find this total when the labor and material costs are known.

The figures given represent average crop requirements for the regions where investigations have been made. If the farmer does not have precise records of labor and material expenditures for his own farm, he can estimate them pretty closely by taking the average for his own region as a basis and applying current rates for labor and materials, with due allowance for any unusual conditions that may exist in his own case. The method of computation is as follows:

1. Determine the total cost of labor and material per acre by applying current rates to the quantities of labor and materials obtained from the individual's own records, or, if such are not available, use those given in the table.

2. Determine the total operating expense per acre by dividing the cost of labor and material by the percentage figure given for each region.

3. Determine the total acre cost of production by adding the interest charge or the cash rent paid for the use of land.

4. To determine the cost per bushel or ton divide the total acre cost by the yield per acre.

The following example shows how this method worked out in figuring the cost of corn for silage on an Iowa farm:

	Amount	Estimated rate	Cost
Man-hours	27.9	$0.35	$9.76
Horse-hours	51.8	.25	12.95
Seed, pounds	8.9	.03	.79
Manure, tons	2.2	2.00	4.40
Gasoline, gallons	2.8	.25	.70
Coal, pounds	14	.005	.07
Twine, pounds	3.6	.25	.90
Total labor and material (80 per cent of operating expense)			29.57
Total operating expense (100 per cent)			36.96
Interest on 1 acre of land ($200 at 5 per cent)			10.00
Total cost			$46.96

Average yield per acre, 9.8 tons.
Average cost per ton, $4.80.

Produce Shippers' Meeting

On account of the losses occasioned in shipment through improper grading and loading of produce, especially of potatoes, the State Department of Agriculture has called meetings throughout the state. A meeting will be held at Thief River Falls on Thursday, September 15.

These meetings are intended as a general conference between the State Department of Agriculture and the shippers and business men of the state with regard to all problems that come up as to grading and loading of farm produce shipments, especially of potatoes, and the proper receiving and accounting for the same. The session laws of 1921 give to the department of agriculture broad powers regarding inspection of produce, and it desires to inform all shippers as directly as possible of the services it can render them. The proper grading, loading and handof produce, especially potatoes, will be taken up at these meetings.

The railroads are co-operating with the state department of agriculture by placing cars on track for demonstration purposes, and the co operation of the county agricultural agents and the business men in the towns where meetings are scheduled is assured.

The department of agriculture especially wishes to meet the business men of this section for a conference looking toward the improvement of the business relations between the country shipper and the terminal markets.

VARIOUS CLUBS GOING GOOD

Reports of Returns of Work Done by Boys and Girls With Poultry and Other Lines.

(Prepared by the United States Department of Agriculture.)

Supervision of boys' and girls' poultry clubs by the United States Department of Agriculture, in co-operation with state agricultural colleges, was continued during the last fiscal year in seven states, where there were 1,186 clubs with 29,180 members, of which 12,786 made reports from which the following totals have been compiled: Eggs set, 731,709; chicks hatched, 510,478; value of products sold, $94,791.32; value of stock on hand, $382,277.37; exhibits held, 712; members exhibiting, 5,615; prizes received, $9,681.11. A feature of progress was the improvement in quality of fowls bred by club members.

Canning Club Girls Inspecting a Club Garden.

Movements of the Earth.

The continents stand at an average hight of about 15,000 feet above the ocean bottom and their weights causing a pressure of 15,000 to 20,000 pounds per square inch on their bases is supposed to be causing a slow creeping of the land into the sea against the 5,000 pounds of pressure by the water at the bottom. The rocks of mines are observed to creep under less pressure. In recent experiments, two hemispheres of rock were fitted together by plane surfaces, and a cavity was ground in one or a steel washer was laid on it and the hemispheres were then forced together by hydraulic pressure continued for months, at room temperature. It was demonstrated that a pressure of 89,000 pounds per square inch will close even small cavities in granite, basalt, obsidian or limestone.

Ruth Outwits a Bandit Gang

By JOHN RENWICK

(©, 1921, Western Newspaper Union.)

"You had better get out of here, if you don't want trouble."

"I've got something to tell you. If you don't want trouble yourself, [illegible] you'd better listen to me."

"What! Threatening me, are you? [illegible] or I'll quicken up that [illegible] habit of yours considerably. Git!" [illegible] Martin [illegible] a run for the doorstep where [illegible].

With [illegible], but quite sprightly, ragged, limping Coyote Pete hastened his steps from off the Bayne domain, and disappeared by the time its proprietor turned around ready to carry out his threat.

"Why, father, wasn't that rather rude?" inquired his daughter, Ruth, stepping through the doorway. She was pretty as a picture.

"Rude?" repeated the ranchman carelessly. "It's the only way to treat such cattle as that. There isn't a worse loafer on the range. He's been a fire-eater, a raider, and is a beggar when he's not on the verge of the delirium tremens. It's all your fault, [illegible]. You encourage him by giving him a snack whenever he takes the fancy to wander by, and now he's making a regular station of it. I'll be back before midnight. Expect your company about dark, don't you?"

"I think so; I hope so," replied Ruth.

Before the evening was over she expected to welcome her lover, Rodney Morse.

It must have been half an hour later when there came a timid tap at the door. Coyote Pete, his threadbare cap in his hand, stood on the step in an humble attitude.

"Why, won't you come in?" asked Ruth in her usual cheerful, generous way. "You look tired, and—perhaps hungry?" she insinuated gently.

"Not this time, Miss," replied Pete. "You see your father don't welcome me very heartily, and I don't want to intrude. But you're the only critter on the range ever takes time to give me a bite when I need it, and I wanted to do you folks a good turn. Your father wouldn't listen to me after I'd tramped twenty miles to give you a warning."

"A warning?" repeated Ruth vaguely.

"I understand your young man and some friends are coming through on the stage this evening."

"Why—yes," replied Ruth slowly.

"Well, I overheard two half-breeds down on the Taylor place talking early this morning, planning to join two other bad characters, hide between here and the railroad, and hold up the stage coach."

In a moment Ruth became alarmed. Within a quarter of an hour she and Pete had arranged to outwit the bandits. He had been gone two hours when the horse he had gone away with came back riderless.

Instantly Ruth buckled a belt about her slender waist, sprang to the saddle and was soon on the trail. Ruth had gone about twenty miles when at a bend in the road she drew rein promptly near some high bushes.

A flicker of light, like that of a match, suddenly flaring in among some heavy timbers ahead, had attracted her attention. Ruth tied the horse and began a detour of the vicinity.

Within five minutes, true daughter of the frontier that she was, she understood the situation completely. She had viewed four men smoking and reclining in a natural hide-out. It seemed that during some recent storm a large tree had been bent over and half uprooted by the force of the wind.

Ruth crept cautiously around to the spot where the top of the tree was caught. Her experienced eye told her that this, once released, would shoot back to its original position with catapult force. For nearly an hour she hacked and clipped.

R-rip—snap—crash! Like a stricken giant rising from the dust, the great tree at last tore from its fetters. There were shouts of dismay and frantic yells of pain, as the roots sank back into place, shutting the baffled plotters into a prison.

Ruth ran out into the road. The stage coach came to a stop. Her lover sprang out, and Ruth was inclosed in his loving arms.

It did not take long for Ruth to explain. Crushed and subdued, the outlaws were dragged out and secured. Ruth had saved the passengers injury and her lover the little fortune he carried with him.

They searched for Pete, and found him where the horse had thrown him. His head had struck a stone and he was unconscious.

Long before the wedding the outlaws were convicted. Then Pete became the handy man about the Morse place, where his greatest satisfaction seemed to be to enjoy the loving happiness of Rodney and his frontier bride.

JANE'S SHARK

By MARY A. MURDOCK

(©, 1921, by [illegible] Newspaper Syndicate.)

Jane's glance triumphantly swept the long stretch of deserted beach. Not a soul in sight! For an hour at least, she might confidently expect to have all this wonder to herself. Gleefully she visioned the chagrin of Tom not to mention her half-dozen other satellites when they should have discovered her to have already taken her morning dip without their ubiquitous ministrations.

It was five o'clock, and half an hour before sunrise. Jane waded out towards a not distant sand bar, her eyes fixed on the eastern sky, where the gray mist was parting, to reveal hidden color treasure of orange and gold. She felt suddenly awed. How big everything was! How tiny her hands seemed, hoved in front of her on the surface of the water. At that moment, she half wished for a chance to snub the owner of a certain steadying if presumptuous arm; then, shaking off the weakness and determined to glory in her new found freedom, she plunged, squealing irrepressibly, into an oncoming wave and swam with an even, sure stroke for the bar.

Once there, she turned to glance at the hotel, oddly somnolent in the half light, then with a superior sniff, intended for its lazy inmates, she stretched luxuriously on the sand and gave herself up to the enjoyment of the spectacle to the eastward. For a full half-hour she watched and marveled and dreamed. How trivial now seemed yesterday's preplexities and intrigues! Her unaccountably poor showing at the tennis tournament, that cataclysmic error which had caused her partner to view her in stunned surprise—how little such things really mattered. She remembered with a certain sense of shame the flirtations which had marked her stay at this most popular of beach resorts. What poor sport it was, after all. Henceforth she determined to repress the eternal Eve in her and to save her smiles for—him. And a delightful speculation gripped her as to who—he might be.

A cold tongue of water lapped her bathing slipper and she jumped up, shivering. The tide had risen. Jealous waves were already trying to edge her off her perch. She fussed with her cap in preparation for the swim back, pausing for a last look at the King of Day, now well over the rim of the world.

For a while she stood there, a charming figure in her modish sea suit, eyes agleam with youth's love of life, curling tendrils of gold whipping her creamy throat. Suddenly she stiffened and a sharp cry escaped her.

Cradled between two of the larger overlapping waves she had espied something sinister and white, a gleaming mass that moved and glowed in the long rays of the morning light. A sort of numbness seized her, as through her mind there flashed all the stories she had heard recounted of the white-bellied terror which many of the hotel habitues were reputed to have glimpsed thereabouts, always from the asylum of a dock.

Jane viewed despairingly the fast-diminishing strip of sand. Ten minutes at the most, and she would have to take her chances with the thing in the water. On the verge of fainting, she yet managed to find her voice. At first thin and weak, desperation lent it strength. A favoring breeze aided her, and the cry which roused half a hundred sleepy vacationists from their beds was that of, "Tom!"

Tom heard with the rest, and not one of the wondering watchers saw anything grotesque in his pajama-clad figure, as it flew to the water's edge.

"Get a boat, Tom," Jane screamed, then toppled and fell.

But Tom didn't go back. A few minutes and he had in his arms a strangely docile Jane, who could only whisper faintly, "Tom, darling Tom," and who clung piteously to him.

As he swam back to the beach, now thronged with half-clad people, his precious burden held close, he was too deliriously happy to wonder why Jane, conceded the best swimmer in the crowd, had not dared negotiate the short distance. Time enough for explanations later—for the present life was very sweet, with that soft "Tom, darling Tom" in his ears.

Through a haze of joy, he was conscious that one of his vigorous strokes brushed away something which felt like seaweed, but which was apparently a white satin petticoat, and he wondered from whose clothesline it was missing.

New Dresing for Burns.

A newly devised instantaneous dressing for burns consists of three rolls of gauze immersed in a solution of bicarbonate of soda and minerol, put up in a container with an instantly removable lid.

Mollie Reveals Her Secret

By NATALIE F. PETERS

(©. 1921, Western Newspaper Union.)

It was the second evening before their marriage. All the arrangements had been completed and for a brief hour the lovers were alone together at the home of the bride-to-be.

"Are you quite reconciled to marrying the daughter of a rich man, dearest?" asked Mollie Greaves, nestling up against Walter Barrett, her fiance. "Just think! If you hadn't been so proud, Walter, we could have been married two years by now."

"And where would my self-respect be, Mollie?" asked Walter. I love you with all my heart, but I could hardly live as a pensioner upon my wife, could I?"

"But, dearest, surely your love for me is stronger than your pride," urged Mollie.

"Well, but now I shall have you and keep my pride too," he answered. "I always knew that some day my pictures would be snapped up. Wallis, the dealer on the avenue, has been offered a thousand dollars for that seascape of mine and—"

He broke off suddenly, for there were tears in his bride's eyes.

"What is it, dearest," he pleaded. "Have I said something to hurt you?"

"No," she sobbed. "But, Walter, I have been deceiving you these two years."

"Come, out with it," said Walter; but he was smiling no longer. What could it be? Something dreadful, no doubt, and something by which he was to prove the sincerity of his love for her.

"Then listen, Walter, and let me finish before you say a word," said Mollie, sitting up primly and stiffly before him. "It's about your pictures. During the last year you have been getting better and better prices for them from Enoch, haven't you?"

"Well, I should say I have."

"Then listen, Walter," said Mollie quickly. "That is all a trick of mine and father's. When you asked me to wait until you had made a name for yourself father thought you foolish. He had money enough for both of us, he said, and nothing would have pleased him better than that you should continue painting all your life and let the future take care of itself. But when you refused—well, you know that 'Moonlight Over Brooklyn Bridge' of yours?"

"Well, I should guess so. Enoch gave me $250 for that and it was my first success."

"Enoch didn't buy it," sobbed Mollie. "At least, didn't buy it on chance, as you suppose. Father went to him and told him he would pay $250 for that when you took it to Enoch and $50 extra for each picture you painted until you reached a thousand dollars. And those customers of Enoch's who you thought bought all your pictures—they were just father and me, Walter. And every picture that he has bought he has given away. And now I know that things are back just where they were two years ago, and I oughtn't to have told you, but I couldn't marry you with a lie in my heart, Walter. So kiss me once and then I will leave you and not see you again until—why, Walter!"

He was bending over her and laughing, and the kiss that he gave her did not seem in the least like a farewell kiss, but rather a harbinger of many kisses to come.

"Walter! You aren't going to leave me? You are going to forgive me?" Mollie whispered incredulously.

Walter sat down in his chair again and drew her on his knees and kissed the last of the tears away.

"Now you listen to me, Mollie, and don't you interrupt me until I am through," he began. "Of course if I had known of that little trick I should have been extremely angry. But it has helped me in more ways than you imagine. In the first place, this giving away of my paintings to hospitals and schools has advertised me and created a demand for my work."

"Yes," breathed Mollie.

"And only last Friday I was in at Wallis' and he said to me: 'I wish you wouldn't give all your work to Enoch, Mr. Barrett. Why don't you let me have some of it?' So I told him that I had made a year's contract with Enoch to give him so many pictures and that I couldn't break it. And what do you think? Well, if I hadn't entered into that arrangement I should have been able to dispose of my work at just about twice as much again, and if my pictures hadn't been dispersed throughout the city I could have a collected exhibit this winter as Wallis wants. So that you and my respected father-in-law to be have deprived me of just about half a year's income."

"Walter!"

"Five thousand dollars, and I'm going to get it back from you."

"How?" asked Mollie, smiling.

"One dollar apiece," answered Walter. "Five thousand kisses at compound interest, doubling themselves in five and twenty years."

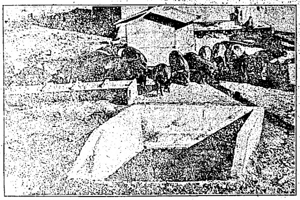
SUMMER IS EXCELLENT TIME TO EXTERMINATE MANY HOG PESTS



Medicated Hog Wallows Are Much Liked by Animals.

(Prepared by the United States Department of Agriculture.)

Thousands of dollars' worth of good hog feed goes every year to the feeding of mange mites and lice, it is shown by reports to the United States Department of Agriculture. That is to say, after the hogs have fed on the corn and other forage and put it in the way of becoming hams, bacon or side pork, the parasites swarming over the animals' bodies take their toll and reduce the victims' flesh through discomfort and disease. These parasites are more numerous and active in cold weather, when the hair is thick, but summer is an excellent time to exterminate the pests that remain over the season.

Hogs Like to Wallow.

The instinctive habit of the hog to wallow in water when the weather is warm may be taken advantage of in applying treatment for external parasites, department experts say. By medicating the water in properly constructed wallows, remedies for lice and mange may be applied in a satisfactory manner with a minimum expenditure of money, time and labor. If the results from the use of medicated wallows are to be satisfactory, however, it is necessary to consider the nature and habits of the animals to be treated and plan accordingly.

If conditions are such that hogs may exercise choice in the matter, they invariably select shallow water in which to wallow. If the nostrils can be kept above the surface easily, the hog will lie down on its side and roll, then get up and repeat the operation on the other side until the entire body is wet.

The proper depth of liquid in the wallow depends upon the size and number of hogs using the wallow. For pigs weighing from 40 to 80 pounds, the wallow should be charged with liquid to the depth of about 3 inches. For hogs from 80 to 150 pounds, 4 inches is sufficient. The medicated liquid should never be so deep that the hogs are afraid to lie in it. For a number of hogs of varied sizes, a depth of from 3 to 4 inches is most practicable. No medicine should be added until the hogs have had three or four days to get accustomed to the wallow. It should not be kept medicated for more than about 48 hours at a time, as the hogs can get well soaked in that time, and constant application is liable to irritate the skin. After that, medicaments may be added at intervals of a week or ten days.

Simple Remedy as Effective.

Crude petroleum is one of the simplest remedies that can be obtained for the purpose, and is the only one that will eradicate both lice and mange with one treatment. No heating equipment is necessary and any kind of reasonable good water can be used. The oil apparently does not injure the animals if the freshly oiled hogs receive proper care and attention. Unprocessed crude oil, as it comes from the wells, is probably the most effective crude oil dip. However, processed crude petroleum, known to the trade as fuel oil, which is the residue from manufacturing gasoline and other light hydrocarbons, is commonly used and is effective in eradicating lice and mange. As a rule, the thinner the processed crude oil, the better it is for a dip or wallow.

In using oil in wallows, about one pint for each pig or one quart for each grown hog is recommended. This can best be determined by observing whether the pigs use the wallow and whether their bodies become well coated with oil. If all are not well coated, add more oil to the wallow. The oil will make the water distasteful enough so the hogs will not try to drink it.

Hog wallows are comparatively easy of construction. For best results, they should be of concrete, sufficiently large to accommodate the number of pigs in the inclosure, and with one side sloping to give easy access.

The oil floating on the surface of the water limits or prevents evaporation, and the water if exposed to the sun during the day soon becomes so warm that hogs will not lie in it. If the wallow is exposed to the direct rays of the sun during summer months so that the hogs will not lie in it, it is advisable to construct a shade over it and the oil should be added in the evening. Oil added after sundown is usually carried out on the bodies of the hogs before noon the next day.

A shady, well-ventilated place should be provided for freshly oiled hogs. All wallows should be drained and cleaned as often as necessary to keep them and the surroundings in good sanitary condition. It is very important that the wallow be properly constructed and cared for; otherwise it will soon get into a filthy and insanitary condition.

Hog lice do not live long when separated from the animal, but as a precautionary measure all small inclosures which have contained lousy hogs should be cleaned and disinfected before being used for a new lot of hogs. The litter and manure should be removed and the floors cleaned, after which the woodwork and floors should be sprayed with a good disinfectant.

Farmers' Bulletin 1085, "Hog Lice and Mange," gives much useful information about the pests and methods of eradication. It will be sent on request to the division of publications, Department of Agriculture, Washington.

SOWING TURNIPS TO FOLLOW VEGETABLES

No Better Crop to Utilize Vacant Spaces in Gardens.

They Are Useful for the Table, and to a Limited Extent Will Supply Place of Potatoes—Reasonably Rich Soil Needed.

(Prepared by the United States Department of Agriculture.)

As a crop to utilize garden space after early vegetables have been harvested, nothing is better than turnips. Turnips should be planted in most parts of the country about July 25, but in the extreme South as late as the last of August and can be left in the ground until after several light frosts or all winter in the South. They are useful as a table vegetable, and to a limited extent, will supply the place of potatoes. It is the general opinion of specialists of the United States Department of Agriculture that the American public could consume many more turnips than it does, a fact of particular interest this year when there seems every indication of a curtailed potato crop.

For field sowing, turnips are usually broadcasted. The particular requirement is a reasonably rich soil finely raked and leveled off to avoid water collecting in pools. The seed should be sowed sparingly. One homely rule is to take the quantity which seems sufficient and divide it in half. After the seeds have been scattered on the surface of the ground, they should be raked in. This may be done by dragging a piece of brush over the ground. The surface should be well smoothed. It is a good plan to sow turnips just after a rain, giving them opportunity to sprout before a crust forms. After sowing, they will need little attention until harvest.

CANDLE AND GRADE ALL EGGS

Department of Agriculture Endeavoring to Teach Women Best Ways of Marketing.

Farm women frequently have entire charge of the marketing of eggs, butter and poultry. In some states they form what are called "egg circles" for marketing their eggs in large quantities. The eggs are collected regularly by one of the members or by some one hired by the circle. Efforts are being made by marketing agents of the United States Department of Agriculture to teach these farm women the value of properly candling and grading the eggs so that only the best are marketed.

GOOD AND POOR PRODUCERS

Owner of Small Flock Can Determine by Observation Which of His Hens Are Layers.

In any flock some hens will be found to be much better producers than others. Often there are a few hens that are such poor layers that it doesn't pay to keep them. Where the flock is small the owner can determine by observation which hens are merely boarders, and these are the ones to eat.

IDEAL CONDITIONS FOR HENS

Egg Production Is Encouraged by Sunshine, Fresh Air, Green Feed and Comfort.

Hens lay best in the spring of the year. It would be reasonable to suppose that the nearer to spring conditions the henhouse and its occupants can be kept the better will be the egg production. Sunshine, fresh air, green food and comfortable temperature are the ideal conditions.

USING GUINEA FOWLS AS GAME SUBSTITUTE

Birds Need Large Range for Most Profitable Results.

Pearl Is Most Popular of Three Domesticated Varieties—They Will Weigh From 1 to 1½ Pounds When About 2 Months Old.

(Prepared by the United States Department of Agriculture.)

Guinea fowl are growing in favor as a substitute for game birds, with the result that guinea raising is becoming more profitable. Guinea fowls are raised, usually, in small flocks on general farms, and need a large range for best results.

Domesticated guinea fowl are of three varieties, Pearl, White and Lavender. The Pearl is by far the most popular, say specialists of the United States Department of Agriculture.

Pearl Guinea Fowl.

Guinea fowl have a tendency to mate in pairs, but one male may be mated successfully with three or four females. The hens begin to lay, usually, in April or May, and will lay 20 to 30 eggs before becoming broody. If not allowed to set they will continue to lay throughout the summer, laying from 40 to 60 or more eggs. Eggs may be removed from the nest when the guinea hen is not setting, but two or

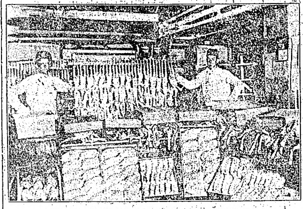
CAREFULLY PREPARING POULTRY INSURES HIGHER MARKET PRICE



Preparing Poultry Under Modern Conditions for Market.

(Prepared by the United States Department of Agriculture.)

Not a day passes that inspectors employed by city, state or federal government, do not condemn food of one kind or another because it is unfit for human consumption. Sometimes this is due to deliberate adulteration, an intention to defraud the purchasers, but more often it is the result of improper packing, neglect to consider temperatures to be encountered in transporting from point of origin to destination, or failure to consider the time which must necessarily elapse before the product is likely to reach the consumers' tables.

All this entails not only great loss in money, likely to be reflected in prices demanded of the public, but also it endangers the public health, because occasionally some unworthy article slips through inspection and is served as food. Enough food products spoil every week to form a very important part of the amount needed by the people; and practically all of it might be saved through intelligence and care on the part of the producers and shippers.

After your chickens are fattened and ready to kill, it will pay you to study the methods of killing, bleeding, picking, chilling and packing described fully in bureau of chemistry circulars: 3, "How to Pick Chickens," 52, "How to Wrap Heads," 61, "How to Kill and Bleed Market Poultry." Issued by the Department of Agriculture, these circulars may be had by application to the division of publications. The man who hopes to succeed should know everything possible about his proposed market, and its demands.

Broilers in Demand.

Ordinarily the demand is for broilers of three sizes—squab broilers, small broilers and large broilers. Squab broilers weigh, dressed, from three-quarters to one pound; small broilers, the size most in demand the greater part of the year, weigh from one to one and a quarter pounds each, and large broilers from one and one-half to two pounds.

Broilers may be sold alive or dressed, in the discretion of the shipper; but if dressed, this should be done according to the demands of the market, and these demands one can learn only by inquiry and study. Getting the product ready for the buyer in the public market has much to do with the price received. The appearance of the article, the manner in which it is packed, and its condition—these are the points that make a reputation for the shipper.

Temperature to Maintain.

The temperature of chickens when they are alive is 103 degrees Fahrenheit. This must be reduced after killing to 32 degrees Fahrenheit or less before they can be packed for long hauls in refrigerator cars. The time required to chill fowls usually is about 24 hours, and the packer must be sure that the body cavity, as well as the skin and flesh, are free from heat before the birds leave the chill room. Failure to observe this requirement is responsible for much of the ill-conditioned poultry found in the public markets. The range of temperature permitted, too, is small. Below 30 degrees Fahrenheit the flesh is frosted; above 35 degrees Fahrenheit decay proceeds too rapidly to permit of long hauls to distant markets. Of course, the birds can be frozen after they are chilled and so shipped, and this is a very excellent plan, especially if the haul is across a hot country, say the specialists in the Department of Agriculture.

Packing for Market.

It is customary to pack broilers with the breasts up, and the feet hidden. The prevailing method at present, where refrigeration is available, is to pack the chickens in small boxes holding a dozen each, but small boxes suitable for one or two chickens have recently been placed on the market. If the business is to be permanent the containers should carry the farm name, or the name of the shipper if the farm has no name. An attractive advertisement on the box has a great deal to do with marketing, a fact proved long ago to the satisfaction of shrewd business men.

Small packages are becoming more and more popular. Two layers of chickens in a box are being discarded for a single layer. It is being realized that refrigeration is more perfect if the carcasses do not touch, and if pressure on such tender tissue as chicken muscle is eliminated as far as possible. On this account heads are wrapped in waxed paper and turned back where they do not rest against the soft flesh of the breast or thighs. No longer does the packer thrust old cocks, broiling chickens and fowls indiscriminately into a big sugar barrel, pressing them down in his effort to pack tightly, and so bruising the flesh and tearing the skin.

PROBLEM IN MASKS

By CAROLINE H. WILSON.

(©, 1921, by McClure Newspaper Syndicate.)

"How utterly absurd," exclaimed Cecile, impatiently tossing her book onto the table.

"Why, what is absurd, and what are you reading, anway?" asked Florence.

"'The Masquerader,' and it is preposterous to suppose that the wife of one man could mistake the other man for her own husband. It is ridiculous, I say."

"Oh, I don't know," said Florence.

"I agree with Cecile," exclaimed Verona, a Western girl, and a pupil of Sargent's gymnastic school. "Some trick of speech, some mannerism, or peculiarity of deportment, would surely give one away."

"That's so," chimed in Rachel. "Just look at this room full of girls, for instance. No two of us are alike. Mary calls everyone 'my dear' and exclaims 'Oh, grief!' every time that anything goes wrong. Florence's pet expression is 'Gummy.' Cecile is generally mute. Maud could be identified anywhere by her laugh, and I suppose I have my share of peculiarities."

"Then Florence talks all the time and when no one else will listen to her talks to herself."

"Well," added Maud, coming to Rachel's defense, "you just try being somebody else, as Mr. Loder did, and you will notice those things."

"Gummy!" exclaimed Florence. "I have just the idea!" Then she paused. "Yes, I have it."

"Well, what is it?" asked Cecile, interested to see if anyone could solve the problem that had perplexed her.

"We will have a stunt show at dinner tonight, and impersonate each other. Then we will see if it changes Cecile's mind as to the possibility of Loder taking the place of Chilcote successfully."

"Agreed. We have half an hour to dress," said Maud, "so let us fly to our rooms."

It was planned that Maud was to take the part of Cecile, the quiet one, and the youngest of the college house family. Maud, the boisterous tomboy, who was fully 5 feet 9, was struggling into a shirtwaist of Cecile's. A short skirt, which came nearly up to her knees, completed the ludicrous effect.

Cecile, in her room before the mirror, had a very woe-begone countenance.

Florence came into the room laughing uproariously, perhaps rather overdoing the part of Maud. Maud, the tomboy, came in silently and slipped into Cecile's place. Her lips were tightly compressed to restrain from laughter.

That meal was a merry one. Florence, imitating Maud, who was always quoting Shakespeare, presumably to air her knowledge of Professor Kittedge and his English two-class, amused everybody.

Mary talked on every subject dear to a freshman, "cuts," "quizzes" and "summonses to the dean."

Rachel, trying to be Western, flatted her a's, rolled her r's, talked about cowboys and branding cattle, and finally waxed eloquent on woman's rights.

Verona, vainly trying to disguise her Western mannerisms, talked enthusiastically about the latest exhibition of pictures by a Spanish artist—in Boston.

"Well, one night for a very short time, if he was physically like the one he was impersonating. But I think it would be deadly wrong even if it were possible."

"Well, I still think it was right. Think of the relief to Chilcote's wife. And think of his power in Parliament, which Loder more than sustained," said Florence.

"A gentleman to see Miss Cecile," announced the maid at the door.

"I consider it an awful overthrow to the novel," said Maud, "but we've seen ourselves as others see us, at any rate."

Just then Cecile came back to the room, looking flushed and twirling a big diamond on her finger.

"Girls, I have changed my mind. It is possible and right to wear a mask. Mr. Morris says he asked me to be his wife because he thought me a sweet little thing, not too priggishly pedantic."

"Here! Here!" yelled Maud, at the top of her lungs. "And you graduating from Sanders' theater tomorrow with a magna cum laude and final honors to Latin and French, all covered in three years and a half! You deceiving little blue stocking!"

THE GOODRIDGE BANNER

VOLUME XV, No. 36. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, SEPTEMBER 16, 1921. $1.50 PER YEAR

Northern Minnesota Putting on a Real Fair

The Northern Minnesota Fair, to be held at Bemidji, Minn., Sept. 20, 21, 22 and 23, promises to be the best fair ever attempted by any county, and is advertised as "second only to the state fair," which is quite a claim—but from the amount of livestock and agricultural exhibits already entered, and the amount of money spent for a program of sports and amusements, the managers feel warranted in making such claims.

Permanent improvements have been made that run into large sums, and a building program for next year is already under way that calls for the expenditure of thousands of dollars.

The optimism shown by the Fair management in these large expenditures is warranted because they have prepared a program that is bound to bring favorable comment from all who attend, which will insure success in future years also. A new grandstand has been built that will accommodate the crowd that Bemidji expects to entertain. The track has been put into shape for the big racing events.

To date, nearly 1,000 head of livestock have been entered for exhibit.

The five railroads running to Bemidji have granted a one and one-half fare rate from Sept. 19 to 25, a concession heretofore given only to the state fair.

Married

One of the season's prettiest weddings was solemnized on Wednesday morning at 10 o'clock at St. Bernard's church in this city when Miss Una Nelson, only daughter of Mr. and Mrs. C. W. Nelson, became the bride of Walter R. Patterson, son of Mr. and Mrs. Robert Patterson of Cooperstown, N. Y. Rev. M. J. Noesen performed the ceremony in the presence of about 200 guests.

Mrs. Patterson is one of the popular young ladies of the younger set. She received her high school education at Paynesville, later attending Pillsbury academy at Owatonna and Northwestern university at Evanston. Mr. Patterson is an engineer on the Minnesota Northwestern railway.

School Notes

School is going in full blast. The attendance is increasing, and soon the entire school family will be on duty.

Great interest is manifest in the commercial course of the high school. Typewriting necessarily had to be limited to the junior and senior students.

Oscar and Ernest Wiseth enrolled in school this year for the first time.

At the regular assembly hour Wednesday morning the following program was carried out: Several songs by the school and short talks by the following members of the faculty: Misses Giefer, Vaughan and Mrs. Breen. They all expressed themselves as being happy to be back to work and emphasized several factors indicative of a successful school year.

A letter was received this week from the State Department of Education giving an itemized account of the state aid due this school for the school year 1920-1921. The regular school apportionment and library aid is not listed, which is due this district in addition to the following amounts:

Graded Aid—Regular or flat $600, high school teachers $500, supplemental $700. Tuition from state funds $153. Consolidation—Regular or flat $300, transportation $2,651. Total $4,904.

Home Brew Mixture

Somebody sent the editor of the Poketown Gazette a few bottles of home brew. The same day he received for publication a wedding announcement and a notice of an auction sale. Here are the results: "Wm. Smith and Miss Lucy Anderson were disposed of a public auction at my farm one mile east of a beautiful cluster of roses on her breast and two white calves, before a background of farm implements too numerous to mention in the presence of about seventy guests, including two milch cows, six mules and one bob sled. Rev. Jackson tied the nuptial knot with 200 feet of hay rope and the bridal couple left on one good John Deere gang plow for an extended trip with terms to suit purchaser. They will be at home to their friends with one good baby buggy and a few kitchen utensils after ten months from date of sale to responsible parties and some fifty chickens."—Ex

A Prohibition Enforcement Convention

Will be held in Minneapolis September 19 and 20, 1921. Former National Prohibition Commissioner Hon. John F. Kramer, Congressman Andrew J. Volstead and other notables will be among the principal speakers. Hon. W. I. Norton, author of our strong state prohibition law, will conduct a conference on what the state law contains and how it can be quickly and forcefully applied.

Elsie Wins a Grandpa

By HUBERT R. PLAIN

(©, 1921, Western Newspaper Union.)

Bright as a dollar, Elsie Danvers had a great idea in her busy little head. She was only nine years old, but she knew more than most children of twelve, and thought more deeply and more to a purpose than some people of twenty.

Under her arm she carried a small cardboard box, neatly done up in wrapping paper and carefully tied. To her way of thinking it was a very important belonging. When she came to the neat little cottage known as the Hyde home, she found its spinster occupant, Miss Susan, resting on a rustic bench after her exertions in trimming the rose bushes.

Miss Hyde liked the Danvers people greatly, and little Elsie particularly well.

Miss Hyde received her little visitor with a welcome smile. She at once noticed the serious face, usually so sunny. She made room for Elsie on the garden seat.

"Miss Hyde," spoke Elsie at once, "I heard some people telling about the parcels post."

"Have you something you wish to send, Elsie?" asked Miss Hyde.

"Yes, ma'am, I have," said Elsie in a prompt, business-like way. "I heard mamma crying the other day while she was telling the minister's wife about my grandfather. I never knew I had one before. He hasn't been very good to mamma, but maybe he doesn't know how she loves him, and how she puts some flowers on his picture whenever his birthday comes around. On my birthday two friends gave me the same present—those little speaking dolls, you know. Well, I'm sending one of them as a present to grandpa in this box, and I've written him a little note in it telling him about poor papa and all of us, and I want you to direct it—I've got his name and everything: 'Mr. John Marsh, Rushville'—and send it for me through the parcels post."

"I will do just as you say, dear," she said, "and nobody shall know about it except you and I."

Elsie parted with her precious package with supreme confidence in her good friend. Miss Hyde took it down to the postoffice and mailed it. She did some thinking on the way. She had heard of stern, hard-hearted old John Marsh. Mrs. Nellie Danvers, the orphan child of a brother, had been adopted by the old man. Later he also took charge of Eunice Ross, a distant relative. Mr. Marsh did not seem to disapprove of his ward's marriage to Albert Danvers. Yet, while they were off on their honeymoon he had written to them, forbidding them to ever approach him again in any way.

Nellie had written, pleading for an explanation. It was coldly refused. The next thing she heard was that her uncle was arranging to will his fortune to Eunice. Then she was shocked to hear of the death of the latter. Since then old John Marsh had shut himself in to a miserly, cheerless existence.

"John Marsh, Rushville," received the parcels post package two days later. He carried it into the house, opened it, and read the tiny childish note it contained. His eyes glared. He gritted his teeth as he gave the squeaky doll a fling through a doorway, into the room Eunice had once occupied.

All the same, he did not sleep very well that night.

A squeak, clear and distinct, sounded through the house. Noiselessly the old man arose from his bed and reached the sitting room. In the one beyond, where he had flung the doll, was a light. He seized a gun he kept always loaded, crept to the open doorway, and made out two masked men ransacking a desk that had not been opened since Eunice died.

Bang!—John Marsh fired and the burglars disappeared.

The old man found a bag left behind by the burglars filled with money and papers secured from his own wardrobe. Then, as he began to pick up the papers strewn about from the desk Eunice had owned, he made a startling discovery.

What had estranged him from Nellie was a letter apparently in her handwriting shown him by the plotting Eunice. Addressed to her lover, it referred to her uncle in sneering terms, telling how she cared only for the fortune he might leave her. Now, among the scattered papers John Marsh found evidences of Eunice having laboriously practiced to counterfeit Nellie's handwriting.

Towards the end of the week, as Elsie was sitting in the garden, an old man opened the gate. Carefully repacked, he carried the parcels post package.

"Why," shouted the little miss, all smiles and dimples—"I know who you are—grandpa—'cause that little box I sent, and—oh, I must tell mamma!"

It was a tearful, yet happy interview, that which followed between uncle and niece. All was explained and when Mr. Danvers came home that evening he learned that all the family were to return to Rushville, where he was to have a free, gladsome life caring for the old man's property.

"Dear little child," said John Marsh, fondly stroking the golden-haired fairy who had brought all this about—"my fortune saved, my old-time happiness back to me, all through you and that blessed parcels post."

REDEMPTION

By MARGARET A. NORTON

(©, 1921, by McClure Newspaper Syndicate.)

It was a crucial moment. Rachel recognized it. Without a second's hesitation she grasped the steaming coffee pot and, with an alarming agility, sent it, contents and all, right through the big pane of glass in the dining room window.

Then, with a slightly heightened color, but apparently otherwise calm and placid, she began filling some glasses with water to substitute in place of the usual beverage.

Ralph, astonished, aghast, his mouth open, stood as if turned to stone and watched his wife's movements. To his astonished gaze she appeared as cool and chilly as a winter morning.

"They" had told her—why, even Ralph's own mother had warned her—that Ralph's ugly temper had spoiled his first wife's life; that he was given to fits of "meanness," which while they lasted made life near him, or with him, a misery and a terror.

"They" had said that she would rue the day she married him, for he was "overbearing and tyrannical" and "had no thought for anyone but himself."

To all well meaning critics, except Ralph's mother, Rachel had turned a smiling but unmoved face. With Mrs. Rodman she had talked earnestly.

For some months her cheerfulness and the love Ralph undoubtedly bore his handsome and cheerful wife held his tyrannical temper within bounds. But this lovely April morning he had risen with all his disagreeable propensities on the surface.

Rachel had not uttered a word of remonstrance, not even when her husband kicked the unoffending cat, threw a chair in his path to the other side of the room and nearly broke the covers of her new range when he replenished the fire. She pretended not to notice that her merry remarks were unanswered or glared at. It was not until, through his own carelessness, he had spilled a few drops of hot coffee on his wrist and had, with a muttered oath, thrown the offending cup across the room, landing it in scraps on a pretty and prized rug, that Rachel acted.

It was then that she followed his example, but to his horror and the sudden cooling of his pettish resentment, not only followed his example, but went his several better, for the window pane was a valuable one and the coffee pot one of their best wedding gifts.

Neither spoke during the hasty meal that followed.

At dinner she acted just as usual. Ralph was very silent. He noted that the debris of the morning explosion lay where it had fallen. His mother and uncle were coming to tea.

After dinner he gathered up the broken glass and cleared away the coffee grounds.

That night she prepared a letter. It was not long. In it Rachel told her husband that she had been warned about his inflammable temper; that she loved him despite that very bad blemish, and she believed he was manly enough to conquer his ruling passion. She told him that she meant for a while, "only for a while, and just as an object lesson, to show you how terrible such behavior is. When I see that my acts are not bearing fruit and that you are not bearing fruit and that you are not worth my descending to such tactics then I shall say 'good-by,' and forever 'good-by.' I cannot live with a husband unworthy my respect. I should still love you, Ralph, but I should leave you just the same as if my love had departed, for I am an individual with a right to happiness, and it would be unobtainable with you. Think it over, husband!"

Ralph never mentioned the letter, but it was many months before he allowed his besetting vice to get the better of him again, and when he did it proved to be the last time. This time he stoned and killed a hen that had done some damage in the garden. When Rachel, who loved all helpless creatures, saw the mutilated body she acted. That night when Ralph went out to feed his poultry, which he fancied, despite his occasional cruelties, his poultry house was empty. Rachel had given every bird away.

"When you can use creatures humanely," she said, "I'll agree to have more here. But that hen's broken ribs and body made me understand that you had to learn humane principles before we could trust animals of any kind in your hands."

[illegible] the last lesson necessary. Ralph [illegible] point. He began to respect [illegible] never done before with [illegible] woman who had come into his life, [illegible] will which refused to submit [illegible] to injustice and tyranny.

"I must not lose her," he thought, "for if she goes it will be forever."

[illegible] later as the pair were looking [illegible] some fowl that Rachel herself [illegible] in the poultry houses, Ralph remarked reminiscently:

"I'm mighty glad, Rachel, that you had the gumption to hit hard from the shoulder when I merited it."

And Rachel, her prophecies fulfilled, answered: "I never hit you, honey. But I did hit the black moods that were killing you."

Hartridge Locates Two Claims

By FREDERICK HART

(© by McClure Newspaper Syndicate.)

"I've never eaten such delicious waffles!" exclaimed Stephen Hartridge as he gazed regretfully at a clean-swept plate. "Do tell me, Mrs. Ward, how you manage to get them so light and crisp!"

Mrs. Ward beamed on her prize boarder. Stephen Hartridge was a young mining engineer who had been sent by a great corporation into the back country to investigate the mineral resources of the region; he was young and good looking, and there had been some competition among the keepers of boarding houses for the honor—and profit—of his trade. Stephen had tried them all, and after one trial at Mrs. Ward's had remained as a permanent guest. He lived down at his little shack, where he spent his time making out reports and testing soils and unpromising looking rocks; but for his meals he never failed to report to Mrs. Ward promptly on the dot. His remark about the waffles was but one of many admiring comments which he had given.

"Bless you, Mr. Hartridge, I don't make them waffles. I'm no hand to cook. I just run the place and see that everybody gets served. It's daughter Mary that's the cook. She can take a little flour and some milk and an egg or so and make you think you're sittin' right at your mother's own table!"

"Really? Why haven't I met this paragon of the kitchen? You are selfish, Mrs. Ward."

From another man the implied request might have made Mrs. Ward angry, but her favorite boarder could do no wrong.

"You just set where you are, sir, and I'll ask her to come in," she replied genially. Then, calling to the back of the house:

"Mary! Oh, Mary! Come here a spell!"

"Yes, mother," replied a voice. In a moment the door swung open and Mary entered. Stephen rose from his seat and waited expectantly.

"Mary, this is Mr. Hartridge, the engineer down at the river shack," beamed Mrs. Ward. "An' this is my daughter, Mr. Hartridge—the one that makes them waffles you like so much."

Mary blushed and laughed delightfully. Stephen Hartridge looked at her more closely. Above the shrouding apron that covered her from shoulders to ankles he saw a roguish face, lighted by her smile, with two merry blue eyes and curling light hair that even the handkerchief knotted about it could not entirely keep in order. And she, as she looked at his sunbrowned countenance and saw his six feet of strength and poise, felt that for the first time in her life she had met a real man. But the thoughts in both their minds were not expressed. Stephen said:

"I liked your waffles so much that I couldn't resist the temptation to cry, 'Author! Author!'"

"Just so you don't ask me to make a curtain speech," she laughed. "I'm sure I don't mind appearing and bowing." And she suited the action to the word.

Stephen was delighted. He had not expected her to understand his theatrical allusion, but she not only understood it but capped it as well. He would have said more, but that she [illegible] to the kitchen to attend to the wants of something or other that was in the oven. Stephen sat back with a sigh.

"Mrs. Ward," he said, "you must let me come to call some evening."

"I'd love to have you," replied the motherly old soul. "And I'm sure Mary [illegible] too. You come right along any time you feel like it."

That was the beginning of their acquaintance—an acquaintance that quickly ripened into warm friendship. Stephen found Mary delightful in every way, and she in turn learned to think often of the bronzed young engineer who spoke so quietly and moved so gracefully and comported himself in such manner as she had always imagined a gentleman would.

Then one day Stephen failed to appear at mealtime. The day passed, and another, and still no Stephen. Mrs. Ward, anxious, made inquiry and discovered from some grizzled miners that Stephen was holding a claim he had located for his company—a job that necessitated his staying on the land night and day till the proper papers could be made out.

"But he hasn't anything to eat!" cried Mary in dismay.

"Oh, he'll git along somehow er other," replied the miner. "I see him cookin' onct er twict as I passed his shanty. Got any more o' them griddlecakes, Mis' Ward?"

That night—the fourth of Stephen's absence—a cold rain set in. After clearing the supper table Mary stood looking out at the gray swirls of water that swept across the valley. She thought of Stephen in his cheerless little shack, eating food he had cooked himself—he hated cooking, he had said once. She looked and saw no light in the shack. In a moment her mind was made up. She darted into the kitchen and returned with a well-stocked basket. Throwing her shawl over her head she stepped out into the rain and began the slippery descent to the cabin in the valley.

She was drenched and soaked when she got there. Her rap was answered

CABBAGE BEETLE DOES MUCH HARM

Insect Carefully Avoids Arsenical Sprays Effective Against Many Other Pests.

BEST METHODS FOR CONTROL

Tobacco Dust Found to Be Most Effective of Repellents Tested—Arsenate of Lead Applications Found Satisfactory.

(Prepared by the United States Department of Agriculture.)

Evidently the Western cabbage flea beetle was not hatched to die by poison—at least by sprays of arsenicals found so effective against many crop insect pests. It may be driven away, however, by poisonous applications, and herein lies the methods of control discovered by specialists of the bureau of entomology, United States Department of Agriculture, whose experiments in combating the pest are described in Department Bulletin 902, "The Western Cabbage Flea Beetle," recently published. This insect is by no means confined to cabbage, but frequently does serious injury to turnips, radishes, mustard, kale and other cole crops, to sugar beets, table beets and under exceptional conditions to beans and peas.

Dainty in Habits.

The beetles, it is said, are dainty in their feeding habits, carefully avoiding foliage that has been sprayed, and attacking either unsprayed parts or flying to other plants. Repellents such as tobacco dust were found to be the most effective of those tested, and of the arsenicals, heavy applications of arsenate of lead gave the most satisfactory results.

A formula that gave excellent results was arsenate of lead paste, 1 pound; fish-oil soap, as a sticker, 1 pound; and water, 10 gallons. Half of this weight of powdered lead arsenate, or 2½ pounds in 50 gallons of water, is equally effective, with a corresponding quantity of soap, to act as an adhesive, or "sticker." It should be applied with a sprayer fitted with elbow extension, and special effort should be made to coat thoroughly the under surface of the leaves. Two or three applications at five to eight-day intervals are sufficient, even in case of severe infestation, provided the first application is made promptly on the first appearance of the insect.

Control by Nicotine.

The pest can also be controlled by nicotine sulphate, one-half pint, 40 per cent solution, in 50 gallons of water, with 2 pounds of soap added, which is a deterrent. It is not possible, however, to control this insect entirely when it occurs in its greatest abundance.

In addition, it is desirable to keep the plants thrifty and well watered. Mechanical and crop traps can be used with advantage. Clean culture is always advisable.

BROOM CORN FIBER DEMAND

Crop Compared With Many Other Farm Products—Marketing Methods Neglected.

(Prepared by the United States Department of Agriculture.)

Broom corn is marketed today by practically the same methods in use 70 years ago, according to statements made by specialists of the bureau of markets, United States Department of Agriculture. It is a small crop compared with many other farm products and, owing to its limited use, has failed to command the attention [illegible] marketing agencies which have [illegible] such an important part in de[illegible] the highly efficient systems for [illegible] tribution of the more impor[illegible] ucts.

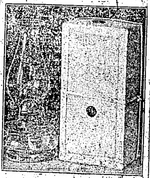
Boys and girls who are members of poultry clubs, or those who are interested in any way in chickens, should learn how to candle and preserve eggs. Candling means the sorting out of bad eggs before a strong light in such a manner that the rays of light come to the eye through the egg so that the contents can be seen and the condition noted.

The shell of a newly laid egg has a soft "glow" or "bloom" which is a sign of perfect freshness. This glow or bloom is destroyed by handling, and in any case disappears after the egg has been exposed to the air for a short time. After that it is difficult to distinguish a fresh egg from an old one by the appearance of the shell, so candling becomes necessary if you would be sure that the egg is good.

Candle Eggs in a Dark Room.

Eggs can be candled best in a dark room, by the use of a bright light inclosed in a box or case having a hole a trifle smaller than an egg directly opposite the light. The egg is held at this hole for examination. An ordinary hand lamp, a lantern, an incandescent bulb, or a flashlight can be used. If you are using a box and a hand lamp the box should have a hole at the top, otherwise the heat from the top of the chimney would set the box on fire. A tester chimney made of tin, such as is used on a lamp for testing eggs in incubators, may be used for candling, in which case you would not need the box, as the eggs are tested by means of a hole in the side of the tin.

A perfectly good, fresh egg shows "full" and "clear" before the light. There is almost no air cell at the large end and the yolk outline is only faintly visible. A fixed air cell of one-eighth to three-sixteenths of an inch in depth indicates a fresh egg, as eggs run generally. A larger air cell with a movable lower line indicates—according to sizes and fluctuations—a stale egg or one becoming weak and watery. Very small dark spots sometimes seen usually are blood clots. Large dark spots, blood rings, and shadows are due to heat and germination, and indicate first stages of decay. An egg that appears very dark or black, except for a large fixed air cell, contains a chick at an advanced stage of incubation.



A Shoebox and a Lamp Will Do for Candling Eggs.

Fresh eggs, properly preserved, may be kept from six to ten months and be almost as good for household purposes as fresh eggs. Another reason for preserving eggs in water glass, for instance, is the fact that they do not acquire the objectionable "cold-storage taste."

Allow Three Dozen to Gallon.

To preserve 15 dozen eggs in water glass these directions are given by the specialists of the United States Department of Agriculture:

Select a five-gallon earthen crock, clean it thoroughly, scald, and allow it to dry. Heat ten to twelve quarts of water to the boiling point, and allow it to cool. When the water is cool, measure out nine quarts, put into the crock, and add one quart of sodium silicate, commonly called water glass, which can be bought at any drug store. Stir well, so that the solution becomes thoroughly mixed.

The solution thus prepared is ready for the eggs, which may be put in all at once, or from time to time as they are obtainable. Care should be taken in putting them into the jar not to crack or break the shells; also be sure the solution covers the eggs at all times. Put the crock containing the preserved eggs in a cool, dry place, and cover with a tight lid or waxed paper to prevent evaporation.

To preserve a smaller or larger number of eggs, the solution should be mixed and prepared in the same proportions.

Use Only Clean Fresh Eggs.

If best results are to be obtained the eggs should be clean and fresh, and preferably infertile. For this reason it is always best when possible to candle the eggs carefully before preserving them unless they are known to be strictly fresh. If an egg is only slightly soiled a cloth dampened with vinegar may be used to remove stains, but eggs should never be washed with water or soap and water, as water removes the protective coating on the shell and may tend to cause the contents to spoil. Never use badly soiled or cracked eggs. They may spoil all the others.

Fresh eggs preserved according to these directions usually will keep for from six to ten months, and can be used satisfactorily for cooking and for the table. If, however, preserved eggs are to be boiled, a small hole should be made with a pin in the larger end of the shell before placing them in the water, to allow the air in the egg to escape when heated, and thus prevent cracking.

STORMY WEATHER

By PAULA PHILLIPS.

(©, 1921, Western Newspaper Union.)

Nanette, seated in the garden where ountains tinkled, and rare flowers loomed, was very miserable, indeed. For the beautiful gift of happiness was to be found neither in her father's luxurious home or garden. Nanette, with her many conquests and carefree days of girlhood, had left unlearned the lesson of true love. Now that it was before her, it was a difficult lesson to understand. It had been very sweet before she had known that it was love at all. Knight Evers was such a companionable satisfying sort of friend.

She was usually busily engaged in her partnership of some game. But Knight would turn occasionally with his bright smile of comraderie toward her, and leaving her still undisturbed. So in their rides together, he always had time to pause for the viewing of the glorious scenery which held her spellbound, and seemed to know instinctively, when and where Nanette would wish to linger most. They were merry together, too, with little secret jokes concerning others, that were innocently their own; and also, Knight was unostentatiously careful of her.

When father Norton, millionaire Norton, he was called, noticed the growing friendliness between his only daughter and the young nobody, whom the Failings had inconsiderately invited to the country club as their guest, he merely raised supercilious eyebrows.

Nanette seldom showed any admirer undivided attention, and he believed that this unusual acquaintance would be of short duration. But as time passed and Knight Evers, office employee of an insignificant business concern, continued to visit the country club, and later to visit Nanette herself, Mr. Norton became annoyed and chagrined; for his obedient daughter, for the first time in her life, ignored his request.

"It would be wise," her father advised her, "to cease encouraging young Evers. You know as well as I, that nothing can come of such an attachment. To put the case frankly, he is decidedly beneath you and your family, in position. Drop him. We have other views for you."

But Nanette did not at once drop Knight Evers. Though knowing her father, she knew that he would not relent in his judgment. She wondered, tearfully and vaguely, if Knight should ask her to marry him, and Nan was pretty certain that the question was trembling on his diffident lips, if Knight should ask her, would she be able, after the diffident manner of her raising, to make him a competent helpmeet.

Would Knight be unhappy in her failures? Would she be unhappy in her restrictions.

Nan pondered seriously, and it was Jim Brent who came to be her father's best aide. Capable Jim Brent, with his poise and assurance. Her father's friends called the man Jim naturally, to most of them he was their confidential banker. He was an officer in the country club, of which Nanette's father was president, and he was a bachelor. This latter state, however, he was quite willing to forsake at Nan's little yes. As yet, Nan had not quite whispered it. But when she compared her future wifely duties at the accomplished Jim's side, to those unaccustomed duties which she must painstakingly learn as Knight's wife, Nanette was inclined to throw up even love and its sweetness for certainty and the approval of her own family.

So when Knight's question came, spoken all impulsively in the beautiful moon-lit garden, Nan was ready for him. Knight had scarcely time to regret what he called his own "selfish rashness" before Nanette uttered her

"It cannot be Knight, good old friend," she said firmly. "Love is all right for sunny weather, but when it comes to storms, the frightening storms of life—well, it really takes more than love, dear."

Knight had choked up at the little word dear, and had gone, blindly on his way. The days that followed were the hardest Nanette had ever known. She had expected to miss her understanding pal, but she had not counted upon the constant ache of a aging heart.

And when, one day, Nan fled to the woods, to be free from the chatter of guests that wearied her, Jim Brent's talk seemed like idle chatter now, too Nan walked farther in the woods than she knew. And there, a thunderstorm found her. A flashing, roaring thunderstorm in the cathedral of trees.

From childhood, electrical storms had been Nanette's terror. Wild-eyed, white-lipped, she walked. Before the next fearful reverberation, she closed her eyes. Then out of the threatening darkness, came miraculously, two strong protecting arms to enfold her. She glanced up quickly, gratefully, at a comforting sense of security.

Knight Evers stood looking down at her tenderly, forgivingly.

"Nan," he said, "my life has been all trouble and ripped to pieces—like the storm clouds since you left. I can't live without you, Nan, even if your father is worth a million."

"A million dollars," said Nanette contemptuously.

"What's it worth when you are out in the storm? A strong protecting arm like yours, Knight dear—"

Peace had followed the storm.

FOR HIM

By MOLLIE MATHER.

(©, 1921, Western Newspaper Union.)

She was a small creature with wide appealing eyes of blue. And what the men found to so admire in her was more than other women could see. Among themselves they discussed her as a vampish person to be righteously avoided.

Certain it was that from the moment Meda Brown became a member of the Husted house party, swains old and young left their formerly adored to follow in her train. And, Meda Brown; what a plain name.

Nevertheless, the demure one triumphed easily—everywhere. The strange thing was that she did not try for the triumphs, or seem to care. Usually she had to be hunted out in some secluded corner, or forestalled on one of her customary walks down the road. Gwen Person's fiance was continually seen in the unwelcome Meda's company, and of late Marion Grovenor's heretofore faithful attendant was usually to be found there too.

The women's cool attitude toward the interloper showed their displeasure. What right had Julie Husted to bring this unknown relative of her husband's among them?

When Tom Lacy met her, Meda was picnicing with her Husted cousins on the bank of a stream. She talked to Tom, as he happened along, while her cousins fished. And though Tom Lacy believed himself to be in love with Marion Grovenor, he lingered and thought the little Meda Brown person very entertaining, indeed.

It was always that way. As days passed he planned and schemed for them eagerly.

Meda was so delightfully surprising. She could be gravely, wisely sympathetic or infectiously gay and merry.

"I suppose," Marion contemptuously remarked to Tom, "You believe that flattering interest in yourself and your engrossing business is genuine. She puts it on for everyone like a cap. And then laughs at you for your pains. Why you all humor her in her self esteem is more than I can see. She's just a little cat without a thought beyond her own amusement. And if you care for me——"

Tom knew the rest. He had heard it before. If he cared for Marion his friendliness with the pleasing Meda must cease. The trouble was that he did not know this could be done. Meda was so different from flirtatious maids he had known. His friendship for her was a real and vital thing. Or was the deep feeling merely friendship? Then Tom Lacy knew—it was love. He told her frankly, as they sat together, that he had intended to marry Marion, and that he had thought he cared for her until Meda came. And, he recalled as he spoke, the many bitter things Marion had said of the girl, who now listened; the unkind tale of her unscrupulous conquests, her heartless triumphs, and he felt that the revelation of Marion's nature, with her unreasoning jealousies, had killed, at its beginning, any love that might have been. Tom, in his eloquence, was not aware of all that he said. He impressed upon Meda Brown his own belief in her, despite Marion and all others. And when he had finished, waiting breathlessly his fate, Meda, her soft eyes suddenly aglow, threw back her head and laughed. Tom stared, growing very white.

"You, too," laughed Meda, "so you had to love me. Though before we met you intended to marry Miss Grovenor."

Still smiling, Meda looked back at him, "Go and marry her, my dear friend," she said, "for I have finished."

Tom sat, after she had gone, trying to understand. He had not known that love could so make one suffer. Love, how little he had realized its meaning. So they were right, Marion and the rest of the women; it was unbelievable.

Tom Lacy stood undecidedly. He did not want to go back to the house. A little cottage stood at the end of the country lane. He and Meda had stopped there sometimes to visit a solitary old woman. Meda liked to play for the lonely one on her old piano. His steps led him there now, unconsciously. Absently, he dropped on the wooden bench outside the cottage window. The tinkling tones of the piano came to him. Meda's voice was singing a sweet little song, its each verse beginning with "Somebody." He listened, wondering vaguely at the tremulous catch in the still loved voice: "And somebody's dream, if dreams can come true, is only a dream of gladness for you; my dream is for you."

Then all at once Tom Lacy understood. The despised girl would willingly efface herself and her love, that she might give to him what she believed to be his own dream of gladness. To him, and to Marion, who so misjudged her. So she had acted for Marion's sake, the part Marion gave to her. And through all she cared. His heart sang at the thought. For a moment he stood thinking of the two women—Marion, whose selfish exactions had marred their happiest hours, and this other girl, with her dream of gladness but for him. Tom Lacy went boldly into the room. Meda's eyes welcomed him. He took her into his arms.

POSTSCRIPTS

By MARGARET A. SWEENEY.

(©, 1921, by McClure Newspaper Syndicate.)

Cynthia Stewart, in the silken ease of her orchid dressing-gown, sat scowling at a letter that lay upon the table before her.

"I'll tell him the truth," she declared as she drew a sheet of paper towards her and began to write:

"Boston, May 3, 1920.

"My Dear Crofter—I am afraid that what I am about to say may hurt you, but I think it is the wiser way to tell you the truth.

"I know that a good sport never hits a man when he is down, so you see I am a rather cheap sport. I am going to swat you—I am breaking my word—my troth to you.

"It is now six months since your doctor sent you to Pasadena, and you tell me that your specialist there says that it will require another six months in that climate before you are well, and that in order to keep well he advises you to make a permanent home in California.

"Well, Crofter, needless to say that I would not—could not leave Boston; and, besides, it may take years, judging from what I know, before you are financially able to assume the responsibility of a home—such a home as we would like.

"I am no longer so very young. Crofter, I shall be twenty-four next month; and so, in justice to myself and my family, I think it better to break our engagement.

"Today I am returning the ring and the string of pearls. Please do not judge me too harshly, and, please, for old time's sake, let us still be friends.

"With all good wishes for your health and happiness. Yours sincerely.

"CYNTHIA."

"P. S.—The real truth is, Crofter, that father's new partner, Mr. Wallace, has piles and piles of money—he made it while you were overseas being gassed to death—and father and mother and Aunt Sarah all sing his praises and all think that I ought to marry him. Mr. Wallace thinks so, too, but I told him last night that I wanted a few days to think it over."

"There—Crofter ought to know that I'm not altogether to blame," she soliloquized, as she glanced over the postscript. "He knows that I—"

"A letter for you, Miss Cynthia."

The letter that the maid brought was postmarked "Pasadena," and Cynthia opened and read:

"Mountain Road, Pasadena,
"April 26, 1920.

"Dearest—Since writing to you a few days ago I have been obsessed by the thought that it is selfish and unfair for me, a partial invalid, to hold you to your promise to become my wife.

"In some way, Cynthia, I have become aware (or I think I have) that you want to be released. The tone of your letters is different. I feel a change in you.

"And, of course, I know that I am not the man, physically or financially, that I was on that day of days in June, 1917, when you made me the happiest man in all the world. I want to play fair with you, Cynthia, and so I shall not think of holding you to your promise to me.

"I wish, Cynthia, that you were here with me this morning. If I could look into your dear eyes and tell you just what is in my heart it would make this easier.

"I am alone on the veranda, and my chair faces toward that mighty range of mountains that rises before me like a vast fortress—vague and reticent these mountains stand, and they take no part in our lot or being. Beyond them lies the great Mohave desert; beyond that lie endless mountains and plains, and away off there on the New England coast—you—you.

"Every day, dear heart, I sit here at the foot of the misty mountains and close my eyes for a little while so that I may see you the better, and sometimes in the evening I walk and talk with you under the orange trees—it is a way lonely folks have.

"But the chances are, little girl, that I may never see you again, for I have found that I must make my home out here, and I know how attached you are to Boston. I have bought this little four-room bungalow—it is almost completely covered by a bush of rambling roses.

"I want to thank you for the wonderful letters you have written me. Please let me keep them. Some of them gave me courage at the Marne and I have another battle still to fight.

"You shall always live in my heart, dearest, for I love you—you—you only.

"Always yours,
"CROFTER BARRISON."

"P. S.—If I have made a mistake, Cynthia, about your supposed wish to be free, I beg you to let me know at once and I'll go and fetch you home. Remember that 'Home is where the heart is.' Please wire immediately."

Fifteen minutes later this rush message sped over the wires:

"Boston, May 8, 1920.

"Crofter Harrison, Mountain Road, Pasadena, Cal.:

"Leaving Boston today for home. Meet train at Los Angeles—due there the 8th.

"CYNTHIA."

Dr. J. H. Laney

SPRAYING CELERY TO PREVENT LEAF SPOTS

Application of Bordeaux Mixture Is Recommended.

Treatment Should Continue Throughout Growing Season and More Especially in Moist, Cool Weather—Apply With Pump.

(Prepared by the United States Department of Agriculture.)

Celery plants should be sprayed with bordeaux mixture every ten days to two weeks to prevent leaf diseases, which often seriously injure the crop for market purposes. These leaf spots occur generally in celery-growing districts in the United States during cool, moist weather. Home-made bordeaux, composed of 4 pounds bluestone (copper sulphate) and 4 pounds stone lime to 50 gallons of water, is the cheapest and best fungicide for the purpose. The spraying should be begun while the plants are still in the seed bed and continued throughout the season. The sprayings should be more frequent during moist, cool weather favorable to the development of the leaf spots and further apart in dry, hot periods. Apply the mixture thoroughly with a pump which will give a very fine misty spray that will cover the plants but not run down the stalks and thus disfigure the stems.

Healthy Stalk of Celery.

Since the disease is carried over winter on the seed, and in the soil where diseased celery was grown the previous year, it is important that new soil be used in the seed bed or the old soil sterilized by steam, hot water or formalin solution and that disease-free

THE GOODRIDGE BANNER

VOLUME XV, No. 37. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, SEPTEMBER 23, 1921. $1.50 PER YEAR

Clean Up Campaign On

SQUAD HERE TO AID SERVICE MEN

An opportunity will be given every veteran of the World war in Pennington, Roseau, Kittson, Red Lake and Marshall counties to receive assistance in the settling of claims for compensation, advice as to hospitalization or vocational education, or information relative to any problems arising from his war service Sept. 30 and Oct. 1, when the local "Clean Up" campaign is on. The Red Cross and American Legion are participating in this work at the request of the government, and a united effort is being made to help every ex-service man who needs assistance of any sort.

The "Clean Up" squad will make its headquarters at Thief River Falls. Its members include: A medical examiner and a representative of the federal board for vocational education examiner, a compensation and insurance claims contact examiner, and representatives from the Red Cross and the American Legion. They may be seen daily between the hours of 9 a. m. and 5 p. m. Persons who have made previous claims which they believe were not satisfactorily adjusted may apply for a re-opening of their cases as well as men desiring vocational training or awaiting claim adjustments.

An especial effort is being made to get in touch with every man in the county who is in any way entitled to assistance. Where it is not possible because of illness of disability to present claims in person, the local Red Cross workers will endeavor to assist in getting necessary information to members of the squad.

As this is the most intensive effort which has yet been made to locate all claimants and adjust their claims satisfactorily the co-operation of every resident is asked in reaching these cases. Additional information may be secured at Red Cross headquarters.

Farmer Firm Gets Double The Trade of Nearest Rival

Marketing twice the quantity of livestock handled by any other commission firm at St. Paul, the Central Co-operative Commission association has conducted its first four weeks of business at a cost 45 per cent less than the current charges, according to W. A. McKerrow, general manager.

The co-operative selling agency, backed by the Minnesota Farm Bureau federation, is charging commission rates 25 per cent below prevailing rates, he said, and has been able to pay 20 per cent of its earnings into a reserve fund.

Records compiled by the state railroad and warehouse commission and the bureau of markets show that in its first four weeks of business the farmer-owned company handled 31,584 head of livestock, while its nearest competitor handled 15,327 head. Companies doing the next largest business in this period handled 12,710 and 10,914 and 8,812 head respectively.

One of the most important services furnished by the new organization, according to farm bureau officers, is the transfer of stockers and feeders direct from farmer to farmer at minimum cost. In four weeks, the firm shipped 63 carloads of stockers and feeders.

Auction Sale

My entire farm equipment will be sold at auction on my farm near Mavie on Tuesday, Sept. 27.

CARL TALLEY.

FIND FAULT WITH SEPARATOR

Pays to Investigate When Flow From Cream Spout Seems Smaller Than Ordinarily.

If the flow from the cream spout of the separator seems smaller than ordinarily, it usually pays to investigate. In spite of all precautions, it often happens that foreign matter lodges in the cream screw, thus causing part of the cream to be retained with the skim milk.

INFERTILE EGGS KEEP BEST

Surplus Roosters Should Be Disposed of as Soon as Hatching-Egg Season Is Over.

Infertile eggs keep best when placed in water glass. This means that useless "roosters" should go as soon as the hatching-egg season is over. Eating the big roosters is not like tender young fryers, but the housewife with a fireless cooker can turn the toughest old male birds into several fine chicken dinners.

Railroad Meeting

In accordance with a prior notice, the Grygla Commercial club held a special session last Monday evening for the main purpose of hearing a report of the committee chosen to represent this village at a consultation with a railroad committee in Bemidji the week before. About 75 were present, including a large number of farmers. It is impossible at this time to give a complete report, but the sum of it was that the formerly organized railroad construction company elected two members from Grygla, O. J. Johnson and A. J. Andersen. The proposition is that the three directors from Bemidji would take charge of securing the right-of-way northwest from Bemidji to a point north of the reservation line about nine miles east of Goodridge, and the Grygla directors to secure the right-of-way from there to Grygla and northwest to the boundary line. Petitions signed by many hundreds will be forwarded to Washington requesting the opening, or the right-of-way across the reservation. It is a safe prediction that when the right-of-way is ready to turn over to a railroad company that will build at once that it will be taken up quick.

It was the unanimous sentiment of the meeting, and seems to be of this entire section, that there will be no trouble in securing the right-of-way. With a railroad through this part of the state running north and south with a direct market to Duluth and the Twin cities there will be a wonderful progress for every one. It will be necessary for every person to be ready to take off their coats and do their very best to perfect the enterprise. There is no money to be paid or transfers made to any one, only a pledge of the free right-of-way to the railroad company when the road is built. We will publish from time to time news in regard to the progress as we find it out. Be ready to work.—Grygla Eagle.

The line of railroad alluded to above is one that has been talked of for some years, to run northwest from Bemidji to Warroad or St. Vincent or some other point on the Canadian border. It takes a fresh start every fall and interest wanes before spring. However, the promoters seem to be more in earnest at this time and something tangible may come of it.

One Day More

The Northern Minnesota fair at Bemidji will be continued over Saturday, Sept. 24. A special program has been arranged for that day.

Nutritional Clinic

The Pennington County Public Health association held a meeting on September 15, where it was decided to hold a nutritional clinic in Goodridge on the 28th of September, St. Hilaire on September 30 and Thief River Falls on October 1. These dates were arranged with the Marshall county schedule so as to use the same director from headquarters in both counties.

The nutritional clinics do for the older children very much what the baby clinics do for the babies, particularly look out for the often unnoticed causes of general run down condition, "lifelessness and weakness, lack of energy, and so on, that often are found in children who are nevertheless not definitely ill of anything in particular.

In the majority of instances the nutritional weakness can be overcome and the children restored to normal by judicious diet, sleep and exercise, provided of course actual defects, such as diseased tonsils, etc., are corrected.

The nutritional clinics, which are conducted by specialists, members of the Northwestern Pediatric society, are primarily for children from five to sixteen years of age who are underweight. It will be necessary to have the children weighed and measured a few days preceding, the clinic. Those who are ten per cent or more underweight should be selected for examination. Your county nurse will take care of this feature of the clinic.

It is extremely important that the mothers of the children selected for examination be present at the clinic. Much more can be accomplished if the mother is at hand at the time her child is being examined. She is able to get answers to any questions which may arise in her own mind. The real value of the clinic is lost unless the mothers are present.

Three pounds of corn silage for every 100 pounds of live weight of cattle per day is a good rule to follow. A cow which weighs over 1,500 pounds should receive 45 pounds of silage daily. Beware of moldy silage. A small quantity may not be injurious, but if the cow eats very much, digestive disorders will follow.

The Brussels Sprout Duel

By HAZEL SMITH.

Copyright, 1921, Western Newspaper Union.

I had served Monsieur le Marquis faithfully for fifteen years. That is not so short a time, as things go nowadays, for it seems that one changes his butler as often as his overcoat. But Monsieur would never let any of his servants depart. Besides, my father had served his father a lifetime.

We had had great trouble during the five years preceding Monsieur's death, for his daughter became attached to a worthy young man whom Monsieur resolutely refused to allow within the chateau. He was a son of the Comte de Minot[illegible], but he was a Dreyfusard! Enough! France has been rent in twain by the affair, and in our home it was not otherwise. Mademoiselle Henriette wept bitterly, but at last she acquiesced to the inevitable, and Monsieur Paul went to America, heart-broken.

But after my master died I conceived an idea. I had long wished to visit America, for I had heard rumors from returning visitors that a chef at the Hotel Plankstea[illegible], New York, had invented a salad which was identical with the famous salad of my master. Enough! I must needs go, find the thief, and ram his salad down his throat.

"Mademoiselle Henriette," I said respectfully, the morning before I sailed, "can I be of service to you in America?"

She looked up and I knew of what she was thinking.

"My dear friend," she answered, "I know it. But I cannot stoop to ask Monsieur Paul to return to me. It must be of his own accord."

"At least he should know that Monsieur le Marquis is dead," I answered.

"Then heaven bless and guard you in your dangerous venture, Jean Birrabou," she said.

Enough! Twelve days later behold me, Jean Birrabou, seated at a table in the luxurious Hotel Plankstea[illegible]. Six salads did I order and consume that day. And then, just as I decide that the rumor is false, the waiter brings me the Salad Imaginaire.

I gasped, for there before me is the identical salad of my master the Marquis, invented by him and known only among the high aristocracy of France. I fixed him with my eye.

"Who has invented this salad?" I demanded haughtily.

"It is I, Monsieur," answered the waiter, eyeing me bravely.

I rose from my seat and took the salad bowl, inverted it, and clapped it on his head, so that the oil ran down over his shirt front.

"Dog of a thief!" I hissed, "you stole that salad." The waiters separated us.

I drew my card from my pocket and presented it to the scoundrel.

"Your salad," I said, "is my master's salad."

That evening his seconds called at my boarding house.

True to my word, behold me in a cellar at five o'clock the following morning, my will made, my last message to Mademoiselle in an envelope awaiting postage, my soul ready to face the future. I saw my enemy tremble. They handed us our pistols.

My hand trembled; the memory of my master overcame me. I felt my eyes filling with tears. I could not longer see the scoundrel whom I was so soon to kill.

"Fire!"

Our weapons went off together. I saw my foe standing unmoved, a smile of malice playing upon his lips. I felt a violent blow upon my breastbone. I sank down in the straw.

"I forgive you, monsieur!" I said, as he came toward me. "Wait till I die; then heap the straw over me."

Gently he unbuttoned my coat and felt for the gaping wound. I closed my eyes in agony. Lo! A moment later and he was holding up a small, crushed pellet.

"Your wound is but superficial, monsieur," he announced. "See, I have found the bullet."

The pellet was wrapped in silver foil. Slowly he peeled it off, disclosing to my anguished eyes—a Brussels sprout! It had fallen harmlessly upon my waistcoat.

I rose to my feet, stupefied. My enemy came forward and held out his hand to me.

"My dear friend Birrabou," he said. "Do you not know me?"

I looked at him, and suddenly I gasped from amazement. I had seen his photograph upon Mademoiselle's desk.

"Monsieur Paul!" I exclaimed, and he bowed suavely.

Enough! Think how nearly I came to killing him whom I had set out to find! But we have returned to France now, and whenever Monsieur and Madame Henriette have guests it is I, Jean Birrabou, who makes the salad of Monsieur le Marquis.

HER SUMMONS

By JOHN WESTON.

Copyright, 1921, Western Newspaper Union.

She was a frail little thing, unaccustomed to the confusing ways of a city, and when Barrie first saw her, his heart went out to her. He had come recently himself from an affectionate Scotch home, to the cold barrenness of a boarding house, and his sympathies were dormant. Phyllis, hovering like some frightened butterfly in the dingy hall, had gone forward to him in shy eagerness, as he came down the stair.

"Please," she said, "I have rung the bell several times, but nobody answers. Will you tell me where I can find Mrs. Banby? I have rented her rear bedroom."

"Come on up," invited Barrie cheerily, "I'll show you the way; Mrs. Banby's probably out in the yard, the rear room is right next to mine."

"I'm glad!" said the girl impulsively, then blushed at her boldness.

Phyllis was more glad as weeks passed that her room happened to be next to Barrie MacDonald's, for he had a way of leaving little surprises outside her closed door that made her anticipate and feel less lonely. Coming from the unfamiliar city office at evening, it was cheering to find a well-read book lying there for her perusal—or a magazine maybe, or a fresh-cut flower in a waxen paper. And sometimes there would be fruit, or later as the friendliness grew and the two took pleasant walks together—there would be a small box of candy before her door. Phyllis insisted upon the "smallness" because she had learned that Barrie was learning his profession there in the strange city, and economy was a necessity. Once or twice she took him out to Aunt Martha's in the country for Sunday visits, and shrewd Aunt Martha agreed in her choice of Barrie as a friend. Barrie learned much of Phyllis during those visits, of her past sacrifices in caring for an invalid parent, and how the brother who should have helped had gone far away to seek his fortune. Barrie grew more and more sure that Phyllis was the one girl in the world for him, but Barrie was not sure—of Phyllis.

She liked him, that was evident; but the liking was so genuinely natural that Barrie feared the feeling was far from love; so he waited. She had confessed to him, laughingly, her fear of the creaking old house during the lonely night.

"Sounds," she told him, "as if ghostly steps were coming and going in the halls."

So, sometimes to reassure her, Barrie, waking, would tap gently on the wall. And reassured, smiling there in the darkness, Phyllis would tap back her response from the other side. And then one day she went away. Barrie was stunned by the suddenness of his loss. Phyllis no longer brightened by her sweet presence the gloomy walls; Phyllis, no more singing companionably about her adjoining room. It was the brother who returned all unexpectedly with his won fortune who had carried Phyllis away. The brother, jeering at the shabby rear bedroom, had carried her few belongings down to his car, while Phyllis quickly, and more like a flitting butterfly than ever, kissed Barrie warmly and all unasked, and murmured that her spirit would come back to the little room at night, she knew, to answer his taps on the wall. Barrie lay miserably that night. Later, he might hear from her, perhaps, and later they might even see each other occasionally—but it would not be the same. Phyllis would no longer need him, call for him. Distinctly from out the silence came a sharp summons. Barrie sat up and listened. There were the three familiar tappings of Phyllis upon the wall, the usual waiting pause, then three more. Barrie half dressed and ran to the door. His breathless call brought no response. Mrs. Banby called to him from the lower hall.

"Say, I'm glad you're up, MacDonald," she said. "There's been an automobile accident out on the boulevard; some car ran into Phyllis Dale and her brother. Mr. Stearns, who just came in, told me. The brother is raving at the hospital, he says; came tearing on there alone with a cut in his head. He says Phyllis is lying dead in a ditch near the road. Some [illegible] have gone out after her body. It's terrible—"

How Barrie got to the ditch by the boulevard road he never knew. And he was there first. Instinct may have carried him, while the brother in his confusion gave wrong directions. The grass was very soft and deep from which Barrie lifted the girl, her face shone ghastly in the moonlight. He was holding her when the seekers came upon him, and they allowed him to keep her in his arms as they drove back. Then Barrie gave a shout. "Dead," he cried. "She's not dead. To the hospital, quick."

The soft grasses had saved her body from injury, the doctor said, and the result of shock would pass over.

"Barrie, dear," Phyllis asked after a long time, "how did you know how to come and find me there?"

"You summoned me," he told her, "by tapping on the wall."

"The last thing I remember before I went off into silence," she said, "was wishing that I might bring you, in just that way."

"You did," answered Barrie gravely. Phyllis smiled.

"Well, anyway, you are here," she said in great content.

CLARENCE

By NANA LYNCH.

© 1921, by McClure Newspaper Syndicate.

Clarence was long, thin, and pale—pale skin, pale hair, and pale blue eyes, mercifully protected by tortoise shell glasses. His occupation was not pale; he was an expert meat-cutter, which occupation he always brought forward as the strongest support of his belief in fate. For had he not, despite his training for office work in business college, followed by his army service in a clerical capacity, turned to meat cutting, which he had taken up to help eke out his college expenses? "What is to be, will be." Selah.

The other interest in Clarence's life was his girl. They were to be married.

Came Tuesday night. As they stood in the hall, Jennie said, negligently like:

"Oh—ah, Clarence, mind if I go out to lunch tomorrow? You see," she said swiftly, "Jimmy Smith's chum is in town, and Bertha and he want some one to make up a party of four, and I said I'd go."

Ordinarily Clarence would not have minded.

"What's the fellow's name?" he questioned.

"Jean Rae," said Jennie demurely. He went to school with Jimmy and the Smiths want to make it pleasant for him while he's here. They asked Gert to make the fourth yesterday, but Jean didn't take to her, so—" She paused.

Clarence saw no good reason for refusing to let her go. So he gave his consent, kissed Jennie "good night," and, going home, promptly forgot all about the matter.

. . . .

Not until there arises an author who can do full justice to the history of the working girl, will the world know the truth about the girls' dressing room. It is the business girl's sanctum sanctorum. There she may retire singly, or in groups, to powder her nose, read her own or somebody else's love letters, and exchange confidences, secure from mere male interruption.

Here at 5:[illegible], a month after her interview with Clarence on the question of lunching with Jean, we find Jennie. She had occupied the dressing room the most of that day, with first one girl and then another. Now, it was Rose's turn. Rose was nineteen and romantic. That Jennie should ask her for advice! It was thrilling! Eyes wide, she listened gravely.

Said Jennie, the while she powdered her nose: "Honestly, I don't know what to do. You see, I've always gone with Clarence and I know he thinks a lot of me, but, oh, I don't know Jean is so, so—You know," she finished helplessly.

Rose nodded wisely.

Jennie sighed. Rose asked sympathetically:

"How does Clarence feel?"

"Awful. He raised Cain when I said I couldn't see him Sunday. Asked me if Jean was coming out. He says it must be one or the other, that it isn't the square thing for a girl to go around with more than one fellow."

"What did you say to that?" interrupted Rose breathlessly.

"Well," Jeanie blushed, "well, I said that I didn't think it was right, either, if a girl was engaged and—and—what do you know? I was so surprised; he said he always thought we were and—and, he had been saving up for a ring," she ended in a triumphant whisper.

"Jennie," Rose squealed, "how wonderful!"

"Of course, I had known Clarence the longest, but Jean is so impetuous."

For several days Jennie and her lovers were the chief topic of the office conversation. She asked advice of everyone, from the timekeeper to the office boy, swearing each one to secrecy. Then one morning she appeared with the usual diamond on the usual finger and blushingly accepted congratulations. The girls gathered around, laughing and talking, even the boss himself deigned to notice it, asking playfully: "Well, when do I lose my stenographer?"

Later, at an opportune moment, Rose pounced on her.

"So it is Clarence, after all?" marveled.

Said Jennie, surprisedly: "Why course; who else could it be?"

Jennie smiled beatifically. says"—the old familiar stra ence says that it just had to intended us for each other."

Within the year the sold out, the office force and Jennie and Clarence ried.

About a month after Jenni ding Rose bumped into Jimm for a brief visit. As they wait their respective trains they over old times.

"So Jennie and Clarence got ried after all," said Jimmy.

Rose nodded. "Yes," she said to think how near she came to ing Jean."

"Jean!" Jimmy stared, the "Why, old Jean had no m of marrying Jennie than babe. He had a girl back Jennie all about her, an ciprocated by telling him Clarence."

"Oh," said Rose thou

RIGHT MEASURES TO KILL DODDER

Experts Say Discovery of This Parasite on Farm Is No Cause for Serious Alarm.

PLAN FOR ITS EXTERMINATION

Pest Does Not Cause Damage If Remedies Are Applied Before It Gets Foothold—Prevent Seed From Maturing.

(Prepared by the United States Department of Agriculture.)

If remedies to exterminate dodder—the parasitic plant infesting clover, alfalfa, and some other plants—are applied before it gets a foothold, the pest does not cause serious damage. If, however, dodder is permitted to develop unmolested, radical measures will be necessary in order to control it.

During recent years, specialists of the department say, an increase in the number of complaints of dodder have been received from all parts of the United States. They add, however, that the discovery of this parasite on the farm should not be the occasion of serious alarm, but rather for the employment of a well-conceived and systematic plan for its extermination.

Starts in Small Patches.

During the first season of infestation, in clover or alfalfa, dodder usually occurs in small scattered areas. As is the case in combating all weeds, it is essential that dodder should not be permitted to mature seed, and such small infested areas should be mowed and the dodder removed or burned in the field to prevent the development of seed. If seed has formed, burning the patches of dodder is the only remedy, since it kills not only the plants but also any seeds which may be lying on the surface of the soil.

If infestation is so great that patch treatment cannot be depended upon, it will be necessary, in order to free the farm of the pest, either to plow the crop under or utilize it for hay before seed has formed. In the latter case, the aftermath left on the field should be closely grazed, for which purpose sheep are especially useful. If the infestation is general and threatens seriously to damage succeeding crops, it may be necessary, according to the bulletin, to cut the crop, allow it to dry, and burn it in the field in order that all dodder seed may be destroyed.

Inferior Seed Blamed.

As with all weeds, preventing introduction on the farm is far easier than eradication after it has once gained a foothold. It is usually introduced by the use of impure seed, and a bulletin urges that farmers learn to distinguish dodder seed so that they can recognize it when they are purchasing clover and alfalfa seed. For adequate examination, a magnifying glass is necessary. There is a wide range in size of dodder seed, but in general they are usually dull-coated with roughened or minutely pitted surfaces, and usually have two or three flat surfaces, while the seeds of clover are usually smooth, rounded, and possess a certain luster. Furthermore, the scar on dodder seed usually is very inconspicuous, whereas the scar on leguminous seeds is clearly evident.

Protect Alfalfa Fields Against Dodder by Proper Control Measures.

When animals are allowed to graze where dodder grows, they should not have access to fields not infested, since they are likely to spread the weed by means of pieces of stems adhering to their coats and hoofs. On land which contains the seeds of dodder, the bulletin suggests the use of a five-year cropping system consisting of plants which are not damaged by the pest and recommends the following plants: Corn, soy beans, velvet beans, cow-peas, and small grains such as oats, wheat, and rye. Sugar beets, onions, flax, and a few other cultivated plants are subject to dodder infestation, but clover and alfalfa are its important hosts.

BASIC QUALITIES IN LAYERS

First Is Constitutional Vigor and Other Is Early Maturity—Easy Then to Get Eggs.

There are two absolutely basic qualities in all great layers. The first is constitutional vigor. The other is early maturity. With these qualities

PREPARE EARLY FOR NEXT CROP OF CORN

Selection of Seed Ears Is of Vital Importance.

Avoid Danger of Sprouting in Field With Moist, Damp Weather and Injurious Insects—Plowing Is Big Problem.

(Prepared by the United States Department of Agriculture.)

Nothing in the line of corn culture is more important than the selection of seed ears and the preparation of land for the next season's crop. Both of these operations should have attention in the late summer and early fall of the previous year, say experts of the United States Department of Agriculture. Seed can best be selected from the field because then it is possible to observe the condition of the parent stalks as to vigor and freedom from disease. Seed from diseased ears may not grow at all or may produce weak, barren stalks. Farmers' bulletin 1176, "Control of the Root, Stalk and Ear Rot Diseases of Corn," which may be had free from the Department of Agriculture, tells how to detect the diseased ears.

Seed ears may be selected as soon as they have gotten their growth and before the sap is entirely out of them. By picking them at this time, the grower avoids danger of sprouting in the field with moist, damp weather, and also the danger of destructive insects. After they are picked, the ears should have their moisture taken out as quickly as possible. All that is necessary is free circulation of air. This can be obtained by drawing back the husks, tying the ears together in pairs and hanging over a wire. If ears are hung in too large clusters, there is danger of mildew. Care should also be taken to avoid freezing, especially before the ears are thoroughly dry.

Select the Best Ears This Fall for Next Year's Seed.

Fall plowing is a matter governed by local conditions, and the farmer's judgment will be called into play. In some localities it is better to plow early for the conservation of moisture. Plowing under all of the humus is advisable wherever it can be done, to improve the physical condition of the soil and increase its fertility and thus produce strong, vigorous corn.

STORAGE TO PREVENT DECAY

Ohio Expert Says Place Should Be Dry, Cool and Well Ventilated for Best Results.

That much improvement may be made in the home storing of fruits and vegetables by giving attention to the storage cellar or basement is pointed out by J. B. Keil, garden assistant at the Ohio experiment station.

The storage should be dry, cool, and well ventilated, he states. Spraying the walls with whitewash, to which an ounce of copper sulphate to one gallon of spray has been added, helps to destroy decay germs.

Cooling of the storage may be carried out in most cases by ventilation, windows being kept open during cool nights and closed in the daytime.

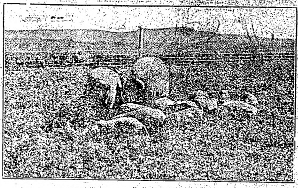
Fruit keeps in storage much better under uniform conditions of temperature, particularly apples. It is often possible to keep apples from three to four weeks longer than their regular maturing season by careful storing.

STORE VARIOUS VEGETABLES

Different Classes Require Separate Storage Places—Much Depends on the Skin.

Different classes of vegetables require different kinds of storage. The sweet potato, squash, pumpkin and fruits of this class must be stored dry and warm rather than cold. Potatoes, cabbages, beets, turnips and the like are stored in a moist atmosphere and where the temperature is close to freezing point—say, 34 degrees F. The manner of storing depends to some extent on the rind of the vegetable. One with a leathery skin [illegible] not transpire moisture very fast, while those with a soft [illegible]

MARKETING ALFALFA PRESENTS SEVERAL DIFFICULT PROBLEMS



A Healthy Looking Pork Family in an Alfalfa Field.

(Prepared by the United States Department of Agriculture.)

The irrigated areas of the southwestern United States can produce a high market grade of alfalfa hay, but there are several difficult problems that must be solved in order profitably to market the hay, say specialists of the bureau of markets and crop estimates, United States Department of Agriculture.

Method of Baling.

The first step which has a direct bearing upon the marketing of alfalfa is baling. The rainfall in the Southwest is exceedingly light during the hay-making season, and for this reason much of the hay is baled out of the windrow or cock.

When hay is baled from the windrow in sufficiently green state to save all the leaves, it cannot be pressed tightly because of the danger of heating, and shippers therefore frequently experience considerable difficulty in loading cars with the minimum weight for which they pay charges. Hay which has been stacked and allowed to dry can be baled more compact, but in baling stack hay many of the leaves shatter because of the dryness. According to the application by many inspectors of the present grade rules, this hay is of a lower grade than when the leaves cling to the stems, notwithstanding the fact that the leaves may be contained in the bale.

Sources of Trouble.

Bleached hay, together with weeds, causes considerable trouble in marketing alfalfa. It is well known that alfalfa hay bleaches quickly when exposed to bright sunlight, but there is a wide difference of opinion as to just the amount of nutrient that is lost in bleaching.

Commercial grade rules, however, are based in part upon this factor. Producers and shippers in these sections contend that too much weight is given the color factor in the present commercial grades for alfalfa and not sufficient weight to its feeding value.

From investigations recently made by the bureau of markets and crop estimates, it appears that when the present grading rules are rigidly and technically applied, as is frequently the case on declining markets, it is impossible under the most ideal conditions to produce "choice" grade alfalfa.

The presence of a weed, a blade of grass or of a bleached stem will prevent a bale from grading "choice," and it is practically impossible to obtain hay which is entirely clear of any of these things. Considerable hay is bought and sold on this grade, however, but the use of it, and sometimes also of the grade No. 1 causes the shipper a heavy loss.

The specialists believe that commercial grades for any kind of hay should be made so that the physical limitations in production and preparation will be properly recognized, and that such grades should be uniformly applied, and not influenced whatever by the state of the market.

Causes of Wide Margins.

Most shippers in the irrigated sections seem willing to handle hay at a gross profit of $1 per ton if the chance of losses on account of rejections could be eliminated. The rejections are almost always based upon the claim that the hay is not up to grade, but occur almost entirely upon a declining market. With only the meager protection against this practice and resultant loss, furnished by inspection services maintained by the trade organizations of the various markets, he is compelled to raise his margin of gross profit to $2 or $3 per ton.

When the producer notes the wide difference between the price which he has received for his hay and the price quoted at the adjacent market, he feels that the shipper or dealer is taking advantage of him and is making too large a profit. The producer's desire to share in this supposedly large profit is one of the principal causes of the co-operative wave that is now agitating southwestern alfalfa growers. When this desire is stimulated by an enthusiastic, prospective manager it seems to be not a very difficult matter to form an organization of producers to ship and market hay.

Co-operative Marketing Association.

Co-operative market associations can no doubt market their own hay as advantageously as the individual shipper, provided their manager is as well trained and possesses equal experience and business ability, but they are sure to meet the same marketing difficulties, and will have just as many rejections and losses which must be deducted from the proceeds of their sales.

Many of the irrigated sections of the Southwest do not ship more than from 2,000 to 3,000 cars of hay each year and this business is in some instances divided between two or three shippers, who also conduct other businesses in connection, thus greatly reducing overhead expenses. Co-operative shipping associations are being organized in several of these projects. The cure for the present marketing difficulties in the alfalfa sections of the Southwest would seem to be along the line of better standards and their impartial applications, say the marketing specialists.

FIX FARM INCOME BY VOLUME OF BUSINESS

Must Be Margin Above Annual Maintenance Charge.

Size of Business Is Most Important Factor to Be Considered in Selecting a Place—Three Things to Remember.

(Prepared by the United States Department of Agriculture.)

It requires a farm business of at least fair size to provide an income that will merely cover maintenance charges and these charges are relatively higher for small farms than for large ones, say specialists of the United States Department of Agriculture. A farm may be of such size as to furnish most living needs of the farmer, such as vegetables and fruits, as well as enough income to pay the taxes and running expenses, but unless there is a margin above this annual maintenance charge no progress can be made toward accumulating a surplus.

This point is often overlooked, and thousands of men fail to understand why they do not get ahead faster, when, as a matter of fact, the size of their business is such that there is only a slight possibility of any margin being left after obtaining a bare living and paying absolutely necessary running expenses. Often the income is insufficient even to do this, and the farmer and his family have to go without some of the comforts of life.

Thus it is that the size of the farm business is one of the most important, if not the most important, factor to be considered in selecting a farm. In determining the value of a farm in this regard it is essential [illegible] of business is at least potentially present, as evidenced by tillable land or by markets for intensive crops on small areas.

That the volume of business can be achieved by economical methods.

That the volume of business that can be conducted on the farm is such that it will yield an income large enough to provide a comfortable margin, after paying the absolutely necessary expenses of operation and providing an adequate living for the farmer and his family, for saving or future demands.

DAIRY COWS LIKE VARIETY

Few Speckled Apples, Beets, Carrots and Other Worthless Foodstuffs Are Delicacies.

A dairy cow appreciates variety in her ration almost as much as does a human being. Hay, grain and silage are good and certainly should constitute the main part of the ration. But a few speckled apples, beets, carrots, small potatoes, and other worthless foodstuffs all are delicacies to the cow. The dairyman who thinks of his cows in this way, not only keeps them in flourishing condition, but is repaid immediately by an increase in milk yield.

STAR BOARDERS NOT WANTED

If Milk Flow Is to Be Kept Up Cow Must Be Persistent—Otherwise Discard Her.

The cow that milks heavily for a short time or for four or five or six months and then drops off, perhaps entirely drying up, is never to be seriously considered when annual records are being computed. Naturally if one is to keep up the milk flow he must have a cow persistent in her upkeep. If she proves otherwise it is probable that she belongs to the [illegible]

The Judge's Decision

By FREDERICK CLARKE.

Copyright, 1921, Western Newspaper Union.

The last day of the month, the last month of the year, the last hour of the session of the great criminal court in which the famous case of the State vs. Walden Renstone, charged with conspiracy to defraud, had dragged its slow length for a full week—such a time, the scene, the climax.

There had been little but the humdrum progress of the law in the case until that day. The judge, William Eaton, had listened to the evidence in his usual subdued manner. The fate of the prisoner had been forestalled. It seemed patent that Walden Renstone, accused of selling fraudulent bonds with the collusion of a band of disreputable brokers, was guilty.

The last evidence was in, the state was about to begin its argument, when a woman, deeply veiled, who had sat beside the prisoner all through the trial, arose to her feet, threw back her veil and confronted the judge and jury.

If the eyes of the courtroom had been fixed upon the judge instead of upon this woman, there would have been noticed a quiver pass over the austere face, dignity, self-control go hurtling to the winds, a sudden pallor obscure the set, statuesque features. Then, with his glance riveted, fascinated, Judge Eaton simply bowed as the woman made a request to speak in behalf of her husband.

"Let me plead for him, let me tell my story!" she cried. "Guilty or innocent, give me the opportunity to show that he is more sinned against than sinning."

"Object!" cried the attorney for the state.

"Overruled," came mandatorily from the lips of the judge, and the abashed attorney stood petrified at this distinct violation of precedent and usage.

It was a pitiful story the woman told, of a reckless man with a loyal, patient wife. He had been deceived by bad companions. In the midst of poverty temptation had come. Look at him—a consumptive, a physical wreck. The doctors, she said, had given him up to die, his span of life was limited.

As in a daze the judge listened to the arguments that followed. As in a dream he went back in his life twenty years. The only woman in whom he had ever been interested was this woman. He had known her as Lucile Danvers. He worshiped her at a distance. She had married Renstone—he had never forgotten.

And now, in her forlorn plight, she had revealed herself as the wife of the man whose name the judge had almost forgotten. Then came the charge of the judge to the jury.

In consternation friends of the judge listened to his charge; the prosecuting attorney heard, appalled. The counselor for the defendant looked [illegible]

applied it to a remission of the guilt of the prisoner, and practically ignored the results of the evidence. Impressed by a realization of the superior knowledge of the judge, the jury retired and brought in a verdict of—

"Not guilty!"

A few minutes after Judge Eaton had entered his chambers the next morning, two associate judges came to him. They looked serious and troubled.

"Judge," spoke one of them, "we are your friends, as you know. Your decision in the Renstone case has caused a great deal of criticism. We fear the bar association will demand an investigation."

He extended a folded document.

"Read it," he said, stone-faced, not a quiver in his masterly mien. It was his formal resignation of the judgeship.

From that day Judge Eaton disappeared from public view. It was rumored that he had retired to a small family estate.

Then current gossip told of a heavy property loss, of his serious illness, and then the world forgot him.

From that illness, three years after he had made the sacrifice of wealth, position and judicial [illegible] honor out of sympathy for a woman, Judge Eaton came back to consciousness to find a beautiful young girl at his side.

She had acted as his nurse for over a month.

And in a day or two she told him who she was—the daughter of Walden and Lucile Renstone. Both were dead, but had spent two years of comfort and peace since he had saved her father from imprisonment.

An unexpected fortune had come to Renstone. Dying, he had directed his daughter to pay off all he had embezzled. Dying, her mother had blessed the noble man who had sacrificed his all for her in her darkest hour.

She had directed Florence to find him, to tell of her undying gratitude. And it was she who had come to the judge's side when all others had forgotten him.

"Do not send me away!" she pleaded. "Remember, I am as friendless and lonely as yourself. I seek only to devote my life and service to the noblest man in the world."

And so new brightness and hope came to the man the world had rejected, and interest on his part and gratitude on the part of Florence Renstone grew into a love that united them in marriage, radiant and happy.

The young friends of little Miss Edith Gunderson gave her a surprise birthday party Wednesday evening. The evening was spent in children's games and a delicious lunch was served.

G. C. Stein was in town Tuesday. He moved Saturday into a house he has purchased in Thief River Falls. He wishes to express his appreciation of the manner in which the people of all all Cloverleaf patronized his sale.

Some Changes

Bernt Tanem has leased the Tollefson restaurant property and moved his confectionery and pool tables over this week. Charles Johnson and family have moved into rooms over the Banner office and the restaurant has been discontinued. Charles Stephenson will move his barber shop into the room formerly occupied by him west of the pool hall.

Community Club Meeting

There will be a Community club meeting at the school house Friday evening, Sept. 30. A good program has been arranged.

Geo. A. Selke of the state department of education and Co. Supt. Geo. M. Gunderson will be present and discuss matters of interest to the schools. There will be music and other entertainment. A large attendance is urged.

Imported Wheat

The Farmers mill received a carload of western wheat Wednesday which had been eight days on the road from Dooley, Mont., and the freight on the car was $330. This is the first importation of wheat here and is largely in the nature of an experiment. If as good or better flour can be made from it than from the home grown wheat, so as to be sold at the same price as the home flour, the importation of wheat will be continued.

Too Closely United.

A British officer, who was attached to one of the commissions sent by his country to the United States during the World war, was the proud possessor of a huge mustache. One evening, the story runs, there was a dance held at one of the suburban hotels near Washington, and the lady with whom this gallant officer was dancing felt that her hair was falling over her ear. During the course of the waltz she managed to fix it up with a hairpin. At the end of the dance, however, the officer was alarmed to find his mustache pinned up with the lady's hairpin.

Secure Your Savings

Our forefathers fought for independence, and we should save for independence. A Liberty Bell Bank is yours for home savings by depositing $1.00 in a Term Savings Account here.

Each year thousands of people of small means lose what little money they have saved, through investing it in something that looks like a "get-rich-quick" opportunity.

For the person of small means, this Bank offers security of principal, certainty of 5 per cent compound interest return and availability of funds when needed.

MINNESOTA HISTORICAL SOCIETY

THE GOODRIDGE BANNER

VOLUME XV, No. 38. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, SEPTEMBER 30, 1921. $1.50 PER YEAR.

Corn and Potato Day

At an informal gathering held in the school house last Friday evening it was decided to hold a corn and potato day in connection with the Boys' and Girls' club exhibit, on Saturday, September 17. It was thought that this was an opportune time to make an excellent display of corn and potatoes, the season having been very favorable for these crops. A finance committee, consisting of the three following men, Carl Christianson, H. A. Halverson and H. B. Rockne, was appointed to solicit funds for expenses of the day.

It was decided to offer the following cash prizes:

Corn			
Northwestern Dent, 12 ears	$3	$2	$1
Minnesota No. 13	$3	$2	$1
Minnesota No. 23	$3	$2	$1
Potatoes:			
Best peck of Early Ohio	$3	$2	$1
" Irish Cobbler	$3	$2	$1
" Burbanks	$3	$2	$1
" Green Mountain	$3	$3	$1

Prizes for Boys' and Girls' club work will be announced in the next issue. Keep the date in mind and plan to bring a good exhibit. A good program will be arranged for, as well as other attractions that will be worth your while.

Credit in Sight

To Help Farmers

Financial help is in sight for Minnesota farmers whose assets justify the extension of additional credit, R. E. MacGregor chairman of the War Finance corporation's committee for Minnesota and the Dakotas, told a conference of farmers and bankers at state headquarters of the Minnesota Farm Bureau federation.

Funds to be loaned for agricultural purposes probably will be available as soon as the committee can be completely organized, Mr MacGregor said.

The conference was called by the farm bureau federation committee of six, representing farmers and country bankers, to lay before Duluth and Twin city bankers the credit needs of the farmer. The meeting, attended by representatives of the Duluth, St. Paul and Minneapolis clearing house associations, the federal reserve bank and the federal land bank, resulted in two important developments:

First—Both farmers and bankers agreed that agricultural loans made possible to country banks through the War Finance corporation will afford definite relief by carrying many farmers through the present critical credit situation.

Second—The Committee of Six launched a campaign to encourage eastern investors to put their money into northwest farm mortgages, as the best means of providing long time agricultural credit.

The amendment to the War Finance corporation act, which made $1,000,000,000 available for agricultural credit, was drafted in consultation with officers of the American Farm Bureau federation, and was backed by the state federations.

"No credit scheme in the world, however, can save the man who has involved himself so heavily in debt that his farm, in normal operation, cannot meet current expenses, pay interest and reduce obligations," E. G. Quamme, president of the St. Paul federal land bank, said. "Operations of the War Finance corporation," Mr. MacGregor said, "will permit country banks to obtain enough money to carry solvent farmers until they can bring their livestock or crops to the most valuable market conditions." The principal financial difficulty of the producer, according to Thomas Meighen of Preston, banker member of the committee of six, is that while he can obtain credit for planting and raising and harvesting his crop, he is pressed to liquidate as soon as the crop is harvested. "The inevitable result," Mr. Meighen said, "is to throw the whole crop on the market at once and put it into the hands of men who buy it at depressed prices, and are enabled, by simply handling it and holding it, to realize more than the farmers got for it by their year of labor."

Fasmer representatives contended that it would require no more credit to finance this grain in the hands of the farmer, in country or terminal elevators, than to finance it in the hands of speculators.

Grygla Market Day

There was a fine exhibit and a monster attendance at the fair at Grygla yesterday, and it was considered a real success. A number of promoters from Minneapolis and Bemidji were on hand talking railroad. They want the reservation opened and $1 per acre bonus from farms along the line.

School Notes

This week closes the first month of school. Report cards will be given out next week. A number of pupils will receive low marks or no grade, due to irregular attendance.

Ole Sande of Thief River Falls visited school on Monday.

Mrs. Sam Rouze visited the High school and Grammar rooms on Tuesday.

Tuesday the class in animal husbandry took their laboratory lesson over in Carl Edseth's blacksmith shop, shoeing a team of horses. Mr. Edseth gave a detailed explanation on the subject of horse shoeing and afterwards the students went to work under his direction. The horses, belonging to Mr. Vaughan, passed through the ordeal excellently, and the boys rather enjoyed the experiment.

The county board of health conducted a nutritional clinic in the school on Wednesday. All the pupils in school were given the opportunity to be examined and a few others came in for the examination. A number of children were found to be underweight and a few overweight. These pupils were given a thorough examination by the doctor in charge. The county nurse, Miss Knutson, county chairman, Mrs. Richter, county agent, J. J. McCann, of Thief River Falls, Mrs. R. H. McDonald and Mrs. Theo. Taudberg of the local committee conducted the clinic. Dr. Stuart of Minneapolis, working for the Minnesota Public Health association, conducted the examinations.

Sow Thistle Found

Near Iowa State Line

That the dreaded sow thistle continues to move southward is indicated by reports of county agents to their leader and assistant leaders at University farm. The Freeborn county agent discovered the weed on three different farms in that county, and the Dakota county agent says the obnoxious weed has been located on six farms within his jurisdiction. The Scott county agent [illegible] three samples for farmers as sow thistle.

LIST OF BUILDINGS IN FARM APPRAISAL

Mention Water Supply, Light System, Etc., Separately.

Necessary That New Improvement Costs Be Correctly Inventoried and Depreciation Be Adequately Provided For.

(Prepared by the United States Department of Agriculture.)

In making a farm appraisal, each building or improvement, such as water supply, lighting system, etc., should be listed separately, say farm management specialists of the United States Department of Agriculture. It is best not to list separately other land improvements, such as fences, drainage, and the like, but their value should be included in the appraisement of the land so improved.

One of the most perplexing appraisals will be that of the farm buildings and other improvements. The buildings and improvements are bought and sold with the land, and it may often appear difficult to give them a value separate from the land. This is not so difficult as it may seem, and it is of importance that they be separately valued, as only by this means can all the uses of the inventory be realized. Furthermore, this is necessary in order that new building improvement costs be correctly inventoried and depreciation be adequately provided for.

There are two bases which may be employed in appraising buildings and improvements—original cost of construction and estimated cost to replace present prices. In either case allowance should be made for depreciation from the date of erection to the inventory date.

DUST BATHS IN HOT WEATHER

Effective Means of Ridding Fowl's Body of Vermin and Provides Enjoyable Exercise.

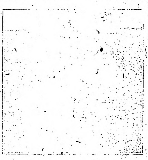
Don't forget about the dust baths in hot weather. At this season, all that is necessary is to keep a few little spots spaded up quite fine around in shady corners of the yards. Keep them free from stones and clods and lightly sprinkle them with water every noon. Then the fowls can get their bodies down on the cool, moist earth and counteract the effects of the hot afternoon's sun. Besides this, the dust bath is an effective means of ridding the fowl's body of vermin and also provides the fowls with enjoyable exercise.

[illegible] SEED [illegible]TIFIED

[illegible] Be Told [illegible]

[illegible] by De[illegible]

[illegible]



A Cock of Sweet Clover Hay Which Has Been Cured in [illegible] Condition.

white sweet clover. The seeds of the two [illegible] distinguished, and it is quite possible [illegible] by accident or design the cheaper seed of the biennial type may be sold for the more expensive annual plant. For this reason the United States Department of Agriculture urges prospective buyers to look carefully into the origin of every lot of seed offered. Growers of annual sweet clover this year should be able to state where they got their stock seed, when it was seeded, when it blossomed and when it was harvested. If any responsible state official can add his assurance that the seed is true annual, such a statement would be worth getting.

The large growers are naturally preparing to meet all demands for evidence as to the purity of their stocks. Unless the smaller growers can also give adequate assurances regarding the authenticity of their seed it may be harder to sell and they may have to accept prices in line with those paid for common sweet clover seed. All such growers are advised to take up this matter with their farm bureaus, county agents or state experiment stations and protect themselves as far as possible.

STORAGE CELLAR ESSENTIALS

Should Be Located on Well-Drained Site and Insulated Against Cold and Heat.

The four things to be kept in mind in planning a storage cellar are: securing a well-drained site, on a knoll if possible, but in any case where no water can settle back in the cellar; insulation against both cold and heat is necessary; the cellar should be supplied with plenty of moisture so that roots and tubers will not shrivel; at the same time it must be ventilated so that moisture does not condense or drip.

The following products can be stored in a root cellar so designed:

Apples, asparagus, beans, bulbs, cabbage, canned fruit, carrots, celery, cranberries, fresh fruits, onions, parsnips, pears, potatoes, sauerkraut and tomatoes.

COVER CROPS IMPROVE SOILS

Not Grown as Much as They Deserve Nor as Frequently as Needed in Many Instances.

Cover crops for fall and winter are not used as much as they deserve nor as frequently as the soil requires. More vegetable matter is greatly needed on thin soils. Those who break early and plant rye, wheat, oats, barley or emmer will find advantages for improving soil and in extending the rotation to build up the land. Without humus it is a difficult matter to use commercial fertilizer to advantage. By turning the cover crop you make a beginning for better soil.

[illegible] twenty-fifth [illegible] of the [illegible] written [illegible] the line: "Dinner for [illegible]"

[illegible] years—isn't it thrill[illegible] cook, [illegible] as she [illegible] daughter [illegible] house [illegible] her own home on her return from abroad.

"Twenty-five years! Thrilling! [illegible]" As she chilled and glazed [illegible] the dinner for 12, back [illegible] the years the cook's mind traveled to another seething summer day [illegible] another home not so very much more [illegible] after all, but yet her own, where she had waited with mother and [illegible] bridesmaids by her side, tearful but happy, for the one man to lead her down to the waiting minister, the relatives and friends.

Over them all, her thoughts raced back—the struggling years, the full years, the lean years, the lonely years, the well-worn years—her self pity growing stronger and stronger, and through it all the thermometer mounted and the dinner for 12 progressed, until at 5:30 cook dropped into the chair with a final growl at the little kitchen maid: "Now, let them rave on, kid; we'll be ready."

"Fine!" ventured little Maggie, brightening visibly at the first nearly pleasant word that had emanated from her top boss that day.

"Listen, cook, let's joy ride over with John when he takes Bridget home—will yer?"

"Joy ride—do I look like a joy ride?" snarled the cook. "And what are those pans?"

"Them are the clean pans for the milk. Come on, will yer?"

"Yes. I'll go."

"We'll make him drive us home by the crazy folks' house, the longest way round," whispered Maggie to cook, and then—"Will yer?" she called to John when he came out from the tiny grocery, where he had gone for yeast cakes, after leaving the laundress at her door.

"Will yer?"

"All she can say is 'Will yer,'" shouted cook, above the cranking of the servants' Lizzie-mobile—"Have you time?"

"Yes," said good-natured John, comfortably, "I guess so. The boys will start the milking."

Down the shady country road they chugged along the gardens of the state infirmary.

Just now work for the day was over. In groups under the shade trees the old men waited the call for supper. The boys played a random game of ball. The women, sullen and indifferent, trooped down the walk from the laundry.

John guided the car through the gates and drove slowly round the driveways, past the big stone buildings.

Cook, growing cooler in the soft haze of the June afternoon, forgetting for the moment to look inward and backward, gazed out thoughtfully at the blue denim clad figures.

Cook's kitchen with its diversity of daily troubles, began by contrast to take on a roseate hue.

"Don't they never go out, John? Are the doors all locked on 'em? What's the bars for?" piped Maggie, bouncing from side to side trying to look everywhere at once.

"Behind the bars are the very worst cases," John told her, "the hopeless ones and the violent ones. And that's the hospital."

How much she had to be thankful for, cook's thoughts ran on—her health and earning capacity, her strength and active mentality. Even memory became sweet, as, one by one, the blank faces passed in review.

"Look at all the children? Where do they all come from? Can't they ever get out? Gee, they all look like you do when you're awful mad, cook. Are we going out this gate? Gee, I'm glad we're going out an' we ain't lame nor blind nor sick nor nuthin', ain't you, cook?"

With every tired nerve relaxed and every scowling frown erased, bearing proudly a new lease of life, a breathless, laughing cook raced with a skipping kitchen girl through the woodhouse into the steaming kitchen, flipped up the oven to test the Parker House rolls rising by the side of the range, basted the chickens and turned them over, and as she tightened the belt of her apron and started to garnish the [illegible] said softly to herself:

"Always—it might be worse!"

DRINKING WATER IN SUMMER

Supply for Hogs and Chickens Overlooked on Many Farms—Skim Milk Not Sufficient.

Perhaps no animals on the farm suffer more for fresh drinking water during the summer than hogs and chickens. Hogs, particularly, are usually left with only slops and skim milk, when these hot months they crave cool water. Water in chickens' pans quickly evaporates, and is too often forgotten. It is positively cruel to forget any animal's drinking water needs in the summer months.

STORED POTATOES NEED AIR

Where Piled to Depth of 10 or 15 Feet Tubers Sure to Go Through Sweating Process.

(Prepared by the United States Department of Agriculture.)

It is a bad practice to store potatoes in large bins or piles, the United States Department of Agriculture advises. Not infrequently potatoes are piled to a depth of 10 to 15 feet, the pile being correspondingly large in the other two dimensions. When stored in this manner, they are almost certain to go through a rather violent sweating or curing process, during the course of which the tubers in the central portion of the pile are frequently subjected to a dangerously high temperature. This is especially true if the tubers are slightly immature, or were not dry and free from moist soil when gathered, or if stored when the outside temperature is high, making it difficult to lower the inside temperature of the house. Overheating from all of the causes mentioned may be avoided by making some provision for aerating the pile.

Good Type of Potato Storage House.

HORSES REQUIRE GOOD CARE

Animal in Pain Consumes Half More Feed to Do Same Work—Fit Collar Properly.

Too many farmers fail to realize the bad effect of sore shoulders on horses. A horse that is in pain requires from 30 to 50 per cent more feed to produce a given amount of work without loss of weight. There is no need for an animal to have sore shoulders if the collar is well fitted, the hames are adjusted to pull at the right angle on the shoulders, and the collars are kept clean. Young horses just starting to work should have their shoulders washed with salt and water after work, and the mane should be kept out from under the collar when at work. A little care will be well repaid later.—C. L. Bray, Colorado Agricultural College.

PROFITABLE AGE FOR FOWLS

Some Hens Are Not Good Producers After Their Second Year. Others Lay Longer.

The profitable age for hens varies with individuals. Some hens are not profitable after their second year, while others will pay their keep and more too for three or four years. In figuring up the value of a hen, consideration must be given the value of her eggs as well as to the number of them she will lay.

ESCAPING JUICES CAUSE MUCH LOSS

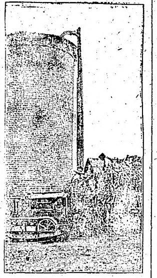
Leaching and Fermentation During Ensiling of Corn Is Made Subject of Inquiry.

SILAGE SAMPLES ANALYZED

Evidence Found of Downwash of Liquid in Silo Carrying With It Soluble Food Materials—Results Not Yet Complete.

(Prepared by the United States Department of Agriculture.)

Every farmer who has a silo knows that some change takes place in the substance of the corn or other crop conserved by this means, and it is generally assumed that some loss in substance of both moist and dry matter takes place as a result of fermentation and leaching. To ascertain as definitely as possible the amount of this loss, its causes, and means for wholly or partially preventing it, the dairy division of the United States Department of Agriculture has been conducting a series of experiments. The results of two years' tests are covered in a professional paper, Department Bulletin, 953, Nitrogen and Other Losses During the Ensiling of Corn.



Cutting and Blowing Corn Into Silo.

Samples of Silage Analyzed.

Samples of silage in cheesecloth sacks were buried at various depths and positions in a silo 42 feet high by 14 feet in diameter, holding approximately 150 tons. The bags were weighed when put in, and samples of the silage analyzed. When the bags were reached in feeding out the silo, the contents were again weighed and analyzed.

The two years' work furnished evidence of a downwash of the juice in the silo carrying with it soluble food materials, so that the silage in the lower part of the silo may gain in food material at the expense of the upper part. There was an average loss for all the bags of nearly 10 per cent of the dry matter, which apparently is due largely to the fermentation of the carbohydrates and to the carrying away of soluble material by the juice. The sugars almost entirely disappeared. There was a considerable loss of crude fiber and of the furfurol-yielding bodies. There was a loss in total nitrogen, which was larger when the corn put into the silo was immature than when mature corn was used. It is probable that this loss is due largely, if not entirely, to the nitrogenous compounds in the juice. The albuminoid nitrogen suffered a loss of over 50 per cent, while the non-albuminoid forms increased several times their original weight.

Big Escape of Juice.

There was a gain of ether extract, probably due to the formation of new ether-soluble bodies. The second season nearly 10,000 pounds of juice escaped from the silo. This juice carried a considerable percentage of nitrogen of various forms which in ordinary practice would remain in the silo.

The results are as yet incomplete, and the tests are being continued.

PUREBREDS BEST PRODUCERS

Enormous Differences Among Dairy Cows Have Been Brought Out in Number of Cases.

The value of purebred stock, say specialists in the United States Department of Agriculture, is most noticeable in those cases in which the capability of the animals is measured most directly. Among farm animals the best illustration can be found in dairy cattle, though careful yearly tests of milk and butterfat production are relatively recent affairs. The enormous differences among dairy cows when given the same opportunity have been brought out clearly in a great number of cases, and these differences are strongly inherited through both the sire and the dam. The average production for purebreds and grades is much above the average of all milk cows, which is about 4,0[illegible] [illegible] of milk [illegible] [illegible] pounds [illegible]

Frank Dolby had worked as a reporter on a daily newspaper for three years at $15 a week, and was glad to get it, and saved some money. He was new at the business and had large ambitions for the future. Frank was satisfied well enough until he got acquainted with Newton Barnes.

"Tell you, Dolby," he observed as they sat over lunch at a cheap restaurant, "when a fellow gets into this sort of jog-trot pace, there isn't much prospect ahead."

"Well, what are you getting at?" inquired Frank. "Some new dream of wealth, I'll wager!"

"Yes, sir!" emphatically agreed Barnes, "only an actual reality this time. I had to write an article on motion picture shows last month, and it opened my eyes. Why, Dolby, the money spent in this country on these shows would pay the national debt. You know my folks live in a country town about two hundred miles from here. I saw a friend from there yesterday, and he said there wasn't a picture show in the place. Let's make a start."

"And how?" interrogated Frank, skeptically.

"Well, here's my plan: Let us move to Parkville, and start in business."

"Who's going to run it?"

"You and I," said Barnes.

"And the capital?" mildly suggested Frank.

"You'll have to supply it. If I didn't know you had $500 saved up at the bank of course I wouldn't have come to you."

Frank liked Barnes, and was of an adventurous spirit. Once he began to look up the "movies" business it fascinated him. At the end of two weeks behold Frank and his friend at Parkville, and the Palace theater in full blast.

The first thing that Frank did after arriving at Parkville was to fall in love with the sister of his partner, Etta Barnes.

The Palace theater was a big draw for nearly a week; but when the month ended, they came out barely even.

"I see the trouble," explained Barnes—"we're not up-to-date. We have either got to get a first-class outfit, or close shop."

"Where will we get it?" propounded Frank. "I have a bare fifty dollars in the bank."

Rather disconsolately they kept the show going, but pretty well convinced that it would run out. Then one evening circumstances, accident, fate, changed the whole current of events.

It was market day, and a good many farmers had remained in Parkville to take in the movies. Just as the first series of films was reeling off, a man came to the entrance. He was a neighboring storekeeper, bareheaded, and in a hurry.

"I just got a message over the telephone from the Bartlett farm, about two miles out of town," he advised Frank. "His haystacks are all on fire, and the house is threatened. His hired man thinks he is in the show here."

"All right," replied Frank. Then he hurried into the iron booth. Within the space of two minutes he had prepared a plate for Barnes to slip across the lens of the machine. The showing film was retired, and there suddenly flashed across the screen the sentence:

"If Farmer Bartlett is in the audience, hurry home at once—haystack on fire."

"What's that!" cried out the individual named, and there was a momentary bustle. Not only Bartlett himself, but his family and several of his neighbors hurried from the show to their teams hitched outside. Then as the exhibition film was replaced, the incident was soon forgotten by the audience.

It was the following afternoon, and the two partners were rather desperately discussing their situation and prospects when Farmer Bartlett entered at the doorway of the photo playhouse.

"Well, my friends," he exclaimed, shaking hands with them heartily, "you flashed that message to me last night just in the nick of time, and did a big thing for me."

"How was that?" inquired Frank.

"Why, my haystacks had caught fire, with only my crippled hired man about the place. He soon gave up trying what a few pails of water could do, and phoned here. We got to the farm just in time to put out the fire in the barn and scatter the blazing haystacks. In ten minutes more, barns, house and all would have been in ashes. Now, then, what can I do for you?"

It became apparent, after a very brief talk, that their grateful and interested friend could finance them, and this he did. Not only was a new and acceptable outfit put in at the Palace, but two new places were started in other towns.

The tide of fortune seemed to turn all at once. In a year the ambitious partners were sailing smoothly, in two the ambitious Frank Dolby led the loveliest girl in Parkville to the hymeneal altar—Etta Barnes.

Expert Aviators.

The Missing Fortune

By MURIEL BLAIR.

Copyright, 1921, Western Newspaper Union.

Because John Davis was hungry and had to work, and because a big wind storm had blown down some barns and fences and nearly half the trees in Glenville, thereby offering that individual an opportunity to labor, sunshine came suddenly into the life of pretty, Patient Ethel Moore.

She needed it, poor girl, and more than deserved it, if ever a loving, helpful daughter and a true and earnest sweetheart did. Ever since her mother had died Ethel had led a hard, slave-like existence. They had not always lived in Glenville. It was the lure of chance and a fortune that had induced William Moore, her father, to abandon a fairly prosperous store business in a city 50 miles distant, to fill out, as he anticipated, the glowing dream of his life. He had always longed for a farm, and when he was called urgently to the bedside of his dying brother, Robert, he felt certain that at last the coveted acme of his ambition was in sight.

Robert Moore, reputed a rich man, died before his brother reached him. In his will he left William everything. When "everything" was materialized into coherency, to the surprise of his neighbors and the bitter disappointment of the legatee, the estate comprised only the old home, with its weather-beaten porch and boarded-up cupola, dreary and gloomy in the extreme.

"The place will do to live in," moodily decided William Moore, "but what has ever become of the stocks and bonds and money everybody knew my brother had six months before he died?"

William Moore's wife died, he sold out his business and then lost his cash in an unwise speculation.

Then the shoe began to pinch. He had a small house in the city, which brought in a certain income, but not enough to cover living expenses. Ethel learned to do dressmaking and her little earnings helped to keep the wolf from the door.

It was when Archie Winston came into her life that the days seemed worth while and the nights were filled with sweet dreams. The old man had grown sour and selfish, and would not hear of a change in their domestic relations.

"I may get something yet out of my unfortunate investment," he was wont to say.

It was several days after the big storm and the fallen and hanging limbs of the giant trees surrounding the Moore homestead had not been cleared away.

When John Davis came along one morning Ethel listened to his application for work with interest and sympathy.

"I've been sick for a long time, Miss Moore," he declared, "and not able to take a steady job for some time ahead. I'll trim out that hanging stuff up around the house for fifty cents."

"Very well, Mr. Davis," she agreed after a moment or two of wavering thought. "It isn't much to pay, though."

"It's a lot to me," sighed Davis, thinking of the hungry mouths at home. "You'll get a blessing for this," he added.

Ethel went into the house with thoughts of the struggling brood of children of John Davis' in her mind. She remembered an old trunk in the attic filled with odds and ends, and wondered if she would be likely to find anything of service to the Davis household.

Several old garments she discovered, might be utilized. She was kneeling by the trunk, engrossed in her task, when a most unearthly hubbub drove her to her feet with a shock.

"Oh, dear! what can have happened?" gasped Ethel breathlessly.

Then, as she dashed outside, she saw her father standing in the garden, waving his arms frantically.

"You've ruined the looks of the house!" he was storming at John Davis.

The latter sat on the ground staring vacantly at a mass of wreckage near by. It was the shattered remnants of the old cupola.

Mr. Moore advanced to where the ruins of the cupola lay. Ethel heard him utter a strange cry. She ran towards him as he stooped over and picked something up.

It was a tin box. Her father lifted its catch, threw back the cover and nearly fell over as a great conviction illumined his mind.

"Quick, daughter!" he panted. "Papers—and money! If it should be my brother's missing fortune at last—!"

It was, at last, and in full. The hiding place of the missing fortune had come to light through Ethel Moore's kind deed. It meant so much to William Moore that he seemed to grow younger in an hour. He sent John Davis home feeling rich, and he told Archie and Ethel that evening that they might arrange to have the old homestead renovated for a wedding.

No Choice.

"Now suppose," said a Canadian temperance lecturer, "I had a pail of water and a pail of beer and brought on a horse, which of the two would be taken?"

"He'd take the water," came a voice from the gallery.

"Exactly," said the lecturer. "But [illegible]

BOBBY'S JAM

BELLE WITKIN.

©, 1921, By McClure Newspaper Syndicate.

Peggy's eyes flashed resentfully. Just because Howard Milwood owned half of the town of Milwood was no reason why his daughter should patronize her.

"You must come up to the festival, dear," Betty Milwood was saying kindly—too kindly. "Several young college men will be there, and I'm sure you'll have a good time."

Then she added rather self-consciously, "Did I tell you Kent Wayne was to be there—yes—the Kent Wayne of New York. He is so interesting and so devoted."

Little Peggy's eyes opened wide.

Kent Wayne, the artist, at Betty's charity festival!

Betty smiled in anticipation as she thought of Kent. He would be devoted, of course, and she would stroll carelessly about with him. The entire town of Milwood would be duly impressed.

She walked along so absorbed in her thoughts that she did not see a low, black roadster spin up the road in the direction from which she came. Had she seen the gray-capped, tweed-coated driver she might have not been so complacent.

The athletic-looking young man in the motor had seen her, however, and whispered a fervent prayer of thanksgiving when she passed without seeing him.

He rode slowly along enjoying the fine spring day until he came to what he involuntarily called "a picture of wistfulness." Peggy, sitting on the steps, was thinking disconsolately of her scanty wardrobe.

"I suppose the old organdie will have to do—and my old hat," she thought. "Well, at least, that is pretty if it is last year's."

Then she became aware of someone standing at the front gate of the little house and looking at her.

Brown eyes, fortified by the smile, looked at gray eyes. Then, his hat in hand, he approached and said, "I beg your pardon, Miss, but my engine needs water badly; that is, it won't run without it, and I—may I have some?"

"Yes, certainly. Don't you want to come in?"

Wayne followed into the long, cool kitchen, where it took him an extraordinarily long time to get a drink.

Wayne had entirely forgotten his "thirsty" engine and was racking his brains for an excuse to linger when, there came a dull, ominous crash, followed by a cry from above.

Peggy started.

"Oh, my goodness, what's that!" she exclaimed, entirely forsaking her attitude of calm dignity.

Seated on the bottom stair and gazing tearfully upon a heartless world sat Bobbie, aged six.

"Oh, Bobs," she gasped, "tell us how it happened?"

"Well," said Bobbie, still sobbing, "I—I went to the pantry 'n I—I got some jam—just a teeny, weeny bit. Peggy, honest, 'n then I—"

"You what, Bobbie?"

"I heard you comining 'n I was afraid you'd think jam isn't good for little boys," said Bobbie, very innocently.

Peggy tried to look severe.

"Well?"

It developed that Bobbie had taken a small glass of jam upstairs in preparation for a lonely feast, had dropped it over the banisters and, in panic, had taken the quickest way downstairs, which was not by way of his feet.

Satisfied that he was not hurt, Peggy took him into the kitchen, washed his face, kissed the bruise on his arm to make it "all well" and sent him out to play.

Kent, now recovered, suddenly remembered the errand which had brought him to Milwood, and much against his inclination, took his leave.

Peggy watched him out of sight and smiled wisely to herself as she thought: "Water for the engine—but I wonder why he didn't give his name? But then, he doesn't know mine, either."

In which she was mistaken.

The day of the festival came at last. Peggy started out for Betty's home.

As she drew near, she caught sight of a familiar roadster at the entrance to the Milwood grounds. She entered the grounds and was at once carried off by a group of friends to one of the tables where refreshments were being served.

Suddenly the chatter of the girls ceased and someone next to Peggy whispered, "There, look—quick, Peg! That's Kent Wayne, the artist."

Peggy looked, then looked again. It was the young man of the roadster and he was coming in her direction. Then he was at the table and she heard him speaking:

"Miss Carter, may I see you for a moment?"

They sat in the garden for a long time; then there was dancing on the pavilion. After that there was a strawberry supper, and later in the evening Kent saw Peggy saucily wave good-by.

Milwood saw a great deal of Kent Wayne after that, and the gossips nodded their heads wisely when Kent and Peggy were seen together in the black roadster with Bobbie perched on Kent's knee, [illegible] fully running the [illegible]

HANDLING BRUSSELS SPROUTS

Considered by Some as Superior to Cabbage Because of Its Milder Flavor.

There seems to be a growing appreciation of brussels sprouts, which some consider much superior to cabbage because of its milder flavor. The fact is not always realized, though, that the brussels sprouts can be kept long in the winter. It is only necessary to dig them up and take them indoors when cold weather comes, setting the roots in earth in boxes or on the cellar bottom. This can be done even if some of the sprouts have been removed, and, of course, they should be taken off as fast as they grow large enough for use.

SCATTER GRAN FOR POULTRY

Proper Way to Give Feed to Hens Is Distribute It Over a Large Surface.

Some hens are gluttons, and in their greediness will seize food to prevent other hens from securing their share. Those are the hens that become over-fat and finally quit laying. When food is given in a way that permits the hens to eat without having to scratch, there is sure to be an unequal distribution of the food among the fowls of the flock. The proper way is to scatter the grain over a large surface so that each hen will be compelled to work, and all will fare alike.

THE GOODRIDGE BANNER

VOLUME XV, No. 38. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, OCTOBER 7, 1921. $1.50 PER YEAR.

Town Boards Responsible

Lots of folks don't seem to fully realize that the situation with respect to the enforcement of the Noxious Weed Law is different from what it has been for the past twenty-five or more years. One item in particular is provoking a lot of discussion. This is the responsibility on the part of the township boards for the cutting of weeds along the roadsides. Until the passage of Chapter 320, S. F. 422, Laws of 1921, roadside weeds were supposed to have been cut by the abutting property owners and the board members, village council and such officers were authorized to notify the property owners to destroy the weeds. Now, under the provisions of Chapter 320—cited above—it is obligatory on the town boards to cut or cause to be cut all noxious weeds along the roadside.

Sec. 4. "The governing board of each town, village, borough or city shall at the expense of such municipality cause all noxious weeds standing or growing upon any public road or highway therein to be cut down between the first day of June and the 15th day of October following as often as may be necessary to prevent the ripening and scattering of seed of noxious weeds."

Obviously the members of the town boards did not wish to offend friends and neighbors by ordering them out to cut the weeds even though a large majority of the farmers favor the prpeedure as provided in former laws. As a result most of the roadsides were neglected until weed seeds had ripened. Thus the old story, "Everybody's business is nobody's business."

Now it is to be different. The law plainly states that the cutting of roadside weeds is up to the town board of the respective township and the administration of the law is in the hands of state officials. Hence no danger of creating a neighborhood "feeling" is likely to develop. The local weed inspector notifies the members of the town board just as he would a farmer or city lot owner. If they do not comply with the notice and get the weeds out, the law may take its course.

The new law was based on the assumption that united action was the basic principle in noxious weed control. Those who want to see weeds under control and voluntarily attempt to keep them in check will welcome the law and its enforcement. Those who are indifferent or neglectful of weeds will be willing to be reminded and will fall into line for the universal effort. Those who do not sense their resdonsibility to our fellow men must be reminded of the fact and be brought to the point of realizing that this weed problem is not any one individual's, but one demanding the attention of every land holder, country or city, and of those who have charge of lands such as public parks, roads, streets and alleys.

No State Tax!

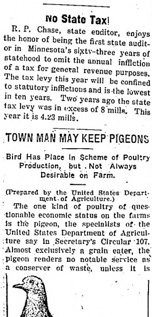
R. P. Chase, state euditor, enjoys the honor of being the first state auditor in Minnesota's sixty-three years of statehood to omit the annual infliction of a tax for general revenue purposes. The tax levy this year will be confined to statutory inflictions and is the lowest in ten years. Two years ago the state tax levy was in excess of 8 mills. This year it is 4.23 mills.

TOWN MAN MAY KEEP PIGEONS

Bird Has Place in Scheme of Poultry Production, but Not Always Desirable on Farm.

(Prepared by the United States Department of Agriculture.)

The one kind of poultry of questionable economic status on the farms is the pigeon, the specialists of the United States Department of Agriculture say in Secretary's Circular 107. Almost exclusively a grain eater, the pigeon renders no notable service as a conserver of waste, unless it is shattered grain in the fields, and that in large measure would be taken up by other poultry and by pigs. The pigeon has a place in the scheme of urban poultry production, but, except in isolated instances where conditions are peculiarly favorable, its production on farms may not be desirable.



$10,000,000 AID FOR VETERANS

Red Cross Provides Friendly Service of Many Kinds to Army of Disabled.

BULK OF WORK BY CHAPTERS

2,397 of These Are Helping Ex-Service Men Obtain Benefits U. S. Provides.

One field of Red Cross service alone, that of assisting disabled veterans of the World War, entails expenditures $4,000,000 greater than the aggregate receipts of the Annual Roll Call of 1920, the American Red Cross announces in a statement urging a widespread increase in membership at the Annual Roll Call, November 11 to 24. At the present time National Headquarters and the nation-wide chain of Chapters of the Red Cross is spending approximately $10,000,000 annually for the relief of disabled ex-service men and their families, while the aggregate receipts from last year's Roll Call were approximately $6,000,000.

It is in the 2,289 of the 3,600 Red Cross Chapters which still are helping solve the veteran's problem of adjusting himself to a normal civilian status that the greater part of the cost of this service is borne. Of the total sum spent for veterans' relief last year, National Headquarters expended a total of more than $2,000,000, while the remaining disbursement of approximately $7,000,000 represents the contribution of Chapters in this country-wide effort to assist the Government in providing the aid sorely needed by these men and their families.

An Ever Expanding Problem

That the problem of the disabled service man is ever-expanding and probably will not reach the peak before 1925, is the assertion of well-informed Government officials and that 2,397 Red Cross Chapters regard it as their most important work is evidence that the expansion is in nowise confined to a particular section but is, on the contrary, nation-wide. At the end of the fiscal year, June 30, 1921, there were 26,300 disabled service men in the 1,692 United States Public Health Service, Contract and Government Hospitals and Soldiers Homes, and that number is increasing at a rate of 1,000 a month.

Thousands of these men receiving medical treatment, compensation and vocational training from the Government today, started their efforts to obtain them through the Red Cross Chapter. The Chapter, acting as the disabled man's agent in claims against the Government, informs the man as to the procedure necessary to gain for him that which is provided him by Federal statute. His applications for compensation, medical treatment and training are properly filed with the aid of the Red Cross Chapter.

Many Forms of Assistance

If there is delay before the man's claim is acted upon, the Red Cross Chapter lends the man money to meet the imperative needs of himself and his dependents.

Most vital to the man's gaining full benefit from the Government's care is keeping his mind free from worry about his home. Keeping the veteran's family from hardship of every kind and informing him of its welfare is another province of the Chapter. Free from fear on this score, the man's recovery and advancement usually is rapid.

Every month during the last year, the American Red Cross has given service of one kind or another to an average of 129,215 former service men and their families. An indication of the extent of the faith reposed in the Red Cross Chapter is to be found in the fact that there were 356,544 requests for friendly aid in the solution of personal problems.

448 Workers in Hospitals

While the man prior to entering Government care deals largely with the Chapter, afterward he comes into contact with the service provided by National Headquarters. There are 448 Red Cross workers in the United States Public Health Service and contract hospitals and other institutions in which these men are being cared for, whose duty is to provide for his recreation, help him with his compensation claims, keep him in touch with his family; in short, meeting his every need outside of that provided by the Government. While these are a few responsibilities of the National Organization, they are by no means all. Among other Red Cross accomplishments for the year are:

It handled 70,732 allotment and allowance claims.

It delivered through its Chapter organization 63,655 allotment checks to veterans who had moved from the addresses furnished to the Bureau of War Risk Insurance.

It provided a special fund of $10,000 for medical assistance to men under vocational training.

It made 82,405 loans totaling $450,000 to men taking vocational training, of which 85 per cent has been repaid.

Corn and Potato Day

AND

Boys' and Girls' Club Exhibit

GOODRIDGE, MINN,

Monday, October 17

Corn and Potato Day

Preparations are under way to make October 17 a real get together day of farmers and business men. This is an opportune time to make an excellent display of corn and potatoes, the season having been very favorable for these. The exhibit has been staged in the school house. A good program has been prepared for the occasion, as follows:

Music all day by band and orchestra.

11 a. m., judging of calves by J. J. McCann and Leonard Houske.

1 p. m., poultry culling demonstration and egg exhibit by Nortwest School of Agriculture, conducted by Prof. H. Hoberg.

Following the demonstation will be a corn and potato talk by Prof. T. M. McCall.

The foollowing cash prizes will be off

Corn:	
Northwestern Dent, 12 ears	$3 $2 $1
Minnesota No. 13	$3 $2 $1
Minnesota No. 23	$3 $2 $1
Po	
Best peck of Early Ohio	$3 $2 $1
" Irish Cobbler	$3 $2 $1
" Burbanks	$3 $2 $1
" Green Mountain	$3 $2 $1

The following cash premiums will be offered to members of the Boys' and Girls' club:

Dairy Calves	$3 $2 $1
Sheep	$2 $1
Garden Vegetables	$3 $2 $1

The two latter will be judged on points as follows: 20 per cent on care of garden, 20 per cent on financial report, 60 per cent on yield and exhibit.

Canned Goods	$3 $2 $1
Poultry, best pen of chickens, consisting of three birds	$2 $1

All entries of exhibits must be made before 11 o'clock a. m. The merchants ar offe [illegible] al inducements for people to come to town on that day.

School Notes

At the regular monthly school board meeting held Tuesday evening Christ Urdahl presented his resignation as chairman and member of the board. His resignation was accepted and John Kusmak was appointed to fill the vacancy. Carl Christianson was elected chairman by unanimous vote of the members present.

On October 17, designated as Corn and Potato day, the memhers of the Boys' and Girls' club will exhibit their garden vegetables, canned goods, poultry, sheep and calves. There are ten members in the Calf club and each of them has a calf to exhibit. The calves will be judged and the best one in the lot will be taken to Crookston to compete for prizes in the Red River Valley stock show held in November. The boys and girls have taken good care of their calves, and they are anxious to make a creditable showing in this department.

At the regular assembly period Wednesday morning Harry McDonald gave an interesting account of his visit to the state fair, state capitol, and a general sight seeing trip in the Twin cities. Tina Gaudland recited an October poem, and Inga Hanson gave a recitation on "Good-bye to Summer."

Mrs. Joseph McCabe visited school on Wednesday of this week.

The following pupils have been promoted this week: Mamye Dahlen, Agusta Harms, Florence Halvorson and Esther Runken. Promotions were mane on merited work only.

The Missing Letter

By HAROLD SINCLAIRE

Copyright, 1921, Western Newspaper Union.

We all looked upon Libby Arliss as an old maid, absurdly old, although her age could not have been more than thirty-five. But after her mother died she ceased to go about much in our village society; and by the time she was out of mourning she had settled down into a lonely life in her little home. She had a fine garden, and we boys and girls used to steal her pears and mock at her when she came out and threatened us.

"I'd like to get even with Miss Libby for being so mad about our taking her wormy old pears," said Steve Marks, the "bad boy" of the village.

None of us liked Libby. That was how we came to concoct the love letter.

Why we hit upon William Tabor I can't quite remember. The Tabors had once been the most respected family in our village, but William was wild when he was a young man and went West, returning broken down in health, a year or two before.

Three of the high school scholars concocted the letter. It ran like this:

"My Dearest William:

"May I—dare one whom the world calls a sour old maid, avow to you something against which I have fought for many months in vain? William, I love you! There, I have avowed it, and you cannot guess how shrinkingly I write down these words which my hand is powerless to stay. I love you—and now I have told you all. The rest is with you.

"LIBBY ARLISS."

Why not send Libby a letter by the same post? I asked. No sooner thought of than acted upon. William's letter ran in this way:

"My Dearest Libby Arliss:

"Because my tongue is weak and falters in your presence, I would fain write down the words I long to say to you. Libby, I love you. May I call to see you and tell you of the fatal passion which you inspire in my heart? WILLIAM TABOR."

We dropped these epistles into the letter box and waited with bated breath, metaphorically speaking. We saw Mr. Tabor's buggy coming at breakneck speed down the road in a cloud of dust. He pulled in the horse outside the gate and hitched it to the fence. Then he got out and went in, walking very quickly. He rang the bell and Miss Libby came to the door.

And as she stood there looking at him and smiling up at him, he took her in his arms and kissed her.

That was enough for us. We were all thoroughly scared. We took to our heels and ran home.

"Well, lady, there's news in the village," said my father, when he came home that night.

"I know, dear," said my mother, smiling. "Libby Arliss and Will Tabor have made up again."

"Trust a woman for finding out these things," my father said. "Well, I'd always hoped it would come to pass, but I never thought it would be in just that way. It seems that she had written him a letter two years ago, when he returned, and he found it, unopened, yesterday evening, among a lot of old papers that his father left."

The next morning I met Steve Marks and he caught me by the wrist.

"What do you think?" he exclaimed, indignantly. "Sylvia Temple has just confessed that those letters never reached them at all."

"What? Why?" I shouted.

"Because she sneaked back to the postoffice after we had gone, and fished them out with a piece of stick with a fish hook in the end, and tore them up—that's why."

"Then how did it happen?" I asked.

"I'm blessed if I know," he answered, scratching his head, and at that moment who should come along but Miss Libby herself. She looked ten years younger, and she smiled so [illegible] are.

[illegible] you boys know all about it, I [illegible]" she said, when we blurted out [illegible] congratulations. "I can't begin to [illegible] how happy I am and—and—[illegible] I guess I've been a pretty crabbed sort of woman for a long time. But now I want you all to come into my garden this afternoon and pick as many pears as you can carry away. They're just about ripe."

Well, you could have knocked me down with a feather, for I had had those pears on my mind all day.

Soap and Water.

The Icelandic word geyser, meaning vehement, or impelled, has been so adopted as a household word and, in general, connected with heating water, that it is scarcely recognized as coming from the volcanic districts of Iceland, where the natural formation of fountains of boiling water thrown into the air to a height of more than 100 feet are a feature in the landscape which is as picturesque as it is interesting.

In order to induce the largest geyser in the most important group of volcanic springs in Iceland to "show off" during the visit of the king of Denmark and the royal party who accompanied him, a large quantity of soap was placed in the basin because for some years this particular spring had shown no activity of an explosive kind and this method of inducing an eruption is one that has always found favor.

Too Wild and Woolly

By DOROTHY WHITCOMB.

Copyright, 1921, Western Newspaper Union.

When the father of Julia Everly set his foot down as to his matrimonial plans regarding her, Mrs. Everly weakly submitted to the dictum, and Julia herself bowed her pretty head to hide the tears and said, quietly enough:

"Very well, papa."

"You see," explained Judge Everly to his wife, "twenty-five or fifty thousand dollars isn't a fortune in the big cities, but here in Brandon it makes me the leading man of the place. I've got a good deal of pride, Mary, and I would like to see Julia marry some young man whose means would add to the family wealth, instead of one who would use it up."

"But young men with fortunes do not seem to be in much evidence around Brandon," suggested Mrs. Everly.

"Oh, some one will come along. Julia is young yet; plenty of time," declared the judge. "She's pretty well educated. I can give her the biggest wedding Brandon ever had, and I'm determined to see her well settled in life."

Mrs. Everly sighed softly to herself. Her husband had been a good deal of a disappointment to her, since he had been elevated from a modest income as a country lawyer to a judgeship and the acquisition of twenty-five thousand dollars through a legacy. He had become selfish, sordid and scheming. He posed as a magnate and talked like a millionaire. The time was when he had welcomed Dale Martin, the son of his dead law partner, as a fine young man of whom anybody might be proud.

The banishment of the dearest friend she had ever known naturally affected Julia. She shed some tears and said quite resignedly: "Very well, papa."

She wrote the most comforting letter in the world to Dale, whom business had taken temporarily to the county seat.

The judge came home one afternoon from his office quite brisk and animated. A client was coming to Brandon, an important client, he said. He had brought a letter from another lawyer in Idaho, had an estate to settle up in the county, and had placed his affairs in the hands of the judge.

"Outside of the business standpoint," the judge told his wife, and Julia heard, "I am interested in Mr. Ralph Buxton. He is wealthy, and he is unmarried, I find."

Frontier-like and refreshing, indeed Mr. Ralph Buxton turned out to be when he made his appearance that evening. Julia dressed up attractively to please her father. [illegible] a tall, rough-limbed young fellow of about twenty-five, bronzed with the desert's sun. She winced as he shook her hand. He was ingenuous, boisterous, whole-hearted all at once.

He paid marked attention to Julia. At first his quite familiar ways jarred on her, but finally she noted manly deference under his rude compliments. The judge chuckled and nudged his wife in a meaning way, as later in the evening he saw Julia and the westerner conversing on a garden seat.

"I'm glad I've met you," said Buxton to his companion. "I wish I had a sister like you," and then he became confidential. He told the story of his hard struggle to win a fortune. He told, too, of a dark-eyed Spanish [illegible] Rockies. Then Julia breathed more freely, understanding the big blunt fellow better, while her father was whispering with fatuous self-complacency to his wife:

"Must be worth a hundred thousand—and see the way he has cottoned to Julia!"

But one day the business on which Buxton had come was finished.

A new phase of his character was now presented. To this day the judge tells with a reminiscent shudder the wild cowboy who somehow [illegible] run across an old ranch com[illegible] Both had appeared at the law [illegible] in an automobile, and had insisted [illegible] the judge accompanying them [illegible] the country."

The papers were full of that [illegible] ous visitation a few days later. [illegible] told of a mad trail of shot-up [illegible] roads taverns, of farmers called [illegible] of their beds at midnight and forced to dance lively to the tune of a fusillade to suit the tastes of the two original gentlemen from the far West.

Ralph Buxton left Brandon the next morning, but the judge did not know it when he sent from the library early in the day for Julia [illegible]

"About—er, that young man, [illegible]ton?" he said solicitously.

"Yes," responded Julia softly.

"I hope, that is—I have dis[illegible] that he is scarcely adapted to [illegible]ilized ways, and I hope you ga[illegible] no encouragement?"

"But I fancied you liked him," [illegible] sinuated the artful minx.

"I did, till last night—ugh!" [illegible]dered pater familias, and [illegible] kissed the longing face. "[illegible] the way, Julia, I have c[illegible] views. How is young Mar[illegible] along?"

"Why—I hardly know," [illegible] Julia.

"Suppose you try and fi[illegible] rected the judge, and Julia [illegible] had won the day.

THEIR PROBLEM

By JACK LAWTON

Copyright, 1921, Western Newspaper Union.

Daisy sat at the window looking down the avenue of trees. Her pretty brows were drawn in a reflective frown, and the blue eyes beneath were troubled. It seemed strange, indeed, that one should need to go away in order to prepare one's self for the ordeal of becoming the wife of a governor of the state. Ordeal? Daisy smiled at her thoughts; rather, she ought naturally to be overjoyed at the honor. What matter that the governor in question was her father's own age, or that he was a widower, with children of his own to look after? Children: again Daisy smiled at her naming. Constance, his daughter, her suitor told her, was already older than she, while Richard, the son—Daisy could not remember much about the son; as usual, she had been absently listening.

"And I'll always be just 'Daisy,'" the girl thought, and smiled forlornly. She turned to switch on the lights. Suddenly it had grown dark outside. It was mother's intervention, which had gained for her this respite for thoughtful consideration, in a big old exclusive inn on the lake shore.

"Perhaps, dear," mother gently suggested, "your true answer will come to you there."

But how could there be other answer than the one her father so stubbornly desired? Daisy sighed, as she loosened her hair and folded the china-blue kimono about her. She turned wearily toward the small reading table, just as a big clap of thunder shook the house, and the lights promptly vanished—not only in her own room of the inn, but from all other windows and gardens. It was really fearful, to be alone in such dense darkness. Daisy tried to wait in patience until the lights should come on again, but no such relief seemed near. She decided finally to go in search of candles, but the outer corridor with its long rows of darkened closed doors, was too unfamiliar a passage to travel. So she turned again, endeavoring with groping hands to count back to the door from which she had come. She remembered that she left her own room door open, and perplexed at last in her count, entered the nearest room, whose door stood ajar. A window showed in the exact location of her room window, and the white bed occupied the same place against the wall. Daisy closed the door behind her, and—walked straight into the outstretched arms of a muscular young man. Her first impulse was to scream, and it was this smothered scream which made her aware of the young man's muscular power. She knew that he was a young man, from the quick sound of his voice, and she knew he was muscular, from the way that he shook her.

"Great guns!" exclaimed the man, "don't start a scream because you happen to walk into a man in the dark. This is my room; if you took it for yours, that isn't my fault."

But together, they could go no farther in the confusing labyrinth than the third hall, where a window bench stood. In silent resignation the two sat down on the window bench, Daisy in her china-blue kimono, her rippling hair touching the man's coat sleeve.

"Your people will probably come along soon and find you," he comforted.

"I haven't any people here," she told him. "I came on alone—to think something out."

The shadowy young man laughed shortly.

"Why—that's me, too," he said. "I'm here trying to get used to the glorious idea of a brand new step-mother, younger than myself.

"Came out to sulk, away from the bosom of my family. Hope to be able to go back soon, and do the welcome act in a proper and becoming manner."

"Mercy on us!" exclaimed Daisy, "your predicament is like mine reversed. I'm trying to get used to the idea of being a step-mother."

"Don't do it," the young man earnestly advised. "You are much too helpless and appealing to be a step-mother—why they'd run all over you. Look how frightened you were in the storm. Ran right into my arms."

Daisy arose abruptly. The astonishing young man who feared a step-mother, was winding one of her locks around his hand.

"I'm a cave man," he announced cheerfully. "I am going to keep you until the lights go on."

Fortunately, considering the determination in his tone, the hall lights flashed on in brilliance.

"Great guns!" cried the young man again, "you look exactly like the picture of that mighty pretty girl dad keeps on his dresser."

"You are Richard—" Daisy said wonderingly, "the governor's own son. He has shown me Richard's picture. Surely, there can be no doubt—"

The young man nodded.

"But Dick, to you," he said.

He drew her arm through his to lead her down the hall.

"I think," he said quietly, "that if we stay here for awhile, you and I, we will find our problems vanished, our difficulties removed. And I have no present intention of welcoming you as a step-mother, either."

Alone in her room, Daisy glanced about happily. "You were right mother," she whispered, "this old house has given to me my answer."

The Red Cross is spending Ten-Million Dollars a Year to help the ex-service man and his family —
Annual Roll Call Nov. 11-24, 1921

To bring before the country in visual form the vast problem it is helping to solve, the American Red Cross has prepared for its Annual Roll Call, Nov. 11 to 24, a poster showing how rather than diminishing the total of World War veterans entitled to Federal aid continues to grow. Red Cross Service to these men is costing $10,000,000 a year.

President Harding Now Heads Red Cross

© UNDERWOOD & UNDERWOOD

Succeeding former President Wilson, President Harding was recently elected president of the American Red Cross. He is here seen accepting the office. From left to right: Maj. Gen. Merritte W. Ireland, Surgeon General, U. S. A.; Dr. Livingston Farrand, chairman Central Committee of the Red Cross; the President; Asst. Secretary of the Treasury Eliot Wadsworth; Rear Admiral Edward R. Stitt, Surgeon General, U. S. N.

Red Cross Trains 147 Blind Vets In Useful Work

Training designed to fit them for the battle of life was taken by 147 blinded ex-service men at the Red Cross Institute for the Blind, near Baltimore, Md., during the fiscal year 1920-1921, according to the report of the Institute for that period.

Of this number, 19 have gone on to other institutions, in almost every case to institutions where those having sight are receiving advanced education. The blind ex-service men who have entered such institutions are provided with special text-books in Braille, reading which they were taught at the Red Cross Institute.

Twelve men have passed from the Institute to successfully carry on some occupation or business for which they were fitted by special training. A few have withdrawn from the Institute because of poor physical condition, 14 are receiving further "training on the job" and 87 are still in training.

Red Cross Plans $6,000,000 Effort To Save Children

Medical care and clothing for thousands of children in Central and Eastern Europe are outlined as the activities of the American Red Cross in Europe for the current year, says a statement on the eve of the Annual Roll Call of the organization. These activities, supplemental to the feeding operations of the European Relief Council of which Herbert Hoover is chairman, are designed to provide the most adequate and balanced relief within the resources of private philanthropy.

Through the establishment of child welfare stations in the centers of population of those countries where adequate medical care is not now obtainable, the American Red Cross plans to provide the medical assistance needed to restore these children to a normally healthy life. The sum of $6,000,000 has been made available for this work.

Red Cross Gives $310,000 to Aid 'Clean-Up' Drive

An appropriation of $310,000 for Red Cross work in connection with the "clean-up" campaign instituted by the Government to bring the claims of all disabled service men who are entitled to Federal aid before the proper government bureau for action, has been made by the American Red Cross. The Executive Committee of the American Red Cross in making the appropriation authorized the appropriation of $35,000 of this sum to the American Legion to defray the expense of the Legion representatives assigned to the various districts of the Veterans Bureau.

The remainder of the appropriation was authorized for apportionment among the several Divisions of the Red Cross for carrying on that part of the "clean-up" work that falls directly upon the Red Cross organization.

Young America Sends Vast Relief To Needy Abroad

Various relief projects of the Junior American Red Cross in European countries resulted in helping 237,000 destitute children during the last fiscal year, according to the annual report of the American Red Cross for that period. The growth of the activities of the Juniors abroad is manifested by a comparison which shows this figure is 200,000 larger than that of the previous fiscal year.

The National Children's Fund raised by school children, members of the Junior American Red Cross, was drawn upon for $420,557 for these projects. Receipts for the National Children's Fund during the last fiscal year totalled $155,317.

America Succors Russians

Food, clothing and medical relief costing $700,000 has been provided by the American Red Cross for the thousands of Russian refugees stranded last year in Constantinople and vicinity.

A SERVICE RECORD

By MARY McDONOUGH

© 1921, by McClure Newspaper Syndicate.

She was a yeomanette—an efficient war-time servant of Uncle Sam. She was very lovely in her service uniform.

All day the click of her typewriter sounded lightninglike, all night her needle flew, for there was a hope-chest, and, laden away with lavender-scented embroideries, were prayerful hopes that he—a lowly doughboy in France—would return to her, sound in body and mind.

She grew horribly lonely at times. Occasionally other girls, situated like herself, would accept others' invitations just to help ease away the gnawing ache of loneliness. Not Eileen, however.

One day Roy Robbins, first lieutenant on a warship anchored in the harbor—dashing, and already with a notable sea record—had occasion to go over some records in Eileen's department. He thought her "different" and charming, and found several reasons for returning.

One day he said: "I suppose some busybody told you I was married; I suppose you think me the proverbial sailor with a sweetheart in every port. I'm not. But I admit I have been married. However, there's a separation, which will undoubtedly end in prompt divorce, though it was not my wish. I would have told you all had you given me the privilege."

Eileen's lovely face flushed. She had the old-fashioned ideals of marriage, with all its sacredness. She was shocked and offended.

"I'm so sorry," she said, sincerely. "I refused you only because the man I love and am promised to is in France, fighting. I'm keeping loyal for just—him. But tell me about yourself!"

So Lieutenant Robbins, divested of his graceful manners and official authority, was now just an unhappy, lonely man, telling his woes to a good woman.

"It's absurd, and so easily straightened out!" Eileen exclaimed. "I'm sure she still loves you, and somehow I feel that through it all you'll always love just her. Wouldn't you try——"

"No use fanning the ashes of a dead love," bitterly. "The last spark's expired."

Suddenly came his orders to sail. Came, too, the call for volunteer yeoman (F) for Washington and the Great Lakes. Eileen grasped the opportunity. Robbins' home was in Washington. Perhaps she could manage to meet his wife; one could not foretell what service she might render.

Because she was so lovely, so golden and so all-peaches-and-cream, Eileen easily made friends of all classes. She found Marguerite Robbins, a lovely, slender girl of 25 or 26. Marguerite opened her heart. They had become fast friends. Eileen was consoling, even optimistic.

Later came a long-remembered Sunday afternoon, when Eileen was surprised to find Lieutenant Robbins awaiting her in the shabby Washington boarding house. She had written and implored him to look up her soldier-lover, who had been wounded overseas. She never mentioned his wife.

"A message from your man," Robbins explained. "He was hurt rather badly, but he's getting on. They say he called for you ceaselessly in his delirium." And when Eileen had shot her myriad scorching questionings about her Jim, she ventured, "And you?"

"Only hoping some T N T will blow my fool head off. You knew me better than I knew myself when you said I loved my wife. I do, but it's too late. House closed up, and I understand there really is another!"

"How cruelly untrue!" Eileen was all excitement. "What foolish pride keeps you from seeking her? She is really lonely, sick and sorrowing. Just a week ago, worn out with brooding, she was ordered to a sanitarium on the Potomac."

Late that afternoon the miracle happened. Marguerite Robbins thought, as she saw the familiar white-uniformed officer approaching, that it was a vision! But she could not mistake the glad, ringing voice.

"Sweetheart!" he cried, holding her close. "The long months I've kept you unhappy!" But I didn't understand, dearest. I'm afraid we both believed malicious, false gossip!" Then, shocked, "How pale and thin you've grown, precious!"

"Roy, dear!" she sobbed happily, "You do care, don't you, dear? Everything is so beautiful and bright again. Why, I've just got to keep living now!"

Many months later Eileen's Jim came back from the war. The doctors said he might never be well again. But Eileen's faith was strong. He had little money, but she had not scraped and saved in vain. "I found the dearest shack, away in the pine woods, when I had my vacation furlough," she told him, enthusiastically. "Just the place for a lovely, long honeymoon, and just the place to regain your health, Jimmie, dear."

"Are you sure you'll never be sorry, sweetheart?" he asked, anxiously. "You are so young, dear—so very, very beautiful——"

"I don't think you want me," pouted Eileen, teasingly, "and I've already asked Marguerite Robbins to be my matron of honor."

"And I've asked the lieutenant," laughed Jim, with sly humor. "Under the circumstances——"

"We'll be very happy," finished Eileen, from his shoulder.

REPELLENT KEEPS FLIES OFF

Not Good Practice to Depend on Cow's Tail to Keep Pests Off—Three Formulas Given.

Don't say "shoo, fly," nor depend on Bossy to keep the pest away by means of her tail. Neither is effective. Rather—take advantage of sprays which have been found a success.

Below are given three formulas, either of which is recommended by Prof. J. R. Watson, entomologist of the Florida experiment station, to keep almost any kind of flies away from domestic animals:

No. 1:

Laundry soap, one pound; water, four gallons; crude petroleum, one gallon; powdered napthaline, four ounces.

No. 2:

Fish oil, 100 parts; oil of tar, 50 parts; crude carbolic acid, one part.

No. 3:

Laurel oil, one part; linseed oil, ten parts.

No. 1 must be thoroughly emulsified by running it through a spray pump after which it can be sprayed on the animals.

Usually.

Goodridge, Minn.

Home Amusements

The question of home amusements is one of much more serious import than is presented upon the surface. There are amusements and amusements, and parents should select for their children their amusements just as carefully as they select their food, clothing or studies; for as the child's amusements are, so will the child herself be. Children are more easily led than is at first sight imagined, and a judicious parent can create an interest in some pursuit that would have been utterly distasteful. There is so much to learn, and so much that is interesting and amusing in the process of learning that it seems a pity not to cultivate in children an interest in solid amusements.

THE GOODRIDGE BANNER

GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, OCTOBER 14, 1921.

$1.50 PER YEAR.

Bring Exhibits Early

Every effort is being put forth to make the Corn and Potato day a successful undertaking. The corn and potato growers are busy selecting their show samples. The boys and girls are doing everything in their power to make a creditable showing in all departments. The business men are making special inducements by offering liberal discounts on goods purchased on this day. It will be a genuine get together of young and old.

To avoid confusion and rush on Monday morning, exhibitors are urged to bring their show samples early. They may be taken to the schoolhouse or left at any of the business places any time this week and they will be taken care of.

An interesting program will be carried out, as follows: Music by band and orchestra all day. At 11 a. m., judging of calves, followed with a calf parade. At 1 p. m. poultry culling demonstration and egg exhibit by the Northwest School of Agriculture, conducted by Prof. H. Hoberg. Following the demonstration will be a corn and potato talk by Prof. T. M. McCall.

Plan to be present with a representative exhibit of the corn and potatoes you have raised this season.

11 Orphans Depend on Pennington Co. for Life

Pennington county's quota in the nationwide drive launched to save the lives of children now facing death by starvation in southern Russia and Armenia is 487 bushels of wheat.

Eleven of the 3,500 orphans assigned to Minnesota for food and clothing depend on the generosity of the citizens of this county for their lives, according to J. M. Davies, state director for the Near East Relief.

Practically nearly every elevator in the state is helping to collect the 147,000 bushels of grain set as Minnesota's share of the 5,000,000 bushels being gathered as the gift of American farmers. Minnesota farmers may turn their gifts over to their local elevator when they haul in their usual loads of grain for sale. Nearly every elevator has agreed to receive, store and load the gift grain free of charge. The first gifts began coming in last week.

"We have been informed by our workers abroad that unless Minnesota provides food for 3,500 helpless boys and girls this winter, they will perish of hunger," Mr. Davies says. "Every child among the 3,500 for whom Minnesota fails to provide is doomed to die. We dare not fail."

Red Cross Gives $310,000 to Aid 'Clean-Up' Drive

An appropriation of $310,000 for Red Cross work in connection with the "clean-up" campaign instituted by the Government to bring the claims of all disabled service men who are entitled to Federal aid before the proper government bureau for action, has been made by the American Red Cross. The Executive Committee of the American Red Cross in making the appropriation authorized the appropriation of $35,000 of this sum to the American Legion to defray the expense of the Legion representatives assigned to the various districts of the Veterans Bureau.

The remainder of the appropriation was authorized for apportionment among the several Divisions of the Red Cross for carrying on that part of the "clean-up" work that falls directly upon the Red Cross organization.

Young America Sends Vast Relief To Needy Abroad

Various relief projects of the Junior American Red Cross in European countries resulted in helping 237,000 destitute children during the last fiscal year, according to the annual report of the American Red Cross for that period. The growth of the activities of the Juniors abroad is manifested by a comparison which shows this figure is 200,000 larger than that of the previous fiscal year.

The National Children's Fund raised by school children, members of the Junior American Red Cross, was drawn upon for $420,557 for these projects. Receipts for the National Children's Fund during the last fiscal year totalled $155,317.

America Succors Russians

Food, clothing and medical relief costing $700,000 has been provided by the American Red Cross for the thousands of Russian refugees stranded

RED CROSS WORKING FOR HEALTHIER U. S.

Thousands Aided by Instruction in Care of the Sick, Food Selection and First Aid.

How the American Red Cross guides thousands of persons to health is shown in a summary of the society's activities in the health field based upon the annual report for the last fiscal year. Through its Nursing Service, its Home Hygiene and Care of the Sick courses, nutrition classes, First Aid classes, Life-Saving classes and Health Centers and in numerous other ways designed to acquaint masses of citizens with proper methods of living, the Red Cross carried its message of health into all parts of the country.

The work of the Red Cross during the war in its traditional field of nursing, furnishing the military and naval establishments of the nation with 19,877 nurses, is well known. And there are today 37,787 nurses registered with the American Red Cross and subject to call in emergency. During the fiscal year, 1,551 Red Cross nurses were accepted for assignment to Government service, 388 by the Army and Navy and 1,163 by the United States Public Health Service.

In addition to the nurses enrolled by the Red Cross for Government service, the Red Cross itself employed a total of 1,348 public health nurses in the United States and Europe. By far the greatest number was employed in the United States, 1,257, while 81 were in foreign service.

Home Hygiene and Care of the Sick classes, giving thorough instruction in the proper care of the sick in instances where the illness is not so serious as to require professional nursing care, during the fiscal year numbered 5,179. A statistical picture of the Red Cross operations in this field follows:

New classes formed during year	5,179
Classes completed during year	6,209
New students enrolled	101,088
Students completing course	73,482

What the Red Cross accomplished in giving proper instruction through its Nutrition Service is indicated by the following table:

New classes formed during year	142
Classes completed during year	186
New students enrolled	2,341
Students completing course	2,013

In addition to the above, a total of 22,000 children were given instruction in the proper selection and preparation of foods.

Through its 260 Health Centers, the Red Cross reached 90,252 persons. In these Health Centers, 4,015 health lectures were given and 780 health exhibits held.

In the United States last year, 75,432 persons were killed and 3,500,000 injured in industrial accidents. To prevent this enormous waste the Red Cross held 5,100 first aid classes with a total of 104,000 students enrolled.

RED CROSS RESCUED 600,000 FROM DEATH

Spent $1,200,000 for Relief of Famine Sufferers in China Last Year.

To help overcome conditions of acute distress in five famine stricken provinces of Northern China, where millions of persons were affected by an unprecedented shortage of food, the American Red Cross during the last fiscal year spent more than $1,200,000, $1,000,000 of which was contributed directly by National Headquarters and the remainder by various groups interested in the welfare of China.

Through the wide relief operations thus made possible it is estimated that more than 600,000 famine sufferers were saved from starvation.

To the end that similar prompt relief measures by the organization may always be possible the Red Cross is asking continued support by the American people by universal renewal of membership at the Annual Red Cross Roll Call, November 11 to 24.

The method of relief employed by the American Red Cross in its operations in China was particularly effective, for in addition to saving hundreds of thousands of lives it provided China with more than 900 miles of permanent roads that are sorely needed to prevent a recurrence of famine. At one time the Red Cross employed 74,000 Chinese workmen, paying them in food for themselves and dependents, this

LOCAL HIGHWAY PROJECT BLOCKED BY MARSHALL COUNTY COMMISSIONERS

The state road from the town of Highlanding running north by Goodridge to the Marshall county line is now completed and the work of Mr. Lund, who was awarded the contract for this job, has been accepted by the state engineer and the board of county commissioners. The commissioners were so well pleased with the work that Mr. Lund was promptly given two other road contracts in the vicinity. The state engineer has at all times worked in the interest of better roads for this section and deserves much credit for the constructive work already accomplished along this line.

Of the twenty-seven miles between Oklee and the Marshall county line north of Goodridge, twenty-two miles of state grade has been built. The remaining five miles of this distance is good passable ditch grade. The completion of this road has served to bring the Goodridge and Grygla country fifty miles nearer the Twin cities than formerly when a detour by way of Red Falls was necessary.

Roseau county has a complete state road from Roseau to the Marshall county line. If the Marshall county authorities would do their share and arrange to build a grade connecting with the Pennington county road on the south and the Roseau state road on the north, a road would be opened that would connect with the main trunk highway at Roseau and the Jefferson highway at Oklee. Pressure has been brought to bear on the Marshall county commissioners and petitions requesting a north and south road through the county have been presented, but to date, and in spite of a general demand for the road, the Marshall county officials have taken no action in the matter.

A FORTUNE

More fortunes are made in the business world than in any other line. To get your first start you must have a business education. Write the Union Commercial College, Grand Forks, N. Dak., for their free catalog and find out the wonderful progress students of this big school are making, and how you can succeed also.

MANY EGG GRADE TERMS ARE USED

Almost Hopeless Task for Customer to Make Purchase in Intelligent Fashion.

CONSUMER GUIDED BY PRICE

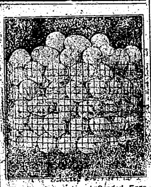
Difficulty Caused by Carelessness or Ignorance on Part of Retailer in Allowing Product to Deteriorate Rapidly.

(Prepared by the United States Department of Agriculture.)

The customer is often bewildered by the number of grades of eggs offered by the retailer; fresh eggs, strictly western fresh, guaranteed fresh, New York state fresh, fresh gathered nearby, storage eggs, guaranteed good storage, storage firsts, guaranteed extra good storage, and candled storage eggs, may all be found side by side or in nearby stores.

Grades Are Meaningless.

This multiplicity of terms makes it



Carefully Selected and Graded Eggs.

United States Department of Agriculture. As a matter of fact, most of these so-called grades are meaningless. The consumer usually is guided simply by the price asked, assuming that if he pays the top price he will get the best eggs, no matter what the particular retailer may call them. In this he is partly correct, since the wholesalers usually maintain prices closely related to the quality of the eggs which they pass on to the retailers, and the price which they charge them is reflected in the retail price to the consumer.

Retailer at Fault.

The difficulty is that because of carelessness or ignorance on the part of many retailers the eggs which they receive from the wholesalers often deteriorate rapidly while in the store. Thus the retailer frequently receives eggs of good quality, attaches a fancy name to them, and a price in proportion to what he paid, and then lets them deteriorate on his hands, so that they are actually poorer in quality than some cheaper eggs which he may have just received at his store.

Under present conditions the best thing the consumer can do is to avoid buying eggs at stores which are obviously careless in handling them, telling the retailer just why he does not buy eggs at his store. He should also call the attention of the retailer to any bad eggs bought of him. The pressure which can thus be exerted by the consumer can be made an important factor in bringing about a much needed improvement in the handling of eggs by retailers.

850 DISASTER DEATH TOLL FOR ONE YEAR

Red Cross Gives $1,871,000 Relief When 65,000 Families Are Made Homeless.

Forty-three disasters, resulting in the death in the United States of 850 persons and the injury of 2,500 called for emergency relief measures and the expenditure of $1,871,000 by the American Red Cross during the fiscal year ending June 30, 1921, says an announcement based upon the forthcoming annual report of the Red Cross. These disasters caused property damage estimated at $30,000,000, affected sixty-seven communities and rendered 65,000 families homeless.

The year's disasters were of varying types, including several which previously had never been thought of as falling within this classification. The Red Cross furnished relief in seventeen fires of magnitude, five floods, seven tornadoes or cyclones, one devastating storm, three explosions, including the one in Wall street; one building accident, two typhoid epidemics, the most serious being that at Salem, Ohio, which affected 9 per cent of the population; one smallpox epidemic, in the republic of Haiti; one train wreck, the race riot at Tulsa, Okla.; the famine in China, emergency relief in famine among the Indians of Alaska, the grasshopper plague in North Dakota and an earthquake in Italy.

Pueblo Most Serious.

By far the most severe of the dis-

port was the Pueblo flood early in June, 1921. The rehabilitation problem confronting the Red Cross in Pueblo was one of the most difficult in recent years. When the first news of the horror was flashed throughout the country, the American Red Cross National Headquarters responded with a grant of $105,000 for relief work. Governor Shoup of Colorado, appreciating the long and successful experience of the Red Cross in organizing disaster relief work, placed the entire responsibility for the administration of relief in its hands.

In response to appeals from President Harding, Governor Shoup and other governors of western states and through local chapters of the Red Cross and other community organizations, public-spirited citizens brought the total contributed for Pueblo's rehabilitation to more than $325,000.

The terrible havoc wrought by the flood waters is a matter of record. More than 2,200 homes were affected and 7,351 persons were left homeless. Estimates of $500,000 as an absolute minimum for rehabilitation were made by Red Cross officials in charge of the relief work.

Fast Work in Wall Street.

The Wall street explosion was notable in that relief workers of the Red Cross were on the scene twenty minutes after the disaster occurred. The race riot at Tulsa also was unique in disaster relief annals in that outside of a small emergency relief fund contributed by the Red Cross, the only relief measures outside the city consisted of the service of social workers, nurses and a trained executive whose object was to assist local forces in directing their own efforts.

In decided contrast with the previous year, only one tornado assumed the proportions of a major disaster. This occurred on April 15, in the border sections of Texas and Arkansas with the city of Texarkana as the center. The significant feature of this disaster relief work was the fact that it covered so much rural territory as to make necessary a large number of relief workers.

The famine in China, necessitating relief expenditures totaling more than $1,000,000 by the American Red Cross was by far the most serious of the foreign disasters in which the Red Cross gave aid.

Builds Up Its Machinery

In connection with the administration of disaster relief measures, an increasing effectiveness on the part of the Red Cross to deal with emergencies was manifested during the past year. In 328 Chapters of the American Red Cross there have been formed special committees to survey the resources of their respective communities and to be prepared in case of disaster. In others of the 3,402 active Chapters, a network of communication has been formed through which instantaneous relief may be dispatched to any part of the United States.

That its work in this field may be continued with ever greater effectiveness, the American Red Cross is appealing for widespread renewal of membership during its Annual Roll Call, to be conducted this year from November 11 to 24.

LIFE SAVING CORPS ENROLLMENT 10,000

Growth of Red Cross Life Saving Corps throughout the country continued unabated during the last fiscal year, a summary of the year's achievements by that Red Cross Service shows. There are now 160 Corps with a total membership of more than 10,000 members, of which 1,276 are sufficiently skilled in the work to act as examiners. Among the outstanding achievements of the Red Cross in this field during the last year was the organization at the United States Naval Academy, Annapolis, of what is perhaps the largest life saving corps in the world.

RED CROSS GIVES ANNUAL BUDGET

$19,361,657 Allotted for Current Program of Relief and Service.

MILLIONS FOR VETERAN AID

Medical Aid for European Children Will Cost $6,000,000 This Year.

Washington.—Expenditures totalling $19,361,657 for carrying through its program of relief and services in the United States and overseas are outlined in the budget of the American Red Cross for the current fiscal year. This total is more than $5,000,000 lower than the expenditure during the last fiscal year, when the disburse-

nounced at National Headquart[illegible] a statement calling attention [illegible] necessity of continued support [illegible] organization by response to the [illegible]nual Roll Call, November 11 to [illegible] if the vital work of the society is [illegible] be effectively carried on.

Outstanding among the items of [illegible] domestic budget is the appropriation of $3,000,250 for work in behalf of the disabled ex-service man and his family. This appropriation represen[illegible] the amount alloted to this work [illegible] National Headquarters only and [illegible] not take into consideration the [illegible] tions being spent in chapters [illegible] lief of the World War veteran[illegible] is in the chapter that the [illegible] amount is spent in meeting this [illegible] gation of the Red Cross, the am[illegible] ment continues, as manifested [illegible] ures of the fiscal year 1920-192[illegible] the total was approximately [illegible] 000, of which $2,602,004 [illegible] the disbursement of Nat[illegible] quarters while the remain[illegible] chapters' contribution to [illegible] Red Cross service.

[illegible] Work for [illegible]

Chief among the supp[illegible] the appropriation for work [illegible] erans is that which concern[illegible] with assistance to disabled men [illegible] women in government hospitals. This item of $1,750,000, an increase of more than $500,000 over the appropriation for the same work in last year's budget, will provide those personal services for the disabled and their families which are indispensable to supplement those provided by the government. The director of the Veterans' Bureau has recently expressed his desire that the Red Cross should continue and extend these "humanizing services." Other items of the appropriation for veterans' relief are proportionately increased. An additional appropriation of $469,600 has been made for Red Cross work in connection with regular Army and Navy hospitals and with the regular Army and Navy.

For disaster relief, the Red Cross has set aside for the current twelve months an appropriation of $543,970, virtually doubling the appropriation for the same purpose for the fiscal year 1920-1921.

More than $2,000,000 is provided for service and assistance to the 3,600 Red Cross chapters by the national organization.

Helping Destitute Children

Other items of the domestic budget include $408,546 for miscellaneous activities, including contributions restricted for special purposes and $763,000 for management. Each of these items represents large reductions o[illegible] similar appropriations of the prev[illegible] year.

From a fund of $10,000,000, [illegible] 000 of which was contributed [illegible] the European Relief Council cam[illegible] and $5,000,000 allotted by the [illegible] Cross for child welfare work [illegible] Europe, there remains $8,785,108 [illegible] available, of which it is estima[illegible] that $6,000,000 will be required [illegible] this work during the current ye[illegible] For Red Cross participation in [illegible] joint effort to relieve famine conditions in Russia, for final work in the China famine, for Junior Red Cross and other overseas activities including the closing of the old general reli[illegible] program in Europe $4,978,000 is [illegible] available.

In announcing the national b[illegible] the Red Cross makes it cle[illegible] the figures do not include chap[illegible] penditures or place any cash [illegible] on the invaluable service of [illegible] teers in chapters.

CAFETERIA PLAN GAINS IN FAVOR

Plan for Feeding Stock Is Being Used on Many Farms in Corn Belt and Elsewhere.

'HOGGING DOWN' SAVES LABOR

Keeps Hogs in Good Condition, Distributes Manure Uniformly and Provides for a Simple Rotation of Crops.

Prepared by the United States Department of Agriculture.

Thirty or forty years ago some shrewd farmers fell into the habit of letting their hogs run in the cornfield in September and October and allowing them to eat ears and stalks until all that remained could be plowed under.

Some also turned hogs into the rye in the spring and let them range on the tender and succulent stalks until they became too woody to be palatable. This process was termed "hogging down."

Labor Shortage Changes Methods.

Then came a crusade for "clean farming"—typified by harvesting and shocking the corn stalks, husking the yellow ears and piling them into the cribs, later to be fed to the same hogs. "Hogging down" was decreed to be shiftless evasion of honest toil. The "hogging down" farmers fell into disfavor and dropped the practice to a large extent.

Meantime, the labor market was tightening, and a day's work came to be regarded not so much as something to be gotten out of the farmer or his sons or a hired man, but as a period to be paid for in money that could be used for other purposes.

The United States Department of Agriculture and some of the experiment stations in corn states have of late years given careful attention to the possibilities of feeding stock on the cafeteria plan. Today it is in use on hundreds of corn-belt farms and in many other localities in all parts of the country where corn is grown.

Hogging down corn saves labor, while causing no more waste than when the corn is harvested and hand fed. Properly managed, it keeps the hogs in better condition and adds weight more rapidly. It distributes manure uniformly. It leaves the ground in fair condition for the next crop, and it fits in with a rotation system admirably adapted to build up a run-down farm.

A Good Five-Year Rotation.

Hogging Down Corn Saves Labor Without Undue Waste.

A system that is widely used calls for fencing the farm into five parts—six if you wish to retain a permanent pasture. Corn is planted in the first section and as soon as the kernels have become hard the hogs are turned in. As they have been on other feed, it will take a week or ten days' feeding to get them entirely on a corn diet. In the corn-belt latitude they may be expected to live entirely in the cornfield from about September 10 until the crop is consumed. It is generally found best not to permit the hogs range of the entire field, but to erect temporary fences. These can easily be built of 25-inch wide wire mesh, fastened to anchor posts at the ends and tied to cornstalks instead of line posts. If a supplemental crop such as rape, cowpeas, soy beans, or even pumpkins, has been sowed among the corn, it will provide protein feed which the corn lacks.

The following spring the stalks and trash that remain on the surface of the field are cut over with a sharp disk and the ground prepared for a second crop of corn, which is harvested by hand, while the corn for "hogging down" is planted in the second tract.

The rye is used for hog pasture from early spring until the stalks become too hard. It will be found valuable pasture for brood sows with young pigs. After the pigs cease to consume the rye they are taken out and not returned until after the grain becomes ripe, when they are allowed to consume the entire crop and graze on the young clover until time to turn them into the corn in September.

The clover and timothy come on the next year and are used for hog pasture and the best parts kept for hay for other stock. The fifth year the timothy and clover crop is cut for hay and the sod turned under late in the fall to prepare the ground for the next year's "hogging down" crop of

BURN DEAD POULTRY IS EXCELLENT PLAN

Especially True in Case of Death From Disease.

Burying Not Satisfactory Because Dogs and Other Animals May Dig Carcass Up—Concrete Crematory Is Not Expensive.

(Prepared by the United States Department of Agriculture.)

Accumulations of manure in the henhouse are objectionable upon grounds of sanitation, but not more so than dead poultry. How often have you seen a dead chicken thrown into the road or trampled into the barnyard manure? The disposal of these bodies offers a problem for the poultryman, the correct solving of which may in many cases become a very important matter, say specialists of the United States Department of Agriculture. This is especially true, of course, in cases of death from contagious diseases, and this includes a large proportion of poultry deaths.

To throw a dead chicken on the manure pile or into the road is to invite the spread of disease. Burying is not entirely satisfactory, because unless the grave is dug deep the carcass may be scratched up by dogs or other animals. Furthermore, in the winter the ground may be frozen. Therefore, specialists declare, the best way to dispose of dead poultry is to burn the bodies.

Many town and city homes have garbage burners which may be used, but where this is not available some poultrymen having hot-water heating systems burn the bodies in the furnace. This cannot be done in the summer, though, so small crematories have been built on some poultry plants. Some of these are of concrete the size depending upon the number of birds kept on the place, and others are ordinary iron wood-burning stoves. A concrete crematory will not be expensive, and would pay for itself in safeguarding the health of all the poultry.

SELECTING BEAN AND PEA SEED IN AUTUMN

Choose Plants Alike in Varietal Character and Earliness.

When Plants Have Fully Ripened Avoid Shattering in Pulling and Hang in Airy, Dry Place Until Seed Is Quite Hard.

(Prepared by the United States Department of Agriculture.

The best seed of beans and peas is to be obtained by marking a few of the finest plants with a bit of cloth at the beginning of the harvesting season and allowing the crop of these plants to ripen completely, say experts of the United States Department of Agriculture.

In making such selections it is best to choose plants alike in varietal character and earliness. When ripened until dry, pull these plants in the early morning, in order to avoid shattering, and hang or spread them in an airy, dry place until the seed is quite hard. Then shell the seed, spread it out not over two or three grains deep, and when thoroughly dry, store it for the winter in bags of coarse open-meshed fabric hung in a cool, dry place.

Pods which for any reason have been overlooked when picking beans or peas for the table should be saved, since they can be shelled for seed, though inferior to the selected stock described above. In saving seed from remnant crops of this kind it is well to discard all pods containing only one or two seeds, as these may have come from plants with a tendency to produce poorly filled pods.

Some very destructive bean diseases, including pod-spot, are carried in the seed; so it is extremely important to observe the general rule that no seed should be saved from diseased plants when saving beans for seed. Never save seed from pods which are not bright and clean.

Names of Confirmants

The confirmation services in the Lutheran church Oct. 2 were well attended. A class of 32 were confirmed, 15 from Torgerson and 17 from Erie. Rev. Hansen, assisted by Rev. Mostue of Thief River Falls conducted the services. The class consisted of the following:

Evelyn Anderson, Palma Bakken, Emma Bye, Minnie Bye, Glays Christianson, Betsy Fjeld, Selma Hanson, Edna Halverson, Odilia Johnsrud, Ovilia Lien, Theodora Loyland, Thora Jerhus, Bertha Odegard, Cora Olson, Annie Rindahl, Alma Raasch, Thilda Sunsdahl, Anna Tangen, Sena Tangen, Kermit Berg, Johnie Grimley, Halvor Helle, Arnold Hovet, Clarence Iverson, John Kolseth, Gilbert Olson, Edward Olson, Oscar Quam, Albert Quam, Reuben Stenvick, Loyd Thompson,

D. A. Danielson Resigned

At a special meeting of the board of directors of the Goodridge creamery held Wednesday evening the resignation of D. A. Danielson as manager was presented and accepted, to take effect as soon as a man can be found to take his place. Mr. Danielson will move onto and assume management of the home farm near LaCrosse, Wis. With the departure of Mr. Danielson and family the creamery will lose a good man and the community some good neighbors.

More Propaganda

Now comes the warning that with the first spell of cold weather, a car shortage in the northwest is likely to result. We do not quite understand the warning, whether there really is a car shortage in sight or whether the big coal barons are simply trying to scare the public into buying their high priced "black diamonds." We believe with Chas. Henke of the Dassel Dispatch that the newspapers of the state as an organized force should dig into the high price of coal with both feet and while they are digging into the price of coal they might add the high freight and

MINNESOTA HISTORICAL SOCIETY

THE GOODRIDGE BANNER

VOLUME XV, No. 40. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, OCTOBER 21, 1921. $1.50 PER

Corn an Potato Show a Success

The corn and potato show held here last Monday was a very successful venture. There was a very large and attractive exhibit of potatoes, corn and garden vegetables. The attendance was very good, the school house being being crowded to capacity. There were a number of people from Thief River Falls and from Grygla, but the attendance was made up in most part of interested farmers, the village also was well represented.

The children's display of garden vegetables and stock attracted considerable attention, and they deserve credit in their respective showing.

It was a very busy day, something doing every minute. The local band responded very generously with musical selections throughout the day, which was well received, as evidenced by the liberal applause.

The judging of the stock by County Agent J. J. McCann was witnessed by a large number of eager spectators. The boys proved themselves good winners as well as good losers. Little Conrad Hagen wore a smile that stretched from ear to ear when his calf won first place in the show ring over very close competition. Following the judging the boys led their calves in a parade. The addresses given were instructive and interesting from various points of view. The subjects discussed were of particular practical value to the people of this community, and were handled by experts in their particular lines, who were able to impart knowledge, making the occasion a very profitable on

The speakers were: T. M. MaCall, whose subject was corn and potatoes; H. Hoberg, poultry feeding and culling, who also gave a demonstration of poultry cullling; A. J. Kittelson, boys' and girls' club work, alll from the Northwest School of Agricultnre, Crookston, Minn., and Leonard Houske, creamery inspector, who discussed the dairy calf project.

J. J. McCann acted as judge of calves; T. M. McCall, corn and potatoes; H, Hoberg, poultry, and A. J. Littelson, club work.

The prize winners were:

Potatoes

School Notes

School closed Wednesday evening of this week in order that the teachers could attend the Northwestern Educational association, which is in session this week in Crookston.

Olga Grimley and Esther McEnelly enrolled in High school Tuesday morning. Better late than never.

A 16 foot Everwear slide was erected on the school grounds Tuesday afternoon. The children are already expert performers and enjoy the exercise very much.

Opportunities

Banks, wholesale houses and business concerns of all kinds want young men and women with a business education. To qualify for a good position takes but a short time and costs but little. Write the Union Commercial College, Grand Forks, N. Dak., for their free catalog, and find out what this successful school can do for you.

The Test of True Love

By FREDERICK CLARKE.

Copyright, 1921, Western Newspaper Union.

"I'll walk home with you, Dick," said Frank Fayles to his friend Richard Talbot, and started away with him from Miss Landis' door. At the corner of the block he stopped and wrung his friend's hand violently.

"I congratulate you, old man," he said warmly. "I think your fiancée is one of the finest girls I've ever met—and just suited to you, too, and I bet your married life will be one long dream of paradise."

Talbot did not reply, and his friend, mortified by his coldness, accompanied him in silence. Talbot was thinking bitterly of his folly—his absolute folly. It was too late to withdraw with honor now. The wedding was only one month away. And during the past two weeks he had come to realize that he had made the mistake of his life.

He had thought Elsie Landis all that could be desired in any woman until—until he had met Edith Spinner. Honor forbade him to speak; but the pressure of their hands when they met must have betrayed them to each other. They had met three times only—and he was head over heels in love with Edith.

He thought over his future that night. He could not withdraw.

He rose up after a sleepless night, resolved to give Elsie the chance to reconsider. It was not until eight o'clock that evening that he found himself in Elsie's presence.

Their greeting was commonplace enough: The handshake, the kiss, and even that seemed perfunctory. Talbot sat down.

"Richard," said his fiancee, looking at him curiously, "do you know you have been acting in a very odd manner lately?"

"I? How is that?" he stammered.

"You haven't seemed to love me as much as you used to," she stammered. "I have been thinking—O, Richard, don't you care for me?"

A moment later and she was on her knees at his side, her arms around him, weeping.

"Elsie!" exclaimed Richard, miserably, "I—I love you—"

"You won't love me when I have told you something," she sobbed.

"Tell me and see," said he. He could think of nothing better to say.

"I have been untrue to you," she sobbed. "I don't mean that I've kissed anybody else. No, but—O Richard, you are so simple and noble, you would never understand. Well, I—I had been wondering whether our marriage was going to be happy. It had begun to seem so ordinary, our love. And then I met a man—just two weeks ago. He fascinated me and—and I loved him more than you, dearest."

Richard sat up very straight. This was a turning of the tables with a vengeance.

"We never told each other," she went on, weeping bitterly. "I felt that we ought not to be married until you knew—and I didn't dare to tell you until today."

"Why today?" inquired Richard kindly.

"Because he is married now," sobbed Elsie. "He got married yesterday. And he had been engaged to her for a whole year—just think of that! He had just been flirting with me and I—fooling me. And then a sudden revulsion came over me and I knew that it was you I had loved all the time. Richard, can you ever forgive me or shall I give you back your ring?"

"Who was the man?" inquired Richard, conscious of an odd sense of helpless jealousy.

"Nobody you know, Richard," she answered. "So it wouldn't do you any good to tell you his name. But I'll tell you whom he married. I believe you met her once. It was a Miss Spinner."

"Edith Spinner!" he shouted.

"Yes, Richard. She is said to be a dreadful flirt. Why, what is the matter?"

"Come here, Elsie," said Richard. "Do you know I have been fancying myself in love with Edith?"

"You, Richard? Since we were engaged! Why, how dared you?"

"How dared you?" he retorted.

"I didn't!" she cried. "It was purely imagination. I just feared that we mightn't be quite suited to each other and—"

"That's what I did."

"You never kissed her, Dick?"

"Never!" he said, looking her in the eyes, and then suddenly he drew her upon his knee and kissed her.

"Elsie, darling, shall we start over again?"

"Yes, Richard," she answered, raising her lips to his. "But—you're quite sure that you never kissed her, Dick?"

This Helps Some

According to information received from the Marshall county board of commissioners the ditch grade north of Goodridge running north nine miles from the south line of Marshall county has been designated as a state road. This will add nine miles to the proposed Oklee-Roseau highway, and indicates that Marshall county is awaking to the importance of the proposition.

Openings at Dunwoody

Dunwoody Institute opened in Minneapolis on September 15, with a large enrollment. There is still room, however, for some additional students in the printing, press work, sheet metal, electrical work, laundry executive course, highway construction and building construction, also machine shop work.

The school is endowed and gives free training to residents of the state of Minnesota. Boys in any place in the state desiring to learn a trade can attend the school practically for nothing.

Write Dunwoody Institute, Minneapolis, Minn., for catalog.

The Refugee's Reward

By HOWARD SMITH.

Copyright, 1921, Western Newspaper Union.

I opened the door of my room at the little Mexican hotel at Guyara at the summons of an unexpected knock—rapid, nervous, appealing—to face the most beautiful woman I had ever seen.

She was trembling visibly. Those deep dark blue eyes were scintillating with a seeming terror. She glanced up and down the corridor as if momentarily expecting some hovering doom. Then, breathlessly:

"Senor, in the name of humanity, as a friend, as a brother, as—" she glanced at my gray wig (false), at the mature obscuring colored spectacles I wore—"as a father," she added more assuringly; "let me in. Allow me to hide—to occupy your room for the next thirty minutes."

It was a period of war's alarms, of unusual happenings. All that portion of the republic was in turmoil. I was engaged upon a peculiar mission, hence disguised. I stopped past her into the hall, lifted my hat and said courteously:

"With pleasure. It is your apartment—at your will," and I heard the door bolted on the inside and went down to the lobby, applauding myself for a kind deed. In a very few moments two men in uniform accompanied by a servant came bustling down the stairs and up to the desk of the hotel clerk. They were red, perspiring, angry.

"We have not found her!" spoke one of the officers.

"The lady you describe, register name Hermosa Alivina, was given room 41 this morning."

"It is unoccupied; we have visited other rooms. She is not to be found. One apartment was bolted on the inside. It was 49," spoke the servant.

"Ah! that is your room, is it not, senor?" interrogated the clerk, and I arose and came forward.

"Mine," I bowed with alacrity, for it was not a time to falter or arouse suspicion. "I just left it."

I followed the group up the staircase.

"Empty!" pronounced the head officer in a sour, disappointed tone as the barrier was forced, and he darted a swift glance about the room.

"Observe!" shrilly called out his compatriot, lifting a filmy, dainty dress from a chair. "Again," he added, and pointed to the open window, to a sheet twisted into a rope dangling into the shallow court below. The leader paused momentarily to direct a scowling glance at me.

"If I thought you were a party to this escapade—" he began.

"Save your words," I interrupted calmly, with an indifferent shrug of the shoulders. "I am the loser, as I miss a suit of clothes."

I took my loss philosophically. I had lost a good deal lately, I and my partner, back at the mines.

I have said that I was disguised. There was a reason. Briefly, my partner and myself had just got our grant over on the range panning out great, when the revolution came along.

We held a concession from the central government. Fortunately, too, the government of the province had approved it. This would hold when peace came around again, provided it was filed at the capital.

* * * * * * * * * * *

I noticed two of the coach passengers—suspicious looking fellows whom I seemed to have seen before. I awoke from a doze, with the ominous words in my ears:

—nging

"Senor, alight!"

One of the men held the driver at bay with a revolver. The other, similarly armed, marched me to the side of the road, carrying my satchel with him. He roughly burst it open, went over its contents and arose to search me.

"A certain document, a mining concession—we know you have it. We want it," he said.

"Save yourself the trouble of a search," I told the baffled spy. "The paper in question was taken with a suit of clothes stolen from me, and doubtless cast it away as worthless."

I was allowed to resume my journey. My partner joined me in the capital city a little later. We had abandoned all hopes as to the mines.

One evening we were seated in an outdoor cafe enjoying some really creditable music, when my companion touched my foot and whispered: "The lady at the table to the left seems greatly interested in you."

I changed my position to view—my lady of the hotel episode! She was radiant with youth, beauty and happiness. She arose, a distinguished young man in uniform her escort.

"Senor, my friend!" she cried spontaneously, clasping both of my hands. "My husband, Colonel Mendoza. Alixe, it is my great friend, he whose—whose clothes I stole. Oh, sir! to you I owe a life's happiness. I have sought to locate you—"

"To exchange the apparel in question for a certain dainty gown I treasure as a memento?" I asked gallantly.

She blushed divinely, and added: "And also to give you a receipt. The paper I found in your coat, senor—I saw its importance, a concession. It is filed with the government."

"How can I ever thank you!" I cried, truly delighted.

"Oh, senor, it is I who am the debtor, I and Alixe." Then she whispered in her husband's ear: "May I?" He bowed with an indulgent smile.

And then the beautiful girl threw her arms around my neck—and kissed me.

The "Dog" Ada Adopted

By WINIFRED SHERWIN.

Copyright, 1921, Western Newspaper Union.

They were a lonely old couple. Seth Earl was sixty and his wife, Ada, fifty-five. If they had had children living they could have faced the future more hopefully. But the loneliness that had always encompassed them since their only boy, Arthur, had died in babyhood, seemed to be closing in around them more tightly from day to day, like a tangible thing.

They owned their house in the village and Earl's pension from the corporation that had employed him for 30 years, small though it was, provided them with the necessities of life. Since Earl had retired he had mooned aimlessly about the garden plot.

Once, five years before, they had discussed adopting a child. But Seth had never returned to the subject.

"I guess I'm too old to start caring for a child now, Seth," said his wife.

"If only I had something, if only a dog," he said to himself. "That would be company. He'd come to wake me mornings, barking and wagging his tail, and then what walks we'd have together. Well, why not? Why shouldn't I have a dog? Other men have one."

As he expected, Ada offered strong opposition to the suggestion.

"He'd muss up the house and scratch things," she protested.

"Oh, yes, we can get a dog," answered Seth, promptly. "The Society for the Prevention of Cruelty to Animals has dogs to give away. I was reading something about it in the paper yesterday. Ada," he continued firmly, "I'm going into town tomorrow to see that society, and I'm coming home with a dog."

"Well, I suppose he can eat the scraps," said his wife, grudgingly. The imminence of the event startled—almost terrified—her, but her husband's eagerness quenched all further objections on her part. She even began to picture their neat little home with its new occupant.

When Seth had departed next morning Ada found, to her astonishment, that she had become almost as eager as her husband.

And when at length Seth stood at the door, dejected and dogless, a great discontent settled upon her.

"Couldn't you find a single dog that would suit, Seth?" she snapped out.

"Couldn't get near 'em," her husband answered, apologetically. "I found the society all right, but the woman secretary wouldn't let me in. No, nor even finish what I had begun to say. I hadn't got the word 'adopt' out of my mouth before she asked me if I were married. 'Married 30 years,' I answered, '30 years, ma'am, and to the best woman—'. 'Then bring your wife along,' she said. 'We don't have dealings with men.'"

"You mean to say they take all that trouble about a dog?" inquired his wife.

"Well, I suppose we'll just have to give up thinking about a dog," answered her husband, gloomily.

"Now, isn't that just like you, Seth!" replied his wife. "The moment a trifle happens to upset your plans you want to give up. You promised me a dog and a dog I'm going to have."

Her husband drew her to him tenderly.

"Ada, my dear, you're going to have your dog and the finest in the land," "even if it takes the last penny of our savings."

"But it's not going to cost a penny, Seth," she answered. "Because I'm going into to town tomorrow and—and —I'm going to bring back our dog."

Seth Earl put his wife aboard the train next morning. He was to do the housework that day, while she was gone upon their errand. And when at last he heard a tinkle at the bell he could hardly open the door, he felt so shaken.

Ada stood at the door, a basket in her arms. She entered and set the basket down.

"Let me see him," cried Seth, as she began to unfasten the blanket that covered it. "Is it a fox-terrier, Ada? It must be a puppy."

He jumped as a child's feeble wail came to his ears and looked at his wife in terror, as, with motherly fingers, she pinned back the coverings, showing a fine baby boy.

"I was wise," said Ada softly. "That was the Society for the Prevention of Cruelty to Children you sent me to. And when I saw the babies lying in their little cots all in a row I wanted to take them all and—and—"

"I wish you had, dear," answered her husband ecstatically. "This beats the best dog living."

How to Photograph Pets.

When photographing animals, give your orders in a quiet, composed voice and in as few words as possible. Get the cat standing in a chair, reared on her hind legs to rub cheeks with her master or mistress. Get the cow stretching an eager nose toward a handful of green corn husks; the horse with pricked ears, just breaking into a welcoming whinny; the canary taking a seed from its owner's finger; the dog with face animated at the sight of his master. The secret of getting neat rabbits and squirrels is to move very slowly.

How to Banish Smell of Paint.

To aid in removing the smell of fresh paint put a pail of cold water in the room and remove it every hour or so.

The Marble Quarry

By LESTER PETELLE.

(©, 1921, Western Newspaper Union.)

Lucy Bentwich took her husband's hands in hers and stared at him, while the breath came hard between her lips. She read his message in his eyes before he uttered it.

"The Mercury doesn't want you any longer, Jim," she said. "Is that it?"

Jim nodded miserably, and they sat down side by side upon the lounge and looked at each other mutely. For months they had felt the blow coming. Jim had been a reporter on the Mercury for five years.

Presently Lucy rose and began to prepare the evening meal.

"Let's get an abandoned farm in New England, dear," she said. "You know one can pick them up for a very small first payment. You can write, and, bit by bit, we can pull things together. I can raise chickens and we'll have a garden, and—"

Lucy's parents had had a farm in New Hampshire and had abandoned it when she was a year old.

They talked the scheme over all that evening, and it ended in their closing up the house and taking a trip into New Hampshire to look around. And then it was that they came upon their ideal village.

It was a tiny, straggling place in a sheltered valley, with high mountains all round, and at the end of the long street was the dearest little place—about 12 acres, with a brook at the foot and a little cottage, falling into decay, but still weather-proof, with old-fashioned fireplaces and dormer windows—just the place for them.

"We just have it, Lucy," said Jim. Lucy's own spirits rose.

But was it for rent or sale? It had lain vacant for more than 20 years, the neighbors said. Only one man knew—Ezra Powell, the boss of the little community, the village banker, the landowner, whose property adjoined their own. As for the title deeds—the registrar's office had been burned out 12 years before and there was no remaining.

They went to Ezra Pow a grim, red-faced, dom who listened to their formation with stolid

"That place ain't to said, when Jim had mine? Young man, I d my private affairs. I sa have it."

"Unless that place is yours going to take it," said Jim, defiant

Powell stormed and threatened and the interview terminated with vague threats on the one side and defiance on the other.

They moved out to Clearwater a week later, and by the end of May the house was in order and the ground broken up and planted. A motherly hen and a brood of chickens laid the foundation of what promised to become a flourishing industry. And soon they discovered the cause of Powell's hostility.

It was the neighbors who told them, under pledges of secrecy and with every appearance of fear. There was a rich marble quarry on Powell's land, and the indications were that the vein ran obliquely under their own little farm. He could not get them out, but they could not have put him out. They had only the right of prior possession.

Powell could, however, make life almost impossible, and did. He inaugurated a boycott, and the village tradesmen dared not serve Jim, who was compelled to go to Evesham for his supplies. On his return, loaded down, he found two rough-looking me at the door. Inside was Lucy, cryin

"They tried to get me to come o she said. "But I knew that if left the house they would take session. Jim, we are like pris

It was true; they were Jim dared not leave his la

It was late in August visited them. "How long foo s going to hold out?" "You have to give up afor Come, I give you a couple of to quit

"I'll go," said Jim, "for seven dred and fifty dollars."

"Done!" shouted Powell with hemence which amazed the holders. He pulled out a bulg pocketbook, which he had brou with him for the purpose, and p off eight one hundred dollar "Got change?" he sneered.

Jim walked over to a loos and raised it. Inside of a c legal document. Jim took light.

"What's that?" shouted P piciously.

"It looks," said Jim, deliberat "like the legal title to this

"The legal owner of seems to be one Timothy B Jim. The sounds like yo name, Lucy."

"Why—then this w place!" Lucy exclaimed

"Wait a minute," cr is a title deed to one ninety four acres of la the rest of our property? it, Powell?"

Powell was staring curi Suddenly he slipped to the floo a moment Jim was at his side.

"Run for a doctor, Lucy!" he shouted.

But when the doctor came Powell was beyond all earthly aid.

Jim owns the marble quarry now, and, when he and his wife are dead, the property will not pass out of the family.

Maintaining One's Dignity.

"Should a golf player have a sense of humor?"

"Certainly," said Mr. Dubwaite. "He should at least be able to laugh pleasantly when his caddy snickers, thus creating the impression that while he may not be much of a golf player he has other accomplishments that would elicit applause if he cared to show them."—Birmingham Age-Herald.

Some Phrases Wouldn't Sound Well.

One of the most interesting of recent American inventions is the phonograph safe lock, which will open only when the owner of the safe repeats through the keyhole a phrase that has been recorded previously from his own voice.—Brooklyn Eagle.

CARS MUST BE WELL COOL

Refrigerator Should Be Allow Rest on Siding at Least 24 H Before Loading.

The careful shipper should ask the railroad to frigerator car on his siding hours before he expects to loa man who works to prevent de loads his poultry into a car hav high temperature. Examine the see that when the doors are close a ray of light enters. See that the pipes are in working order; and w the car has been iced and salted 24 hours take the temperature a four feet from the floor midway tween the doors. If it is below grees Fahrenheit you may loa chilled birds with safety.

PLANT DISEASES TAKE HUGE TOLL

Farmer Suffers Loss of Income and Consumer Compelled to Pay Higher Prices.

CONTROL OF PESTS IS URGED

Can Be Brought About Only Through Painstaking Technical Research, Followed by Adoption of Remedies by Farmers.

(Prepared by the United States Department of Agriculture.)

When a plant disease or some other crop pest destroys an important crop throughout a large area, it is easy to see how dangerous these pests are both to agriculture and to the country. The farmer whose crop is destroyed suffers through loss of his income; the consumer often through abnormally increased cost of his food supply. Occasionally, as in 1916, when the wheat crop of the United States and Canada was reduced approximately 280,000,000 bushels by black stem rust after the entire expense involved in its production, except that of harvesting and threshing, had been incurred, the result is so serious as to endanger the stability of banks and of business generally in the devastated region and even, as in that case, to threaten the future of nations through impairment of food supply when needed for winning the great war.

Take Heavy Toll on Crops.

But spectacular and widespread destruction of crops is by no means the only harm worked by plant diseases. Every season and in substantially every imporant producing section they take heavy toll on crop production. Their existence without control constitutes one of the chief hazards which the farmer encounters, increasing his cost of production and ultimately the price which consumers must pay.

It has been difficult to determine even approximately the amount of damage done by plant diseases, but very careful estimates recently made by the pathologists of the state experiment stations and the Department of Agriculture indicate that in 1919 the production of ten of the important cereal, fruit and vegetable crops was reduced more than 650,000,000 bushels by plant diseases. This estimate does not include damage due to insects nor to adverse climatic conditions.

When it is remembered that substantially equal expenditures for labor and other items up to the point of harvest are required for the diseased and the healthy crops, it is clear that these pests constitute a most grievous and dangerous overload on agriculture, our basic industry.

Protecting Wheat Seed Against Smut by Formaldehyde Treatment.

Must Aid Stabilization.

That stabilization of agricultural production, which is highly desirable from the standpoint of business as well as of the producer and the consumer, can only come when farmers generally are able so to shape their plantings that, with normal weather, the acreage planted will produce the approximate quantity required to meet the consuming demand. Until this is accomplished, seasons of shortage with prices painfully high to the consumer are certain to be experienced. Along with these will come years of excessive production in which the producer is compelled to bear destructive loss because prices are below the cost of production. For the correction of this destructive alternation of too little and too great crop production the development of effective control of plant pests is one of the most important factors.

SAVE CORN FOR EXTRA SEED

Excellent Plan to Select Enough to Serve for Two or Three Years' Plantings.

When corn is selected from the field for seed, the United States Department of Agriculture urges that enough seed be selected to serve for two or three years' plantings. This is essential in the origination and perpetuation of high-yielding varieties adapted to local conditions. Seed corn that matures well and dries out promptly without injury will keep its good germinating and yielding power for four or five years. Often a bad season will prevent the selection of desirable corn for seed. But home-grown seed corn of the best quality can be always available by protecting a sufficient quantity from moisture and from insects and [illegible]

ERADICATION OF BARBERRY PLANT

Campaign Begun as Control Measure Against Loss of Grain by Black-Stem Rust.

BUSHES THRIVE EVERYWHERE

Plants Spread to Woodland, Pastures Stream Banks and Fence Rows by Distribution of Seeds by Different Birds.

(Prepared by the United States Department of Agriculture.)

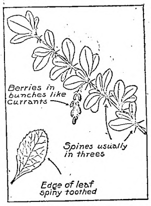
The job of eradicating the common barberry has proved to be a much more extensive one than was anticipated by the United States Department of Agriculture at the outset of the campaign in April, 1918. This campaign was begun as a control measure against the enormous losses of grain from black-stem rust. In years of moderate rust epidemics, the reduction in the yield of wheat alone has amounted to 50,000,000 bushels, while in 1916, the year of a very severe epidemic, there was a reduction in yield of 180,000,000 bushels in the United States alone.

Bushes Grow Everywhere.

In the grain-growing districts of the upper Mississippi valley, where the campaign has been carried on, it was supposed that barberry bushes existed chiefly as ornamental plants in the towns and cities. This was disproved during the first year of the campaign by the finding of 176,430 bushes on 1,166 rural properties. About 75,000 of these were scattered widely over 127 properties, showing that all country bushes are not confined to the farmsteads, but had been spread to woodland, pastures, stream banks, and fence rows by the distribution of seeds by birds.

With these facts in mind, the campaign was more vigorously pushed in 1919. As soon as the survey of most cities and villages was completed, a farm-to-farm survey of certain definite areas was begun. The results in 1919 were as follows: 338,000 bushes were found on 14,100 city properties, while 1,760,000 bushes were found on 4,600 farms. Of these last, 1,680,000 bushes were ones that had escaped from cultivation on 1,200 properties.

During the calendar year 1920 efforts were concentrated upon the farm-to-farm survey. A resurvey of cities and villages in the counties surveyed was carried on at the same time. In Ohio seven counties along the western border were completed; in Indiana 19 counties; in Michigan five counties; in Illinois three counties; in Wisconsin four; in Iowa 17, in the northwest portion of the state; in Minnesota the equivalent of 15 counties in the southwest portion of the state; in Nebraska the equivalent of 16 in the eastern part of the state; in South Dakota nine along the eastern border; in North Dakota ten in the eastern portion of the state.



Berries in bunches like Currants
Spines usually in threes
Edge of leaf spiny toothed

Common Barberry.

Many Bushes Removed.

In the entire campaign of three field seasons a total of 5,444,000 bushes have been found and 4,230,000 removed. Included with these, in so far as estimates were furnished, are hundreds of thousands of bushes removed from commercial nurseries during the early part of the campaign. The larger numbers were about 600,000 for Minnesota, 500,000 for Iowa, 200 000 for Wisconsin, and 75,000 for Ohio. Of the 1,214,000 remaining bushes about 1,000,000 are seedling bushes less than 18 inches in height in a single area in southern Wisconsin. The work for the field season of 1921 is to continue the farm-to-farm survey in as many counties as possible adjacent to those already completed.

BIG VALUE OF COVER CROPS

Especially Valuable to Small Gardeners and Trucksters Who Cannot Obtain Manure.

Cover crops are of especial value to small gardeners and trucksters, who often find it both difficult and expensive to obtain stable manure. They add the humus which is so necessary to maintain a good physical condition of the soil. Wherever there is a vacant place in the garden a few seeds of rye, vetch, clover, etc., may be sown and raked in. If a suitable rotation of crops is followed all parts of the garden may be covered with a green manure crop [illegible] or three [illegible]

PARTLY FILLED SILO IS DANGEROUS PLACE

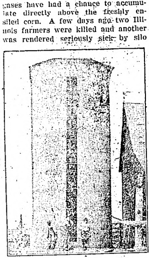
Turn Machine Blower on Before Attempting to Enter.

Number of Accidents Occur Each Year Owing to Carelessness and Ignorance of Methods of Removing Deadly Gases.

(Prepared by the United States Department of Agriculture.)

Turn the machine blower on and leave it on for at least two minutes before anyone is permitted to enter a partly filled silo. Unless this rule is followed, the result is likely to be dead men, says the United States Department of Agriculture.

Annually fatalities occur among farmers and their helpers as a result of the workmen entering half-filled silos after the deadly carbon monoxide gases have had a chance to accumulate directly above the freshly ensiled corn. A few days ago two Illinois farmers were killed and another was rendered seriously sick by silo gases which are almost as dangerous as the poisonous mustard gases used during the recent war. In this instance, one of the farm workmen entered a 50-foot silo which had been half filled the previous day. Some time elapsed and when he did not come out, another of the hands ascended into the silo. Neither reappeared, though the other workers shouted to them repeatedly to come down.



Newly Constructed Silo—Doors Should Not Be Wedged Into Place Until Needed to Prevent Waste of Corn.

Fearing an accident, the farm owner finally climbed into the silo. He also was immediately overcome by the poisonous fumes and only the fact that others followed him, forced open the extra silo doors and carried him into the open air saved his life. The two other men were suffocated immediately.

Each year, a number of accidents of this kind occur, due largely to carelessness and ignorance of the proper methods of eradicating the dangerous gases. The preventive measures are simple and efficient and, where they are followed, there is no danger.

No workman should ever enter a partly filled silo, after the ensiled corn has had an opportunity to develop poisonous carbon monoxide gases overnight, until the machine blower has been started. The fresh air dilutes and scatters the obnoxious gases to the extent that they are rendered harmless. After the blower has been operated for two minutes, it is perfectly safe for the workmen to enter. Another precaution which should be practiced religiously is not to wedge the silo doors into place until they are needed to prevent the waste of the ensiled corn. Many farmers follow the practice of placing most of the doors before any great amount of corn is cut and deposited in the silo. This prevents free circulation of air through the silo which, in turn, operates to favor the accumulation of carbon monoxide and other deadly silo gases.

DISCOVER NEW BLACKBERRY

Species Nearly Four Times Larger Than Garden Variety Has Been Found in Colombia.

A species of blackberry, nearly four times larger than our garden variety, has been discovered in Colombia by American scientists and is being experimented with by the Department of Agriculture with a view to distribution to farmers of this country.

The giant berry was discovered by Dr. Frank H. Chapman of the American Museum of Natural History, in the remote forests of Colombia. It was brought here by Wilson Popenoe, agricultural explorer of the Agricultural department and named the Colombia berry, after the country of its origin.

SHELTER TURKEYS IN WINTER

Good Plan to Keep Fowls in Same House They Are Expected to Use in Laying Season.

It is a good plan to house the turkeys during the winter months where they are expected to lay during the laying season. A straw barn makes a very desirable shelter for turkeys during the winter season and, being little used in the spring and early summer, makes a very suitable place for the turkeys to lay and brood in. A little forethought may prevent the turkey hen from stealing her nest away to [illegible]

The Mystic Fairy

By NATALIE GOLDEN.

Copyright, 1921, Western Newspaper Union.

"A pretty girl," mused Arthur Perry, and his heart warmed at the radiant smile bestowed upon him for such a mere trifle as restoring to the superior being in question a shopping list she had dropped.

It was on the main street of the bustling little city of Wellston. The young lady had a companion who seemed to be an elder married sister. The latter led a little child of four by the hand.

In his neat, though well-worn suit, and with that classic, intelligent face of his, he did not resemble a tramp, and yet here he found himself in a strange town without so much as a single cent in his pockets.

Two years previous, an expert linguist, Arthur had graduated from college. For a year he lectured in two institutions of learning. Then he had temporary charge of the foreign correspondence of a large importing firm. They failed, and with all his splendid education Arthur had been unable to secure a new position. He had learned that a large manufacturing concern in the city he was now in, needed a man of his capabilities. He had spent his last dollar for railroad fare to find himself stranded, the prospective position having been filled.

He sighed as he gave a last thought to the pretty girl. He smiled as he glanced at the little cherub-faced child playing at the curb. The combination suggested home, love and happiness—what strangers to him during two long, lonely years!

"Look out, there!"

Of a sudden the warning cry rang out shrilly. The driver of a cab standing at the curb uttered it. And then Arthur Perry awoke into action with all the agility and skill of his splendid athletic training at the call of courage amid peril.

The little child had dropped the ball and it had bounded over the curb and rolled to the middle of the stone-paved street. Naturally the child had followed it. Just at that moment an automobile whisked around the corner headed toward the helpless being directly in its course.

Arthur Perry reached the child. With a rough, heavy push that caused the little one to cry out with fright and pain, he drove the imperiled infant almost to the opposite curb and then—a shriek from the pavement, a sickening blow and the intrepid rescuer knew no more.

It was perhaps two hours later when Lillian Trevor reappeared at the scene of the accident. She had turned from the show window in time to see the stricken man seized quickly by the chauffeur of the auto, lifted into it and flashed away before anyone could interefere. Then there was the haste and excitement of getting the rescued child and her hysterical sister home. And now of her own volition, her mind full of that white, silent face, she had glimpsed for a passing moment, Lillian was urged on to find this noble rescuer of her little niece and thank him.

She spoke to the policeman at the corner, to proprietors of several street stands, but it was only when she addressed an old cabman that she gleaned the information she desired.

It was about ten o'clock the following morning when Lillian rang the door bell of the palatial home of Robert Barr, a retired city merchant. He looked puzzled as she was shown into his presence.

"Mr. Barr," she said plainly, as he courteously asked the object of her call, "I have come concerning a young man whom your automobile ran down and spirited away yesterday afternoon."

"I imagine you must be the young lady he was constantly referring to in his first delirium," insinuated Mr. Barr. "The great burden of his thoughts seemed to be a beautiful miss with a little child."

"It—it could not have been myself," demurred Lillian, but she flushed faintly. "May I call each day, nurse him if I may, at least bring him flowers, fruits, books, so he may know grateful friends are thinking of him? Oh, sir, he risked his life to save our dear little one!"

"You must be some mystic fairy, Miss Trevor," said Mr. Barr a few days later to his now welcome caller.

"How is that?" inquired Nellie.

"It was through you that young Perry came to me and now I find him an indispensable treasure. For years I have been seeking some expert in the languages to classify my large foreign library, and here he is at my hand, well and happy."

"Even though he was kidnaped?" submitted Lillian, with a smile.

"Oh, that was a double deed that eventful day," declared Mr. Barr.

"You mean?"

"That you had already kidnaped his heart."

And pretty Lillian flushed, and knew it was so within the ensuing week, and was glad of it.

More Important.

Askit—How did he make his money?

Lostit—That isn't worrying me. What I'd like to know is how did he manage to save so much of it.—London Answers.

Swimming Encouraged.

"Everybody should learn to swim."

"I'll say so," replied the lifeguard. "The more some of these folks submerge, the better the ocean looks."

Care Should Be Taken That Material Does Not Get Into Drinking Water or Feed.

If sodium fluorid is used for killing lice on chickens be careful not to let it get into the food or water. Don't pour it out where the hens will drink it before it can soak into the ground. The material is rather poisonous if taken internally.

Where some of the sodium fluorid in dust form reaches the body of the operator, and is allowed to remain for several hours, local irritation and burning may occur on tender parts of the skin. In dusting large flocks it is better to use a table rather than to hold the fowls between the knees. The solution does not injure the hands, even when dipping is continued for several hours, except where there are sores, which may become slightly irritated.

Don't allow sodium fluorid solution to remain in galvanized vessels a great length of time. It is best not to keep it overnight in tubs or galvanized containers, as it will injure them.

Local News Items

Anton Lien was in Thief River Falls Saturday.

W. O. Gaylord was in Thief River Falls Monday to consult a physician.

Mr. and Mrs. J. A. Sundquist were Thief River Falls visitors yesterday.

George Wold returned Saturday from an extended visit at Northwood, N. Dak.

Gaylord and Lysbakken were out showing land to prospective purchasers Tuesday.

G. Ernest Nelson and son shipped a carload of potatoes to St. Paul Tuesday morning.

Mrs. Theo. Tandberg entertained Mr. Tandberg's mother, from Thief River Falls Monday.

Mr. and Mrs. Ben Habedank of Thief River Falls spent Sunday at the Henry Tollefson home.

Miss Louise Besancon, who has been attending school at Thief River Falls, is at home, quite ill.

Mr. and Mrs. Theodore Hamm and children of Erie were guests of Mr. and Mrs. Carl Lindstrom Sunday.

Mrs. Julia Halvorson returned Saturday from North Dakota, where she has been cooking for potato dealers.

Mrs. S. D. Rouze spent Sunday at home and went Monday to Thief River Falls to attend the teachers' institute.

Mrs. E. K. Rime and daughter Gladys went to Thief River Falls Tuesday, where Miss Gladys had dental work done.

Owen Olson and family moved the first of the week into rooms in the George Wold building over the Gaylord land office.

Mrs. Breen, Mrs. Josephson, Misses Mabel Tweeten and Violet Josephson autoed to Thief River Falls and return Saturday.

Mr. and Mrs. J. A. Sundquist visited Mr. and Mrs. W. L. Hall at Thief River Falls Sunday. Mrs. Sundquist and Mrs. Hall are sisters.

Andrew Sand went to Thief River Falls Monday, accompanied by his niece, Miss Arvilla Anderson, who has been visiting here.

Mr. and Mrs. Gunnarson and children of Ada visited relatives here Saturday and Sunday. Mrs. Gunnarson is a daughter of A. C. Tvedt.

Miss Annie Tellefson and Tellef Tellefson spent Sunday in Goodridge and went Monday to Thief River Falls to attend the teachers' institute.

Mr. and Mrs. Andrew Austin and Olaf Oveland of East Grand Forks visited with Mr. and Mrs. Albert Halvorson and Mrs. Julia Halvorson over Sunday.

Mrs. Christina Vake and little daughter and her sister, Miss Mabel Rime, were in Thief River Falls Saturday shopping and visited the Dr. Kirby sanitarium.

Rev. C. A. Hanson and family moved the first of the week to Brooten, Minn., where they will reside on a farm while Mr. Hanson is endeavoring to recover his health.

Quite a representation from Goodridge went to Thief River Falls Monday evening to witness the ceremony of opening for traffic of the first block of new paving.

Mrs. A. W. Seavey and little daughter of Blooming Prairie, Minn., came Wednesday for an extended visit with Mr. and Mrs. George Josephson and Mr. and Mrs. M. O. Seavey.

Ten cars of live stock were shipped from this station last Saturday. It is a shame for our cattle to have to be turned off now, totally unprepared for market as many of them are.

A number of lady friends of Mrs. Carl Edseth and Mrs. J. O. Stephenson gave them a birthday surprise last Thursday evening. Each received a number of beautiful and beautiful

A. C. Tvedt, accompanied by John Nystul, made a trip to Gatzke last Saturday to interview the business men and farmers of that section with reference to the proposed road connecting Ohlee and Roseau.

R. P. Turnbaugh and family moved the first of the week back to their former home in Missouri. They were preceded a short time since by the brother Allan. Mr. Wilson will operate his large farm east of town himself next year.

Rev. H. A. Nuoffer of Cass Lake, Rev. H. Brauer of Mahnomen, Rev. E. Kreidt of Thief River Falls and the local pastor, H. Lutz, motored to the Red Lake agency last Tuesday. All in all, it was a pleasant trip. The visitors were very much impressed with the natural beauty of some of the country and the utter desolation of other parts, having driven 2½ hours without seeing a human being.

To Trade for Land

I have two Percheron registered stallions and a few grade mares that I want to trade for land. Write John Hamre, Fertile, Minnesota. o21

Mrs. Will Wayne is the guest of her mother, Mrs. J. Payne, this week.

G. A. Gilbertson, who lives nine miles north of town, has just completed an addition to his house.

Alfred Tvedt, who has been dangerously ill with pneumonia at his home at Colgate, N. Dak., is reported as recovering.

A party of nine from Bemidji passed throu here yesterday via automobile talking reservation opening and railroad, They were: Earl A. Barker, president of the Bemidji Civic Commerce association; and J. J. Opsahl, John Moberg and R. A. Hannah, the railroad committee of the Commercial club, and five others. The Banner acknowledges a pleasant call.

BARBERRY CUTS WHEAT YIELD

Scientific Investigation Has Proven That Rust Gets Its Start in Barberry Bushes.

Your barberry bush may be reducing your wheat yield or increasing the cost of a loaf of bread. Wheat rust in some years causes a loss of 200,000,000 bushels of wheat and scientific investigation has proved that the fungus which is responsible for this disease gets its start in the spring from the common barberry plant. More than 4,000,000 barberry bushes have been located by federal workers and 3,500,000 plants destroyed. One bush may infect acres of wheat and it will be worth while to look around your farm and adjoining country and see that they do not harbor any of these wheat thieves.

RETAIN ALL GOOD PRODUCERS

Relatively Few Hens Will Prove Profitable After Their Second Laying Season.

Hens showing indication of having been good producers throughout the year should be retained for the next year regardless of their age, but relatively few hens will prove to be profitable producers beyond their second laying year if of the heavier breeds, such as the Plymouth Rock, Rhode Island Red, Wyandotte or Orpington or beyond their third laying year if of the lighter breeds such as the Leghorn.

HISTORICAL SOCIETY

THE GOODRIDGE BANNER

VOLUME XV, No. 41. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, OCTOBER 28, 1921. $1.50 PER YEAR.

Reunited by Quicksands

By WILLIAM FALL.

Copyright, 1921, Western Newspaper Union.

"I wouldn't go out tonight, Elizabeth, if I were you," spoke querulous, rheumatic old Grandma Denby.

"I must, grandma," was the reply, firm, yet pained, and the old woman glanced keenly at the young face, wearing care and sorrow, and sighed, and then was silent, gazing sadly, dreamily into the flickering grate.

"Dear child," crooned the old woman, as Elizabeth threw a cape across her shoulders and flitted from the room. "Dear, poor child—I know! I know!"

Just a year this very night, not chill and sere, although September-like now, but a star-spangled evening of sweet sounds, a stroll along the whispering sands, and troth plighted under the great, stately elm that had shaded the old brook for over a century. Then under the great elm where each had promised, no matter what might happen, to return there upon each anniversary as to a shrine devoted to a love undying, eternal.

"It was all my fault," moaned Elizabeth, as slowly, sadly she started down the edge of the sand beach, a watery moon casting dim, weird shadows across her path. "Oh, why was I jealous, why was I so impulsive and cruel?"

She recalled the May day festival at the village where she had been so proud of her lover, Randal Gray, and then so irrationally jealous of him.

In a fit of pique, incited by a false friend, a scheming girl companion, she had tried to punish her lover, entirely innocent of any real purpose to pain him, and she had lost him.

"And I can never forget!" she wailed to the sighing night winds, and pursued her lonely path on a pilgrimage of sorrow and penitence.

She faltered as she came in sight of the old elm.

"I thought it would comfort me to come," she moaned, "but it is breaking my heart!"

At last she reached the old trysting place. She sank like a wearied child to the moss-covered trunk and cried her heart out.

Hark!

Her pulses stirred at a cry of alarm. It was a call for help.

Elizabeth started to her feet and tremblingly listened. A new fear came into her face as she traced the call—across the sloping expanse of stunted oak to where the brook ran and the whispering sands were the most treacherous.

She was a true daughter of the woodland, and she sped like a sprite along the upper ledges overlooking the brook.

"Help!"

It was closer now, that cry.

A human form was visible in the swirling mass of quicksands, appealing wildly for help, with arms outstretched, sinking deeper and deeper each succeeding moment.

How she managed to drag one of the great rough logs, the size of a railroad tie in thickness, fully twenty feet, she never knew. She managed to tilt the end of the heavy timber across the ledge of rock and let it drop. Elizabeth crept out on the log.

"Grasp the log firmly with one hand—give me the other—"

Then her voice died away and her soul seemed to go with it, for the man she had saved was—Randel Grey.

It was like a hideous dream with a golden awakening, as both reached the soft ground and sank upon a mossy plat exhausted, their eyes met, and then their hands.

"You have saved my life!" he breathed. "I owe it to you—Elizabeth!"

How sweetly, how fervently he pronounced her name, the ring of a year ago in it!

"I am glad," she said simply, and shrank back away very contritely and with a sense of unworthiness.

"If you had not been near," he began, and then asked: "How came you to be?"

Her eyes drooped and she rose to her feet. He caught sight of her poor, bleeding hands, and grasped them and kissed them.

"It was just a year ago—the old elm—do you remember?"

She bent her head, and he guessed the truth.

"Its call was strong upon me—I had not forgotten," he said in a low, eager tone. "Elizabeth, say it was all a mistake, your cold, bitter letter to me."

"It was more—it was cruel, wicked, and I have been punished. Oh, Randal, my heart is breaking!"

He caught her swaying form in his arms. He clasped her close, leading the way past peril into peace, past the weird whispering sands to the soft shadow of the great elm, its swaying boughs seeming to welcome so much youth and loveliness and joy.

The Good Old Days

By FREDERICK CLARKE.

Copyright, 1921, Western Newspaper Union.

Dainty little Nellie Barton was crying as if her heart would break. It was in vain that her best friend and neighbor sought to comfort her. This was the first cloud that had arisen in the matrimonial sky for Mrs. Barton, and, of course, after a season of perfect honeymoon bliss, it seemed to be a terribly dark one.

"Tell me all about it, dear, and let us see if between us we can't find some way to patch up this first domestic quarrel."

"Quarrel!" repeated the bride of a month in a terrified gasp. "Oh, dear, no—there has been no quarrel."

"Go on, dear," she urged.

"It's about the meals," confessed Nellie, with a little sob. "I thought everything was just suiting Ronald to a T. He praised my biscuits and said he just doted on my cookies, pie and sunshine cake. He said they reminded him of food for angels. Then yesterday I found out that it was all a mollow hockery."

"What, my dear?"

"I mean a hollow mockery. I've been so upset I get flustered whenever I think of it. You must know that an old college chum of his was at tea last evening—a Mr. Stowell. I did my best to make Ronald proud of me. Everything was light and dainty."

"What was it, dear?" inquired Mrs Dorsett.

"Oh, they got talking of old times. Mr. Stowell reminded Ronald of a glorious week they had spent together at the Barton home, before they were married. Such cooking! How mother did set out a meal that was a meal! Particularly how Mr. Stowell had never had such an appetite as evenings when mother had baked beans. Such beans! And mince pie! Oh, it made his mouth water to think of it! Then Ronald got egged on to brag of his mother. That salt rising—um! um!" and pretty Nellie, in trying to imitate her dear one, broke down again.

"And apple sauce!" she choked out as the last straw. Practical, loving Mrs. Dorsett tried to soothe her.

"See here, my dear," she said, "you are making a great mountain out of the chatter of two big overgrown boys. Now promise to forget it and I will make everything right."

"H-how w-will you?" sobbed Nellie.

"Will you keep a secret?"

"Y-yes—if it w-will do any good."

"Very well, mother is coming to visit me next week. You say Mr. Stowell is going to come to tea again on his way home from his trip?"

"Yes, he is invited for Thursday evening."

"Then Thursday evening, dear," promised Mrs. Dorsett, with a little wrinkle of a smile about her lips, "those two overgrown boys shall just revel in all the dainties of old times."

Ronald Barton ushered his friend and old-time chum into the neat, attractive little dining room at home, proud of the neatly set table with its glittering silver and glassware. Nellie never looked lovelier. It was when the maid brought in a great steaming dish of pork and beans that Ronald stared a little.

"Butcher must have forgotten the lamb chops," he said apologetically.

"Always liked them," declared Stowell.

"Why, Nellie, isn't this some new fangled sort of baker's bread?" inquired Ronald.

"No, indeed!" resented Nellie with dignity. "That is the regular old-fashioned home-made, salt-rising bread that everybody dotes over."

"Guess our tastes are getting sort of perverted, old boy!" laughed Stowell.

Ronald's eyes fairly bulged at the dessert. The apple sauce looked to him a poor, thin, cheerless dish to offer to an invited guest.

And then came the climax as the maid soberly brought in three great slabs of mince pie—good pie, grand pie, but on a hot night—!

"Too heavy for me," declared Stowell, and Ronald glanced reproachfully at Nellie.

The gentlemen adjourned to the porch. Ronald experienced a species of social discomfort.

"Guess we'd better stroll down to the hotel a little later and have a game of billiards, eh, Barton?" he suggested.

"They open a new grill room tonight, I hear," observed Ronald. "Why, mother!" and the speaker sprang from his chair and greeted his mother with genuine gladness.

"This is a surprise, Mrs. Barton," spoke Stowell.

"Yes, I was busy out in the kitchen and was afraid the maid would spoil things if I didn't superintend a little," spoke the old lady demurely, as she had been taught by her plotting daughter, Mrs. Dorsett.

And then the truth dawned on Ronald. He glanced at his companion. Stowell had flushed up and looked bored.

"Boys," spoke Mrs. Barton in her winning, motherly way, "never forget that two healthy, all-day roving lads coming in to a heavy farm supper hungry as tramps aren't two dainty city-bred children of the larger growth. The 'cooking mother' did is just the thing in its place, but, as I notice from what you left, it doesn't hold a candle to dear little Nellie's clever trifles."

And that was the last that Nellie Barton ever heard of "mother's cooking."

The Mysteries of Yoga

By DOROTHY WHITCOMB.

Copyright, 1921, Western Newspaper Union.

She was not his Molly. John Beatty realized that [illegible] attired in a stiff shirt, which gave him a sensation of impending asphyxia, and a suit of evening clothes, which made him feel like a waiter, he stood moodily beside the door and watched his fiancee moving among her guests.

He had returned from the West after a three-years absence. He had gone to make his fortune in the mines, and Molly had said she would be true to him. He had made the fortune and Molly had been true, but . . . Well, this was not the simple, pretty country girl whom he had left three years before.

There was incense in the air, and Beatty liked the incense of wholesome oxygen. There were three poets present. John did not mind [illegible], but these had long, greasy [illegible] and dirty finger nails. And he [illegible] loathed the black man in the [illegible] who was holding forth to a rapt audience—Molly included—upon the mysteries of Yoga.

"To attain the infinite?" he was saying with a supercilious smile. "It is easy, ladies. Concentrate! Concentrate, and repeat without cessation the magic syllable 'Om.' Then breathe in lightly through the left nostril, concentrate all feelings in the center of the spine, and exhale through the alternate nostril, meanwhile repeating the magic syllable 'Om.'"

After that came a lecture upon esoteric Buddhism, as set forth by the great seer and sage Pittanjali, several hundred centuries before Molly had opened her pretty eyes in Binghamton, N. Y.

After the guests had gone, John Beatty stood facing Molly alone. He was sick at heart and angry words rose to his lips.

"Don't you see, Molly, this isn't real?" he was saying. "It isn't wholesome. That black man—"

"You mean Mr. Ramsammy Chundra Ghee?" inquired Molly, with ominous calm.

"I do," said Beatty. "I don't like to see you mixed up with a crowd of fakers like those, dear."

"I have changed, John," answered Molly. "I have found myself. And you haven't changed. You have lost yourself in the whirl of worldly interests. It isn't any use, John. We could never be happy together. I want to live in the soul to have my spiritual freedom. We could never be happy together."

"You want to break our engagement?" asked Beatty coldly.

She put out her hands.

John grasped her in his arms.

"God bless you, Molly," he said. "But it isn't any use. Only if you grow tired—if you want me at any time, anywhere, you'll let me know, won't you?"

Then he was gone.

Her thoughts went back to those first days when she had come to New York. She had met John in a commonplace boarding house. And yet those had been days of perfect happiness. Now—

A ring at the bell aroused her from her reverie. She opened the door.

The Indian was standing upon the threshold. At the sight of him her face softened.

"You left something, Mr. Ramsammy Ghee?" she asked.

Ramsammy entered after her and closed the door behind him. He turned toward her and held out his arms.

"Yes," he whispered hoarsely. "I left you, my moonflower, my perfect pearl. I could not go home until I had told you that I love you."

Molly recoiled in horror.

"Will you come with me and be my bride, my lotus-flower?" inquired the black man eagerly.

"Oh, I hate you! Go away!" she cried. "John! John!"

The answer was immediate. With a crash John Beatty stood in the entrance.

With a leap he was upon the black man, and with a parting kick, deposited him upon the sidewalk. Then he turned back into the apartment. Molly was weeping pitifully as she crouched on the Turkish rug.

"I—I saw that black skunk turn back, Molly, and I suspected something," John exclaimed. "So I waited outside to make sure that it was all right. You aren't angry with me, dear?"

"Angry, John?" she answered, looking up. "Oh, John, can you ever forgive me?"

John sat down beside her and took her hands in his.

"Molly, dear," he said, "I guess you didn't understand—that's all. Molly, if you'll marry me, you shall have a different poet every night to supper, as long as his hands are clean. But I guess we'll let Ramsammy do his breathing stunts elsewhere. What do you say?"

"All right, John," answered Molly.

Look Out for Number One

By HELEN SCALES.

Copyright, 1921, Western Newspaper Union.

"So that's the gift you've been telling me about for the last month or two, is it, Judge Stillwell?"

"That's the present I have designed for you, my worthy friend, as a reminder of your arduous law studies with yours truly! Young man, take the advice of a successful senior, follow out the sentiment that little card expresses, and you will thank me for giving it to you instead of a watch, or a $50 bill as I suppose you expected."

"No, I [illegible] that I did," retorted Jasper [illegible]. "I knew you too well for that. You are not the kind that ever does that sort of thing, so I'm not disappointed. 'Look out for No. 1,' eh?" and Jasper read the inscription on the little piece of pasteboard. "You've always done that."

"And see where I am!" vaunted the judge, swelling up and waving his hand broadly, as if to enclose the many domains he had acquired in Brampton.

"All right," curtly spoke Jasper, nodding adieu to the man who had taught him how to be a lawyer—for a consideration. "'Look out for Number One.' At the threshold of a new business life I'll take the time to think out just what that means and how it may help me."

He was a careless, worldly young man, this new bachelor of law, and he had been taught his lessons in an unworthy school. His uncle, Robert Miller, had paid his way through college and had helped him on to admission to the bar. Robert Miller was said to have some money, and there were a lot of conniving relatives fervently awaiting his demise and a distribution of the spoils. With the grasping judge as a tutor and these same mean relatives as examples, it was not much wonder that Jasper had a poor estimate of the world in general, and Brampton in particular.

Only about one experience in his career was untinged by the shallow ideas of real success drilled into him. This was his sincere love for Eva Davis.

One day old Robert Miller summoned all his relatives to a family council. A new sect had sprung up in the next town. A specious, impressive appearing man, their leader, had devised the cult of the "Soul Dreamers," he called it. The weak minded and the idle became easy victims. Old Miller had dreamed himself into their mysteries. He now told his relatives so.

"I have decided to do for you people what you are all waiting for," he announced bluntly. "I have liquidated the bulk of my possessions for $10,000. I warn you, after that is distributed you need expect nothing further from me, living or dead. Brother-in-law Thompson, you have a large family, mortgage on your home—what say to $3,000?"

"It would come in good, right sure!" declared brother-in-law Thompson buoyantly.

"And you, Aunt Priscilla?"

"I need a trip abroad, doctor says."

"If you're thinking of me in the distribution," piped in Cousin Felix Todd, "I'll pay back. Say, I know of a speculation in the city where $3,000 will earn thirty in a year."

"Do? all right. Come to the bank and we'll pay off. There's something left, Jasper; what especial line of extravagant folly have you got in mind for your share?"

And now was the supreme moment for Jasper Miller.

"Uncle Robert," he said, "you educated me, you brought me up. I want none of your money—only your affection. Where you go I go."

"Mean that, do you?" snapped out Uncle Robert in his keen suspicious way.

"I do."

"Stick to me if I hadn't a cent?"

"To the last ditch!" proclaimed Jasper dramatically.

In a month the mask was down. Uncle Robert started Jasper into a desultory law practice. Then he proceeded to devote all his time to the "Soul Dreamers." A climax came. The specious head of the cult made off with all the funds of the sect, including $20,000, the last of Uncle Robert's fortune. Uncle Robert came to the little home he had rented for Jasper and himself with a doleful face and a more doleful story: one [illegible]. They were paupers!

As Jasper noted his worn anxious face his better self came to the surface.

"You shall never want a home while I can earn enough to maintain one," said Jasper.

That night Jasper returned by mail to Judge Stillwell the motto: "Look out for No. 1." "I'd rather be a man than rich," he wrote. "Your motto makes the successful man a miser and the man who fails mean."

Then Jasper went to work at hard labor. One day an automobile drew up at the modest little cottage and Mr. Davis called Jasper to the machine.

"I've been watching you, and Eva, too," he announced. "I have bought a business at Brampton and need a working partner. Eva says come."

"And Uncle Robert?" inquired Jasper. "I have planned to stick to him always."

"Then keep your promise," and then Eva leaned over and kissed Jasper, and he knew that happiness and peace and the contented mind were his.

Sweet Daphne's "Hope Box"

By MURIEL BLAIR.

Copyright, 1921, Western Newspaper Union

"How very nice of Nellie," said Mary Lincoln, as she and her best friend Daphne Willis, parted at the village post office after receiving and opening [illegible] exactly alike.

"The [illegible] exquisite," spoke Daphne, glancing with taste and pleasure over the neck collar neatly done up in tissue paper with a dainty sachet bag beside it. "Nellie is very thoughtful."

They had been great friends, those three. All through Nellie's engagement Mary and Daphne had been closest to her of her many acquaintances. She had promised not to forget them when she reached the city on her wedding tour. Now Nellie had redeemed her promise.

"I shall wear the collar at the regular club party next week," said Mary. "You will be there, Daphne?"

"I think not. My aunt is not very well, you know, and needs me most of the time. Besides," and Daphne gave a nervous laugh, "I fear I am getting past the party age, Mary."

"Nonsense!" cried her devoted friend. "Twenty-three and you look like sixteen."

"I shall put the collar away in my 'hope box,'" said Daphne.

Just here Mary made a pretense of clinching her pretty pink and white fists and grinding her pearly teeth in a feint of the most dreadful rage.

"Daphne Willis," she scolded severely, "if ever I happen across that 'hope box' of yours, I'll—I'll stamp on it; yes, I will."

"That's enough!" retorted Daphne closing the cheery lips of her staunch champion with a kiss—"I know I am beginning to feel very old, and I think it a duty to be prepared if any likely old bachelor—why, yes, even some respectable widower—should happen along, you know!"

It was all a joke, Daphne's "hope box," a feminine conceit that appealed to Daphne because it led to pleasant quip and gossip among her bright girl friends. In her own mind Daphne felt pretty well convinced that she would never marry.

Her "hope box" was a satin-lined cedar chest, given to her by a dear girl friend one birthday.

It was nearly a year after the wedding of Nellie that Daphne received a letter from a cousin who lived at Merton. She had been in correspondence regularly with this relative, and several times Miss Dalby had referred to a neighbor, a Mr. Paul Barnes.

"I have great news for you, Daphne," this last letter ran. "I have often told you what a fine young man Mr. Barnes was. His parents left him quite an estate, and I suppose he got lonely in the old homestead. At any rate, he is about to marry, and what do you think? he has picked out the poorest girl in the village. It is one Lina Temple. She is so poor her folks cannot afford any kind of an outfit, and very quietly some friends and myself are helping her out. If you have any little trifles to contribute, I shall be glad."

Good-hearted Daphne had something of a struggle with herself. Then her generous soul impelled a sacrifice.

"I shall never marry," she said to herself. "I shall be making some one happy," and the "hope box" went to Miss Dalby.

Two months later Daphne's aunt died. It was natural that Miss Dalby should ask her to make her home with her. This she did, and Daphne found herself installed at Merton.

"I have often thought of the wedding you wrote me about," observed Daphne, the first evening of her arrival.

"Oh, did I never write you!" exclaimed Miss Dalby. "The match was broken off. We got up quite a handsome outfit for Lina Temple. She never used it, for she eloped with a circus performer two days before the date for the wedding."

"And Mr. Barnes?" inquired Daphne.

"I think, secretly, he was relieved, for the girl was not of his class—headstrong, capricious, all for tinsel and glitter."

Of course, Daphne met Paul Barnes, and there seemed to spring up a mutual interest between them. One evening as he stood at the garden gate, the tender influences of the sweet June night seemed to bind him lingeringly to the spot.

"You are a good friend, Miss Willis," he said. "I never told you, but I have heard of your kind thought to make happy the young lady I at one time thought to make my wife. Shall we walk to the lake and back? It is such a beautiful evening," he suggested, and there was a strange, wistful tremor in his voice.

Daphne listened to words that rang so true their echo thrilled and lingered, even as she came back to the house, her heart beating with the joy of a new-found happiness, her face radiant with telltale blushes.

She went up to where Miss Dalby sat and put her arms around her, and hid her conscious face on her shoulder.

"Dear cousin," she whispered, "you told me you had stored my old 'hope box' in the garret."

"Yes, dear," replied Miss Dalby, smiling wisely.

"I should like to have it back again, if you please," said sweet Daphne Willis.

A pitchfork with removable tines which can be replaced, if broken, has been patented by a Canadian inventor.

ERADICATION OF CORN SMUT

Fresh Manure Should Not Be Applied and Rotation of Crops Should Be Practiced.

There are things to be done and things not to be done to combat successfully the smut of corn which has damaged the crop of this year in various parts of the Northwest. Fresh [illegible] not be put on corn [illegible] rotation of crops [illegible] best [illegible] manure [illegible] disease specialist [illegible] farm, St. Paul [illegible] crop than corn should [illegible] land growing smutted corn this year.

Corn smut is not poisonous, says Doctor Stakman; on the contrary, in its early stages it is edible for human beings. It may occur on any part of the corn plant above ground. It has been found that corn smut spores are killed in the silo.

ESSENTIALS IN PIGEON COOP

Fresh Air, Dryness, Sunlight and Space Enough to Keep Birds Comfortable Are Urged.

The prime essentials in pigeon houses are fresh air, dryness, sunlight, and space enough to keep the pigeon comfortable [illegible] should be [illegible] air circulation [illegible] that the door and yards may be [illegible] while it should be situated for convenience in management. A southern or southeastern exposure is best. The general principles of construction which apply to poultry buildings apply also to pigeon houses.

DEEP PLOWING IS BIG NEED

Soils Are Getting Poorer, Producing Less Per Acre, Thereby Cutting Farmer's Income.

Deep plowing is the greatest need on many farms. It is a fact that soils are getting poorer, producing less per acre and less in the [illegible] after year and [illegible] many farms [illegible] soils are [illegible] they [illegible] are from [illegible] One way is [illegible] the air [illegible] nature [illegible] soil fertile. The roots of plants cannot penetrate deep enough under the present conditions on many farms to get enough plant food and sufficient moisture to yield a normal crop. What is the remedy? Plow deeper.

Deep plowing should be done in the fall. Many soils should be subsoiled, others should be plowed deeper with ordinary breaking plows. Whatever the method, the soil must be made deeper. Plow deeper.

LAMONA FOWL IS OF GREAT MERIT

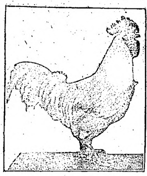
Government Poultry Experts Have Produced New Breed Possessing Fine Qualities.

LAYS WHITE-SHELLED EGGS

Body Is Long and of Good Depth, and Has Large Capacity for Reproductive Organs—Resistant to Weather Changes.

(Prepared by the United States Department of Agriculture.)

The country will soon have a new breed of poultry, a white fowl with red ear lobes, that lays a white egg, developed by the poultry experts of the United States Department of Agriculture at the government experimental farm at Beltsville, Md. Heretofore, it is said, all breeds with red ear lobes have laid brown-shelled eggs. The project was conceived by Harry M. Lamon, senior poultryman of the bureau of animal industry, and at the suggestion of the chief of that bureau Secretary Wallace named the breed Lamona, for the originator.



Lamona Males Have Abundant Length and Depth.

The new fowl possesses characteristics of great merit. It has sufficient size to fit the demands of the great number of consumers who want a bird weighing four to six pounds. The body is long and of good depth, giving a large amount of the highly desirable breast meat, and at the same time large capacity for the reproductive organs.

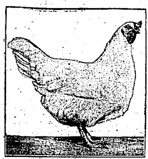
The Lamona fowl is larger than the Leghorn, approaching in size fowls of the American class. It is white, which is most desirable from the market men's viewpoint. It has a comb and wattles of medium size which are not easily frosted, thereby checking development of egg production. It is well feathered, which makes it resistant to sudden changes in temperature.

Foundations of New Breed.

The project resulting in the creation of the new Lamona was started in 1912, when the idea was conceived of combining three varieties of fowls to produce a breed having the shape and the market qualities of the Dorking, with a yellow skin, white plumage, and four toes; and laying a white egg. A low-stationed, close-feathered White Plymouth Rock male was mated to a Silver-Gray Dorking female; and a Single-Comb White Leghorn male, having a rather small, low comb, was mated to a Silver-Gray Dorking female.

The second year the offspring of these crosses were mated separately, the females being trap-nested, and only the high producers of the largest and whitest eggs were used for breeders. Only males from high-producing females have been used at any time. The third year the results of the crosses of the second year were mated, and in addition, care was taken to select white specimens with yellow skins having only four toes. Since then it has been a task of careful selection and breeding.

The new breed is not yet ready for introduction, and no specimens or eggs will be sold until the characteristics sought have been more firmly fixed. It is as well or better developed than were several of the breeds and varieties when they were introduced by their breeders, but the specialists of the department believe that it is not sufficient to have a few specimens that measure up to the ideal. They want the characteristics so well fixed that the fowls will produce a high percentage of progeny of the ideal type. When sufficient stock of such birds has been obtained specimens will be sent to state agricultural colleges and experiment stations to test their adaptability to different sections and conditions.



Hens Have Long, Broad Bodies, With Plenty of Room for Reproductive Organs.

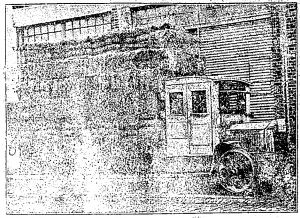
CARE AND ACCURACY DEMANDED IN WEIGHING HAY FOR MARKET



Accurate Weights Can ... Obtained Only ... the Wagon Scales Are in Proper Working Order and the Load Is in Proper Position Upon the Scales.

(Prepared by the United States Department of Agriculture.)

A great deal of trouble and monetary loss sustained by producers and shippers in marketing hay has been found by the bureau of markets and crop estimates, United States Department of Agriculture, to be due to careless weighing.

Weighing by the Bale.

In several sections of the country it is the custom to weigh hay by the bale at the time for baling and to note the weight upon a tag made of cardboard or other convenient material attached to the bale beneath one of the bale ties. When weighing by this method great care should be taken to weigh the hay accurately. During the rush of baling operations sufficient time is frequently not allowed for the scales to come to a balance and there may be as much as ten pounds difference between the actual and the catch weight.

Special care should also be taken in writing the correct weight upon the tag, say the bureau's specialists. It is the common practice in some sections to use only numbers ending in 0 or 5 in recording the weight, and to give or take from the actual weight a sufficient amount to make a number with such an ending. For example, the weight of a bale weighing 67 pounds is written as 65 pounds and that of one weighing 68 pounds as 70 pounds. The tendency, however, is "to take" more frequently than "to give," so that it is a better practice to state the actual weight upon the tag.

Another practice which is often charged back to the producer in lower prices or in weight claims, disproportionate to the actual loss, is the use at a much later date of tag weights placed upon the hay at the time of baling. Unless hay has been thoroughly cured and has been in the mow or stack for a considerable time there is likely to be a loss in weight while hay is in storage after baling, due to additional loss of moisture. Each purchaser desires, and has a right to obtain, the actual quantity of hay for which he pays. If bales are short of the weight specified upon the tags there are grounds for a claim, either in the form of a price concession or of a weight claim. In either case the adjustment of the claim is likely to be less economical to the producer than the actual reweighing of the hay. The producer or shipper should be prepared to prove that the weight of the hay at the time of sale is correct and as indicated upon the tag.

Careless weighing on wagon scales causes as much difficulty as careless weighing by any other method. One of the principal causes of unsatisfactory weights upon wagon scales is lack of proper care of the scales and of the necessary attention to keep them in repair and in good working order. Accurate weights cannot be obtained on scales that are out of repair. Wagon scales should be inspected frequently by a competent inspector and care should be taken to see that they are in proper adjustment and balance before weighing any lot or load of hay.

Care must be taken also to see that the load is in proper position upon the scales. The load should not bind upon the scale box or building, and if the team exerts any effect upon the load it should be unhitched.

When obtaining the tare weight the weigher should be certain that the wagon contains the same equipment as when the gross weight was obtained. A good rule is to remove everything but the necessary equipment from the load before weighing.

Keep Bale Check When Loading.

If the producer or shipper loads the hay directly into the cars care is especially necessary to compute the total weight correctly. Loads are frequently distributed in two or more cars because of the variation in the quality of the hay. If the bales are tagged, a careful record should be kept of the bales placed in each car. If not tagged, the part of the load placed in each car should be weighed separately. A careful check of the total number of bales placed in each car should also be kept so that the shipper may have the proper data upon which to base a claim should any loss occur while the hay is moving to market.

The following suggestions, if followed, will greatly assist in eliminating some of the troubles caused by improper weighing methods:

When using tag weights record the actual current weight.

Have wagon scales in proper adjustment and balance.

See that wagon contains same equipment when weighing both the gross and tare weight.

When loading two or more cars keep careful record of hay loaded in each car.

Always keep a bale record, together with a weight record, of each car.

CAREFULLY CONSIDER DIVERS ENTERPRISES

Hasty Conclusions Should Be Cautiously Avoided.

No Reason for Assuming All Activities of Farm Should Be Devoted to One Big Money Crop—Study All Angles.

(Prepared by the United States Department of Agriculture.)

In making use of the results of a year's cost accounts for the purpose of perfecting the organization of the farm, hasty conclusions should not be drawn. Sometimes a positive decrease in profits may ensue if an enterprise be dropped, because, taken alone, it has failed to pay. Cows, for instance, may not be showing a net profit, but if all the cows were sold there might be no other way of using up the roughage and it would become dead loss. Labor devoted night and morning to milking and feeding cows and charged to them would be entirely lost if the cows were sold and nothing supplied to fill in the time.

The fact that the hogs or the corn crop bring in the most net money during the season is no reason for assuming that all the activities of the farm in the future should be devoted solely to hogs or corn. It may be that the keeping of cows is partly responsible for making the hogs so profitable, or that the growing of wheat, clover, or other crops in rotation with corn makes the latter crop much more profitable than it would have been if grown alone.

Similar conditions will be met with on all farms, and, therefore, no sudden changes should be made on the basis of what a single year's accounts may indicate. All angles of the enterprise should be taken into consideration.

IMPURITIES IN CLOVER SEED

In Recent Purchase North Carolina Farmer Finds Weed Seeds of Various Kinds.

A farmer in Rowan county, N. C., was about to purchase some clover seed last spring from one of his neighbors, preparatory to seeding down his wheat acreage. He noticed that the seed was somewhat impure, and was reminded of the warnings so frequently given by the county agent in respect to pure seed. He asked to have a small sample tested for purity by the state seed laboratory at Raleigh. The sample was reported on merely as "No. 9." Each pound was found to contain approximately 65,062 buckhorn seeds, 2,282 dodder, 2,622 wild carrot, 2,208 black-seeded plantain, 414 curled dock, 276 Venus looking-glass, 138 each of crag grass and green foxtail—a total of 83,140 weed seeds in each pound. This would, no doubt, be sufficient to seed the man's land to these pests for the next decade. Although this sample was the worst of any tested through the county agent's office, on casual inspection it indicated only ordinary impurity. A laboratory test is a safe check even on the purest farm seeds.

Relief in Sight.

"Tobe, I'm sorry to hear your wife has left you and gotten a divorce."

"Yessum, she done gone back to Alabama."

"Who will do my washing now?"

"Well, mum, I'se co'ting again and I co'tes rapid." — Louisville Courier-Journal.

Human Weakness.

No matter what his faults may be, we always have a soft place in our hearts for the person we can have a good time with.

VEGETABLES FOR FOOD IN WINTER

Gather Tomatoes and Beans Before Frost, but Leave All Root Crops in Garden.

CARE FOR SURPLUS PRODUCE

Cabbage May Be Stored in Shallow Trenches, Covered With Straw and Earth—Cellars Provide Good Storage Places.

(Prepared by the United States Department of Agriculture.)

When Bryant wrote "The melancholy days are come, the saddest in the year," he inspired visions of barrenness connected with the first autumn frosts that are not justified if one knows how to prepare his garden stuff for the winter. There is no reason why a gardener who anticipates the cold weather cannot have vegetables with much of the garden freshness for weeks and even months after freezing time, if he follows the instructions of the United States Department of Agriculture. To care for surplus vegetables in many cases requires nothing more than the use of existing facilities in or near the home.

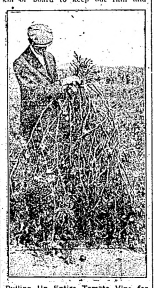
Preparing Tomatoes for Storage by Wrapping in Newspaper and Placing in Shallow Box.

Tomatoes After Frost.

Tomato vines usually have a large quantity of unripened fruit when the frosts come. It is customary to use much of this for pickles, but the frost need not put an end to ripe tomatoes. If the vines are pulled, or if they are cut and the ends sealed with paraffin or sealing wax, they can be hung up in a cool cellar and the tomatoes will ripen and often last for six weeks. Another plan is to pick the tomatoes, wrap them in papers, and place them in shallow boxes or baskets.

Lima beans should be picked before the frost and spread on a slightly moist cellar floor, where they can be kept fresh two weeks. They should be turned from time to time to keep them from molding.

Cabbage can remain in the garden until hard freezing weather, after which it may be kept sound by several methods. One of the simplest is to dig a shallow trench in a well-drained portion of the garden and place the cabbage, roots up, in it, and cover with straw and loose earth. For other vegetables such as Irish potatoes, beets, and turnips select a well-drained location, make a shallow excavation, about six inches deep, line it with straw or similar material, and place the vegetables in a conical pile on the lining. Cover the vegetables with the lining material and carry it up several inches above the apex of the pile, having it extend through the dirt covering for ventilation. The top needs to be covered with a piece of tin or board to keep out rain and snow. The pile should be covered with two or three inches of dirt, and the thickness increased with colder weather.



Pulling Up Entire Tomato Vine for Hanging Up in Cellar.

Outdoor storage cellars or caves are excellent for the storage of many vegetables, and avoid all danger of unpleasant smells permeating the living-rooms. Full information on the storage of vegetables will be found in Farmers' Bulletin 879, which will be sent on request to the department.

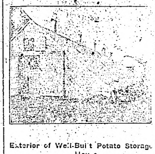
DIG POTATOES WHEN SOIL IS QUITE DRY

Tubers Are Matured When Vines Begin to Drop Off.

Care Should Be Taken to Avoid Spearing or Cutting Them—Store in Cool, Dry and Well Ventilated Cellar or Pit.

(Prepared by the United States Department of Agriculture.)

Potatoes require 90 to 100 days after planting before any will be ready for use. The tubers are not fully mature until after the vines die or at least ripen and shed most of their foliage. Late potatoes in the Northern and Northeastern states are frequently caught by frost before the vines ripen, so should be dug just about the time frost first strikes them. Potatoes should be dug when the soil is reasonably dry so that it will not adhere to them. A spading fork or a potato hook is best for digging them, and great care should be taken to avoid spearing or cutting them in digging. Only a small quantity should be turned out at once, as they will become sunburned if exposed more than an hour or two.



Exterior of Well-Built Potato Storage House.

Store potatoes in a cool, dry place where they will get plenty of ventilation and be in the dark. Potatoes must not be allowed to freeze either before they are dug or while in storage. A good, cool, well-ventilated cellar or storm cellar forms a suitable storage place for potatoes and under proper conditions will keep through the winter and into the early summer. Another method is to bury the potatoes in a pit outdoors and cover them so that frost cannot get to them.

SOME EGG SHIPPING 'DON'TS'

Department of Agriculture Offers Few Practical Hints for Benefit of Poultrymen.

Here are some "dont's" offered by the United States Department of Agriculture that many times mean the difference between a loss or a profit in shipping carload eggs:

Don't waste time and labor by using cheap cases; time and labor are precious.

Don't save pennies by buying poor fillers and flats when you lose dollars in broken eggs. The saving of one egg would pay for the extra cost of a set of No. 1 fillers.

Don't nail braces to sides of car against an incomplete top layer; they seldom hold in place and often are the cause of damage. They injure the efficiency of the car insulation. The use of small under-case braces will prevent all of this.

Don't waste ice and refrigeration by stowing the load so as to make air circulation in the car impossible.

Don't tie up your money in freight claims because of a loose load. Tie up the load and leave the money loose to work again.

TERM INSECTS MOST FORMIDABLE RIVALS

One of Most Injurious Pests Is the Fly Weevil.

It Is Primarily Plague of Wheat and Corn and Is Particularly Harmful in Southern States—Ruins Entire Crops.

(Prepared by the United States Department of Agriculture.)

The insects are our most formidable rivals in the struggle for existence.

Economic entomology does not deal alone with insects which attack fruits and growing crops. It must deal with insects that affect grains and foods in storage, that damage our clothing, that kill our domestic animals and, too, that carry disease to man himself, that eat up our wooden buildings, and that honeycomb our books and implements. We must fight them all along the line.

One of these insect enemies against which the bureau of entomology has been directing a fight, is the angoumois grain moth, popularly known in this country as the fly weevil. It is primarily a pest of wheat and corn in this country, but affects all cereal grains. It is particularly injurious in the Southern states, and does little harm north of central New Jersey, except to cereals in storage.

It is second to the rice, or black, weevil in its capacity to damage grain. Often entire crops of corn and wheat are ruined. Wheat loses through moth attack about 52 per cent of weight. Corn loses from 12 to 24 per cent. Bread made from affected grain is worthless. The moth also eats barley, oats, buckwheat, sorghum, milo, rice, beans, chickpeas and cowpeas.

This is mentioned as an example of avoidable insect pests which the United States Department of Agriculture not only teaches but assists farmers to avoid.

In the case of the angumois moth, which works damage to stored grain in regions where its propagation among growing crops is prevented by the short seasons, the department is urging farmers to fight the pest systematically by such measures as early threshing, proper storage, and fumigation. It teaches them to take advantage of the weakness of the insect by fighting its further spread.

It is only by constant and intelligent effort that mankind can overcome the ravages of insects of every kind which attack almost every substance on which he depends for his livelihood and comfort. In this effort, the public should take advantage of the services rendered by experts of the bureau of entomology and by other experts of the department.

H. CHRISTIANSON & SON

THE GOODRIDGE BANNER

VOLUME XV, No. 41. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, NOVEMBER 4, 1921. [illegible] PER YEAR

Livestock Sale to Be Held November 23

At a meeting of prominent leaders of the Red River Valley Live Stock association held at Crookston last week plans were made to hold a consignment sale at the sales pavilion in Crookston of pure bred sheep and hogs and 50 grade milch cows, "springers" that will freshen soon after the sale. The cows should be from 4 to 9 years old. There is a growing demand through the valley for close springer grade cows. This demand is brought about by reason of the good prices for butterfat and in view of the fact that there is an abundance of cheap feed. Farmers in the valley have come to the right conclusions when they realize that the best money making proposition on the farm this winter will be good milk cows and that the best market for the cheap grain and roughage is in the form of butterfat. This demand for good close springer grade cows is creating a local demand, a demand whereby a farmer who has cows soon to freshen that must be disposed of can realize better values than by shipping to the market. The fact is good milk cows should not be sold on the market this fall.

To bring the best price at a sale of this kind, cows should be in good condition and have evidence of being good milkers. Whenever possible to give, the approximate date of calving will assist in making a good sale. Farmers who desire to consign to to the November 23 sale grade cows, soon to freshen, are asked immediately to notify O. M. Kiser, secretary of the Red River Valley Live Stock association, Crookston, Crookston, giving number, age, breed and date of calving.

Of Interest to Deer Hunters

Those who are concerned for the protection of deer and who realize that radical changes are needed to preserve our most important game animal, will welcome the alterations in Minnesota regulations of deer hunting. It should be remembered that deer and moose hunting this year will be subject to these regulations;

1. License Fees—Resident, $2.00; non-resident, $50.00.
2. Season—November 10 to November 20 inclusive, eleven days.
3. Tags—The form of the license is the same as formerly—the coupon tag to be attached to carcass when animal is killed. In addition a metal locking seal, similar to a car seal, must be attached when the carcass is transported by any means. This seal will be furnished with the license and a fee of twenty-five cents will be charged therefor. This seal will be numbered the same as the license and no duplicates can be furnished. Do not tamper with this seal.
4.—Licenses are required of all persons hunting big game, regardless of residence. No exception for hunting on own land. Must be obtained in county of residence.
5. Bag limits same as heretofore—one deer, any age or sex, or one male, antlered moose.

WHEAT IMMUNE TO TAKE-ALL

Efforts to Combat Disease Lead to Discovery of Thirty-Nine Varieties Highly Resistant.

Efforts by the United States Department of Agriculture to combat the so-called take-all disease of wheat in Illinois and Indiana have resulted in finding 39 varieties that are either immune or highly resistant to the disease. They are Peloglina, Crimean, Currell, Dietz, Longberry, Early May, Fulcaster, Fultz, Gipsy, Gladden, Gold Coin, Grandprize, Harvest King, Hungarian, Jones Fife, Kanred, Kharkof, Leap, Malakoff, Mammoth Red, Michigan Amber, Mediterranean, Minnesota Reliable, Nigger, Pesterboden, Poole, Portage, Pride of Indiana, Red Cross (red chaff), Red Rock, Red Wave, Reliable, Rudy, Stoner (Marvelous), Trumbull, Turkey and Wheedling.

SHIP UNDER FEDERAL GRADE

Shipment of Potatoes Going From Washington to Middle West Must Meet Requirements.

Approximately 1,700 cars of potatoes have been contracted for in the State of Washington, to go from the Yakima valley to Middle Western markets. This stock must meet the requirements of United States grade No. 1. The Washington state department of agriculture is now co-operating with the United States Department of Agriculture in the development of its shipping point section service, will issue certificates on all cars at the point of origin.

Grain Growers' President To Speak at Crookston

Grain producers of the Red River valley will hear C. H. Gustafson, president of the U. S. Grain Growers, Inc., explain this nation wide co-operative grain marketing organization at a meeting to be held in Crookston on Monday evening, November 7, at 8 p. m. The meeting will be held in the Commercial club hall.

Mr. Gustafson is in Minnesota to assist J. S. Jones, organization manager, in starting active organization work. This meeting will give northwest Minnesota farmers an opportunity to get first hand information about the Grain Growers, Inc., and to meet the man who as president is doing much to make it a success.

The U. S. Grain Growers, Inc., is developing rapidly. Over 20,000 farmers have already signed growers' contracts to market their grain through this organization. 608 farmers' elevators have joined this movement. The members to date control over 40,000,000 bushels bushels of grain and it is confidently expected that by the first annual meeting this winter at least 100,000,000 bushels will be controlled by members. All grain producers in the Red River valley are being urged to attend this meeting.

ONE FARM IN THREE HAS AN AUTOMOBILE

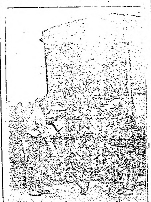
Iowa Leads in Number and Nebraska in Percentage.

There Are Motortrucks on Two Farms in Every Hundred, [illegible] the Telephones and W[illegible] Houses Are [illegible].

(Prepared by the United States Department of Agriculture.)

Nearly every third [illegible] in the United States had at least [illegible] on the first day of [illegible]. Of the [illegible] farms in the United States 1,979,564, or 30.7 per cent, reported having automobiles to the number of 2,146,512. Although [illegible] all states in the number [illegible] on farms, having 17[illegible] Nebraska [illegible] showed [illegible] highest percentage in relation to [illegible] number of farms, heading the list with 75.5 per cent.

Motortrucks were reported on 131,-551 farms in 1920 or about 2 farms out of every 100 in the United States as a whole. The number of motortrucks on these farms was 139,169. The states leading in the number of motortrucks on farms are: Pennsylvania, with 9,372; New York, with 9,-259; Iowa, with 8,910; Ohio, with 7,-519; Nebraska, with 6,548; California, with 6,416; and Illinois, with 6,154.



One American Farm in Fifty Has a Motortruck.

Three and six-tenths per cent of the farms in the country were reported as having tractors on January 1, 1920. This is about one farm out of every 28. The 229,334 farms thus represented had a total of 246,139 tractors.

Telephones were reported on 2,498,-002 farms, or 38.9 per cent of all farms in the United States, in 1920. More than one-half of the farms in the following states had telephones: Iowa, Kansas, Nebraska, Illinois, Indiana, Missouri, Ohio, Minnesota, South Dakota, Wisconsin, Vermont, Connecticut, Massachusetts and Oregon. Iowa, with 183,852, showed the largest number.

Farms reporting water piped into the house in 1920 numbered 644,088, or about one farm out of every 10. The percentage was highest in the New England states and in California. The states leading in numbers were as follows: California, 65,928; Pennsylvania, 46,402; New York, 45,487; Ohio, 41,531; and Texas, 38,580. Gas or electric light was reported on 452,809 farms, or 7 per cent of all farms in the United States.

These figures, gathered by the bureau of the census, are being studied by the United States Department of Agriculture in connection with its work along these lines.

THAT GIRL MELISSA

By MOLLIE MATHER.

Copyright, 1921, Western Newspaper Union.

One went down to the ravine by a path leading from the sunny roadway. Melissa loved to follow this path, though her aunt argued against it. "The ravine is such an isolated spot," Aunt Melissa objected, "if anything should happen to you no one could hear your cries for help. And they say, now, that an escaped convict is hiding around down there."

"I will take the hill walk," Melissa cheerfully evade, for her aunt's comfort. She, herself, was afraid of nothing. And her promise was partly true. Melissa did take the hill walk, but it was from there that the little adventurous path led down to the heart of the silently glowing ravine.

Truthfully, it was Aunt Melissa who busied herself happily over the sewing while Melissa, with her old content, roamed the countryside. Today the forbidden retreat seemed more than ever inviting. She put aside her magazine for uninterrupted pleasure in the view. A bird near by perked its head curiously at Melissa and, imitating, Melissa turned to perk her head at the bird. Then she saw the man. He was stretched upon the ground near her, just around behind the tree. This man's face was white, with its set burning eyes staring at her in hostility. His clothing was rumpled and shabby. After a moment of meditative silence, Melissa smiled. "How do you do?" she remarked. "Are you the escaped convict?" The man jumped to his feet and came towards her.

"Where did you hear that?" he demanded.

"Oh, one hears all sorts of things," Melissa calmly said. "Perhaps the report is untrue. Some one told some one else, I believe, that a man resembling a former resident of the village, who had been committed for a crime, was seen hiding around this ravine. When you appeared I thought that you might be that man."

Hostility left the haggard face. The man settled himself abruptly at her side.

"I was that convict," he quietly told Melissa, "but I have not escaped; I am discharged. The sentence was found, after my second year of imprisonment, to have been a mistake."

"Please tell me all about it," she invited.

The man hesitated. "You live here?" he asked.

Melissa shook her head. "Just visiting; tell your story."

"I was convicted for embezzlement and given a long sentence," the man spoke slowly. "The proof of the theft was indisputable; it occurred in the City Trust bank, where, at the time, I was employed as assistant cashier. The money was supposed to have been gambled away, though no evidence to that effect was found. I made no defense of any kind, or no denial." The tense line fastened again about his lips. "Yet all the time," he added, earnestly, "I was as innocent of crime as you are today."

"Then why," asked Melissa, quickly, "did you make no denial?"

His answer came with difficulty. "Because my own father was the criminal; also, he was the long-trusted cashier of that bank. He had fancied urgent need of the money to pay an accumulated debt. He was, you see, old and very weak, and not himself. He came to me, crying like a child. He spoke of my dead mother, and of his inability to endure the hardship of a prison sentence, and he was cowardly, willing that I should suffer that sentence in his place. So, I suffered. That is all. Now that my father is dead, it seemed unnecessary to longer continue the sacrifice of punishment. I spoke, and my release was found to be justified. With freedom came a home-sick longing for the old associations of my village home. But fight seems to have gone from me, even confidence, to set myself right in the eyes of my friends."

"So," asked Melissa, softly, "What are you going to do?" Hopelessly, the man replied, "I do not know." The eyes of Melissa took on their thoughtful light, reassuringly she smiled upon him.

"Wait," she requested, and bent to her writing pad. With awakening interest he watched her flying pencil. When she had finished she leaned back in content.

"There!" she exclaimed, "that's a real story. One of the best I have ever done. It's for the City Herald, and will be lined front page. Your own story. No, don't object, you owe it to yourself to be right in the eyes of the world, and you shall be, when these facts are proven correct. I am late of the Herald staff, and this article makes the announcement that you are returning to service at once in the City Trust bank. Grasp your chance, my friend, and make good."

Stammering, the broken man stood before her. "But," he murmured, confusedly. "It is all right," explained Melissa, "I am going to marry John Frawlings—John Frawlings of the City Trust bank. He has confidence in my judgment, and he happ[illegible] of me."

"That girl, Melissa," admiringly exclaimed the managing editor, as he looked over the hastily typed pages, "could find a ripping story in the loneliest spot on earth."

"That little girl, Melissa," tenderly mused John Frawlings, as he read her letter, "can find some human being to help, wherever she goes."

DESIGNING PEGGY

By MILDRED WHITE.

Copyright, 1921, Western Newspaper Union.

Tommy sat disconsolate. The coaxings of his setter dog, and the inviting appearance of a new waiting roadster brought no interest to his recently desolated life—Nita Warren had thrown him over. It was unbelievable, but true. Nita, who had walked up the hill with him to school when her dark hair, now so mysteriously coiffured, hung in simple curls to her shoulders. Why, it had always been understood that Tommy was to be Nita's escort; even the school teacher paired them off at picnics. And now came along this new bounder, and carried her away. Not literally, of course. Nita still graced her father's home and dooryard but the bounder was usually to be found in the dooryard too. Only last night she had tossed her head at Tommy's humble invitation to the movies, and had answered, "No thank you. Rupert Hodge and I are going into the city to attend summer opera." Rupert Hodge, with his thirty years had college days behind him. Tommy had not been able to make the college which occupied so many of his youthful dreams. Mother had been left alone, just after poor Dad had managed to put by enough for that coveted college course. The money had to be used then for their daily living instead—the fatherless Tommy and his mother—and Tom had gone to work. That is the name his employers in the small town bank affectionately called him. They thought a lot of Tom. Now when he had been able at least to purchase the shining roadster, and mother, as well as he, had looked forward to pleasant rides with Nita's cheery companionship to make them more pleasant, Nita turned him down for an engaging interloper. Tommy was tired of "trying to butt in there," he told his mother, when she warned him that "faint heart ne'er won fair lady." Then, all at once, the new girl came along. Even Tommy's weary eyes widened at sight of her.

"How do you do?" greeted this girl. "Is Mrs. Thornton at home?" Mrs. Thornton was Tommy's mother.

"I am boarding for the summer with Mrs. West, the Professor's wife," explained the fair caller, "and she sent me down to see if we could have some of your flowers for a tea party. Mrs. West thought that Tommy—do you happen to be Tommy?—would pick them for her."

Tom was aroused to action. "Certainly you may have them," he replied. "Mrs. West is mother's friend. I'll get an armful for you right now. Mother is out."

The girl sat down on the step to await. "All right," she agreed.

"Here are your flowers," he said brusquely.

"Thanks," the visitor casually accepted. "Couldn't you take them over in your car?"

Disturbingly, she flashed a smile at him. It was a regular movie actress smile. "And take me too," she asked.

"I am Peggy O'Moore," announced the young woman, as if this were sufficient reason for her assurance. Tom flushed in sudden realization of his rudeness. "Why—yes," he stammered. "Get in the car please, I will be glad to drive you back." But so delightful was Miss Peggy O'Moore's companionship, that Tom drove around the park on the way, and there they met Nita. She stared, coldly surprised at the presence of a charming young woman at his side, and her quick brown-eyed glance took in the armful of garden flowers, and Tom's own happy irresistible smile. Apparently Nita resented this lightness; [illegible] at her side [illegible] order to gain her attention.

"Attractive girl [illegible]" remarked with [illegible] her Irish blue eyes [illegible]

"She is [illegible]. With [illegible] found himself [illegible] was [illegible] girl [illegible] der came and took [illegible]

Thereafter, Tom [illegible] constantly seen in [illegible] company. Nita [illegible] at various places [illegible] decided [illegible] duty to warn her [illegible] the enchantress. [illegible] she, Nita, was [illegible] altered. "And [illegible]" he told [illegible] had manage[illegible] way [illegible] the very [illegible] West's property [illegible] at ev[illegible] your [illegible] being [illegible] by [illegible] Miss O'Moore [illegible] Nita [illegible] for [illegible] Tommy [illegible] are [illegible] O'Moore's [illegible] con[illegible] expected [illegible]

Tom stood [illegible] then he turned an indifferent shoulder to the new siren. "Nita," he [illegible] "Now is your time to choose between that Hodge man and me." Nita's hands went instantly out to him. Nita's eyes were wet. "Oh! Tommy," she whispered, "I have wanted you so, I—just wanted to tease you Tommy; and Mr. Hodge's attention was convenient." The ignored Miss O'Moore disappeared from the opposite side of the hedge; but later Tommy found her.

"Your plan worked fine," he told her gleefully. "You sure do know women. How can I thank you?" Peggy O'Moore flashed her entrancing smile at him. "You might," she suggested, "bring that poor Hodge man around to me, to be comforted."

IMPORTANCE OF ICE SUPPLY

Farmer Above All Others Should Provide Himself With Ample Supply During Winter.

It would seem that if there is any man who should have his own ice supply it is the farmer. He nearly always has access to a stream large enough to furnish plenty of ice; it comes on at a dull season, and he needs only a day or two to cut and haul enough to run him all summer long. The fact that there is so little ice put up can be due to only one thing: Farmers generally have not experienced its great benefits.

[illegible] SCRATCH GRAIN

Value of [illegible] Mixture Will Depend Upon Its Composition and [illegible] of Grains.

A large number of commercial mixtures both of scratch grains and of ground grains are prepared for poultry feed. But the value of any mixed commercial feed depends upon its composition and the quality of the grains used in its preparation. If a poultry raiser does not produce any grain and keeps a comparatively small number of fowls it is often better for him to buy commercial mixed feeds. The average farmer, however, should feed home grown grains supplemented with [illegible] and meat scrap and [illegible] usually can mix his own feeds to best advantage.

MARKET DAY PRIZES

We are going to give two prixes:

One of 98 lbs. of Vivo Flour to the one bringing in the largest load of grain on that day.

And a second prize of a 49 lb. sack for the next largest load.

A premium of 10 lbs. of whole wheat flour with each 98 lb. sack of Vivo sold at retail price on that day.

CARING FOR SEED POTATOES

First Object to Be Sought Is Prevention of Sprouting in Storage—Temperature Helps.

Prevention of sprouting in storage is the object sought in handling seed potatoes. This can be brought about by keeping the storage temperature at from 35 to 40 degrees Fahrenheit and allowing circulation sufficient to eliminate the surplus moisture given off by the tubers.

Stepping on It

The old-fashioned fellow occasionally passed away by blowing out the gas. These days some of the young fellows accomplish the same result by stepping on it.

Most people "auto" get that.

We have no desire to knock the automobile business, yet once in a while we see some fellow riding around in a car and "stepping on the gasoline" who would have been better off if he had kept his funds on deposit at the bank, awaiting some profitable investment. It reminds us of the fellow who sold his cook stove in order to take the family to a circus.

Mr. and Mrs. C. A. Toomey entertained a Halloween party at their home west of town Saturday evening. Those present were: Mr. and Mrs. Elmer Peterson, Mr. and Mrs. Jay Payne, Mr. and Mrs. R. H. McDonald, Mr. and Mrs. V. C. McLeod, Miss Gladys Wilson, Stuart McLeod. Old fashioned games were played and refreshments served. The guests returned to their homes at 3 o'clock in the morning.

Saving Is Constructive

Saving something out of what you earn means a stronger resolution, future comfort, permanent satisfaction, happiness for the wife and the children, proper training and education for the children, success for self, and independence in old age—all these are governed by the habit of saving or of spending.

A man's habits in handling his income affect his life and the welfare of his family, both now and for the future; his children are served or compelled to suffer because of these habits.

Start a constructive system of saving today—one dollar is all you need.

For those who find it hard to save, we have these Liberty Bell Home Banks—where you can deposit your small change at any time.

THE GOODRIDGE BANNER

VOLUME XV, No. 42. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, NOVEMBER 11, 1921. $1.50 PER YEAR.

THE TIMID ONE

By MILDRED WHITE.

Copyright, 1921, Western Newspaper Union.

"It is so foolish," said Honora, "to be afraid. You should try to grow out of it, Nell. All your young life you have been dreading a possible burglar that never came, and now because we happen to spend a night in a lonely small town hotel, you are certain the burglar's hour has arrived, and that he will appear the moment I leave you alone to annex your belongings. Is it the new diamond ring that you are especially fearful of losing?"

"It's not what he might take that distresses me," Nell told her friend. "It's what the shock of seeing him would be for me. I'd probably keel over, unable to cry for help, and expire before his eyes. For, you must admit, Honora the brave, that this town is a desolate hole and the best location in the world for thieving."

Honora threw out her hands in despair.

"You are the limit!" she exclaimed. "If you feel that your night is likely to be made miserable by the sight of your own shadow, I will persuade the manager to put a cot for me in your room. As an instructor in physical training I think I'd be able to hold my own and yours, too, against an intruder. You might at least be able to scream while I kept busy."

Nell laughed. "Oh, I will promise to go to sleep and be a good child," she promised sweetly.

But when Nell was alone in the small room with its long windows opening on the veranda roof, she peered covertly out into the darkness and then securely fastened her door. A second window near her own opened out from the end of the dimly lighted upper hall. She hummed bravely as she slipped into a china-blue kimono, and loosened her short thick hair. Very much like a small frightened child Nell looked, squatted in the middle of the hotel bed re-reading mother's last letter: "Try," wrote mother, "not to be a little coward on your trip; but forget timidity and enjoy things with Honora."

Nell thought fondly of Honora, so big and capable and kind. Small, dainty and wide-eyed, Nell beheld herself in the mirror. Then—horror of horrors! she beheld also reflected there a man's skulking figure huddled on the veranda roof outside. This man appeared to be coming from the hall window nearby. Nell's long dreaded burglar had arrived. She was able to continue the humming of her song naturally, as she methodically replaced the letter, and carelessly turned toward the door. As she closed it hurriedly upon the outside, a gentlemanly person, apparently a hotel guest, came from the direction of a room opposite.

"Beg pardon," said this man, and bowed apologetically, at sight of Nell in her blue kimono. Eagerly, and recklessly she ran to him. "Won't you," she begged, "step into my room for a moment. I am sure that I saw a man skulking about on the veranda roof outside the window; by this time he may have entered. There is no bell here to ring for assistance, but perhaps I could run down to the office—" Nell paused confusedly.

The man was quick in action.

"I will go right in," he agreed.

"Wait a moment, other help may not be necessary." His perplexed tones came to her presently from the veranda roof outside. "There is no one here," called the man, "or in your room, either. May have been a servant out to close a window or something like that." Apprehensive still, Nell ventured a step or two inside the door.

"However," her rescuer smilingly assured her, "I will report the matter downstairs so that you may be sure of protection for the night." He stood a moment, looking down quizzically. "Are you alone?" he asked abruptly.

"Honora and I," Nell explained, "are traveling together. Her room is the second one down the hall. Honora," she laughed shamefacedly, "would not have been afraid of any possible burglar. I think she would be able to protect herself anywhere. But I—" Nell shook her head helplessly—"I just ran for protection," she said.

The man grinned. "And get it, I bet," he answered.

Nell nodded assent happily. "See how nicely you came to my relief tonight," her eyes met his gratefully.

"And you are not afraid now?" asked the man.

"Not at all," she earnestly told him. He laughed shortly.

"Well, good night and pleasant dreams," he said. "And don't you ever be afraid of burglars anywhere; they won't bother you."

"Good-night," Nell responded cheerfully. She smiled at him as she closed the door.

Later, she sat up suddenly in her bed.

Stealthy footsteps undoubtedly were passing down the hall. As she snapped on the light she saw beneath the crack of her door a broad white envelope.

"It's an adventurous night," she told herself gleefully. Fear seemed to have left her utterly. The envelope was addressed in a man's hand to "The Timid One." As Nell unfolded the note inside, a beautiful diamond ring slipped into her hand. "Give this to your friend, little girl," Nell read. "I copped it while the Honora one was asleep. You can tell her that you held up the escaping burglar in the hall, and managed to get the ring away from him; which is, after all, exactly what you did."

ALL JOKING ASIDE

By MISS ETHEL I. STETSON

©, 1921, by McClure Newspaper Syndicate

Dear Ben:

Here is a piece of corking luck for you. On Wednesday a rare and fair little cousin of mine is traveling to the big city. There's a long wait due her at Belcherton. Circumstances prevent my trotting along at her side. If you'll make the stop-over one-half as enjoyable for her as she will make it for you, I won't have to thank you for the courtesy. The gratitude will be all on your side.

A. SANBY.

Benjamin Frale read this letter, considered and despatched a brief reply:

"Have cousin wear rose. Will be properly entertained. Don't worry.

(Signed) "B. F."

On Wednesday morning at the Campford depot, Allan Sanby assisted a dainty, white-haired little woman with her bag and wraps.

"Now, don't be flustered, Cousin Anne. Just get off at Belcherton, wave your rose and the best looker in the city will rush to your side. That's Ben Frale."

As the train pulled out, leaving Sanby on the platform, he reflected:

"That's a good one on Ben, beside saving me from a darn tedious trip. I don't know—this fetching and carrying for an old woman is getting a beat. If it wasn't for Marjorie I believe I'd quit, money or no money. Marjorie! She's some blossoming flower! If I had Cousin Anne's money I'd marry her right off the reel. I'm so keen on having the old dame croak, but it's a blasted shame she can't loosen up and give a fellow a start, I'll say.

"Gee! Ben will be sore, spending half a day with old Cousin Anne and losing a couple of clients. Probably just as well, though; he's too keen on work anyway."

* * * * * *

Extract from letter written to Allan Sanby by his Cousin Anne, June 12, 19—:

"I found your Benjamin Frale most enjoyable. I did feel nervous, not having traveled alone for so long. But immediately I got off at Belcherton, Mr. Frale took me in hand. He is really delightful. I shall not return as soon as planned because Mr. F is coming on to New York for a few days and he has kindly offered to take me about some."

"By gosh! Ben's sure put one over on me. His little motto used to be 'The harder you dig, the brighter you'll find the gold.' That chap's buckled up against hard luck and he thinks he sees some gold bright enough to suit him without too hard digging. Well he can go me one better. I can't marry my Cousin Anne, but he can. I'll cook him some way."

* * * * * *

Extracts from letter written to Miss Marjorie Walden by Allan Sanby, June 13, 19—:

"There's a young chap, a lawyer, Benjamin Frale by name, lives over in Belcherton. He's trying to do me out of the old lady's fortune. He's some smart guy, too. Marjorie, as an old friend of mine, won't you go over and persuade him, as only you can, to do the right thing by me?"

Marjorie Walden was an intelligent young woman. Consequently she understood human nature as expressed in the person of Allan Sanby. Also she had a deep sense of humor and a love for adventure.

"I'm trusting everything to you?" was the sentence with which Allan had closed his letter to Marjorie. Upon the day following its receipt Marjorie went to Belcherton, and on the day following that Allan Sanby received this telegram:

"Married. Meet Mr. Frale and me at the 5:15 train. (Signed) Cousin Anne."

Sanby acted much like a fisherman's catch, gasping and flopping. At the depot he had himself enough in hand to be surprised at the appearance of a distinguished elderly gentleman, who took entire charge of Cousin Anne.

"My husband. I believe he has a nephew who was a college chum of yours."

Later it was made even clearer to Allan Sanby that his place as fetcher and carrier had been quite usurped, and in contradiction to his attitude of a few days previously, the knowledge made him feel ill.

"Ben's played me a low-down trick, sending his uncle to meet Cousin Anne. Got to overlook everything though; he's the only fellow I know who'll let me have a cool thousand or two. Marjorie's old man isn't too badly off. I'll blow over to her burg. 'The sweet flower.' She always fell for me."

Late that evening Allan Sanby despatched this telegram to Benjamin Frale:

"All joking aside, meet me at 9:30 tomorrow sure."

At midnight he received this telegraphic reply:

"Impossible. Marjorie and I start honeymoon tomorrow, all joking aside.

(Signed) "B. FRALE."

END OF PERFECT DAY

By GERTRUDE CUSHING.

©, 1921, by McClure Newspaper Syndicate.

There is something about the subway—any subway—at 6 o'clock in the evening that puts the final test upon a man's disposition. When you see a man bucking crowds, taking a blow from the edge of a suitcase on a perfectly inoffensive, homeward-bound calf, the while a horizontal umbrella finds a sudden resting place in the small of his back, without retaliation, you may know you've come across a pretty good sort of chap.

Morton Godfrey not only failed to retaliate—he kept on whistling; perhaps in a way that was a sort of retaliation, for he had no respect for key or tempo. When he reached the fifth note with a sweeping intake of breath it was a little melancholy, I will say. But had you known what the last twenty-four hours had offered him your hat would have been off to his cheerful irony. A perfect day! "Gosh, what a day!" he sotto voced as he dodged the swinging boots of a bundled child and plunged into his car.

The trouble began at about midnight the night before, when the thermometer dropped 20 degrees, and was carried forward by the absence of the chore man and the failure of Morton's alarm clock to "go off." A hastily opened egg, which had boiled one minute instead of six as ordered, precipitated catastrophe. A rapid fire conversation with his soul mate, in which he suggested a destination for the new cook which did not conform to her ideas of a gentleman's vocabulary (and which met with the response that the new pastry shop served a very good breakfast), led to a rather hasty exit minus the customary kiss.

This hurt, and Morton's first act upon reaching the office had been to call up the house. The bone of contention, with a brogue that had a multitude of good consonants, told him his wife had already left for town. "Movies, Oi'm thinkin'," the brogue said, and that hurt more.

If he had known that Nettie went to town because she was too unhappy to stay at home it would have been salve to his wounded conscience, but he didn't know it, and at intervals through the long and tortuous day he concocted little plans for his return at night which should at once and permanently dispel the cloud hanging aloft and bring Nettie—a little contritely—to his arms.

At 7 o'clock he called the house again. Nettie had not returned and the complexion of his thoughts changed a bit. This was something new, indeed. There was quite a touch of irony in his choice of a tune.

Seated in the car he opened the paper to the page of theatrical announcements. Of course it was nonsense, but if Nettie was not at home when he reached there he believed that he would go back to the city and see some good show.

He had worked himself up to quite a dramatic mood when he became conscious that the car was at a standstill. He turned to the window for idle contemplation of the figures at the station. Idle for but a moment however. Standing at the news-stand a woman's form caught his eye. She was short and plump he judged, for the ankle generously displayed had a charmingly curved outline. Her arm showed round, too, in the tight coat sleeve. Her skirt was of a length which he had to admit he had often scathingly condemned in talks with Nettie and her heels were—yes, they certainly were absurdly high. But with it all there was an allure about her, a "je ne sais quoi" that could not be denied. Perkiest little hat he had seen for one while and a something about the cant of her head that suggested everything his present rebellious fancy demanded. If her face lived up to the glimpse, he was vouchsafed she must be a "winner," that was all.

Why not find out?

Morton sprang to the door and watch in hand made so convincing an appeal that the stern guardian of the portals swung the lever and he jumped to the platform. At the same instant the sharp clang of the gong startled the woman at the news-stand. She turned swiftly and Morton found himself beaming expectantly into the face of his own wife.

The story in his eyes was one any woman could read and not knowing anything about the fascinating vision which had inspired it, she blushed brightly and sparkled at him quite as he had hoped the vision might.

"What on earth are you doing at this station at this time?" she asked.

"Oh! I don't know. I thought I might meet you."

"How did you recognize me so quickly, from behind?"

"I knew your hat," he lied jauntily.

"That's just what I was thinking of. I only bought it about two hours ago. That's certainly one on you."

"Here's our car. Come along!" he countered, and, sliding his hand into her arm, he skipped with her down the crowded platform.

As they entered their own door, "What's that thing you're trying to whistle?" Nettie asked.

"That? Oh, that's the thing they play at the movies, isn't it?" And shamelessly below pitch he sang, "This-is-the end-of-a per-fect day!"

Three hundred women nurses of Great Britain died while serving in the World war.

KNOWLEDGE ASSISTS IN SELLING TIMBER

Farmer Can Avoid Losses by Careful Study of Market.

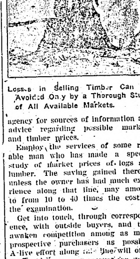
Forest Service Offers Suggestions to Owners of Woodlands in Regard to Sale of Material at Highest Prices.

(Prepared by the United States Department of Agriculture.)

Woodland owners often sell their timber without having a sufficient knowledge of its market value to protect their interests, and suffer loss in consequence. Losses can be avoided only by a careful and thorough study of all available markets. The following steps may be of assistance in acquiring a knowledge of the sale value of timber, says the forest service of the United States Department of Agriculture.

Take advantage of the experience of neighbors who have recently sold timber or have otherwise informed themselves in regard to good markets and current prices.

Apply to the state forester, the county agricultural agent, or any other available public official or personal agency for sources of information and advice regarding possible markets and timber prices.



Losses in Selling Timber Can Be Avoided Only by a Thorough Study of All Available Markets.

Employ the services of some reliable man who has made a special study of market prices of logs and lumber. The saving gained thereby, unless the owner has had much experience along that line, may amount to from 10 to 40 times the cost of the examination.

Get into touch, through correspondence, with outside buyers, and thus awaken competition among as many prospective purchasers as possible. A live effort along this line will often bring about an open market for standing timber.

Determine the value of the material by reference to current market prices and the total cost of putting it on the market.

Additional information concerning the selling of farm timber is contained in Farmers' Bulletin 1210, Measuring and Marketing Farm Timber, copies of which may be had free by addressing a request to the Division of Publications, United States Department of Agriculture, Washington, D. C.

AN 'EASY OLD GINK'

By GAIL WHITEHOUSE.

©, 1921, by McClure Newspaper Syndicate.

The flabby-faced young man gazed with gloomy indifference at the straw hat floating in the mud puddle. Presently, as he observed from the corner of his left eye the approach of a bare-headed, elderly gentleman, an expression almost of intelligence dawned upon his doughlike features.

Then, as if performing a rite, he bent above the puddle, tenderly removing the hat, he wiped it carefully with a sky-blue handkerchief. As the gentleman drew up smiling and puffing, he presented the hat with grave ceremony.

"Course, if it hadn't been for me," he suggested, tentatively.

The elderly gentleman chuckled, fumbled through his trousers pockets and brought to light a few pieces of silver and a crumpled bill. He passed the bill to the youth.

"Here, son." Smiling cordially he pulled the hat more firmly over the ears and turned in the direction of the square. "Nice lad," he told himself. "Nice and accommodating."

The flabby-faced young man eyed the bill, thrust it carelessly into a convenient pocket and again sought the telegraph pole with his spinal column.

"Easy old gink," he mumbled.

At the edge of the square the elderly gentleman paused, then proceeded toward the nearest bench, one end of which was occupied by a small, black-haired child and a jaded doll.

The child noted his approach with sullen eyes. Thoughtfully she grasped the doll and gave it a little shove along the bench.

"Hello, mister."

The elderly gentleman peered down, his round face beaming with good humor.

"Well, good afternoon, sister. Going to let me sit beside you, eh?"

The child nodded gravely.

The elderly gentleman seated himself in the indicated spot, only to suddenly rise again, a puzzled expression on his good-natured face.

"Bless my soul!" he ejaculated.

With a convincing wail the child grabbed up the doll.

"Aw, mister, you squashed her!"

"Now, that's too bad," sympathized the elderly gentleman, thrusting his hand into a trousers pocket.

The child watched furtively for the reappearance of the hand. "An' she cost two dollars," she gesticulated tragically.

"Never you mind," soothed the elderly gentleman, drawing forth the [illegible] (there was a [illegible] this time). He counted out four [illegible] pieces. "Here you [illegible] one this time? They're [illegible] . . . er . . . [illegible] blonds."

The child [illegible] the money, stared darkly at the [illegible] whimsical face of him whom she afterward termed "de easiest gink I [illegible] bumped up against," and [illegible] the path.

"[illegible]" murmured the elderly gentleman. "What a funny little kid. [illegible] nice little kid!"

A few feet [illegible] from the path in an [illegible] a band of green-necked ducks [illegible] utterance to a series of loud [illegible] quacks.

Again the elderly gentleman crossed back to Main street and turned in at the little delicatessen on the corner.

"Got [illegible] nice for hungry ducks?" he [illegible] greeted the marcelled lady across the counter.

"You c'n get canary seed in the drug store acrosst," she mumbled gloomily.

His attention [illegible] centered on a pile of currant buns. "Well, now, I think I'll have a dozen of those."

The lady [illegible] the counter counted out ten [illegible], dropped them into a paper bag [illegible] watched the elderly gentleman [illegible] with it.

"Ain't he [illegible] easy old gink?" she remarked [illegible] to her reflection opposite.

And the elderly gentleman, hastening back to the square, chuckled inwardly: "Canary seed! What a [illegible], witty, [illegible] lady. Canary seed!"

[illegible] carried [illegible] buns down to the [illegible] and [illegible] happily while an [illegible] looked mildly at his [illegible] somewhat near-[illegible] he [illegible] unaware that eight of [illegible] buns [illegible] untouched and un-[illegible] into the muddy bottom of the [illegible].

[illegible] he passed down Main street the [illegible] lady watched him languidly through the window of the delicatessen [illegible] dark-haired child, [illegible] blond doll, [illegible] half-[illegible] at a cream puff [illegible] with sullen eyes. [illegible] flabby-faced young man spat gloomily into a [illegible] puddle and greeted [illegible] with a [illegible] "Evening, Mr. Per-[illegible]."

[illegible] the elderly gentleman, munching [illegible] the [illegible] peppermint drop, [illegible] to his little hall room. [illegible] turned [illegible] key in the lock he [illegible] reverently: "Weren't [illegible] ducks [illegible], though? Bless [illegible] soul!"

Rich in Protein.

Sweet clover, although slightly richer in protein than alfalfa and red clover, is not as good a hay plant as either alfalfa or red clover.

LADY IN THE MOON

EVELYN B. HAMPDEN.

©, 1921, by McClure Newspaper Syndicate.

One month had elapsed since Aunt Cynthia's favorite nephew had come to live in her attractive home.

The apartment house in which she dwelt was a duplicate of those on either side, so it happened that when rushing forth to catch a car one morning Oliver collided with a girl turning to hurry up the step.

"I beg your pardon," he ejaculated. For an instant he looked into a pair of laughing eyes, then the girl vanished. Oliver gazed at the door which had closed behind her, while his car with clanging bell rolled past.

"The Fair Unknown," as Oliver dubbed her, was most elusive, and cautious inquiry of his aunt failed to elicit any information except that the people were strangers.

Nevertheless the fates were kind to him. Occasionally the familiar garnet suit was observed at a distance; various times he saw it disappear into the neighboring doorway and once he actually met "The Fair Unknown" face to face.

A swift glance of amused recollection was all he got, but Oliver was satisfied.

"She remembers me at any rate," he chuckled, and decided to risk a casual hint which, dropped for Aunt Cynthia's benefit, might hasten the call she intended to make some time.

This plan was unnecessary, however, for his aunt greeted him with, "I've called on our new neighbors."

"New neighbors," scoffed male impudence, "you said they had been here two months."

"Fine people; very old family."

Oliver, wisely refraining from comment, picked up the newspaper. "Listen to this," he began, "'partial eclipse of moon tonight. Good opportunity to view the lady in the moon.'"

"Here's where your humble servant hies roofward this very night to hunt for that lunar goddess."

"Haven't you ever found her?" inquired his aunt.

"Found her? Bless me. I've never looked for her. Most people talk of a man in the moon, you know. How does this female look?"

"She has a lovely face," replied Aunt Cynthia, rising to answer the 'phone.

Later, Oliver, armed with a pair of field glasses, was wandering about on the flat roof of the building he called home.

Turning to examine the structure on his left, he noticed a shaft of light streaming before him. He wheeled [illegible] so [illegible] the [illegible] full [illegible] spotted [illegible] held [illegible] to her eyes, and was [illegible] down at him from the height [illegible].

[illegible] of tense silence ensued, [illegible] in the [illegible].

[illegible] answered. [illegible] a tantalizing voice from [illegible] opposite roof. "Are you the man in the moon?"

[illegible] time the laugh was deep-throated and masculine and a voice matching it [illegible]: "Please, may I come over? We seem to be kindred spirits."

"[illegible] kind of owls," came twinkling across the intervening space.

Oliver waited. Presently she spoke, the tone this time suggesting hesitation.

"I think you may come over a moment," she deliberated, "if you can get here."

Soon they were chatting easily.

The night was clear, with a delicious tingle in the atmosphere, and although the stars blinked their astonishment and the moon beamed understandingly, the nocturnal tete-a-tete continued.

Finally, the girl exclaimed in surprise:

"The eclipse!" she cried. "Look, the moon is half covered; only the lady is visible!"

Oliver looked and saw clearly the luminous face.

"Queer I never discovered that sooner," he marvelled. "How plain it is!"

His companion moved toward the horizontal trap door.

"Must you go?" he protested, following.

"Yes, my mother will be wondering if I have fallen off the roof."

Oliver lifted the door.

"When and where can we get properly introduced?"

"Well, mother expects to return your aunt's call soon, and——"

"Yes."

She was half way down the stairs.

"Real soon?" urged Oliver.

Another merry "Yes" was her reply. When about to close the trap he suddenly stooped.

"Say," he called, "what's your name?"

"Juliet," came laughingly from below.

Shortly afterward he entered his aunt's living room.

"What luck?" smiled that amiable lady. "Did you find your moon girl?"

"I sure did," was the jubilant response. "She's a dear!"

To avoid further questions, which might prove embarrassing, he placed the glasses on the table and turned to leave the room.

"Most people look for the man, you know," Aunt Cynthia teased.

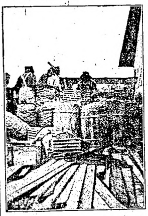
"Yes, and sometimes they find him, too," grinned six feet of nephew from the doorway.

DECREASE IN POTATO YIELD

Weather So Unfavorable That Estimate on August 1 Showed Drop of 61,079,000 Bushels.

(Prepared by the United States Department of Agriculture.)

Although the potato acreage is estimated by the bureau of markets and crop estimates, United States Department of Agriculture, to be 3,972,000 or 1.6 per cent greater than last year,



Grading and Packing Potatoes for Market.

the weather during July was so unfavorable that the estimated yield on August 1 showed a drop of 61,079,000 bushels from the indicated yield on July 1. The figures for yield were placed at 315,918,000 bushels, as compared with 428,368,000 for 1920 and a five-year average of 371,283,000. Prices reflected the change in condition. On July 16 the average of ten leading markets was $3 to $4.75 per barrel for Virginia Eastern Shore Cobblers and $1.25 to $2.15 per 100 pounds for Kansas Early Ohios. By August 12 Virginia Eastern Shore Cobblers had advanced from $4.75 to $5.50, while Kansas Early Ohios were selling at $2.40 to $3.25; Idaho Rurals were moving at $3.50 to $3.60 per 100 pounds.

Home Town Paper Week

During this week---Nov. 7 to 12---the country newspapers of America arc askinfi the citizens of the various communities to do a little boosting for the institution in the community which has never spent any effort in boosting its own affairs---the country newspaper. The Banner is sending out a large number of sample copies. If it meets your approval, we would be glad to receive your subscription.

IN FATTENING TURKEY INCREASE SLOWLY EXTRA AMOUNT OF FEED

[illegible] Fattened Turkeys Always Command the Highest Prices.

(Prepared by the United States Department of Agriculture.)

Once upon a time every farm family had its flock of turkeys, which supplied plenty of birds for the home table and some for the tables of those who lived in the towns. Turkey raising in recent years, however, has decreased, one of the main reasons for this being that as the population of the country increased farming became more intensive and the area suitable for turkey raising was reduced. Turkeys require plenty of range in order to thrive.

Many farmers, however, still consider turkeys a profitable side line on the farm and about the first of October begin to consider how to put more flesh on their turkey flock.

Feeding Turkey Flock.

During the summer and early fall turkeys can find an abundance of feed on the average farm. Grasshoppers and other insects, weeds and grass seeds, green vegetation, berries and grain picked up in the fields all go to make up the turkey's daily ration. When this natural feed is plentiful very little need be added until fattening time except for the purpose of bringing the turkeys every night to roost and to keep them from straying from home. For this purpose one feed of grain every night just before roosting time is sufficient.

Fattening for Market.

In fattening turkeys for the market an excellent plan is to begin about October 1 to feed night and morning, feeding only so much at a time that the birds go away a little hungry, and gradually increasing the quantity until they are given all they will clean up three times a day during the week before marketing. By the latter feeding is meant that they are fed until they leave the food and walk away. Some turkey raisers feed wheat and oats during the first of the fattening season, gradually changing to corn as the weather becomes cooler. The majority, however, begin feeding heavily on corn about November 1; and, since turkeys are not accustomed to such heavy feeding, scours often result, especially if new corn is used. New corn can be fed safely if the turkeys are gradually accustomed to it by feeding lightly at first and more heavily afterward.

Lose Flesh When Penned.

Confining turkeys during the fattening season to prevent their using so much energy in ranging has been tried to some extent, but with very little success, say poultry specialists of the United States Department of Agriculture. Those confined to a pen eat heartily for two or three days, but after this they lose their appetite and begin to lose flesh rapidly. On allowing them free range again, they pick up rapidly and are soon eating as heartily as ever. The better method is to allow them free range, as it keeps them in good, healthy condition, and they are always eager to be fed.

Nuts of various kinds are a natural fattening feed picked up by the turkeys on the range. Of these beechnuts, chestnuts, pecans, and acorns are those most commonly found by them. Many turkey growers in Texas depend solely upon acorns for fattening their turkeys, and when the mast is plentiful the birds are marketed in fairly good condition.

Duke Vernon's Kind Act

By HAZEL SMITH.

Copyright, 1921, Western Newspaper Union.

"I will never trust a friend again!"

It was a broad and bitter declaration for a man, young, ambitious, in love with life and all its pleasant promises and rewards to come; yet at that supreme moment of disappointment and loss, Lane Percival meant every word he spoke.

He stood in the room where he and Duke Vernon had spent many a hopeful, happy hour during the past year. They had been like brothers. Each had come to the city from a country home to carve a way to fortune. To one of them, Lane Percival, had come as well the glory of youth—love, deep tranquil abiding. Even in that the faithful Vernon seemed to share his joy and take Myra Little to his heart's thoughts as a cherished sister.

And now—this! An opened disordered drawer in the bureau, an overturned tin box with its strong lock broken—and empty. Two days before it had contained $400, the savings of two years. Percival had got leave of absence for a day to escort Myra to a town forty miles away, where she was to spend a week with an old school friend, and he had returned to find Duke Vernon faithless.

"He has taken it all," muttered Percival, dark browed, and his heart for the moment was filled with cruel hate.

That night he wrote all the truth to Myra, with a heavy heart telling her that he must begin all over again, and they must—wait.

"I guess it is my fate to meet with disappointment in my friends," he wrote Myra. "Next time I shall make you my banker, and shut out from my life every bit of human love except for you."

"A telegram, sir," announced a messenger boy, just as Percival was sealing up this letter.

In wonder Lane Percival read a brief message. It was dated at a point in Michigan and it was signed Duke Vernon. It ran:

"Better than I left you word. We have made it."

What word—made what? In bewilderment Lane Percival sought vainly to read the riddle.

He slept a little towards morning. He arose dull and oppressed and bothered. There was a knock at the door.

"Come in," he directed.

"It's me," announced the man who cleaned the halls and washed the windows and kept the place generally in order. "I found a letter, and a check I guess it is, in the court just now. I'm not much of a scholar but I spelled out your name."

"My name!" repeated Percival vacantly.

"There they are," and the man handed Percival a sheet of paper and a check.

The latter was made out for $400 and signed by the missing Vernon.

The letter bore the initials of the same signature, and ran:

"Dear Lane:

"I have a hurry call for funds ready cash. Urgent. A big thing. I have taken your money and leave you check. Expect great news."

Slowly the truth began to dawn on the startled Percival.

There was another summons at the door of his humble room the next evening.

He flung the door open widely. Then he drew back. The open happy face, the bluff, hearty tone of his friend returned, were a reproach that made him shrink from the extended hand.

"I can't do it, Duke," he said. "I have wronged you."

"Wronged me?" rang out the cheery tones of Vernon. "When? How?"

"I believed you had stolen my money."

"I'd have done it if there had been no other way!" cried Duke Vernon. "I've made it. No more scraping and saving and creeping along. Look there!"

He drew forth and flaunted before the eyes of his bewildered friend a certified check.

"Ten thousand dollars!" were the words that dazzled the eyes of the astonished Percival.

"See who it's made out to."

"Duke Vernon and Rupert Percival; my brother!"

"Yes—the ne'er-do-well, the wild rover, the poor fellow you lost faith in. But I had faith. He was all good, only impulsive and easily influenced. He lost your money and his in an out and out swindle. But that was education. I didn't tell you, but for a year I have been staking him off and on, up in the copper mining district—as a partner. You wouldn't see him a year ago when he called here," said Vernon. "He's made good—won't you see him now?"

"Yes," said Lane Percival humbly, "and ask you both to forgive a man who needs to begin the study of human nature all over again, to make himself worthy of being called friend and brother."

And Vernon went out and brought the wanderer back with him. It did not take long, even after his abject confessions, for Duke and Rupert to cheer up their repentant companion.

And they spent that evening in planning what a lot the $10,000, received for a claim that the $400 had come just in time to secure, would do for three young, ambitious fellows and the bonny girl who need not now, wait longer for Lane's start in life.

HOUSE PULLETS BEFORE LAYING

Putting Them in Winter Quarters Early, Results in Larger Egg Production.

SELECT ONLY THE HEALTHY

Best Methods of Cleaning and Disinfecting the Houses—Hens Must Be Protected From Drafts, but Ventilation Is Necessary.

(Prepared by the United States Department of Agriculture.)

To get good results from a flock of poultry during the winter all houses and coops should be in good condition, only healthy fowls placed in these buildings, and good care given to the poultry. As it takes about two weeks for hens or pullets to settle down to their new quarters they should be moved early. The moving should be done before they begin to lay, for a shift after egg production begins may set them back for a month to six weeks. Moving pullets around from one house to another is the best means of holding back egg production if they are developing too fast. The United States Department of Agriculture points out that it is highly desirable to bring the pullets in from the range before they begin to lay.

Prepare Houses for the Winter.

The houses should be thoroughly cleaned, disinfected, and made tight for the winter. It is much easier to do this work while they are empty than after they are filled with fowls. If the house has a dirt floor, it is well to remove the top 3 or 4 inches and replace this with dry gravel or sand. If it has a cement or wooden floor, remove all litter and dirt and put in 4 or 5 inches of fresh straw or litter.

Remove the roosts and scrape the dropping boards, wetting them down if necessary to loosen refuse which has caked and dried on. Sweep the walls and ceiling with a broom, and clean out all old nesting material. The house is now ready to be disinfected. Mix up a batch of whitewash or other disinfectant. Put a peck or more of fresh-burned lime in a tub or barrel and pour on it enough water to start slaking. Stir occasionally and add more water to prevent burning. Keep the vessel covered with an old sack to retain the heat. After the lime is thoroughly slaked dilute it to the proper consistency and strain it if it is to be applied with a spray pump. Add a quart of crude carbolic acid to each bucketful of wash. Other effective disinfectants are lime-sulphur mixture used for spraying fruit trees, coal-tar preparations, or the approved cattle dips.

With a whitewash brush or spray pump apply thoroughly to the inside of the house—walls, ceiling, floor, dropping boards, and nests as well as the roosts, which should be placed out of doors in the sun for a few days. Allow the house to dry out before putting in fresh litter. Rye straw makes excellent litter, because it is tough and does not break up easily, but wheat or oats straw, cornstalks, dry leaves, or course hay are all usable.

Bring the Pullets in From the Range Before They Begin to Lay, for Moving Them Retards Egg Production Two to Four Weeks.

Make Houses Free From Drafts.

Be sure that the house is tight on three sides and that there is no chance for a draft to strike the hens. If hens roost or are placed in a draft during the fall and winter, colds are sure to develop, which may result in roup and other troubles. From one-third to one-half of the south side, or front, of the poultry house may be made of curtains and windows, but should be under control, so that the openings may be closed gradually as the weather becomes cold. Have muslin curtains in the front of the house or leave a window partly open, even on the coldest nights, to allow some ventilation in the house. Fowls will stand considerable exposure to cold air provided it is dry, and ventilation will keep the air in the house dry.

Before the pullets are mixed with the older fowls be sure that the hens are banded or that the web of the foot is punched in some way, so that you can distinguish between the pullets and the hens. This plan permits the older stock to be culled out whenever desirable, and the young hens to be kept for further laying. For egg production do not keep hens over two years, but some of the best hens may be kept for breeders until three or four years old.

THE STORY

By JACK LAWTON.

Copyright, 1921, Western Newspaper Union.

Jane Orme sat deep in her problem before the fire. Bruce Addington was the problem, and even Jane's clear eyes could read no explanation of his strange moods and emotions. Surely Bruce loved her now, even as she loved him, the attachment had been growing slowly and surely, and to Jane Orme love in its unselfishness was a revelation. For years she had written of the subject, and the winsome charm of her writings won for her fame—fame in a measure. The little town that sheltered her still regarded Jane Orme merely as a kindly, friendly person.

Beyond, in the greater cities, young girls bending over her books pictured her very differently as one as ingeniously fascinating as the heroines of her own tales. Jane loved to write of French women.

Her latest book, "Madeline," was growing day by day and so real the character became to Jane that sometimes it seemed more than an insistent inspiration. When Bruce Addington came calmly and unheralded as the one all important into her life, Jane enjoyed much his sympathy in her work. He was able too, to help her in many details of her writing. Bruce had spent three years, long ago, in France. The firm who recently had taken him into partnership commissioned him there at that time. Jane Orme, busy and happy in the penning of her fancied romances, had found none equally satisfying for herself; so, because of her acknowledged lovableness, she was dubbed laughingly, but believingly, nevertheless, as heartless. When Bruce came, her assurance was completely swept aside. Absolutely, Jane loved him.

As weeks passed, there was about the big earnest man that which piqued and troubled her. Why were his dark eyes always somber shadowed, even in the look which told unmistakably his love? And while his eyes and actions voiced this truth, why did his lips remain silent? Jane, pausing often over her written pages, wondered and wondered. And as she brooded busy with her problem in the firelight Bruce came suddenly to sit at her side. His fine eyes looked searchingly, pleadingly into her own.

"I tried not to come," he began perplexedly, then stopped.

Jane sighed. She was discouraged by questionings which failed to bring explanation of her lover's moods.

"I want," she said instead, "to have you read part of my new book. Perhaps you can help me with the coloring."

"Tell me the theme," he begged her, "and later I will go over the story. It is pleasant here with only the light of the fire—and you."

Jane spoke stiffly. It was difficult for her to put into cold words, [illegible].

"The hero," she began, "is a fine young American, who went away to war—the old story in a measure—he becomes wounded and meets, while convalescing, my appealing Madeline. A little French girl, Bruce, but such a French girl, with the charm of my three long ago admired French girls rolled into one. So my hero loves and impulsively marries. But there my story only begins. Disappointment and humiliation come to poor little Madeline when she finds how dissimilar their tastes and dispositions are. Bravely, as she tries to mold herself into the typical clever American girl her husband so evidently expected to find beneath her whimsical personality, Madeline fails, to her bitterness and his despair, while John Allen himself fails in living up to the hero-

---

FRESH WATER IS ESSENTIAL

Importance of This Matter Is Not Generally Recognized as Its Value Demands.

A scratch mixture should be fed the poultry flock morning and night and light feed in the morning. All fowls then will eat at night so they will go on the roosts with full crops. An abundance of fresh, pure water is needed. The importance of this matter is not so generally recognized as its value demands. It is not enough to fill up the water vessels in the morning—it will pay to give a fresh supply along with the evening feed. Grit and oyster shell are needed, for fowls on free range soon exhaust the natural supply of small, sharp stones that have any grinding value in the gizzard.

Force of Habit.

Mrs. Smart—Now, listen here, John, I will not stand your staying out so late.

Mr. Smart—Really, my dear, you are unreasonable. You know very well I acquired the habit while courting you. —London Answers.

A Life of Endeavor.

Success comes only to those who lead a life of endeavor.—Theodore Roosevelt.

From Farm to City in New Zealand.

In marked contrast with what is reported to be the effect of unemployment in this country, where the movement is from the city to the farms, the dismissed workers of New Zealand are flocking from the country to the cities, because farmers are cutting wages and discharging many of the hands they employed during the recent era of high prices.—The Living Age.

GIVE HENS VARIETY OF FEED

When Weather Is Cold and Fowls Are Just Beginning to Lay, Feed Them Liberally.

Do not fail to feed your hens a good variety of feed and in liberal quantities when the weather is cold and they are just commencing to produce eggs. Heavy egg production requires correspondingly heavy feeding.

Taste is a matter of tobacco quality

We state it as our honest belief that the tobaccos used in Chesterfield are of finer quality (and hence of better taste) than in any other cigarette at the price.

School Notes

Total enrollment to date, 169. Out of these 44 are in the high school.

Mrs. Breen returned Monday morning from Minneapolis, where she was in attendance at the M. E. A.

Mrs. R. H. McDonald attended the exercises Wednesday morning.

Dr. H. W. Froelich has made two professional calls at the school lately, the occasion being that of vaccinating the pupils. This was done as a precautionary measure against small pox, to all pupils who wished to have it done. 75 submitted to the ordeal. Most of the pupils dreaded to be vaccinated and were agreeably surprised when they discovered that it was not such a painful process after all.

The class in second year cooking made a strawberry shortcake as a part of their class work this week. All were very successful in their venture.

Armistice day being a legal holiday school is not in session.

An interesting program was rendered Wednesday morning, as follows:

Song by the School.
Saxophone Solo, Mr. Nystul.
Vocal Solo, Mr. Beithon.
Selection, Girls' Glee Club.

Band to Meet

A meeting will be held at the school house Thursday, Nov. 17, for the purpose of reorganizing the Goodridge band. All last year's members are requested to be present and all others wishing to join are urged to attend.

Mr. Davis of Minneapolis called on Charles Johnson and family Saturday morning. He went to spend a few days with friends at Esplee.

Market Day Tomorrow

MINNESOTA HISTORICAL SOCIETY

THE GOODRIDGE BANNER

VOLUME XV, No. 43. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, NOVEMBER 18, 1921. $1.50 PER YEAR.

The Market Day

The markht day was a grand success Notwithstanding the snow storm the business places were crowded with people the whole day. The question rises, considering the weather and the crowd, what kind of a crush would we have had if the day had been fine. Altogether 5,000 coupons were issued, which argues a record breaking amount of cash received.

The awarding of prizes took place in the evening The drawing was done by Jack Donahue.

Mrs. Caspar Iverson won the first prize, a Way Sagless bed spring, on a coupon issued by the Goodridge Mercantile Co.

Louis Lee of Kratka took second prize, a pair of Foot-Sohultze shoes, on a coupon issued by the Farmers Hardware Co.

A. T. Olson, third prize, coffee percolator, on coupon issued by Goodridge [illegible].

A. L. Schram, fourth prize, ham, on coupon issued by Goodridge Mercantile Co.

Ole Frontveit of Erie won fifth prize, 50 lbs. Marquis flour, on coupon issued by Farmers Milling Co.

Hanson & Barzen gave two prizes, for two largest loads of grain brought to their elevator on that day: The first prize, 98 lbs. of Vivo flour. was carried off by Bennie Johnson; and the second, 49 lbs. of flour, was won by Hans Bergseng of Grygla.

Gummer Case to Valley City, N. Dak.

William Gummer, 22, charged with the murder of Miss Marie Wick, 18 year old Grygla girl, who was found dead in a room at the Prescott hotel in Fargo on the morning of June 7, will be brought to trial at Valley City, N Dak., on January 3.

Judge Charles M. Cooley of Grand Forks allowed the change of venue asked by attorneys for the defense when Gummer entered a plea of not guilty. He was held to the district court by Judge C. K. Bingham of justice court following a preliminary hearing last June. He has been confined in the Cass county jail since the middle of June, and his appearance in court last week marked the first time he had left the jail since his preliminary hearing in June.

"Fi-Fi" Tells an Interesting Story

Home Talent Musical Fantasy to Be Presented in Thief River Falls

"Fi-Fi of the Toy Shop," a musical extravaganza, is to be staged at the Auditorium in Thief River Falls on the eevoning of November 25. This is a home talent production, under the auspices of the Young Ladies' Sodality.

The story in brief is that of Bonnie, the Toymaker's daughter, who wanders into the woods at the close of day and is overtaken by the Sandman, who casts her into a deep sleep. She dreams a wonderful dream whereln the bisque and woopen creatures of her father's shop come to life and indulge in a night of revelry. Strange things befall the toys and dolls transplanted into the world of life and motion for the fi st time, until Bonnie awakens from her sleep at break of day with the strains of fairy music ringing in her ears.

The following is an extract from a write-up of the production: "There is a plot which moves consistently to a happy ending. The situations which arise when the dolls find themselves for the first time in the world of life and motion are ludicrous in the extreme. An evening of such diversified amuse-amusement is, in fact, so well supplied that the audience wonders that one production can contain so many good features and can be so ably handled by amateurs. The elaborate costuming and scenic equipment give a finish and tone to the production that places it in the professional class."

The price of the tickets is 75c, and mail orders for reserved seats are now being received by Lambert's drug store, Thief River Falls, Minn,

Strayed—Came to my place about three weeks ago, one calf. Owner please claim property and pay for his keeping and for this notice. Oscar Thoreson, 1½ miles west of Erie. n4 3t

Free Shipment for Gift Grain Assured

Free transportation is guaranteed for every bushel of grain given by Pennington county farmers to save the lives of children now starving in southern Russia.

The Near East Relief, which is appealing to farmers of this county for 487 bushels of grain for the famine sufferers, sent this announcement to the county farm bureau this week.

"All the food made from the farmers' gift grain is being hauled from the mills to the seaports free of charge by by the railroads," tne latter says. "In addition to this service, equal to tens of thousands of dollars, many railroads have offered to haul the corn and wheat, without one cent of pay, from the country elevators to the mills. Even where free transportation has not been arranged, friends of the Near East famine victims have guaranteed to pay the freight. This means that every bushel of wheat or corn given by farmers in your county, or its full equivalent in corn or wheat products, will reach the starving women and children.

"Food milled from the corn donated by Minnesota farmers through the farm bureau last spring has already saved hundreds of lives. It is being eaten today by villagers in Transcaucasia and Armenia who would nave died if it had not arrived."

To Stop Building Of Battle Ships

A sweeping program for limitation of naval armament was proposed Saturday at the opening of the arms limitation conference at Washington, by the United States, Secretary of State Hughes proposed:

1. That a holiday in naval construction of capital ships for the next ten years be declared by the powers
2. That all capital ship building programs should be abandened.
3. That certain older ships be scrapped,
4. That general regard should be paid for existing naval strength.
5. That the capital ship tonnage, not numbers of vessels, be the basis for limitation.

Legion to Give Home Talent Play

The Henry Svare post of the American Legion has undertaken the presentation of a home talent play. "The Goodfellow," a comedy drama in three acts, has been selected, and it is intended that the play be given early in December. The various characters have been selected and the first formal rehearsal will be held Friday evening, November 18.

"The Goodfellow" has proved a decided hit wherever it has been given and considerable interest has already been created in this local venture. Definite announcement will be made in a few days with reference to the date of presentation.

Band Elects Officers

The Goodridge band met Thursday evening, Nov. 17, and organized for the coming year. The following officers were elected: President, H. A. Halvorson; sec.-treas., Roy Olson; librarian, Joseph Christianson. John Nystul, who directed the band last year, will also conduct the band during the coming season. Besides the above officers, a ways and means committee was elected, consisting of the following members, Carl Christianson, Nick Bundhund and B. O. Norby.

ERADICATION OF CORN SMUT

Fresh Manure Should Not Be Applied and Rotation of Crops Should Be Practiced.

There are things to be done and things not to be done to combat successfully the smut of corn which has damaged the big crop of this year in various parts of the Northwest.

Fresh manure should not be put on corn ground; a rotation of crops should be practiced. Spores germinate best and multiply in fresh manure, says E. C. Stakman plant disease specialist of the University farm, St. Paul. Some other crop than corn should be planted on land growing smutted corn this year.

Corn smut is not poisonous, says Doctor Stakman; on the contrary, in its early stages it is edible for human beings. It may occur on any part of the corn plant above ground. It has been found that corn smut spores are killed in the silo.

An Heir to a Million

By WINIFRED DUNBAR.

Copyright, 1921, Western Newspaper Union.

"I wish you to encourage young Benton in his attentions, Nellie," spoke John Andrews to his daughter.

Nellie did not reply in words, but her face flushed and her head drooped. The word of John Andrews was law within his family circle and even his wife rarely dared to gainsay him.

Mrs. Andrews looked very solemn. She did not attempt to repress an opinion, however.

"Joel Benton dropped in to see me at the office yesterday," pursued Mr. Andrews in his usual precise lawyer-like way. "He intimated his sentiments toward you, Nellie. He was urged [illegible] to it, he explained, because a bit of rare good fortune, as he expressed it, had come his way. As you know, he and his assistant at his store, Rolfe Wilson, are related to the wealthy [illegible] Jones of Pittston. The old millionaire has never paid any attention to them. Yesterday Benton received a letter and a draft for $5,000 from Mr. Jones. It notified him that he might consider this royal gift as an indication that he was figuring on finding an acceptable heir to his enormous fortune."

"That is news, indeed," murmured the marveling Mrs. Andrews.

"So, Nellie," concluded her father, "there must be no more of this foolishness with Rolfe Wilson. The heir to a million is not to be picked up every day."

"Oh, mother!" cried Nellie, rushing to the side of Mrs. Andrews and burying her tear-stained face in her lap.

"There is indeed no question of choice between Rolfe and Mr. Benton!" said Nellie forcibly. "Mr. Benton inherited the business he owns. Poor Rolfe gave up every dollar of his rightful inheritance to pay the old debts of his father."

"It was a noble sacrifice, dear," spoke Mrs. Andrews.

"He has gone to work like a man and he is all there is to Mr. Benton's business," continued Nellie.

"I hope love will find a way, dear." Mrs. Andrews said simply and Nellie felt cheered even by her poor sympathy.

Almost simultaneously with the cashing of the draft Benton walked into the store he owned.

"I'm going to take a spell of rest, Wilson," he said. "You can run things here."

"There is that debt to the city supply house," suggested Rolfe. "You know they are pressing for payment."

"Oh, I can't bother—let 'em wait."

"But you have plenty of money now."

"Yes, and I'm going to take one good fling and enjoy it," retorted Benton recklessly. "How would you like to buy me out?"

"I haven't the cash."

"You've got some, I know. I'll be liberal. You assume that city debt and pay me $100 a month for six months and the store is yours."

"I will do that," assented Rolfe promptly and the bargain was consummated.

Lawyer Andrews tabooed Rolfe Wilson. He proceeded to cultivate Benton. The latter began to call at the Andrews home regularly, much to the discomfort of poor Nellie.

As to Nellie herself she tried to give her persistent suitor to understand that her heart could never be his.

The months rolled away. Once in a while Nellie met Rolfe casually. Once a week letters expressing their mutual love passed between them. Rolfe was working hard.

"It's all up with me!" Benton amazed him by saying, bursting into the store one morning early and looking the picture of dejected misery and ruin.

"Why, what's the trouble?" inquired Rolfe.

"That $5,000. I spent most of it. Yesterday I wired Uncle Jared for another installment on my fortune. He telegraphed me back that such a spendthrift didn't suit him as an heir and I had missed my chance."

"And what about Nellie?" inquired Rolfe.

"Oh, that's all off now, of course," announced Benton. "I think she put me off, foreseeing what a fool I'd make of myself. After all my big ideas and boastfulness I'll never dare to look her in the face again."

And then Rolfe Wilson felt so sorry for the poor, broken-up fellow that he offered him a one-half interest in the little business if he would get down to earth again and work as he used to do and Benton felt as grateful as a shipwrecked mariner landed safely in the home nest.

That was not all of it. One day Uncle Jared appeared at the little store and disclosed himself.

"I think you were silly in giving away half your business to a spendthrift," he said to Rolfe, "but it shows you're good all through. From what I hear, I fancy you will know how to take care of a big store I've bought for you at Malden and the rest of my fortune, when I get through with it."

Of course, Joel Benton got the little store as a generous gift and, of course, Rolfe got Nellie; fortune and bride being well worth waiting for.

The Runaway Cruise

By DOROTHY WHITCOMB.

Copyright, 1921, Western Newspaper Union.

"Miss Perry, I fear we have lost our reckoning."

Very pleasantly, most confidingly Helen Perry looked up into the face of Roy Lawrence.

"In fact, I have no idea of the whereabouts of the yacht," went on the young man.

"And I don't see how I am going to locate the Neptune."

"I trusted myself to you," said Helen evenly, the radiant contentment of her lovely face not abating one whit. "You will do the best you can. Why bother?"

Roy Lawrence gave a secret gasp—surprise, satisfaction, delight. He had been glum all that day. He had brightened up at noontide when Miss Perry, a twinkle of rash mischief in her eyes, had suggested that they steal away from the big yacht in the little motor boat.

"I don't understand it," murmured Roy to himself. "She does not wear the rosette. She has not alluded to the letter. She was jolly with the Girtons all the morning."

They were two of a party who had come down from Frisco for a vacation cruise. Aboard the steam yacht Neptune there had been Harold Girton, his sister Netta, Mrs. Boyce, his aunt and the chaperone of the party, Helen, the crew and himself.

Both he and Girton were in love with the beautiful Helen, who was a close college friend of Netta. He wrote Helen a note. In it he avowed his love in an [illegible] but manly fashion. The next day was a national holiday. They were to have quite a patriotic fete, there along the lonely South American coast. He enclosed a pretty rosette. If she could find it in her heart to smile on his suit, would she wear it next morning?

He had slipped the envelope under the door of the room which Helen and Netta jointly occupied.

"If Helen does not encourage me," he tragically decided, "I shall leave the Neptune at the next port. I could not remain and see her won by a rival."

And the day had dawned and Helen had appeared. In honor of the day she wore an underskirt formed of stars and stripes and two dainty silken flags in her hair, but no rosette and only the same kindly gracious smile on her lips.

Then a riotous morning of firecrackers and feasting and music—but not for Roy. His heart was heavy until Helen had suggested the runaway cruise.

A flash of supreme happiness enwrapt Roy. He drove the boat around a cluster of little islands and gained a free space, but neither up nor down shore was the yacht visible.

"You see, Miss Perry," he said helplessly, "no sign of the Neptune. Too bad!"

"The gasoline is giving out," he reported grewsomely.

"Then we cannot go much further?" inquired Helen.

"Less than a mile, probably."

"There is an island with a high ridge of rocks at one end," suggested she, indicating the point of view.

"Yes, I see it."

Just barely the engine lasted out till the island was reached. Helen carried the telescope. Roy shouldered a repeating rifle. They left the boat and began the climb of a narrow ledge of rock that arose like some monument.

"Why, look!" suddenly exclaimed Helen.

"The mischief!" echoed Roy.

Twenty canoes filled with dusky savages surrounded the motor boat.

With angry cries the natives rowed to a short distance. Then the canoes were steadied. A shower of pebbles directed from slings, arrows and darts came ringing upon the two wayfarers aloft.

"This is serious!" declared Roy solicitously, and he led his fair companion back into the shelter of a cave. She emerged thence as he fell, struck by a rock from below. She soothed his wounded head with her handkerchief. Then she ran back into the cave—to reappear, however, startlingly!

At a glance Roy saw what she had done. Helen had removed her underskirt of stars and stripes. She ran to the edge of the rock waving the red, white and blue, a true banner, to the angry mob below.

"They see it! They know it!" she cried exultingly, and this was true. One by one the belligerents paddled away. Somewhere they had learned the power and glory of that protecting flag.

And then she attended to the wound on the side of Roy's face, so gentle, so womanly, that he could not resist the impulse to catch her hands in a thrilling clasp and pour out the story of his love.

They knew later that Netta, in the interest of her brother, had intercepted the letter Roy had sent to Helen.

"I must tell you something," whispered the happy Helen. "I loved you all along, but the Girtons were so kind and Netta so pleading that if you had not spoken I must have been influenced to give my hand where there was no love. I planned to see you once alone, hoping—hoping—"

"That I would say what I have told you—oh, blessed runaway frolic!" cried Roy Lawrence rapturously.

The Neptune found them two hours later—sweethearts true.

Gerald Foils a Holdup

By MALCOLM BROWN.

Copyright, 1921, Western Newspaper Union.

"It's a nervy thing to ask you to do, Alling," spoke the chief clerk of the Empire National bank.

"I'm willing to take the risk," smiled Gerald Alling quietly, "for two alluring reasons."

"Would it be impertinent for me to ask what those reasons might be?"

"You are so good a friend," replied Alling promptly, "that I am glad to tell you. First [illegible] I hail with delight any variation in my humdrum work of counting money in a screened cage. Second [illegible] I am in love with Mr. Ward's daughter, Lucy, and I would like to make a good impression on her father, who, to tell the truth, rather frowns on my matrimonial aspirations."

"I see. Very good," laughed the chief clerk. "I hope this new experience will lead to a consummation of your wishes all around."

The coin transmissions were made in a wagon guarded by special officers. Mr. Ward disdained such protection. With his money satchel handcuffed to his wrist, he had carried hundreds of thousands of dollars across the city.

One day his good luck missed him. As he was passing an open area way two men hustled him down its steps. Two others stationed below seized him. He was knocked senseless and when he recovered consciousness the men and satchel were gone.

Fortunately the amount of currency in the satchel was small, but over $50,000 in bonds had been secured by the old footpads.

Out of this had grown a suggestion from the chief clerk of the bank. Ward was to carry the money as before, only to distribute it about his person. He was to proceed on his mission secretly from a side exit of the bank. Gerald was to carry the satchel—empty.

It was the second day of the new program when Gerald was returning from his mock cash delivery to a bank that a bright-eyed old man accosted him and walked along with him.

"Messenger service, eh, Mr. Alling?" he questioned.

"Yes," assented Gerald.

"Thought that loss of theirs would stir up the bank," observed his companion. "Say, I guess I shall never be able to thank you enough for that situation you found for me."

"Oh, I was glad to be of service to you," declared Gerald, heartily.

"I'd like to show you a new wrinkle I've devised to make the bank messenger absolutely immune from loss," the old man told Gerald.

Nothing of a sensational character had happened because of his carrying the empty money satchel. One day, however, the bank detective came to him.

"You needn't know it except to keep a firm grip on your nerve, Alling," he said, "but you are being followed."

"Is that so?" inquired our young hero.

"I feel sure of it. I have noticed two suspicious looking characters apparently on your trail for three consecutive mornings now."

That evening Gerald went to visit his friend the inventor.

That night the inventor showed his gratitude to Gerald by proving that he had done some thinking in his behalf.

When Gerald left the inventor's room he carried a fair-sized package which he took down to the bank with him.

When he got ready to start on his decoy route next morning he went to a secluded corner of the bank and placed the package in question carefully inside of the satchel.

A jam of vehicles near a crowded court, a jostling mob around him, two men close up to him.

"Give me that satchel!" ordered one of the men.

"Take it!" retorted Gerald accommodatingly, and he let the loop slide from his fingers.

Bang—bang!

Ding—ding—ding—ding—ding—

A frightful alarm of sound echoed from inside the satchel—two revolver shots, the sharp rasping clanging of half a dozen bells.

The dismayed and discomfited looters stared at the satchel and messenger. Before they could turn and run the bank detective was at their side.

Gerald saw them led to a patrol wagon, went on his way and after banking hours was called into the private office of the president of the institution. He found the bank detective also there.

"Now then, young man," observed the money magnate, a pleasant but curious expression on his face, "explain that young noise wagon of yours—the satchel."

And then Gerald told of the ingenuity of his friend, the inventor, in producing a device which "went off" the moment he let go of the handle of the satchel.

"I sent for you," said the president, "to tell you that through the arrest of the men your clever alarm ball baffled we have recovered the stolen bonds. Our officer here will share a reward of $5,000 with you. And you probably deserve a month's leave of absence, Alling."

"I'll make a honeymoon of it," cried the delighted young bank man.

Mystery Explained.

[illegible]ESTIONS TO AID [illegible] TIMBER OWNERS

Selling of Product Calls for Good Business Methods.

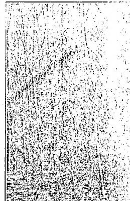
Profit by Experience of Neighbors—Investigate Local Requirements and Prices—Advertise and Secure Competition.

(Prepared by the United States Department of Agriculture.)

Based upon methods used by wood-lot owners that have been successful in marketing their products, the [illegible] service of the United States Department of Agriculture [illegible] 10 suggestions for aiding [illegible] who have timber on the [illegible] sale:

Get prices for various wood [illegible] from as many sawmills and [illegible] using plants as possible [illegible] before selling, consult [illegible] purchases of timber and be[illegible] their experiences.

Investigate local timber [illegible]



Black Locust Plantation—Five-Year-Old Trees.

may be worth more locally because transportation is saved.

Advertise in papers and otherwise secure outside competition.

Secure bids if practicable both by the lump and by log-scale measure.

Be sure that you are selling to responsible purchasers.

Get a reliable estimate of the amount and value of the material before selling.

Market the higher grades of timber and use the cheaper for farm purposes.

Remember that standing timber can wait over a period of low prices without rapid deterioration.

Use a written agreement in selling timber, especially if the cutting is done by the purchaser.

Additional details concerning the profitable marketing of woodland products are contained in Farmers' Bulletin 1117, Forestry and Farm Income, copies of which may be had upon request of the division of Publications, United States Department of Agriculture, Washington, D. C.

GOOD PREVENTIVE OF VERMIN

All Small Inclosures Should Be Cleaned and Disinfected Before Being Used.

Except in accidental cases, hog lice are found only on hogs, and they do not voluntarily leave their natural host, says the United States Department of Agriculture. When separated from the animal they live only two or three days. The lice pass readily from one hog to another when the animals come in close contact. Practically all cases of infestation occur from contact with lousy animals and not from infected premises. Under reasonably good sanitary conditions pens, corrals and premises which have contained lousy hogs are not a source of danger to hogs free from lice.

As a precautionary measure, however, and because it is good sanitary practice, all small inclosures which have contained lousy hogs should be cleaned and disinfected before being used for a new lot of hogs. The litter and manure should be removed and the floors cleaned after which the woodwork and floors should be sprayed with a good disinfectant. The coal-tar-creosote dips, diluted in accordance with instructions on the container, are suitable for this purpose.

TAKE-ALL DISEASE OF WHEAT

Department of Agriculture Has Found Thirty-Nine Varieties Immune to Ailment.

Efforts by the United States Department of Agriculture to combat the so called take-all disease of wheat in Illinois and Indiana have resulted in finding 39 varieties that are either immune or highly resistant to the disease. They are Beloglina, Crimean, Currell, Dietz, Longberry, Early May, Fulcaster, Fultz, Gipsy, Gladden, Gold Coin, Grandprize, Harvest King, Hungarian, Jones Fife, Kanred, Kharkof, Leap, Malakof, Mammoth Red, Michigan Amber, Mediterranean, Minnesota Reliable, Nigger Pesterboden, Poole, Portage, Pride of Indiana, Red Cross (red chaff), Red Rock, Red Wave, Reliable, Rudy, Stoner (Marvelous), Trumbull, Turkey, and Wheedling.

ALFALFA SEED THIS SEASON

According to Reports to Bureau of Markets and Crop Estimates Production Is Larger.

A somewhat larger production of alfalfa seed this year than last is indicated by reports to the bureau of markets and crop estimates. Dry, hot weather interfered with the crop in portions of the Southwest, but elsewhere the crop is larger than usual.

GRAZING MAINTAINS SOIL PRODUCTIVITY

Many Pastures in Virginia Have Never Been Plowed.

Where Beef Cattle or Sheep Are Grazed All of Resulting Manure Is Left on Soil—Lime and Phosphate Are Favored.

(Prepared by the United States Department of Agriculture.)

There is no system of agriculture that maintains the productivity of the soil better than grazing, according to observations of the United States Department of Agriculture, especially where the animals are kept continually on the pastures. Some of the best pastures in southwestern Virginia have been grazed for at least 100 years. Many of them have never been plowed.

The difficulty in getting a good sod on land that has been cropped with grain for a few years has proved the wisdom of keeping the land permanently in grass. It must be borne in mind that there are striking differences in methods of grazing. Where beef cattle or sheep are grazed, all of the resulting manure is left on the pastures, and the land is further enriched if the animals are given additional feed during the winter. This is usually not the case on dairy farms, where the cattle spend much of the time in yards or stables.

Grazing Is Best Means of Maintaining Fertility of Soil.

Grazing is not sufficiently remunerative to justify the liberal use of commercial fertilizers, and very little is ever used in the bluegrass region on the pasture lands. In England it is not uncommon to apply basic slag at the rate of 1,000 pounds per acre to permanent grassland. Some farmers in the bluegrass region of Virginia are beginning to use lime and some form of phosphate on their pastures. This improves the stand of grass, but there are no data available to show whether the increase will cover the expense. In the absence of any experimental data, every farmer is advised to experiment on his own fields in a small way. An application of 500 pounds of acid phosphate or of bone meal to a half acre in an old pasture will soon show whether it is advisable to use fertilizers. If this quantity makes a marked improvement in the stand of grass, less might be beneficial.

MILK GOAT INDUSTRY GROWS

Animal Will Supply Sufficient Amount of Milk for Average Family—Easily Kept.

The production of milk goats has for a great many years been an important feature of the live-stock industry in many European countries, but it has never secured a very strong foothold in the United States. In this country the goat has always been an animal of more or less ridicule, as the majority of the people do not realize the possibilities of certain breeds or types that have been bred for many years along definite lines, say specialists of the United States Department of Agriculture.

In continental Europe milk goats are largely used by families unable to keep a cow, and great benefit is derived from having fresh milk at hand and at a low cost. In those countries the goat is often spoken of as the "poor man's cow."

During the past several years considerable interest has been manifested in the milk-goat industry in this country. The fact that the goat will supply sufficient milk for the average family and can be kept where it would be impossible to keep a cow is beginning to appeal to many people, especially those living in the small towns and the suburbs of the large cities.

The milk-goat industry is only in its infancy in America, the department specialists say. This type of goat is adapted to our country, and the industry should become of greater importance every year.

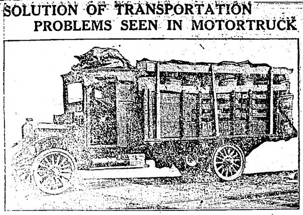
SOLUTION OF TRANSPORTATION PROBLEMS SEEN IN MOTORTRUCK



Farm Truck in This Load Will Go Directly to Dealer at a Market Fifteen Miles Away and Arrive in Fresh Condition.

(Prepared by the United States Department of Agriculture.)

A steadily increasing number of shippers are looking toward the motortruck for the solution of their transportation problems. Farmers are included in this category, and it may therefore be well to point out, as the result of actual experience of others, the things they should consider in connection with the use of motortrucks to haul their produce to market.

In very few instances, say experts of the bureau of markets, United States Department of Agriculture, is it advisable for a farmer to purchase and operate a motortruck solely for his own needs, as the initial investment, cost of upkeep, and the limited time the truck is likely to be in use make the venture expensive and disproportionate to the convenience secured.

Where trucks are operated by private individuals for profit the owner of the truck usually operates between certain points on a fixed schedule. The farmer assumes no risk. He simply pays whatever the rate for cartage may be, and may find the use of this means of transportation an advantage over the railroad or over hauling his produce to market himself, by team. At the same time it has often occurred that when the farmer had learned to depend upon this service, the rates were [illegible] be raised to a point that the farmer could ill afford to pay, or that another motortruck operator would enter the field with [illegible] that both operators were compelled to go out of business, leaving the farmer without any truck service at all.

One Sure [illegible] Venture.

It may be well to consider the basis upon which a farmer may secure motortruck transportation at a nominal cost and create a service upon which he can place full reliance.

There are several co-operative motortruck associations in existence, of which, perhaps, the Farmers' Co-operative company of Harford county, Maryland, has had the largest measure of success. The territory served by the association is a very productive agricultural region. Many of the farmers ship milk to Baltimore, some raise truck crops and others practice general farming.

The association rates on many commodities are decidedly lower than those of the railroad. The members say that the saving of time in marketing their produce is a big advantage, also. For example, when the farmers hauled their produce to market by wagon they had to start out at midnight and did not return home until nine o'clock the next morning. Now, at least eight hours of that time is saved for other work.

But while the Harford County company has had considerable success, it conditions not been possible had the condition not been favorable for the operation of a co-operative motortruck route. This fact should not be lost sight of; and for the benefit of those contemplating the establishment of co-operative motortruck associations the following points should receive careful consideration:

Factors to Be Considered.

A careful survey should be made to determine the adequacy of present transportation facilities, the reasonableness of the rates charged, the approximate daily tonnage available for movement in each direction, the character of the roads over which the trucks must be operated, and the general sentiment of the community toward such an association. The distance from market should not be more than 40 miles, and there should be sufficient volume of produce to warrant reasonably constant operation of the trucks throughout the year.

It having been concluded that the co-operative enterprise will be a decided advantage, only men who have demonstrated their business ability in handling their private affairs and who exercise a good influence among the members of the community should be selected as directors. The secretary should be a man with energy, tact, business ability, and a high appreciation of the farmer's interests. The capitalization of the association should be large enough to permit the issuance of enough stock to pay for the trucks in cash, to assure a sufficient amount of cash on hand as working capital, and to have enough unissued stock to provide for future sound extension of the business, as well as a depreciation fund to replace worn-out equipment.

Make Service the Watchword.

The trucks should be selected only after a thorough and unbiased consideration of the various makes. Records of performance, of cost of operation and maintenance, furnished by actual operators of trucks rather than by agents of truck manufacturers, should be carefully considered in the light of present and prospective needs of the association.

Prepared by the United States Department of Agriculture.

From 26 local egg circles which left the problem still unsolved, to a statewide egg-marketing association with central offices in Portland, is the step taken by poultrymen in Oregon in solving the egg-marketing problems. The story, officials of the bureau of markets and crop estimates of the United States Department of Agriculture believe, points a lesson for egg producers in other parts of the country. Recent reports of the success of the association were received by them with much interest, as being an outgrowth of community egg circles along lines advocated by the department.

Egg circles, they say, are good to start small groups of producers along the right course, but do not solve the larger egg-marketing problems, for as soon as a circle grows to such a size as to handle a half carload of eggs it becomes a real business proposition.

Handle Eggs for Few Producers.

The circles in Oregon were organized in the leading poultry-producing sections and each operated independently of the others for a while, selling their eggs to Portland produce dealers or to private customers, such as hotels and restaurants. They found however, that they were still helpless and had very little control over their products. Some eight or ten circles near Salem co-operated through the Salem circle manager, but the business was so small it was not very encouraging. Things went from bad to worse, and it was decided to form an exchange with offices in Portland to which all the circles could consign their eggs.

This move was ridiculed by produce dealers, for they knew the farmers were not under contract with the circles or the exchange; the dealers, therefore, would be able to obtain their supply of eggs by offering higher prices at the country buying points than the exchange could realize on the market. During the egg-storage season some of the firms paid more in the country, and, as they predicted, the exchange practically failed, and it appeared for a time that co-operation in the poultry business was at an end in Oregon.

A study was made of the Poultry Producers' association of central California, which was more successful, and as a result after a year's effort, the Oregon producers launched forth again to do their own business on a new basis. A state-wide membership campaign was undertaken, and the producers were asked to join the association and sign a three-year contract, or marketing agreement, whereby their whole production was to be delivered to the association to be marketed. These contracts and the storage of surplus production during the storage season placed the association in position to be an important factor in the Portland market.

Modern methods of grading, packing and standardization were adopted, and all eggs are now candled and graded into three classes. Those which are of the finest quality are put under the Diamond brand, while No. 2's, which contain off colors, undersized and off-shaped eggs, are graded out; No. 3's are sold to the bakery trade. The business during the year was expected to reach a volume of approximately 2,000,000 dozen.

During the present season the association has shipped several cars each week to eastern markets, thus keeping the Portland market clear of surplus and in a stable condition. The success of the association has been so great and the increase in business so rapid that as recently as February no new members were being admitted, although applications at the rate of 30 a day were received. The reason for closing the membership temporarily was that they were storing eggs and the finances of the association did not permit handling additional supplies from new members.

Organized on Co-operative Basis.

The association is organized on a co-operative basis, with both common and preferred stock. Each member is obliged to purchase a $10 share of common stock for each 100 hens or fraction thereof. The preferred stock carries no vote and is limited to an 8 per cent cumulative dividend. Some $40,000 preferred stock has been sold and is being retired by a levy of one-half cent on each dozen eggs. The operating expenses of the association

Hard Going.

"I can't sell my history of the war."

"Why not?"

"Too many people were in this war. And many of them can see flaws in my history."—Louisville Courier-Journal.

INSPIRATION

By CORA E. CRAWFORD.

©, 1921, by McClure Newspaper Syndicate.

"Congratulations, old boy. I hear you've sold another story!"

"Yes, and darn lucky I did, too! I was getting pretty hungry! But how's yours coming on?"

"Not coming at all. I'm still hunting for the Big Idea!"

"Well, you can afford to take a rest—that last check of yours was fat enough! The ones I get are usually just about enough for a feed or two."

"I know, Phil. That's why I've been trying to get you to put some time into your work. Mold it, build it. Honestly, now, how long since you've had an acceptance—before this one, I mean?"

"Oh, not since February, but—"

"And this is May! Good heavens! But how many have you written?"

"Oh, one a day. Well, not on an average of that, of course. I do write one in a day, but sometimes I do not write a thing for a week or more."

"That's no way, Phil. A writer should work systematically. He should plan, then construct, and reconstruct, and, finally, polish.

"Say, I'll tell you! If you've nothing much to do, just hop on this bus with me, and I'll show you how to harvest a whole crop of ideas!"

It was the One Hundred and Sixty-eighth street bus, and went via Riverside, and it also became crowded before it reached Fifty-ninth street. Ideal as were the conditions, however, Phil seemed unable to make good his promise.

"Wait, we'll go back!" he reassured, optimistically.

At One Hundred and Sixty-eighth street everyone but the two ladies ahead got off the bus. Phil and Al changed their seats. A woman and a child got on. A man. Another woman.

"Well, Phil, here we are at One Hundred and Twenty-fifth. There are six people on the top of this bus. Now, where's your story?"

"I defy anyone—" began Phil, when the bus stopped for a moment and a man and woman staggered down the aisle on the roof and fell into the seat just in front of them.

They could see the bit of her superbly tailored back not hidden by the magnificent fur she wore.

"Oh, boy, she's a pippin!" exclaimed the impressionable Phil, but in a discreet whisper. "I say, there's your story! Beautiful, cultured girl, forced by family into marriage with newly rich but otherwise impossible, man, twice her age!

"Another man, if you will! Real love for purity's sake, if it suits you better! At last, rebellion, which brings forth the man's brutality! (Observe the thick bull neck, cruel jaw.) Then, either spirit broken and resignation to a life of ugliness, slowly pining away from spiritual and mental starvation, or an uprising—creature at bay, you know, and all that sort of rot—courageously effecting a release from bondage!

"Or if you don't want that line of stuff—the beautiful daughter, reared among the highest culture in the land, at a fashionable finishing school, say; then forced to home life with uncouth, coarse, crude father, who believes that his millions more than justify his manners—or lack of them! Daily humiliations! Private indelicacies! Public demonstrations! Friends visibly amused, patronizing or disdainful! All attempts to humanize the brute, civilize the savage, unavailing! How's that, Al? There are a hundred and one ways it might end. Say, look at him now. Beauty and the Beast. Innocence, refinement, culture, sensitiveness—"

Phil was interrupted by a voice in front. She had not spoken before, but now that the sudden lurching of the bus had threatened to roll her burly companion into the aisle and he had moved closer to her side to prevent such an indignity, she offered vocal objection and in no uncertain terms.

"Hey, shove over there, Bull! What d'yer think I am, anyway!"

"I ask your pardon, ma'am," returned the big man, quite politely. "That curve nearly set me off the seat. 'Twa'n't built for folks my size, anyway. Well, I'll sit across the aisle there—reckon you're safe enough. Not apt to jump off the top of this bus, eh?" laughing.

"Huh! Better tie us together with them bracelets, hadn't yer? I'm some little escaper, yer know!"

"I'll tell the world you are! But I guess you're caught this time. I'll take a chance, anyhow." And he moved across to the seat that had just been vacated.

Al chuckled incessantly. Phil sat in flushed silence. When he could stand it no longer he burst out: "Don't care, Al, the ideas were there, just the same. Fiction's fiction, isn't it?—not fact always. But I'll make this very fact fiction, see 'f I don't! I'll make a story out of it just as it is!"

And he did. This was it.

Ability Recognized.

"You never quote the poets in your speeches any more."

"No," replied Senator Sorghum. "I find that the custom is likely to cause confusion. I once quoted from 'Paradise Lost,' mentioning the author. Some of my dissatisfied constituents got together and said it might be a good idea to look old John Milton up and groom him as a candidate for my job."

COLORADO ADOPTS U. S. POTATO GRADES

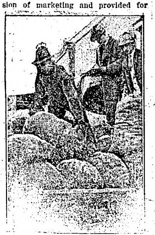
Eleven States Now Use Federal Standards Officially.

New Division of Marketing in the Mountain State Also Is Preparing Grades for Apples and Other Kinds of Fruit.

(Prepared by the United States Department of Agriculture.)

Adoption of United States potato grades in Colorado has increased the amount of the crop marketed on this basis by more than 12,000,000 bushels, according to the August estimate of the bureau of markets and crop estimates, United States Department of Agriculture, and raises to 11 the number of states that have made the United States grades official. Although the use of the federal standards has been optional since the days of the United States food administration, they are now used officially for grading 30 per cent of the total crop and unofficially for 30 to 45 per cent more.

Following the lead of other western states, Colorado created at the last session of the legislature a division of marketing and provided for



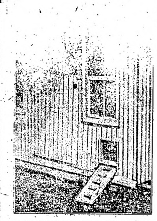
[illegible] Officially Graded [illegible] Colorado.

the inspection of fruits and [illegible] on the basis of state grades. [illegible] division started work in [illegible] hearings were held in producing sections throughout the state for the purpose of establishing practical standards that would be satisfactory to the trade.

These conferences led to the [illegible] adoption of the United States grades recommended by the United States Department of Agriculture for potatoes, onions, cabbages, head lettuce, rough and washed celery, cucumbers and fresh tomatoes. State standards were also promulgated for beans, cauliflower and sacked vegetables.

Apple grades have been prepared also by the Colorado division of marketing, in co-operation with the bureau of markets and crop estimates, after a series of hearings, and grades for boxed and bulk stock will be announced in the near future. Owing to the late start of the work, the division of marketing will not attempt the inspection of peaches or pears this season.

The new work is receiving enthusiastic support from most of the growers and shippers, who feel that it will do much toward building up the reputation of Colorado products in the markets. Although the service is not yet fully organized, a total of 1,000 cars were inspected during the first month's operation.



Small Colony House in Use on Government Farm at Beltsville, Md.

South. Another method of making a cheap, tight wall used extensively in colony-house construction, is to use boards 10 to 12 inches in width placed vertically with the cracks covered with battens 2 to 3 inches wide.

Paint adds greatly to the appearance and service of all buildings. One may buy ready-mixed paints, or get the pigments and oil and mix them. All surfaces should be clean and dry before they are painted. Use a priming coat of equal parts of paint and linseed oil and then cover with one or more coats of paint, and brush it thoroughly into the surface. Whitewash is cheapest of all paints, and may be used inside or out. It can be made by slaking about ten pounds of quicklime with two gallons of water; covering the pail with cloth or burlap; and allowing it to slake for one hour. Water is then added to bring the whitewash to the proper consistency.

Largest Drug Store.

Newark, N. J., claims to have the largest strictly retail drug store in America, if not in the world. The establishment employs 86 persons, including 16 registered pharmacists and 20 women.

Tide!

Browne—Faith will move mountains.

Towne—That's why I prefer a vacation at the seashore. It's there when you want it!

DEFECTIVE PAGE

Stepping on It

Speaking of the days of the inflated dollar, old Si Chestnut said: "By gum, it's a fact that sor a time a nickel's worth of oat straw and four cents' worth of turkey feathers rigged up as a woman's hat would fetch more than the price of a yearling calf."

In fact we all felt the effects of the inflated dollar. Getting the inflation out of the dollar is something like getting over the effects of a "jag" in the days before home brew became popular. Dollars are valuable now because their purchasing power has increased, which is all the more reason why you should save them. Nay we help you?

FEEDING TESTS WITH FOWLS

Mixture of Bran, Middlings, Meat Scrap and Corn Meal Is Ideal for Producing Eggs.

As a result of eight years' feeding tests at the United States Department of Agriculture poultry yards at Beltsville, Md., a mash feed has been compounded which gives uniform high egg production. This mash, which has been tested for three years, is made of 4 per cent bran, 4 per cent middlings, 26 per cent meat scrap, and 66 per cent cornmeal. In the experiments the hens were allowed to select their own mash ingredients. This is the proportion of these different feeds which they ate during the year. Several pens of 30 hens each, both of Leghorns and of Rhode Island Reds, have averaged from 140 to 155 eggs apiece while this mash was fed. While the mash seems to be especially adapted for Leghorns, it has given very good results with Reds. Wyandottes and Plymouth Rocks were found to get too fat on the ration and a mash somewhat lower in meat scrap has given better results with these breeds. Both the Wyandottes and Plymouth Rocks at Beltsville are large standard sized fowls. The tendency to become overfat on this mash probably would not be found in a smaller type of Plymouth Rocks, such as is often found on commercial poultry farms.

STORE VEGETABLES IN BOXES

Where Winters Are Mild, Beets, Carrots, Turnips, Etc., May Be Placed in Barrel.

In sections where moderate winters prevail a box or barrel set below the surface of the ground and fitted with a movable lid provides suitable storage for such vegetables as beets, carrots, turnips, etc. This type of storage is adapted to sections where the bank or pit is used, or to parts of the country where the ground does not freeze to a depth of more than a few inches. Through the aid of such protective coverings as leaves, straw or manure placed on the lid of the storage box, it is possible to protect the vegetables from any sudden extreme of temperature. On account of poor drainage some locations are not suited to these underground storage boxes. In any location care must be exercised to select a site where water will not accumulate in the box.

This type of storage is much cleaner and more accessible than the ordinary bank or pit, and in most cases its cost is very small. A number of these boxes can be provided so that part of the vegetables can be taken out without disturbing the remainder.

Selection Is More Carefully Made Than Average Person Thinks—Defects Looked For.

Not every tall chestnut tree is worthy of becoming a telephone pole—the selection of poles is more carefully made than the average person thinks. Chestnut and eastern white cedar furnish the bulk of the eastern pole timber. Specifications for chestnut poles generally require material to be of good quality second-growth timber, of specified dimensions, butt cut, squared at both ends, reasonably straight, well proportioned from tip to butt, peeled and with knots trimmed close.

Defects looked for in inspection are crookedness, split tops and butts, sap and butt rot, checks and shakes. Poles are assigned to two or three classes according to their length, top circumference and circumference measured at 6 feet from the butt. Poles of the 40-foot class, for example, are required by one representative pole company to be 24 inches in top circumference and 48 inches in basal circumference, while second-class poles of the same length measure only 22 and 46 inches, respectively, at the two points.

As a guide to selling farm timber to the best advantage, the United States Department of Agriculture recently issued Farmers' Bulletin 1210, Measuring and Marketing Farm Timber. Copies of the bulletin may be had upon application to the department at Washington, D. C.

Helpful Oklahoma Frogs.

Frogs assisted federal and county officers to locate a moonshine still on Bushy mountain, near here. The officers were hunting a little lake, beside which the still was said to be operating. They had searched for some time when they heard the croaking of frogs. "Follow the sound and we'll find the lake," one of the officers said. Finding a sixty-gallon capacity still and a quantity of corn mash on the banks of the lake was the result. —Muskogee Correspondence the Oklahoman.

John E. Olson of Fourtown was looking after business matters in Grygla on Wednesday.

Julius Stephenson went last Saturday to St Paul, where he is visiting his son LeRoy and family.

Miss Ruth Clark of Langdon, N. Dak., is visiting her sister, Mrs. J. A. Sundquist, this week.

Oliver Resan, Miss Lena Resan and Mrs. J. Stephenson went to Thief River Falls Tuesday afternoon.

Miss Erma Johnson of Thief River Falls was the guest of Mrs. Theo Tandberg Monday and Tuesday.

Miss Florence Burns, who teaches in the Grimley district, spent Sunday with friends in Thief River Falls.

Mrs. R. H. McDonaln nnd Miss Mildred Argall were Thief River Falls visitors between trains Saturday.

R. H. McDonald and A. B. Johnsrud returned Monday from their hunting trip. They didn't see any "deer."

Willard Stephenson is reported as gaining up finely after his operation and expects to be discharged from the hospital next week.

For Sale or Trade—Three thoroughbred Shorthorn bulls. Will sell, or trade for milch cows or sheep.—A. T. Nelson, Aighlanding, Minn. nI8 5t

Miss Olga Grimley went Saturday to Thief River Falls and met Mrs. Albert Halvorson, who was returning from a visit with friends at Eau Claire, Wis.

Mrs. Vake, Mrs. Josephson, Mrs. Julius Stephenson and Oscar Kulseth attended the Ladies' Aid social at Edwin Hanson's Wednesday afternoon.

Bernt Tonem left Tuesday for the country northeast of Shilling, expecting to bag a deer or a moose. Anton Lien officiates at the pool hall in his absence.

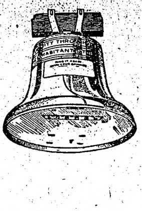
As Charles Johnson was starting out Tuesday for a load of hay an auto driven by Frank McGinty of Thief River Falls collided with him and tipped Johnson, hayrack and mules into the ditch. There was no damage except a broken reach.

Commissioner Hanson was in town Wednesday returning from attendance at a special meeting of the county board. He informs us that the one and one-half miles of new road from Goodridge south to the Elwell road will be gravelled this fall.

Mr. and Mrs. M. O. Seavey entertained a party of young people from town Tuesday evening in honor of Miss Mildred, who is making a visit at home. A most enjoyable evening was spent in candy pulling and dancing. At 11 o'clock a light lunch was served.

The masquerade Friday evening was a success in point of atteudance, but the maskers were few. A very enjoyable time was had. The first prize, for best costumes, was awarded to Misses Agnes Vaughan and Eunice Tvedt. Miss Hilda Holte and Guy McEnelly took the second prize. The dance Saturday evening had a fair attendance and was a very pleasant affair.

At a meeting Wednesday evening to consider the electric light situation it was shown that the electric light bills are behind in payment to an amount of something like $500. It was the sense of the meeting that the village council collect before December 1 all delinquent bills. The matter of putting the accounts of the plant on a meter basis was discussed, but it was thought best to leave that matter until a later date.



Idle Money Is an Expense

Make your money work for you. A Term Savings Account in this Bank works for you every day, earning 5 per cent interest compounded semi-annually..

Your own good judgment will tell you that the only way to success is to save and then rest while your money does the work.

Begin today—a dollar is enough to start an account here.

To keep up saving you should have one of our Liberty Bell Banks in your home or office. It will spur you on to indedendence

School Notes

School will close for the usual Thanksgiving recess on Wednesday afternoon.

Stuart McLeod gave an interesting and instructive talk to the class in animal husbandry on the Guernsey breed of cattle last Tuesday afternoon.

An opportunity class was organized this week under the direction of Miss Giefer. This class will study phonics, the science of speech sounds, a knowledge of which becomes an especially valuable aid in the independent pronouncing of words, as well as an aid to correct spelling.

The three upper classes in high school have perfected their organizations by electing their respective class officers as follows:

Seniors—Roy Olson, president; Joseph Christianson, vice-president; Christina Bundhund, secretary; Daniel Payne, treasurer.

Juniors—Eunice Tvedt, president; Maggie Johnson, vice-president; Ruby Thompson, vice-president; Clenora Urdahl, secretary; Mabel Graff, sergeant-at-arms; Olga Grimley, sergeant-at-arms.

Sophomores—Agnes Vaughan, president; Ida Anderson, vice-president; Edith Scheie, secretary; Mabel Iverson, treasurer.

MINNESOTA HISTORICAL SOCIETY

THE GOODRIDGE BANNER

VOLUME XV, No. 44. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, NOVEMBER 25, 1921. $1.50 PER YEAR

Livestock Sale Cancelled

The sale planned by the Red River Valley Live Stock association for November 23 has necessarily been cancelled as a sufficient number of stock was not consigned to make this sale possible. Breeders generally throughout the valley have preferred to make sale consignments to the usual sales that have been held during the week of the winter shows. The expression of livestock men is very pronounced for the regular sales that will be held at the Winter Livestock show, February 6 to 10, 1922.

Indications are very favorable that all breeds usually represented at the winter shows will have consigned for the sales some of the best individuals of the respective breeds. Breeders are becoming reconciled to the lower prices and have determined to keep on with constructive livestock improvement in the Red River valley.

The coming winter sales, February 6 to 10, will be one of the best opportunities ever presented to livestock men of the valley to obtain good foundation stock and to add better animals to herds that have already been started. Now is the time that livestock breeders should begin to prepare for the winter livestock show and sales. Those who expect to add something better to their herds this winter can well afford to keep in mind the breed sales that will be held during the week of February 6 to 10, 1922.

Does It Pay for the People of Minnesota to Buy Christmas Seals?

As the fourteenth annual sale of Christmas seals is about to start, this question is put squarely up to the people of the state by officials of the Minnesota Public Health association.

In the United States as a whole 114 out of every 100,000 people died of tuberculosis in 1920, while in the state of Minnesota 90 people out of every 100,000 died of tuberculosis, which goes to show that the work against this disease in Minnesota is bearing fruit.

If we stop to consider the enormous amount of money that has been spent for so called consumption cures—which of course never cured—how much better off are the people in Minnesota when they buy a few seals to aid the Minnesota Public Health association and the county public health associations to teach the people how tuberculosis and other preventable diseases can be prevented and combatted.

Buy Christmas Seals to aid this movement.

"The Goodfellow" To Be Given Soon

Much Interest Shown in Local Play Ventuoe

The members of the American Legion who have undertaken to present the comedy drama, "The Goodfellow," are concentrating every effort to have the play ready for presentation early next month. The cast has been practising almost every evening the past week and in the coming week they will be put through concentrated practise periods to insure the necessary polish for the final performance. Those who are acquainted with the play and who have viewed recent rehearsals of the cast are confident of the success of the undertaking and assured that its appearance will be met with approval.

Story of the Plot

John Dawson, open hearted, verging upon prodigality, is not a spendthrift though considered such. When a suspicious robbery occurred and suspicion [illegible] to his door, he experienced the fate of most "goodfellows;" for his fair weather friends deserted him. But Jane Madison, his fiancee, who had troubles enough of her own without assuming those of some one else, stood faithfully by. The theme is well supported and carried to a logical conclusion. It contains a thrilling mystery and touches of delightful humor.

"Between the Acts" Features

The actual playing time of the "Goodfellow" is about two hours and fifteen minutes. Between the acts a number of minstrel stunts will be given in front of the curtain. Arrangements have also been made for a five piece orchestra to furnish music before the drawing of the play proper.

A "Different" Entertainment

It is now a long time since a home talent play was given at Goodridge and it is expected a capacity house will view the performance of this play. The idea of a home talent production at this time has been received with marked enthusiasm. Definite announcement as to date when the play will be given will appear in the next week's issue.

ERIE ECHOES

Mickel Jorde of Meckinock, N. Dak., arrived Saturday evening for a brief visit at the home of his son-in-law, L. B. Johnson.

Rev. Hoyum conducted religious services in the Clover Nook school house Sunday afternoon.

Edward Dempsey, nimrod, lumberjack and ex-front-line soldier, was a pleasant caller at Camp Sub-Urban Saturday afternoon, en route to Thief River Falls via Goodridge.

The Teachers' Progressive league held a session in the SE Star school house Friday.

Sven Swenson and Mr. Skauge of Highlanding have been assisting H. Folkedahl on the latter's new barn during the week.

Iver Iverson bagged 12 skunks in two days' time, which would seem to be a pretty good "haul," never to mention the perfume.

Z. J. Hole and Glennie Lien were evening callers at H. C. Iverson's Sunday.

Ole Nerhus, Tollef Hovet and Ludvick Johnson delivered cattle to Goodridge Friday for shipment to South St. Paul.

Salve Omlid and Hilmer Iverson were guests at the Zakarias Hole home Tuesday evening.

Forming Good Reading Habits

If parents wish their children to form good reading habits they must first form such habits themselves. And there is no better way to do this than to bring into the household a periodical that will be of interest to every member of it; that will supply the best reading for old and young. Among the periodicals of this description The Youth's Companion is unique. Not only does it aim to entertain and inform boys and girls in their teens, as its name suggests, but there is not a page in it that parents can pass over with indifference.

The 52 issues of 1922 will be crowded with serial stories, short stories, editorials, poetry, facts and fun. Subscribe now and receive:

1. The Youth's Companion — 52 issues in 1922.
2. All the remaining issues of 1921.
3. The Companion Home Calendar for 1922.

All for $2.50.

4. Or include McCall's Magazine, the monthly authority on fashions. Both publications, only $3.00.

THE YOUTH'S COMPANION,
Commonwealth Ave. & St. Paul St.,
Boston, Mass.

The Junior Livestock Show

Four hundred Minnesota farm boys and girls wound up the summer month's work by a thrilling exhibit at the Junior Livestock show in St. Paul. Calves, sheep and hogs raised by the club members were shown for two days and afterwards auctioned off to the highest bidder. The grand champion exhibited by Miss Virginia Scanlon of Belview Belview sold on Friday afternoon for 50c a pound. The animal was a grade Angus weighing 1,350 pounds. The price was 30c a pound over that brought by the Wisconsin junior champion at the Madison show.

Nearly two hundred lambs were exhibited by the sheep members. Marion Hunt and Helen Satre from the Pennington county sheep club were there in person with their lambs. Helen won fifth, which was a very good place considering the number of contestants showing. Following the show a banquet was given to all members in attendance. The club members were photographed by motion picture camera men whose films will be displayed all over the country. Mayor Hodgson of St. Paul presented the silver cups to the winners, after declaring that their triumphs were not complete in themselves, but that they should lead them to even greater endeavor and to cooperate with their associates in promoting not only good animal husbandry but better citizenship.

PREVENT LOSSES IN SHIPPING HAY

Invoices Should Precede Car and Contain Full Facts Concerning Consignment.

FOLLOW [illegible] GIVEN

Exact Weight of Hay and Number of Bales in Car Should Be Stated on Bill of Lading Together With [illegible]

(Prepared by the [illegible] Department [illegible])

Careless and [illegible] billing or invoicing are responsible for much of the delay and losses [illegible] by hay shippers, says the [illegible] of markets and crop estimates, [illegible] States Department of Agriculture. Accordingly, the [illegible] the following suggestions [illegible] the shipment of [illegible]

Follow billing [illegible] in detail, [illegible] route and [illegible] road when requested.

Forward bills of lading and invoices promptly.

Prepare invoices carefully, stating car initial and number, date of shipment, number of bales, total weight of car, or of each particular kind or grade and price [illegible] available.

Follow Instructions Closely.

If the billing instructions furnished by the consignee are not clear, it is generally a better plan to hold the shipment until satisfactory instructions are received than to take the chance of billing it incorrectly. When specific instructions as to routing or delivery are given they should be followed in detail, as it is frequently the case that shipments arriving over roads other than those specified must be switched at considerable cost before delivery can be made at the desired location. In many markets hay shipments arriving in certain railroad yards will not sell as advantageously as when they arrive in other yards because of unfavorable switching facilities or because of the distance of the yards from buyer's warehouses. Commission merchants and dealers in the markets are familiar with these factors and, when possible, request billing that will not subject their hay shipments to these handicaps.

Buyers may also desire to reconsign their hay upon arrival or change the billing while the car is in transit; but if the hay is shipped via another line from which they cannot reconsign the shipment, they may suffer a considerable loss which can be charged back to the shipper, if he has not followed shipping instructions.

Forward Bill of Lading Promptly.

When the bill of lading has been signed by the railroad agent it should be forwarded promptly to the consignee, unless it is desired to attach a draft to it, in which case it should be placed in the bank for transmittal to the consignee at the earliest possible moment. When cars are shipped only a short distance, and especially if billed to shipper's orders, the bank should be directed to forward the draft and bill of lading direct to consignee's bank, if known; otherwise to a bank in his town. If this precaution is not taken the bank may follow its usual custom of sending the documents through the regular channel of corresponding banks, which may delay delivery to the consignee until after the car of hay has arrived and been placed on demurrage.

Selling Hay at Terminal Market.

In addition to careful and accurate routing of the shipment, the exact weight of the hay and the number of bales loaded into the car should be stated on the bill of lading, and it is also a good practice to state the kind and grade of hay comprising the shipment.

Making the Invoice.

When a car of hay is consigned to a dealer in a distant market a letter to him stating that a car of hay is being shipped is not sufficient information upon which he can arrange to the best advantage for its arrival and sale. Whether a car is consigned or has been sold on track or to arrive, a carefully prepared invoice should be sent the consignee at the time the car is shipped. Such an invoice should show the car initial and number and date of shipment. Also the kind and quality of hay, together with the number of bales and the total weight. If two or more distinct kinds or grades have been loaded the number of bales and the total weight of each kind or grade should also be shown.

THE NEW COAT.

By MARIE T. BONNER.

© 1921, by McClure Newspaper Syndicate.

Being a woman, Samantha Huskins possessed a goodly portion of that leaven of human affairs—the dramatic sense. Living as she did in the isolation of a northern Maine farm, her husband and few neighbors afforded small opportunity to use that sense. But, given the chance, she made the most of it.

It was one October evening when she and Ephraim—her husband—sat together in their kitchen.

Finally she spoke, casually enough, "Winter's most here!"

"Means I'll have to build a new cow shed directly, I reckon," he growled.

Her husband sighed again. "I'll fetch me home a new pair of rubber boots next time I'm in the city," he said.

Samantha's eyes brightened and she rocked her chair with short, nervous jerks. "That'll be cap'tal, Eph—jes' what you need! An' fetch me some black goods for a new coat!" she cried.

Eph sat erect. "Now, Samantha! You know I ain't able to fetch you a new coat! That cow shed'll cost me nigh on sixty dollars an' that storm door! I'll have to pay Abe Cotts fifteen dollars to the cent to fix it—an'—!" he spluttered into silence.

In the shadow of the lamp-light Samantha's eyes narrowed—and though she said not another word about the coat the thought of it never left her mind and remained there even until the next day when she went over to a neighbor's for a chat.

Mrs. Carter was a crisp tongued old lady who lived alone on the farm nearest the Huskins house.

Samantha laid the matter before her, "I reckon I'll need a new coat this winter, Mrs. Carter!"

"My shed needs paintin'—" observed Mrs. Carter pointedly.

Samantha stared at her in amazement. "Why Mis' Carter!" she gasped. "I can't climb ladders anyway, 'cause my skirts will catch and trip me!"

"Put on overalls!" Mrs. Carter suggested.

"In Pop-over Junction?" cried Samantha, aghast. Then she laughed. "They'd put me outa church! Reverend Simpton jes' preached agin them New York women wearing knickers las' Sunday!"

But Mrs. Carter persisted. "Come over Thursday noon! 'Mos' everybody'll be down to Saco to the Meth'dist conference!"

By noon Thursday practically everyone had gone to the conference. Ephraim was to leave by the half-past one train. Finally he was off.

"G'by, Samantha!" he called as he rolled out of the yard into the road.

Samantha waited until he was out of sight, then struck out across lots to Mrs. Carter's. She arrived breathless. Mrs. Carter was waiting for her at the gate.

"I got 'em ready for you," she announced.

Now that she actually saw the things, Samantha hesitated and drew back; but Mrs. Carter urged her on.

She rushed the reluctant Samantha into the overalls. Just as she was gingerly trying the first step of the ladder there was a sound of wheels in the road.

"It's Eph, Samanthy!" whispered Mrs. Carter. "Now, when he gits opposite, you turn 'round, careless like, and holler, 'Have a good time at the conference?'"

"Here he is Samanthy," prompted the woman on the ground.

Samantha clung to the ladder with one hand and half turned toward the road. "Eph! Eph!" she called. The driver hauled up the horse until his fore feet left the ground.

"Samantha!" he roared, and his eyes bulged and blazed.

His wife trembled on the ladder.

"Do you reckon he'll divorce me, Mrs. Carter?" she murmured.

Mrs. Carter was equal to any occasion.

"Have a rale nice time to the conf'rence, Eph! Samanthy's painting my shed for me!"

Ephraim found his tongue. "Come down off'n that ladder 'fore you break yo' neck; an' take off them trousers!" he ordered.

"Why, Eph! You'll miss that 1:30 if you don't step on right lively," she cried, and waved gaily at him.

For answer Eph began to descend from his seat.

"I reckon you'll get the coat now, Samanthy," observed Mrs. Carter.

"What was you aimin' to paint sheds for, Samantha?" he demanded.

"She's earnin' some money," replied Mrs. Carter smartly, before Samantha could speak.

"I reckon I kin earn plenty for me an' mine," retorted Eph hotly.

"Even to winter coats?" asked Mrs. Carter coolly.

For a second time, Eph found nothing to say. "C'mon home, Samantha!" [illegible]

In silence she peeled off the overalls and started for the road. "G'by, Mrs. Carter," she called as she reached [illegible]

"[illegible] sure an' get broadcloth, 'cause it's durable and stylish," answered [illegible]

[illegible] his face was still crimson [illegible] lips pressed hard, Eph did not [illegible] his arm as Samantha [illegible] it to pass through the gate. [illegible] the way home she leaned back [illegible], admiring the autumn foliage and cutting and fitting her new winter coat.

CONSTANCE

By ANNIE COLE.

© 1921, by McClure Newspaper Syndicate

When Joe announced his intention of marrying Constance his family had warned him that he would have trouble with a wife who was as spoiled and selfish as Connie. But Joe, feeling that she loved him enough to overcome her selfishness for his sake had paid no attention to the warning.

Now, after six months of married life, the family's prophecy seemed about to be fulfilled. Connie was beginning to assume a martyred attitude and a habit of unmercifully nagging him at every opportunity.

On this particular evening Connie chose to be especially nasty.

"Business as usual, I suppose?" she inquired, sweetly sarcastic, when he came in late to supper.

Receiving no reply, and seeming determined to provoke him, she tried again.

"Do you know," she asked, coolly and deliberately, "sometimes I wonder if it is all business!"

Instead of hanging up his hat he replaced it on his head and gave vent to his temper.

"I am going out to a restaurant! Perhaps some day when it's too late you'll come to your senses! I've had enough!" Slamming the door angrily after him, he left the house.

Connie was so surprised that she forgot the half-framed retort that was on her lips. Joe had never spoken like this to her before. She began to feel uneasy and wondered where he had gone. After two or three hours of trying to amuse herself she went into the bedroom and addressed herself in the mirror.

"I don't care!" she said aloud. "I don't care! I'll show him. I don't care if he never comes back!" And just to prove that she didn't, she threw herself down on the bed and cried herself to sleep.

* * * * * * *

When she awoke it was 11 o'clock. How could she have slept so long? And where was Joe? She wondered if he really had left her, and began to feel shaky. She decided to go to the drug store for a drink.

While sipping a chocolate milk the conversation of two men at the cigar counter came to her ears.

"Where—at Geb & Simmonds?"

"Yes, today—shortage of $10,000."

"Funny mix-up, anyone suspected?"

"No, not yet; but nobody handles the money except old man Geb himself, and that young fellow Joe."

Connie waited to hear no more. Setting down her glass with a thump that startled the sleepy drug clerk, she fled from the store.

Ten thousand dollars! So that is what her incessant nagging had made him do.

As soon as she entered the house the telephone rang. With her heart in her throat she answered it.

"No, he isn't here, Mr. Geb. . . . Yes, I'll tell him to call you as soon as he comes in. . . . No message? . . . Yes. Good-by." She hoped her voice had sounded natural.

So they were after him already.

The sound of quiet footsteps on the stairway sent chills up and down her spine. They had come already! What should she do? With a show of courage that she did not feel she went to the door and threw it open. Her husband stood facing her.

He looked very tired, and the hair about his temples was damp with perspiration. Connie knew she had no time to waste.

"Oh, Joe," she began breathlessly, "can you ever forgive me? It's all my fault! Give it back! Don't let them arrest you!"

"For heaven's sake, what's the matter with you?" demanded the thoroughly bewildered Joe, fearing for his wife's sanity.

The insistent jangling of the telephone interrupted before she could answer. Joe went into the dark hall to answer it, barking his shins on the umbrella stand as he went. Connie listened in amazement. From the sheltering darkness of the hall came her husband's voice—firm, confident, even laughing!

"Yes, I was going to call you, Mr. Geb, but I was afraid it was too late. . . . Yes, I found the error. . . . Nothing missing at all. . . . The joke's on us. . . . A fly-speck that looked like a decimal point threw a whole column of figures out of balance. . . . Tonight at the office. . . . Oh, that's all right; you're welcome. . . . Good-by."

He hung up the receiver.

Then, all of a heap, a very penitent Connie flung herself at him, sobbing out her story, begging his forgiveness and almost choking him with the strangle-hold of her arms about his neck.

"You poor little chump!" Joe [illegible] tenderly between [illegible]

[illegible]

[illegible] yeast had [illegible]. While the [illegible] fairly well, with [illegible] egg production was [illegible] for a short period, [illegible] they soon tired of the mixture [illegible] did not consume it with a relish. [illegible] sequently decreased egg production resulted and the mortality among the fowls which received the yeast was noticeably higher than the pens not receiving it.

It is thought that this mortality was due to changes occurring in the mash which developed while it was being held in a moist condition for the 24-hour period previous to feeding, rather than as a result of the yeast itself. The moist mash was discontinued and the experimental pens were put on a dry mash containing one per cent of dried fresh yeast. The condition of the flock improved materially with this change, and the birds soon resumed their normal appearance, with fair egg production.

However, the egg yield was not greater than that from check pens without the yeast. Thereafter three per cent of yeast which was air and sun-dried and fed in a ground condition was used in the mash without any perceptible increase in egg production. These tests in the feeding of yeast were not conducted on a very extensive scale, not long enough to determine thoroughly its value. The results were not promising and unless some better method of feeding the yeast is found this product is not likely to be of much value for laying hens.

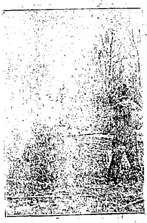
REMOVE TRASH FROM GARDENS IN AUTUMN

Vines, Stalks and Other Rubbish Should Be Cleaned Up.

After Crops Have Been Harvested Soil Improving Crop of Some Kind Should Be Planted If Available Area Is Sufficient.

(Prepared by the United States Department of Agriculture.)

When garden crops are harvested the vines, stalks, and other plant remains should be cleaned up, the United States Department of Agriculture points out. Good gardeners who take pride in the appearance of their gardens remove such trash, as, if allowed to remain, it harbors insects and diseases liable to attack next year's crops. Plant remains from vegetables [illegible] on the same crops next year, but may be burned and the ashes left on the soil or used on other land devoted to different crops.



Burning Rubbish After Crops Have Been Harvested.

Where a sufficient area is available so that part can be devoted to soil improving crops each year, these should be put in as the vegetable crops are harvested. Crimson clover is an excellent soil improver, but can not be grown in all sections. Winter oats, barley, rye, vetch, and combinations of these are good. Where the same area is used for the garden year after year a full application of manure is very desirable. If manure can not be secured, it may pay to sow the garden to one of the soil-improving crops. In many sections there is time between late fall and early spring vegetables for a good growth of these crops.

The Goodridge Banner

Entered [illegible] class matter July 19, 1919, [illegible] postoffice at Goodridge, Minn[illegible] the act of March 3, 1919.

P[illegible] Friday at Goodridge [illegible]

[illegible]

"[illegible] Eunice!" sighed Leslie, and [illegible] she began to understand why she was miserable that evening. It was not altogether envy of her friend. The fact was—she felt that George and she were drifting apart.

Leslie spent a miserable night. In the morning Eunice arrived with the children.

Leslie was astonished at Eunice's appearance. She had always thought of her as the young, immature rather sedate young girl with whom she had roomed at college. Instead of which she saw before her a matronly young woman calm, self-possessed, with two children, a boy and a girl, who made Leslie's heart ache as she kissed them.

It was not until after George's visit that evening that Eunice seemed to thaw.

"So that is George," she said. Then she took Leslie by the hand. "My dear, how long have you been engaged?" she asked.

"Five years," said Leslie, rather frigidly.

"Leslie, do you know that you could have been married for five years and had that much more happiness?" asked Eunice.

Leslie began to explain the circumstances, the long series of misfortunes.

"My dear," she answered, "I know that you have made a great mistake—I should say the great mistake."

"Why?" asked Leslie. "Do you believe in marrying before one is in a position to do so? If George had had your husband's advantages—"

"When Philip and I got married," answered Eunice, "he had just $50 in the world. And we spent that on our honeymoon. The first three years were a continuous struggle. Philip always says that if he hadn't had me he would never have reached the position he holds today.

"If we had waited, as you have waited—where would we be now? Dear Leslie, do you think marriage is a thing that should come after one has made one's way in the world? Philip says that it is part of life, not the reward of life."

Leslie hardly slept that night. And on the next day, after Eunice had gone, she was too ill to go to school.

She knew now that it was not likely that George and she would ever marry.

A ring at the bell—George's ring! He never called at four in the afternoon.

George followed her into the parlor and sat down heavily. His face was unshaven, his tie sagged from his collar; he looked thoroughly dejected.

"Leslie," he said, "I have come to offer you your freedom. I can never marry you."

"The bank has failed," he continued, in a monotonous voice. "Every penny is gone. I am at the bottom of the ladder again. It will mean three years longer. Leslie, I can't hold you. Leslie! Why, what are you laughing about?"

She laughed, and the tears in her eyes were those of happiness.

"My dear," she said, "how would you like to marry me without the house and the furniture and the new trunks and the outfit and the trousseau? Do you want me, dear, or do you want these?"

He leaped up and caught her hands incredulously.

"Do you mean that, Leslie?" he cried. "Why, I have never dared to make that suggestion. Do you—Will you? Today?"

"Tomorrow," answered Leslie, smiling, and then a flood of happy tears blinded her eyes.

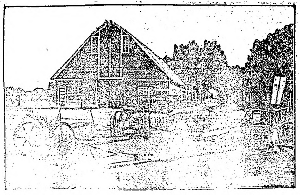
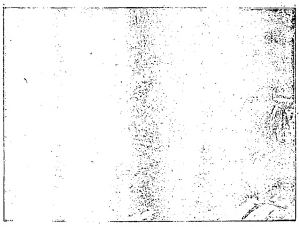
DEFECTIVE PAGE

USE OF FORETHOUGHT AND CARE WILL THWART MANY FARM FIRES



Every Fire Sug[illegible] Preventive and Pro[illegible] That Should Have Been Pro[illegible]



[illegible] May Reduce [illegible] to [illegible]

(F[illegible] the United States Department of Agriculture.)

[illegible] the [illegible] on a farm it [illegible] never can be [illegible] owner must be [illegible] of [illegible] have been the [illegible] years of h[illegible] the [illegible] company wi[illegible] ck, which ha[illegible] ms paid by [illegible] owners. [illegible] insur- [illegible] com- [illegible] portion o[illegible] is im- m[illegible] ever there w[illegible] fires in th[illegible] loss of m[illegible] which 23 per ce[illegible] been prevent- able.

[illegible] to Prevent Fires.

[illegible] of fires was made a s[illegible] in c[illegible] schools [illegible] gatherings, a[illegible] for an entire week in October. The farmer with the accumulation of many years tied up in his buildings may well make every week fire-prevention week.

According to the United States Department of Agriculture, practically every fire is preventable except those caused by lightning or of incendiary origin. Even when the best preventive measures fail and fires break out, preparatory measures will put the farmer and his neighbors in better shape to subdue them.

Every fire must have an initial flame whether it be from a carelessly thrown match or cigarette, an explosion of kerosene or gasoline, an explosion of grain dust in a thrashing machine, or sparks from a sooty chimney or passing engine.

Matches never should be left loose or within the reach of children. Put them in noncombustible containers and have a pocket match safe. Better yet, use safety matches, which can be scratched only on the box.

Smoking never should be permitted around the barn or in the vicinity of inflammable matter. Matches, cigar or cigarette stubs never should be thrown where they can do harm.

Kerosene and gasoline are useful servants, but destructive when let loose.

They should be rigidly confined and never allowed to mix or change places. Kerosene lamps should be solid of base to prevent tipping over. If they are of metal, there is no danger of their breaking and spilling oil. The wick should fit tightly to prevent vapor from the bowl reaching the flame and igniting. They never should be filled in the presence of an open flame.

Gasoline cans should be easily distinguishable from kerosene cans. It is better to store the gasoline in a buried tank. At least the tank should be away from buildings. Vapor never should be allowed to escape in a close room or where there is any fire.

Stoves Cause Many Fires.

Overheated stoves and flues cause many fires. Chimneys should be built from the ground if possible, and should not be attached to any of the framework of the building so there can be uneven settling. They should be clear of the woodwork and should always be kept clear of soot.

Stovepipes should never pass through inaccessible places like a closet or garret. If they must pass through the wall, see that the stovepipe hole is provided with a good "thimble." Where walls and ceilings are near the pipe cover them with metal or asbestos. Every stove should have a piece of sheet metal under it to protect the floor from hot ashes and live coals.

Never leave inflammable rubbish near buildings. Remove it. If it must be burned, pile it in small piles, so the blaze never can get out of control. It is best not to have the children near the fire. This is perhaps a hardship. At least they can be kept from playing with the fire.

When new buildings are to be constructed proper spacing and the liberal use of concrete and masonwork will reduce fire liability. Smokehouses should never be built so that hot [illegible] can start a blaze. Hot ashes never should be dumped in inflammable [illegible].

Fire-Fighting Equipment.

In the way of providing fire-fighting equipment much can be done without great outlay. Barrels of water on the roof and pails of water kept standing in convenient places will possibly save disastrous loss. If there is an elevated tank or a force pump, a hose connection will be found invaluable in time of need. A ladder that will reach the roof should always be available for immediate use.

Sand should be kept handy to throw on gasoline and oil fires; water only scatters them. There are a number of simple chemical extinguishers on the market, some commercial and some homemade.

With the present widespread use of automobiles, a rural fire company, equipped either with motor pump or large chemical extinguisher, or both, can easily be organized and equipped. Every farm fire suggests preventive and protective measures that should have been provided. Take a little time and provide them in advance.

COMBAT WILD ONIONS BY PLOWING IN FALL

Pest Causes Loss of Millions of Dollars.

Important Remedial Method Is to Sow Small Grain, Preparing Land Before Seeding—Maturity of Bulblets Prevented.

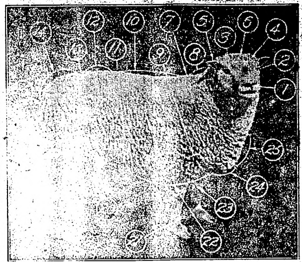
Wild onions, otherwise known as garlic, which cause American farmers millions of dollars' annual loss, can best be combated by deep, late fall plowing. In the opinion of the United States Department of Agriculture. In plowing, the tops should be completely turned under. A jointer attached to the plow, and also disking before plowing, will help to put the tops under. The following spring give the land a thorough preparation and plant to some tilled crop, such as corn in check rows.

It is sometimes impracticable to eradicate this pest completely. An important remedial method in such cases is to sow small grain late in the fall, plowing and preparing the land just before seeding the grain. This method will not destroy the onions, but gives them such a setback that the bulblets do not have time to mature before the grain is harvested.

An important precautionary measure is to sow only grain which is free from bulblets.

Damage from wild onion is of two general classes. Cows eat the young shoots in spring, resulting in tainted milk and butter; and the bulblets which grow in clusters at the top of the stalk in summer are so nearly the size and weight of wheat kernels that it is difficult or almost impossible to separate them except after artificial or over-season drying. Onion-tainted wheat flour is highly objectionable in bread, and wheat thus fouled is shunned by millers. The presence of onions in wheat also interferes with milling operations by gumming the rolls.

SHEEP, OF ALL FARM STOCK, ARE THE MOST DIFFICULT TO JUDGE



The External Parts of a Sheep—1, Muzzle Broad, Lips Thin, Nostrils Large; 2, Face Short, Features Clean-Cut; 3, Eyes Large and Clear; 4, Forehead Broad; 5, Ears Alert and Not Coarse; 6, Poll Wide; 7, Top of Shoulder Compact; 8, Neck Short, Thick, Blending Smoothly With Shoulder; 9, Shoulder Thickly Covered With Flesh; 10, Back Broad, Straight, Thickly and Evenly Covered; 11, Ribs Long, Well Sprung, and Thickly Covered; 12, Loins Broad, Thick, and Well Covered; 13, Hips Wide and Smooth; 14, Rump Long, Level and Wide to Dock; 15, Dock Thick; 16, Twist Deep and Firm; 17, Thighs Full, Deep and Wide; 18, Legs Straight, Short, and Bone Smooth; 19, Cod or Purse in Wether, Scrotum in Ram, Udder in Ewe; 20, Flank Full and Deep; 21, Forelegs Straight, Short, and Strong; 22, Chest Deep, Wide, and Full; 23, Forelegs Wide Apart and Forearm Strong; 24, Brisket Full and Rounding in Outline; 25, Breast Well Extended.

([illegible] Department of Agriculture.)

[illegible] sheep? If you can, you are somewhat above the ordinary run of stock raiser, because of all farm animals, in the estimate of the United States Department of Agriculture, sheep [illegible] most difficult to [illegible]

With [illegible] swine, or poultry the eye [illegible] tell [illegible] as to the quality [illegible] desired, and by [illegible] constantly the breeder or handler [illegible] to estimate their worth point by point. But a sheep with full [illegible] is, like certain members of the [illegible] race, artfully dressed [illegible] may conceal defects that make [illegible] absolutely undesirable, or at least detract from its worth.

Sheep Judging Requires Study.

Nevertheless, sheep judging is possible to anyone who will give it study and practice and the eye is an important agent, although it must be assisted by a careful inspection with the hand.

Any sheep raiser who desires to improve his flock can profit by attending the next county or state fair and following the judges as they go through the sheep pens. If the judges will permit one to try his hand and check up against their findings, it will be much better. A good score card is essential, and one is contained in Farmers' Bulletin 1199, "Judging Sheep," sent on request by the department.

The experienced judge may not appear to spend any time looking at the sheep before he starts the hand inspection; but as a matter of fact, his practiced eye takes in the entire contour, build, and bearing. The student-judge should stand away and carefully view the animal from the front, side, and rear.

The score card allows 25 out of 100 points for general appearance, of which normal weight counts 5; form is given 10, the specifications being straight top and under line, deep, broad, low set for breed, compact, well proportioned.

Under "quality," to which another 10 is assigned, the score card specifies: Hair, fine; bone, fine, but strong; features, fine, but not delicate; skin pink.

After the sheep has been inspected from a distance, one should check up his observations by going over the animal's body with the hand, keeping in mind the first impressions. Practice is necessary to get the correct touch. Pounding and clawing are out of order. Do not muss the fleece if the animal has been prepared for exhibition.

The score card allows 12 points for condition, comprising an even, deep, firm flesh covering, with fullness in shoulder and brisket, thick covering over top of shouldres, back, rib, and thick dock.

Points Noted in Judging.

Head and neck are given nine points, of which five go for a head with clean-cut, strong mouth, thin lips, large nostrils, large, clear eyes, alert look, short face, broad forehead, alert and well-spaced ears. Four points are given to a neck short, thick and smoothly joined to the shoulder.

Ten points are assigned to the forequarters of which eight may be given to the shoulders. They should be compact on top, smoothly joined with neck and body, and well covered with flesh. One point goes to a full, well-rounded, and well-extended brisket, and one to straight, short legs, set well apart.

The body may count 18 points—two for deep, wide, full chest; four for ribs well sprung, close, and thickly covered; six for straight, broad back, thickly and evenly covered with flesh; six for wide, thick loin, well covered.

Seventeen points are given to perfect hind quarters. Level, smooth hips, wide apart, count one; long level, wide rump, thick at dock, four; full, deep, wide thighs, four; deep, firm, plump twist, joined well down on leg, five; straight, short legs, wide apart, one. The udder in ewes or the scrotum in rams counts two if well formed.

Nine points are given to wool—three for quantity, three for quality, and three for condition.

After practice in score-card judging—comparing the exhibited animal with an ideal, for it takes a good animal to score 75 and a choice animal to be marked 90—one is ready to judge by comparing animals one with another. Keep in mind the standard they should approach, and appraise them against one another, point by point, following the same systematic method as with the score card.

It is important to be able to tell the approximate age of a sheep by the teeth. Lambs have a full set of [illegible] milk teeth soon after birth. [illegible] twelve to fourteen months [illegible] permanent teeth appear at the [illegible] [illegible] at [illegible] two [illegible] shorter [illegible] gradually [illegible] mouth sheep [illegible] and should not [illegible]

IMPROVEMENT [illegible] IN WOOL MARKET

Product in Much Better Condi[illegible] Than Last Year.

Much Credit Due Department of [illegible]riculture for Demonstrations Showing Proper Handling and Preparing.

(Prepared by the United States Department of Agriculture.)

Wool received at concentration points for pooling is in much better condition than that handled last year, according to officials in charge of wool pools, who state that the improvement is due largely to the demonstrations conducted last season by the United States Department of Agriculture, [illegible] the proper manner of handling and preparing wool for market. The owners of wool clips who we[re] penalized in 1920 on account of sis[al] twine, burrs or seed have taken pr[ec]autions this season to see that the product is free from objectionable fo[rei]gn matter and in excellent condition [w]hen received at the concentrati[on] point. The percentage of un[illegible]led flee[ces] is much smaller than in 1920, with [a] considerable number of fleeces b[illegible]ed.

Especial emphasis has been plac[ed on] the work of the expert graders [in de]monstrating to producers and [illegible] the value of grading the wool [illegible] sub-divisions within the grade [illegible] [illegible] enable the producers of [illegible] to obtain full value [illegible] basis of grades [illegible]

[illegible] more [illegible] point.

RUNTS [illegible] PROFITABLE

If Stunted Animals Could Be Eliminated Farmers' Incomes Would Be Greatly Increased.

(Prepared by the United States Department of Agriculture.)

A questionnaire survey conducted among 1,000 leading farmers and breeders by the United States Department of Agriculture indicates that about 7 per cent of the annual production of farm live stock in the United States consists of runts and undersized specimens of the various breeds and classes. Farmers report that their annual incomes from live stock would be increased an average of 13 per cent if runts could be eliminated. Better methods of feeding and breeding, breeding better stock, the use of purebred registered sires, good care and systematic attention, better housing and sanitation, proper care of the dam before the birth of young, practical control of such objectable parasites as worms and lice, the control of disease, and the culling from the farm of all stunted stock which indicates no possibilities of successful reformation and rehabilitation are the control methods recommended by these experienced farmers. About three-quarters of them say that it does not pay to raise runts, while the balance maintain that the Tom Thumbs of the live-stock world can be raised successfully only when well bred and when plenty of cheap feed is available and dependable markets are readily accessible.

Farmers Say it Does Not Pay to Raise Runts.

MARKETING POOR HAY CAUSES LOSS

Either the [illegible] or Shipper Suffers [illegible] Trade [illegible].

SHOULD [illegible] STOCK

Advice [illegible] Separate [illegible] According [illegible] Grades, [illegible] During [illegible] and Load- [illegible]

(Prepared by [illegible] States Department [illegible])

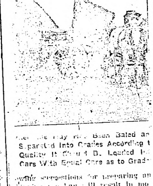
Un[illegible] supply of marketable hay [illegible] small demand, the shipping of [illegible] to market generally results in [illegible] either to the producer or shipper, when but little hay of inferior quality is arriving at a market it is [illegible] absorbed along with the good hay at a discount ranging from $1 to $2 per ton for each grade, each lower grade selling at a discount of from $1 to $2 under the grade next above it.

When receipts of low-grade hay are heavy, there is generally a wide spread in the discount, so that No. 3 hay frequently will not bring within from $5 to $8 of the price at which the No. 1 grade of the same kind of hay is selling. Also a poor demand almost always results in heavy discounts on the lower grades and buyers show a preference for the better hay even at a higher price.

Quality Sometimes Affects Grading.

Investigations by specialists in the bureau of markets and crop estimates, United States Department of Agriculture, show that when any hay-producing section has had unfavorable hay-making weather, which has caused hay to become too ripe or stained, or otherwise damaged, growers or shippers in that section are prone to lower their ideas as to grade requirements. The best hay in the territory becomes No. 1, whether it fills the technical requirements of that grade or not; the lower grades are graded accordingly. This tendency toward leniency in grade interpretations is often communicated to or reflected in the tributary markets, especially if there is a brisk demand.

Indeed, there are so many factors which enter into the marketing of off-grade hay that it is very difficult for producers or shippers of such hay ever to obtain entirely satisfactory results, and the department believes that in most instances it would be a much more profitable procedure to use off-grade or damaged hay on the farm or to sell it locally to someone who has [illegible] it is not [illegible] to dispose of [illegible] hay in this [illegible] it must be [illegible] because of financial reasons [illegible] lack of storage, the department states that the employment of the following suggestions for preparing and shipping the hay will result in more profitable returns:



[illegible] the Hay Has Been Baled and Separated Into Grades According to Quality It Should Be Loaded Into Cars With Equal Care as to Grades.

Keeping Grades Separated.

1. Grade your hay according to commercial standards rather than local ideas.
2. Load cars uniformly and invoice correctly.
3. Choose markets carefully relative to their demand for the kind of hay to be marketed.

When baling from the stack, hay [illegible] should be [illegible] or cut off. [illegible] near the ground at the bottom of the stack also is generally damaged [illegible] to be baled with the good hay. Special care should be taken in trimming the stack to remove all damaged or stained hay. A little of this in a bale of good hay will cause a heavy discount, whereas it can usually be used on a farm in place of hay which will bring a better market price.

When the hay has been baled and separated into grades according to quality, it should be loaded into the cars with equal care as to grades. [illegible] not sufficient hay of one grade is available for a car, another grade may be loaded but should be segregated and not loaded promiscuously with the other hay. It is also a good practice to invoice the hay exactly, stating the number of bales of each kind.

A choice quality of hay will sell well in almost any market. Under present standards lower grades are more difficult to dispose of. Some markets have better demand for certain grades than others. It is important that the shipper knows in what market the best demand exists for the quality of hay he has to offer.

Song, primary and intermediate grade pupils.

Recitation in unison, intermediate grades

Talk, Significance of Thanksgiving Day, Christine Bundhund

Song, school

Interesting posters illustrating several stories the pupils have studied this month were made by the primary pupils this week.

Laboratory work was started in the General Science class this week.

Co. Supt. Gunderson called at the school Friday afternoon

Emma Grimley visited high school Wednesday.

Mr. and Mrs. M. G. Thoreson and Mr. and Mrs. Carl Christianson entertained the members of the faculty to a sumptuous three course dinner on Tuesday evening. Those present enjoyed the occasion very much and mutually agreed that the hosts and hostesses were royal entertainers.

Sitka Rye Flour

Made from the best rye and ground almost as white as any wheat flour, is for sale at the Farmers mill at $1.45 for 49 lbs.

Recipe for Buckwheat Cakes

Take 2 cups buckwheat flour, 2 cups wheat flour, ½ yeast cake, 1 tablespoonful salt, 2 tablespoonfuls sugar. Soak yeast cake and mix all the ingredients with lukewarm water. Beat well. In the morning add two teaspoonfuls of soda dissolved in hot water. Beat again and bake on a hot griddle. Save a little of the batter each time for yeast.

The Farmers Mill is grinding fine Buckwheat Flour, which sells for 75c per 24 1-2 lb. sack.

Fifth Annual Poultry Show

Pennington county's Fifth Annual Poultry show, one of the biggest events of the year, will take place in the city auditorium in Thief River Falls on December 6, 7, 8 and 9. Much interest is manifested in this year's show both by local people and poultry men living at a distance. Inquiries have come from Wisconsin, Iowa, St. Paul and the Dakotas in regard to premiums offered at this show. The farmers of the county are showing much more interest this year as there is a special class for them where they will not have to compete with professionals. All farmers interested in the raising of poultry should make it a point to bring in a few birds to enter in this class as that is the best method to learn what good poultry really is.

This show has grown from an exhibit of 200 birds five years ago until at the present time 800 or more birds are on display at this annual exhibition. This year the officers and directors expect a much larger entry number than ever before and are well prepared and thoroughly organized to handle every entry in the most efficient manner.

Breeders, feeders, fanciers and all others interested in the poultry game should make it a point not only to exhibit but also to visit the greatest poultry display in northern Minnesota.

THE GOODRIDGE BANNER

VOLUME XV, No. 45. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, DECEMBER 2, 1921. $1.50 PER YEAR.

Junior Red Cross Work

The Pennington county Junior Red Cross, acting through its chapter school committee and on the recommendation of the city and school nurses, have expended a total of $383 55 since June 1 in providing medical aid for needy pupils of the county.

Only cases where the parents were financially unable to give their children the necessary medical attendance were considered. The success of the Junior Red Cross in this work is in no small measure due to the local physicians who in most cases have given their service free of charge.

The chapter school committee for Pennington county consists of Supt. Geo. M. Gunderson, John Nystul and Melgaard.

Following is a summary of the secretary's report for June, July, August and September: Tonsils and adenoids removed, 20 cases: eyes refracted and glasses procured, 8; dental work, 15; cases of ear treatment, 2; transportation to doctor, 12; transportation to state hospital, 1.

The date for the annual Junior Red Cross roll call will be Dec. 12 to 16. At this time an effort will be made to enroll all the school children of the county

Special Prizes for The Poultry Show

Mr. Olaf Neset informs the Poultry association that he will award a $10 Rhode Island Red cockerel to the largest display of Rhode Island Reds brougt in by a farmer in Pennington county. Mr. Neset has purchased a high priced bird from the poultry division of the University Farm, which was scored as being the best Rhode Island Red in this part of the state by N. E. Chapman, poultry specialist, last July.

Dave Gustafson and Harry Schuster of Thief River Falls are also offering high priced birds as premiums in the farmers' class for the largest display of Barred Rocks and S. C. White Leghorns.

Statements from farmers raising poultry are to the effect that a large number of entries will be received from the county this year. The larger the number of entries made the larger the premium will be, as the prize will be higher when more competition is had.

Dairy Schools Dec. 15 and 16

Mr. L. V. Wilson of the Dairy Extension division will hold dairy schools in Pennington county on December 15 and 16. The afternoons will be devoted to the holding health department, when a film will be shown on the value of dairy products free from T. B. and other contagious diseases. This course should be largely attended by both rural and city folks, as the general health of a community depends much on the cleanliness of the dairy products consumed. Meetings will be held in St. Hilaire and Thief River Falls, the exact days to be arranged for next week.

Suggestive Reading

You will hear it said that such and such a magazine prints suggestive stories, meaning that they present corrupting ideas in an attractive dress. But there is a suggestiveness also of quite a different sort—the suggestiveness that quickens the reader's sense of duty, stimulates ambition, gives courage to face adversity, fortifies against yielding easily to temptation. It is this better kind of suggestiveness that you will find on almost every page of The Youth's Companion. Which of these two kinds of suggestiveness would you wish to have exert an influence in your in your family life?

The 52 issues of 1922 will be crowded with serial stories, short stories, editorials, poetry, facts and fun. Subscribe now and receive:

1. The Youth's Companion — 52 issues in 1922.
2. All the remaining issues of 1921.
3. The Companion Home Calendar for 1922.

All for $2.50.

4. Or include McCall's Magazine, the monthly authority on fashions. Both publications, only $3.00.

THE YOUTH'S COMPANION,
Commonwealth Ave. & St. Paul St.,
Boston, Mass.

USE METERS

At the last meeting of the village council it was decided to put the collections for electric light on a meter basis. Those who have meters will pay a rate to be fixed at the end of the month Those who have not meters will pay a flat rate of 1 cent per watt. Owen Olson was appointed marshal with the duty of reading the meters each month.

ERIE ECHOES

The East Star Ladies' Aid held a session at the Clover Nook school house Thanksgiving day.

Sakarias Hole was busy hauling hay Wednesday.

Oppie Olson spent part of Tuesday in Thief River Falls shopping.

Mrs. Rouze, teacher in the southeast Star district, returned Sunday evening from her visit with relatives in Goodridge during Thanksgiving.

Mrs. H. A. Dahlen and tots, Olaf Alice, were pleasant callers at Sub-Urban's Sunday afternoon.

The farmers of this vicinity are taking advantage of the fine winter weather, doing the bulk of their hay and wood hauling.

Hilmer Iverson visited at the L. B. and H. Dahlen homes Wednesday afternoon

Osmund Lunden and family, who have been making their home in Star township for some time past, are about to move to Thief River Falls, where they have leased a residence.

Z. J. Hole assisted Iver Iverson Saturday putting curbing in the latter's new well.

The Red Cross Drive

The people of this community are certainly interested in the Red Cross. Mrs. Josephson and Mrs. Vake, who made the canvass here, collected $56 in the time allotted them.

[illegible] THE PINK [illegible]

©, 1921, by McClure Newspaper Syndicate

Everyone he had met that day, on his way to the office had said: "Good morning, Mr. Gifford; fine morning, isn't it?" And Larry Gifford had gazed into the sky and had seen that it was blue and cloudless and that the sun was shining, and had suddenly [illegible] that it was a fine day—outside. But when he opened the door of his business-looking office, everything was dingy and lonely—like his own thoughts.

Perhaps Erma Clark was to blame—perhaps she wasn't. Anyway, he had [illegible] her to one of the usual twice-a-week theater trips that night, [illegible] he had not accompanied her home. She left him at the theater door and told him very decidedly that she preferred to go home alone.

So Larry plodded back to his two uninviting rented rooms with a downcast heart and Erma's angry words still ringing in his ears—words to the effect that he had become so engrossed in his business of late that he had neglected her to the point of rudeness.

A wonderful frame of mind to be in at the start of a long office day. Larry's head felt heavy and stupid and dull, too.

And the work that was before him—his desk was fairly swamped with letters. And right on top of the pile was a pink envelope, addressed in feminine hand.

Larry gave a disgusted groan and threw the letter on the floor.

The door opened. Larry wheeled around in his chair and saw a tall slender girl enter the room. She was dressed in soft, dark brown. But the thick French veil she wore was of such a dark, dense shade that it completely hid her features from him.

"Hello!" the person said. "Alone? Isn't that nice!"

Larry stared at her a moment, then remembering that he hadn't risen to his feet, hastily did so and stood before her awkwardly silent.

Larry hadn't long to wonder, for the girl was already loosening the veil from her face, and then—

"Erma!" he cried joyously, springing toward her, "Erma—dear."

"I couldn't stay away any longer, Larry," she whispered softly, coming closer to him.

"But you said—"

The girl pressed a small hand over his mouth. "I know I said a lot of things, Larry dear, and I've come to be forgiven for them; the things I said about you being selfish and ugly, I mean."

"But I'm afraid I did neglect you, Erma. I didn't think—I had more business than I could attend to last week, and it simply wouldn't let me think of anybody or anything else."

"Larry, you didn't neglect me; you've been wonderful to me—always. I needed this lesson—the thought that perhaps you wouldn't forgive me—to make me understand."

Larry didn't answer. He only stood silently before her, too happy, too bewildered to speak.

"Dear," she was saying in her soft, low voice, "I know how to appreciate you now. I couldn't get along without you. I love you, Larry! I love you. Please, please, forgive me."

Then it was that Larry spoke. "Dearest," he cried hoarsely, "stay with me always; promise me. I love you, Erma dear, I love—"

His last words were lost as he gathered her close in his arms and smothered his face in her hair, his whole heart filled with a new, warm joy of having her back again. For several moments they remained thus, until the sharp striking of the office clock awoke Larry and he lifted his head, still quite dazed, from the letter-littered desk top.

So that was all! Erma was still lost, he was still alone; it had only been a dream.

He mustn't think about it any longer, he told himself. His work must be done and he would tackle the worst part first. So thinking, he picked up the pink envelope, which had fallen at his feet, and opened it. It read:

"Dearest Larry—In half an hour I will be at your office, so have all callers out by then. I'm coming to be forgiven for the horrid things I said to you, Larry dear. I've missed you terribly since last night and I'm in such a hurry to see you that I can't stop to write any more.

"Lots of love,

"ERMA."

Erma had been lost and now she was found again. And happiness had come to Larry by the way of the pink letter.

LENA'S BABY

©, 1921, by McClure Newspaper Syndicate.

Angela put the pan of biscuits down on the table and looked out of the pantry window. At the foot of the lane Amos was talking with the rural delivery man. Angela's sigh became a sob. How much of her present unhappiness would be gossip tomorrow? A tear splashed onto the bread board—another and another. Angela put her head down on the table and cried.

Summer heat, the time when romance calls to the blood; blood heat, the period when desire sings through one's veins—Angela had known each, and now it was zero!

"It wouldn't be so hard if I had someone else to love—a baby, now—"

But the thought was fresh torture to Angela's bruised heart. Hadn't she hoped from the first that there would be children at Meadowbrook? Hopes had become prayers and heaven had been deaf! That was the added bitterness to her present grief. If Amos left her for that other woman there would be nothing but the long, lonely years! Angela knew. She had matured early, faded soon, and she had none of Lina's plump prettiness in her own lean, lank shapelessness.

And Lina Summers, who had laughed at the love of two men, was claiming Amos for her own.

"What you going to do about it, now that you know about us?" Amos had demanded. "There ain't no use our trying to go on same as if you'd never found it out. You'll have to say—"

But Angela had said nothing. Not then, nor through the long night which she had spent in the spare room. In the morning she had come to the homely tasks of every day.

And out in the lane Amos was turning toward the house—walking quickly, as he was apt to do when excited or troubled.

"Lina ain't expected to live the day out," he cried, standing white and anxious eyed in the doorway. "She went to a dance at the Corners last night and her husband was there. They say he tried to make her go home with him, but she jumped into an auto and tried to run it herself. I've got to go—"

It was dark when the sound of wheels roused Angela to activity again. All day she had seemed dead, yet conscious of the underlying throb of heart-ache—misery that had tortured and drained her of her strength. But she asked no questions as Amos stumbled across the lamp-light and called to her. "I've come over after you; I'm going right back—"

"Me! You came for me!"

"I'm banking on you standing by her. Just because she's a woman, too. Maybe she won't last till we get there, but I told her husband you'd come—"

"Her husband! Is he—?"

"Been there all day—and all worked up, now she's going so fast!"

"I'm sorry for all of you," Angela found courage, and voice in the same minute. "She's done all she can to any of us, but I can't forget—"

"Last night?" Amos interrupted. "I know—I said things—but I thought, seeing as there's a baby—"

"Baby!" Angela grew tense.

"Didn't you know? She ran away from her husband because she didn't want to be tied down to children. He was trying to make her go home with him on account of the other little girl he didn't know how to take care of himself. Seems like she didn't run away soon enough, though, and—"

But Angela was no longer listening. In a minute she was slipping into her coat, pulling on her hat.

"Hurry!" she commanded, and again as they walked through the door-yard to the waiting wagon—"Hurry!"

* * * * * * * *

In the upper chamber where Lina was breathing out her life two men and a woman watched her labored gasping. Angela moved close to the tiny nub of humanity that had slipped in as Lina was called out. Amos opened the door as the doctor returned from below stairs.

The woman on the bed opened heavy lidded eyes.

"I've made a lot of trouble—for all of you—" Her gaze left the others, fastened itself on the husband who leaned over her. "I'm sorry!" With an effort she turned her head toward Angela. "If I had been like you. You're a born mother. Could you—?" The dim eyes finished the question.

"I've been promising God I'd be a good mother—if—oh, I want to be!" Angela cried.

* * * * * * * *

"Queer, you ain't never said a word to me about it since Lina died," Amos said to Angela one day. "But I want you to know—I wasn't as ready to leave you as you thought. She wasn't the kind to please me for long. I don't know what got into me—"

"It had to happen." Angela was humming at the sewing machine where she was making up tiny dresses for Lina's child. "I'd been praying for years for children I wasn't never meant to get. Maybe there wasn't no other way of making it come true!"

"Making what come true?" Amos asked.

"The power and the glory," Angela answered, and would say nothing more.

DIARY VALUABLE FOR FUTURE USE

Authentic Record of Happenings and Experiences Often Prove of Great Benefit.

[illegible] INTEREST

[illegible]ms Encountered [illegible] t Be Solved [illegible] rds Were [illegible]

[illegible] States Department [illegible] the most in[illegible] volume of its [illegible] determination [illegible] frequently [illegible] of a New [illegible] Unfortunately, however, [illegible] good inten[illegible] observations [illegible] Department of [illegible] shown.

Valuable in the Future.

For the farmer, the diary will preserve a record of farm happenings and personal experiences which will be valuable in the future conduct of his business. If, when he finds his alfalfa field swarming with grasshoppers, he can look back in his diary to a summer 10 years before and find the poison bait formula that controlled the pest then, he will save much valuable time. He may wish to know the exact location of a tile drain that was laid down when he was a youngster. If the event was noted in his own, or his father's diary, a 10-minute perusal will give him more definite information than a day's digging with a spade. There are dozens of farm problems encountered every year that might be solved more easily, if the farmer had access to a complete chronological history of his property.

The diary may be given a prominent place in the bookkeeping records of the farm business. Generally speaking there are three purposes to be served by farm accounts:

1. To determine the farm investment, receipts, expenses, and the net income of the business.
2. To furnish the net returns from any individual farm enterprise and to supply specific information as to its details.
3. To obtain a memorandum of what other people owe you and what you owe them.

The blank forms necessary for a simple accounting system can be worked out by the farmer himself, or he can apply a system recommended by his county agent. He also can obtain information direct from the office of farm management and farm economics, United States Department of Agriculture. The chief advantage of a farm accounting system, which is a part of the farm diary, is in the additional interest furnished by the personal items. The diary supplies items of supplementary interest which usually are left out of the accounts. Without the diary, the task of keeping the books of the farm business becomes dry and uninteresting.

Make the Keeping of the Diary a Part of Each Day's Routine.

Only persistency and practice will make one an adept at writing a diary. The only rule which can be followed is that the entries must be kept interesting, and in choosing an interesting high light in the day's work one must have an eye to the future, as well as to the present. It is important to write the records regularly. Make entries in the diary every evening at a certain time, and consider it as a part of the daily routine. Once the owner commences to slight his diary, its failure is certain.

Best Materials Essential.

It never pays to use inferior materials in the making of a farm diary; the work is important enough to merit the use of good tools. Good paper and binding, a good pen, and ink that will not fade in a few years are essentials in preparing a volume that will grow in value and interest as its age increases. It is a mistake to think a small blank book is sufficient. The limited size of the sheets makes writing cramped and uncomfortable and detracts from the pleasure of writing up the record.

While a diary can hardly supply the required amount of bookkeeping for a large and extensive farm business, it does record facts and figures that are never preserved in any other form.

MELODY ANN

By FRANCES E. GOODRICH.

©, 1921, by McClure Newspaper Syndicate.

Melody Ann sat on the back step, looking across the mist-filled valley. As usual she was singing, otherwise she would not have been Melody Ann.

"When Melody Ann takes them high notes it makes shivers go right up your backbone," said Deacon Brown, and the other villagers agreed with him.

"Too bad Melody Ann is so odd," they said. "If she'd only dress herself up a bit and not look so gawky she might get a fellow as well as the other girls; but, land's sake, all she thinks of is getting off by herself somewhere and singing."

She was odd. When the other young people were enjoying themselves with lively country amusements, Melody Ann was roaming through the woods or by the sea, singing in her high, untrained voice.

* * * * * * *

The mist slowly dissolved itself in pink, glistening dawn, and Melody Ann caught her breath for a moment with the beauty and mystery of it. Then, like a bird carolling the new day, her voice rose sweet and piercing in a hymn of praise.

She did not hear the automobile that stopped by the gate, nor see the heavily-built, black-bearded man who left the car and walked toward the back of the house, so she was much startled when a gruff voice said "Great! Do that over again, girl." Jumping up, she looked into black eyes that shone with eagerness. She stood looking at the stranger in astonishment, when his impatient command again broke his silence. "But—but—I don't know what I was singing," stammered Melody Ann. "I just sing that way most all the time."

"Well, you can sing the scale, can't you?" he asked.

"Oh, yes, sir. We are taught to sing that way in school," and, always glad to oblige when she could, she sang the scale. Then an octave higher, then still higher, but the man raised his hand. "That will do. Where are your parents? I want to see them."

"My father and mother are dead and I live with grandmother. Won't you come in?" and she led the way into the little kitchen, where the table was laid for breakfast. Mrs. Carwin appeared and with simple hospitality made a place for the stranger at the table.

With shy amazement Melody Ann heard him tell her grandmother that her voice was a remarkable one. It was his business to find and train just such voices as Melody Ann's.

Mrs. Carwin listened eagerly; then with tears in her eyes slowly shook her head. "I know her voice is different from most, but we haven't any money for to have it trained now. Perhaps as soon as she gets to work herself she can earn a little and take lessons."

But the man shook his head impatiently. "Poof, we cannot wait until she can earn the money. The time to start this training is now, and the money will be provided. In New York there is a man of great wealth who gives liberally to train such girls as your granddaughter."

* * * * * * *

That evening the little house overlooking the valley was closed and Mrs. Carwin and Melody Ann went away in the big car to a new life.

Then began work such as Melody Ann had never dreamed of. There were many nights when she crept into bed, wishing with all her heart she was back in the little house on the hill, singing just as she liked.

For some time a thought had troubled Melody Ann. It seemed so ungrateful not to see her benefactor and thank him, even if he would have to wait a long time until she could repay him. She broached the subject to the teacher, but he discouraged it. "Wait until your first public appearance, and then you shall meet him," he said.

At last the day, the hour, the moment, and Melody Ann in a simple frock of white, stood alone before that swaying sea of faces. A strange faintness held her for an instant; then the orchestra began the familiar air, the faces faded and before her lay the mist-filled valley, and she was welcoming the dawn.

The music stopped and her eyes saw the lights again and the faces, and she felt the tense silence. Then applause rolled like thunder through the great hall. She saw her teacher, rather white faced, but smiling, and grandmother, nodding happily, with tears rolling down her cheeks.

At last the crowd was gone and Melody Ann stood face to face with the man who had made her success possible.

* * * * * * *

A year later Melody Ann sat on the back step waiting for the first pink mist to waken the gray mist to life but she was not alone. A strong hand held her own tenderly, and Melody Ann looked into her husband's eyes with a great love shining in her own.

"We will help many other girls just as you helped me, won't we?" she murmured, and got her answer with his lips against her own.

The pink swiftly spread over the gray and Melody Ann's voice rang joyously down the valley.

INOCULATE ALFALFA AND KINDRED CROPS

Department of Agriculture Outlines Three Methods.

When Broadcasting Avoid Undue Exposure to Sun's Rays and Immediately Harrow Field—Liquid Pure Cultures Are Used.

(Prepared by the United States Department of Agriculture.)

Farmers sowing alfalfa in ground where alfalfa or related crops, such as bur clover or sweet clover, have not been grown before, will find it advisable to inoculate the soil with the proper kind of nitrogen-fixing bacteria. The same is true of clover, peas, or any other legume. The United States Department of Agriculture says there are three principal methods of inoculating soil—by direct application of soil from a field known to have suitable bacteria, by pure culture inoculation, and by the glue method.

For the first, it is well to apply at least 200 pounds of finely sifted inoculated soil per acre. This can be done with the fertilizer attachment of the drill, or broadcasting by hand. Broadcasting will require a larger quantity and should be done in the early morning, late evening or on a

Making Examination of Alfalfa for Nodules.

cloudy day to avoid undue exposure of the sun's rays. The field should be [illegible] harrowed after broad[illegible] Transferring soil from any [illegible] distance is expensive and [illegible] the danger of introducing [illegible] weeds, insects and plant [illegible]

[illegible] method of field soil in[illegible] which has met with success [illegible] small amount of [illegible] available is to [illegible] inoculated soil by means of [illegible] glue.

[illegible] pure cultures are prepared by [illegible] Department of Agriculture and [illegible] in limited quantities on application [illegible] more than enough for one bushel of one kind of seed to any person. They are also sold by private concerns. Complete directions are mailed with each bottle.

TRACE TROUBLE TO FENCE WEEDS

Noxious Plants as Rule Are Result of Neglect Because of Other Pressing Work.

RIGHT METHODS OF CONTROL

Biennials May Be Destroyed by Plowing Twice a Year—Perennials Can Be Killed by Applying Waste Oil.

(Prepared by the United States Department of Agriculture.)

"I've too much work to spend time cleaning fence corners," declared a farmer when his neighbor asked why he allowed weeds to grow on line fences and the roadside.

"For instance?" observed his caller who had the New England habit of answering one question by asking another.

"For instance, there's weeds all through my corn and potatoes, and they've been getting into the oats till this year's thrashing will be half Canadian thistles. And, for instance, the hired man's been laid up with ivy poisoning he took fixing up the pasture fence where some rails had rotted out. And, for instance, just now there's some city acquaintances of my daughter coming out, and they might possibly buy the place if we could get it tidied up—and there's a big crop of fall weeds in the front lot. I guess that's enough, for instance, to keep me from puttering around the fence corners with a grass-hook after weeds."

How the Weeds Spread.

"Yes, maybe, looking at it from one angle," persisted the neighbor. "But, then, consider. With balloon-seeds like Canada thistle, dandelions, wild lettuce and milkweed; bur-seeds like burdock and beggar's lice, sticking to every passing man and animal; the scatter-seeds like tumble; and seeds that are scattered by birds—do you suppose those fence-corner weeds will remain in the fence corners? Don't you imagine that they have something to do with the fouling of your crop fields, and of that front lot that you are so anxious to have look neat for prospective purchasers? And don't you imagine that they foul my fields as well as yours? I noticed a little clump of wild lettuce in one angle of

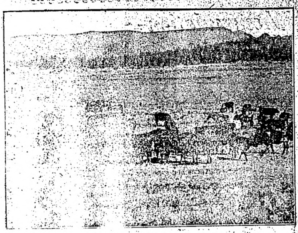
LOSSES TO LIVE STOCK ON OPEN RANGES CAN BE GREATLY REDUCED



[illegible] the Grazing on a Western Forest Range.

(Prepared by the United States Department of Agriculture.)

The utilization of the range in the national forests of the West for the production of wool, beef, mutton and pork is steadily increasing from year to year. Ranchers and stockmen are manifesting a growing appreciation of the advantages afforded by government pasturage. And in the same degree they are all too frequently neglecting live stock after it is turned out on the mountain ranges, state officials of the United States Department of Agriculture.

On all open ranges there are many losses from predatory animals, poisonous plants, disease and accidents, and similar dangers. Unless owners of live stock campaign intelligently and perseveringly against such sources of disaster, their herds and flocks usually suffer a mortality of from 5 to 6 per cent yearly. To illustrate, one ranchman grazed 700 head of cattle last summer on a national forest without a herder. As a result he lost a dozen head of steers worth $50 each.

Mortality High Last Year.

Last year in forest district 5, which includes California and western Nevada, the total live stock mortality in 17 forests amounted to 1,151 cattle, 5 horses and 5,849 sheep. The total number of permittees who used the federal grazing lands aggregated 3,529. They grazed [illegible] cattle and horses, 633,-560 sheep and goats and 5,550 hogs on the forest ranges. Two hundred and seventy-five cattle died of disease; 299 cattle and 1,492 sheep were killed by eating poisonous plants; 91 cattle, 5 horses and 2,745 sheep were killed by predatory animals, and 485 cattle and 1,0[illegible] sheep succumbed to accidents and miscellaneous causes of death.

The matter of live stock losses on the government ranges has become of such importance that the United States forest service made a detailed survey of the specific causes of mortality among live stock in the Stanislaus forest in California during a recent year. During the period under discussion a total of 841 head of live stock out of the [illegible] animals pastured in the forest lost their lives. The manner in which these losses were distributed should be of value to stockmen and ranchers who are interested in curtailing these losses and who are anxious to know what the weak points in their present methods of management are. The losses among cattle were distributed as follows:

Under one year old from blackleg, 98; over one year old from blackleg, 57; calves, loss of mother from larkspur poisoning, 10; cattle losses from larkspur, 53; other poisons, 21; predatory animals, 20; accident, 33; in calving, 14; lost, strayed or stolen, 74; from anthrax, 2; from eating giant powder from railroad construction camp, 5; from neck-and-spine disease, 15; killed by hunters, 2; blind, aged, crippled and ruptured, 4; losses from contagious abortion, 122; from lack of proper food and starvation, 14, and from unknown causes, 337.

Check Predatory Animals.

The losses from predatory animals are being checked as rapidly as the federal agencies for this work are able to cope with the situation. Whenever the forest rangers note that the predatory animals are causing heavy damage, professional hunters are sent to destroy them. The losses due to disease and accident and miscellaneous causes could be substantially decreased if more herders were employed by the owners. Under conditions which obtain on the national forest ranges one or two herders could handle from five hundred to a thousand cattle without particular difficulty. On the same scale that it pays to herd sheep on the government ranges it also is profitable to herd cattle and, potentially, permittees probably will come to this decision of their own accord.

Poisonous plants—and particularly larkspur—are responsible annually for large losses of live stock throughout the western states. There is only one effective system of ridding the ranges of larkspur and that is to grub the plants out season after season until finally the range will be free of this objectionable growth.

The experiences of a certain rancher whose range abuts one of the California national forests, and who, under the supervision of the United States forest service, has been waging a winning fight against larkspur during the last four years, are illuminative in this regard. After careful trial and study of the control methods and the results, this stockman is enthusiastic about the efficiency of the plan and he urges every other rancher or stockman who owns infested range to give the system of eradication a thorough and impartial trial.

Ideal Pasturage Infested.

In this instance the larkspur was prevalent in large amounts on a range where the grazing was otherwise exceptionally good. The infested area was on a side hill where seepage from a spring near the top of the hill provided plenty of moisture, so that the grass was unusually luxuriant at all times during the grazing period. The rancher had to have a herder with the cattle constantly in order to keep them off the larkspur-infested area. Not only did he lose the use of excellent range, but he also was under extra expense to protect his cattle from the poisonous plants. During the 1913 grazing season he lost ten steers, which, despite the efforts of the herder, trespassed on the larkspur area and succumbed to the poisoning which resulted. The following season, under similar conditions, 24 head of valuable range cattle were poisoned. The next year only five steers died from larkspur poisoning, while the following year the mortality aggregated eighteen head. In 1917 the larkspur eradication campaign was instituted, and as a consequence of the work of that season the cattle losses were curtailed to only five animals. The next year the work was continued and not a single case of steer mortality from larkspur poisoning occurred. In 1919 only two steers died, while last year the mortality also was limited to two animals. Recently the larkspur area of the range has been grazed by a band of 2,000 sheep.

One Hundred Acres Grubbed.

The first season about one hundred acres of range were grubbed, the poisonous plants being eradicated with larkspur picks and scattered in exposed places to dry in the sun. One man could dig 1.71 acres a day. The total cost of grubbing the one hundred acres the first year amounted to $450.30, an average of $4.50 an acre. The losses of cattle were reduced from 18 head the year before to 5 head the following season. The saving of 13 head of cattle was directly due to the larkspur eradication work. Estimating these steers worth $50 apiece, a saving of $650 resulted, which paid all the expense of the grubbing and left a balance of $199.70 to the credit of the work. The following season the range carried 50 more head of cattle as a result of the decrease in the amount and severity of the larkspur infection.

In passing, it is worthy of mention that the larkspur picks are made from ordinary surface picks by drawing out one point to a chisel form about two inches wide, while the other point is sharpened in a diamond shape. Generally pruning shears and small hand axes are used in cutting out the brush and trees which obstruct the access of the workmen to the larkspur. Ordinarily an average workman can grub out from seventy to eighty larkspur plants an hour. The last two seasons the grubbing work has been continued, the chief attention being devoted to new areas, as the original one hundred acres are now practically free of any larkspur.

87-Year-Old Plant.

After lying in a warehouse in the Minories since 1834, a case of dried flora from the Azoras has at last found a home in Kew gardens, to which it has been presented by the Royal Botanic society.

The circumstances of the case are remarkable. Last year a firm in the Minories, Messrs. Joseph Barber, asked the Botanic society to accept a case of dried plants, which had been lying in their warehouses for many years, and to which a docket was attached giving the name of the collector, Mr. Carew Hunt (H. B. M. consul at the Azores), the name and place of finding of the plants, and the date of collection—1834. The parcel was addressed to the Botanical society of London, which ceased to exist in 1850.—London Tit-Bits.

CORN BORER NOW SPREADING WEST

Fight to Protect Corn Belt From Adance of Pest to Be Concentrated in Ohio.

PEST DOES HARM IN CANADA

Farmers Urged to Cut Cornstalks Close to Ground as Possible to Destroy Winter Home of Insect—Fall Plowing Helps.

(Prepared by the United States Department of Agriculture.)

The fight to protect the corn belt against the advance of the European corn borer is now to be concentrated in Ohio, where, according to reports to the United States Department of Agriculture, infestations of the pest have been found along the entire southern shore of Lake Erie over a strip varying from six to twelve miles in width and extending to within six miles of the Indiana border. It is at the western end of the lake that the borer also threatens a descent upon this country from Canada by crossing the Detroit river. The department is preparing to reduce its efforts against the pest in other places and in co-operation with Canadian and Ohio authorities concentrate them in Ohio.

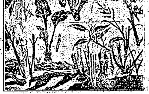
Heavy Infestation in Ontario.

For some months the Canadian authorities have been combating the pest on the northern shore of the lake where it has gained a strong foothold practically devastating entire corn fields in the vicinity of St. Thomas. A three-days heavy wind at the period when the moths were flying is believed to have blown some of them across the lake into Ohio.

Every possible effort, it is said, will be made to hold down the infestations on the Ohio and Pennsylvania side of the lake. Farmers will be urged to cut their cornstalks as close to the ground as possible, as the insect makes its winter home in the stalk. For this reason, too, fall plowing is recommended. The Ohio authorities, it is said, are fully alive to the need for checking the spread of the pest, and are co-operating with the department and conducting work of their own toward this end.

Floating Cornstalks a Source of Danger.

This is the first instance known in which the corn borer was carried any great distance by wind. It has been known, though, to travel by water in floating cornstalks, and in this manner has made its way to islands. This is one ominous feature of the presence of the borer in Ohio, it is said. At present the infestations are in a strip that drains into Lake Erie, and floating stalks are not likely to do much harm. However, the divide where the drainage of the Ohio river begins is only a few miles south of the infested area. Once over this watershed, it is said, there is no telling where the pest may be carried. It is thought altogether possible that infested stalks in that event might be carried even to places far down the Mississippi river.



The European Corn Borer. Top at left—larvae and pupae in cornstalks and young tassel attacked by the insect. Male and female moths drawn on same scale as the corn. Top center—a female moth with cluster of eggs on a section of corn leaf, on a considerably larger scale. Top right—mature tassel showing typical injuries by caterpillar (the broken tassel stem is often the most noticeable evidence of the presence of the insect during the early summer months). Center—external and internal views of injuries inflicted on two ears of sweet corn. Lower half of the plate—snap beans, beets, and celery attacked by the borer, cornstalk containing caterpillars, corn stubbles cut away to show how the caterpillars hide themselves in the fall, winter, and early spring months, "smartweed," which is a favorite food at times, "barnyard grass," which in Massachusetts is often heavily infested, and "cocklebur" plant, a weed that often serves as a breeding place for the pest.

The European corn borer has been known in this country only a few years. It is well known in northern Europe, where it does great damage to corn, especially in Austria. It is supposed to have come to this country and to Canada in importations of broom corn from Europe, and at present several large areas in New England and New York are under Federal quarantine to prevent its further spread. Its presence in Ohio is one of the most important developments since it entered this country.

CO-OPERATIVE GRAIN MARKETING METHODS

Type of Elevator Should Fit Local Conditions.

Excellent System for One Section Will Not Always Work Out Successfully in Another—Comparative Study of Plans.

(Prepared by the United States Department of Agriculture.)

In co-operative grain marketing it is more essential that the system be suited to conditions and practical need than it is that the system itself has been successfully applied in other fields. This has been brought out in an investigation conducted by specialists of the bureau of markets, United States Department of Agriculture, a report of which has just been published in department bulletin 937, "Co-operative Grain Marketing." One cannot carry his investigations of co-operative grain marketing far, says the bulletin, without realizing that what may be an excellent method for one section and for a particular condition will not always work out successfully in other sections or when applied to other conditions. The bulletin makes a comparative study of methods in the United States and Canada.

In the United States the most common type of farmers' grain elevators is owned and controlled by a body of stockholders in the immediate surrounding community, and the elevator is operated as a separate unit independently of any similar elevator.

In Canada the line-house type of farmers' elevator prevails and is highly successful. The line-house type consists of a number of elevators controlled by one central office in a large marketing center. Two such companies in Canada own and operate over 600 country elevators in the three great wheat-growing provinces.

In comparing the two systems, the bulletin states that the line-house operation of the farmers' elevators would seem to offer the greatest advantage in those states where crops are somewhat uncertain or where the crop year is of short duration, and under which conditions it may be necessary to close the elevators for certain periods each year. It is possible under the line-house method of operating elevators to economize in accounting and to standardize in construction and in the machinery used.

Favoring single-unit elevato[illegible] of community pride whic[illegible] [illegible]eters around these [illegible] quite independent of th[illegible] [illegible]. In many section[illegible] prejudice against central[illegible] which is not easily o[illegible] [illegible] in the Middle West [illegible] United States were est[illegible] to solve marketing [illegible] local character.

[illegible] merit [illegible]. Rates [illegible] on a ca[illegible] analysis of c[illegible] adequate and accurate information regarding costs. Accounting [illegible] should be simple but sufficiently comprehensive to show the exact financial status of the association at all times.

In determining matters of policy the interests of the members as a whole rather than as individuals must be considered. Service must be the watchword. And to make the association a real success, each member must feel that it is his association.

Hi's Artistic Minnie

CLAIRE SMITH

(©, [illegible] Western Newspaper Union.)

[illegible] we can board you [illegible] you don't mind eat[illegible] me and the hired man [illegible] that's all [illegible] was mine? It used [illegible] but that was whe[illegible] to be artistic, and [illegible] art, they have [illegible] being artistic [illegible] Our be[illegible] quite like [illegible] we [illegible] are now, and [illegible] that art col[illegible] barn that's [illegible] haven't been [illegible] years now, [illegible] to Green[illegible] enough [illegible] Hi and I [illegible] way we'd sent [illegible] the plumb[illegible] Hi and I [illegible] for Sam's [illegible] and always [illegible] came home [illegible] I noticed [illegible] first evening. [illegible] said Minnie, 'now that I [illegible] I am going to improve things [illegible].'

"Well, that suited Hi and me first rate, for we naturally thought she meant that she was going to help us old folks out with the chores.

"She'd got to be fast friends with that Higginbotham woman, and next day she broke the news to us that they'd rented the old Hopps place for an art colony and some fifty students of both sexes was coming.

"The townspeople was glad, for things were a bit dull in Linborough.

"The first shock come when Minnie had the house repapered.

"The next thing was the furnishings. Our furniture, which you can see, came from Hi's grandmother. But Minnie and some of the lady students borrowed our woodshed, and the first thing we knew, the furniture was up in the garret, and we had some new chairs and tables—all rough wood, with brass nails sticking out. After that Hi moved into the garret and spent his evenings there.

"I don't think he'd have stood for it much longer, only we put up our price from six dollars to nine, and we got quite a superior class of summer boarders.

"Now I was telling you about Sam Bunn. He'd always admired Minnie, and though she hadn't treated him well, he still hankered after her, so he and some other young men come up to talk it over with Hi, and the result was a Society for the Promotion of Being Artistic. It was beating Mrs. Higginbotham at her own game.

"It began when she found the frost had burst her pipes, and sent for Sam. Sam listened respectfully.

"'I'm sorry, Mrs. Higginbotham,' he says, when she gets through, 'but I've joined our new Society for the Promotion of Being Artistic, and I can't fix 'em.'

"'Why not?' asks Mrs. Higginbotham.

"'Pipes ain't artistic,' answers Sam. 'Only wells an' old oaken buckets is artistic. No, ma'am. I can't fix 'em.'

"Well, since Sam was the only plumber in town, she had to send over to Greenfield.

"Then there was Ed Keggs, the butcher. He [illegible] was artistic. So he [illegible] joined the society and he wouldn't sell lamb chops or ribs.

"'Chops ain't artistic, Mrs. Higginbotham,' he explained. 'What is artistic is barbeques. I'll sell you a whole ox to roast upon [illegible]. Spits is highly artistic.'

"As for Jim Saunders, the grocer, he wouldn't sell anything but herbs. He said canned goods was vulgar, and since the roof was leaking, and there wasn't nobody knew how to thatch one, Mrs. Higginbotham gave up the fight and left.

"Yes, it did pay us, being artistic, but we don't envy Deerfield. And, as Hi says, he don't want to be artistic unless his armchair and pipe goes with it.

"Minnie? Oh, she's been Mrs. Bunn these two years past. They've got a brand new cottage up Nobscott way, and a pianola and two babies and Sam's doing well in the plumbing business. So, as I was saying, it's only six dollars again, but you'll have to eat with the hired man, ma'm."

ASK INSPECTION ON ALL PRODUCE

Anyone Concerned in Interstate Shipment May Request Federal Certificate.

INSPECTOR IS TRAINED MAN

Many Causes of Disputes, Costly Lawsuits and Lasting Dissatisfaction Are Removed—Buyer and Seller Satisfied.

(Prepared by the United States Department of Agriculture.)

There are few shippers of produce who have not suffered at some time the discomfiture of receiving word from the other end of the line that their carload arrived in bad condition, due to poor grading, careless packing, frost damage, overripeness, rot, breakage, mold, disease or any one of half a dozen other kinds of injury.

Every instance of this sort means a money loss and the shipper wonders sometimes whether the produce really arrived in bad order or whether some unscrupulous dealer possibly seized upon a trifling excuse to reject the shipment because it was received on a falling market, or sought a pretext to depress its value or to gloss over a sale made at what seemed unduly low prices.

Condition Determined on Arrival.

If really damaged, the shipper wants to know to what amount. Was the whole load affected? What was the actual condition on arrival? Was the loss due to bad handling and packing [illegible] delay or neglect by the transportation company or by the receiver? Was the cause a disease which may develop also in the rest of the crop? Some of these questions interest the receiver and the railways, as well as the shipper or producer. No one cares to assume blame and incur loss for what happened to the produce while it was in the hands of others. How can all these questions be settled without undue expense or delay?

Since the establishment of the federal inspection service three years ago by the bureau of markets and crop estimates of the United States Department of Agriculture, the answer is comparatively simple. "Telegraph to the federal inspector in the nearest large city, asking him to report on the shipment." He is a trained man, with considerable experience in handling produce, a competent and certified judge of grades and condition.

The inspector's verdict is commonly accepted by dealers and shippers and by courts, railways and express companies. With the shipment officially inspected, all parties concerned have learned all that it is practicable to know about its exact condition and grade, and many causes of troublesome disputes, costly lawsuits and lasting dissatisfaction are removed. The inspector's certificate removes fully half of the sources of worry and uncertainty and narrows the market question down chiefly to a matter of salesmanship.

Anyone financially concerned in the shipment may ask for inspection. If there is trouble over the produce, or if there is merely the wish to avoid possible difficulty later on, the applicant writes or telegraphs to the United States food products inspection service, bureau of markets and crop estimates, in the city where the car is to be received.

State Board of Health

THE GOODRIDGE BANNER

VOLUME XV, No. 45. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, DECEMBER 9, 1921 $1.50 PER YEAR.

Road to Red Lake

A meeting of business men of Thief River Falls was held Wednesday afternoon to discuss the matter of making the state road from Thief River Falls to Red lake a federal project. A delegation had just returned from Bemidji, where they met with the Beltrami board and were most cordially received and were assured of the full co-operation of that body.

Word has been received in Thief River Falls that congress has appropriated $100,000 towards this road conditioned on the state of Minnesota giving $50,000. The same delegation that went to Bemidji were instructed to go to St. Paul as soon as possible and take the matter up with Chairman Babcock of the state highway department. It is known that engineers of the department are working in this neighborhood, and one of the aims of the committee will be an attempt to have the route surveyed during the winter in order that work may be begun in the spring.

School Notes

Educational week is being observed in school through the study of patriotic topics, such as American Ideals, American Language, Our Flag, Immigration and Naturalization.

Mrs. Osmund Urdahl visited school the first part of the week.

A very keen interest and competition developed between the leading ticket sellers in the high school to the home talent play, "Goodfellow." Mr. Nystul held out a choice box of candy as a prize to the one who could sell the most tickets. Ruby Thompson and Clenora Urdahl each sold 26 tickets. They drew cuts for the prize and Clenora won. Agnes Vaughan sold 18 tickets and Cora McEnelly 10, besides others. There were 101 tickets sold.

Mrs. C. H. Toomey and Mrs. R. H. McDonald visited the school Wednesday.

The Pennington County Junior Red Cross committee have announced that the annual roll call will be taken next week, from Dec. 12 to 16. Mr. Nystul, secretary of this committee, explained the work of the local Junior Red Cross to the school Wednesday morning and urged a 100 per cent enrollment next week.

At the general assembly period Wednesday morning appropriate exercises were given to further the interest in the educational topics discussed and studied in the schools throughout the country this week.

Christmas seals will be on sale in every room, beginning Monday.

The domestic science girls were all very successful in their first attempt at making coffee cake this week.

The Best Christmas Gift

Can you remember that Christmas when you first received the Youth's Companion among your Christmas presents? You can perhaps recall the titles of some of the serial stories in those early numbers, and you can well remember how every one in the family wanted to read your paper.

Today The Companion makes the ideal Christmas present. No family, especially one with growing boys and girls, should be without the tried and true Youth's Companion—the friend and entertainer of hosts of people, old and young.

The Companion is true to the best American ideals of life, giving every week a generous supply of the best stories, current events, comments on the world's doings, with special pages for Boys, for Girls and for the Family.

The 52 issues of 1922 will be crowded with serial stories, short stories, editorials, poetry, facts and fun. Subscribe now and receive:

1. The Youth's Companion — 52 issues in 1922.
2. All the remaining issues of 1921.
3. The Companion Home Calendar for 1922.

All for $2.50.

4. Or include McCall's Magazine, the monthly authority on fashions. Both publications, only $3.00.

THE YOUTH'S COMPANION,
Commonwealth Ave. & St. Paul St.,
Boston, Mass.

Mrs. Payne Re-appointed

Mrs. Jay Payne has just received notice of her re appointment as postmaster at the office at Goodridge. She has held the office since it was established in 1914, and given good satisfaction to the public.

A Nice Little Stake

P. O. Tvedt, clerk of Goodridge consolidated school district, has just received from the county treasurer $8,827.79, being the apportionment from the November settlement, as follows:

One mill tax	$ 48.34
Special	2,199.87
Apportionment	619.10
State Aid	4,924.
Gross Earnings	236.48

Warrants outstanding amount to $2,102.88 at the present time, leaving a surplus of $5,924.91.

ERIE ECHOES

Oliver Tommerdahl was a business caller in Goodridge Wednesday.

Your correspondent was in error in mentioning in last week's items that the Osmund Lunden family were moving to Thief River Falls to make their future home there, which had been earlier plan. Mr. Lunden has leased a dwelling in Goodridge, whither he moved with his family the middle part of last week.

A. W. Hanson transacted business in Goodridge Wednesday.

John T. ovet has returned from the vicinity of International Falls, near where he was for some time employed on the state road leading to the Iron Range. Mr. Hovet reports conditions and wages as being at their lowest ebb.

Ole Froitvet has his new barn nearly completed.

The Grygla Home Talent Play

The Grygla home talent play given here last Friday evening was a success. The play was a good one and the parts were well taken.

John Is Put to the Test

By CALVIN HENDRICKS.

Copyright, 1921, Western Newspaper Union

How John Beverley managed to capture the dashing and beautiful Margaret Ffoliot nobody ever knew.

John left school about the same time I did and went into a banking office. He used to toil there for eight hours a day, when he might have been playing tennis at the country club, or hunting, or amusing himself traveling. And yet that slow coach won Margaret Ffoliot and they went to Europe for a two-months' honeymoon.

You can imagine that we fellows looked forward with some interest to Margaret's return. They came back and rented a small place at Forest Glade.

Bob Flinders had been Margaret's best friend before the marriage and we were all anxious to know whether he would go to her house or not. I happened to be there when Bob called for the first time, and it was evident from the way John shook hands with him that he hadn't the remotest idea that people used to wag their heads when Bob and Margaret were spoken of.

After the return Bob seemed quite reconciled to his fate. He wasn't [illegible] John's house [illegible] when John wasn't [illegible] before the marriage and [illegible] to give John [illegible] that Margaret and Bob were [illegible]. It wasn't that [illegible] sympathy with John for [illegible] he had done a dirty trick [illegible] but we wanted to see how John would take it.

"John will take it as he takes everything," said Jim Allen. "He's [illegible] and digests the [illegible]. Can you imagine John playing a man's part in anything?"

We soon found out that Margaret was dissatisfied with John. She was ashamed of him.

It was a few weeks after their return that some of the boys fixed up a joke on John. It seemed that Margaret had written Bob one or two letters in the old days and she had wanted them back. Bob didn't want to give them back, because they appealed to his vanity, and they gave him a sort of hold over Margaret. He didn't show us the letters, but he did tell us the bargain he made with Margaret. He promised to give them back if she would give him a kiss, said kiss to be delivered on the first convenient occasion.

Of course, Bob didn't really mean that, because he was a good enough sort of fellow, but still, he wouldn't have been averse from taking one if he had had the opportunity. He told us that Margaret had laughingly accepted his proposition, and that the transaction was arranged to take place in the little garden at the back of the Country club, where nobody ever goes. Bob was to be there with the letters and Margaret with the kiss, and Bob arranged that those of us who wanted to see the fun should watch from the windows of the billiard room, which would be sure to be empty, because the tables were being repaired.

There was a grape arbor just at the side adjoining the place where Bob and Margaret were to meet, and at first we had thought of hiding in there. But Bob was afraid our mirth would be heard and he would get into trouble, and, as we found that we had a perfect view from the windows, we were very well satisfied. It was as good as a play.

Margaret was the first of the actors to arrive, and we saw her pacing up and down the garden in an agitated sort of way.

Bob had the letters in his hand and he gave them to her.

"You see, I trust you, Margaret," he said, and he thrust his head up so that he could wink at us. Margaret was too much agitated to see what he was doing. She kept looking right and left, as though she were afraid, and at last, when she had to deliver the goods, she looked into the grape arbor instead and—John came out.

Bob stood smiling at John in a foolish sort of way, and when John spoke, his voice had a rasp in it.

"You dirty blackguard," he said, "peel off your coat and look alive. I'm going to thrash you."

Bob whipped off his coat and, running at John, suddenly ducked and hit him a fiendish blow just under the belt. It wasn't sport, but it was funny to see John double up suddenly.

We thought that he was done for, but all at once he seemed to straighten and came back at Bob with a thump on the nose which started the blood. And after that Bob didn't seem to have a show.

Bob was a sight when John got through with him. He was coated with blood and filth, and he was yelling "murder!" so loud that all the waiters had come up and stood round watching the game.

John gave his arm to Margaret, and as they walked off together I noticed that she seemed to cling to him in a sort of manner that I hadn't seen her do before.

As I said, you never know what a woman will do.

No, Margaret has cut our set now and goes in for the [illegible]. She's awful fond of John; it seems a shame that such a charming woman should be linked up with a slowcoach like that. As for Bob, he's gone West. He couldn't stand the jibes of his friends. They used to call him "barley water."

THE REPORTER

By MARY BIRMINGHAM.

(©, 1921, by McClure Newspaper Syndicate.)

"The bride's gown was of ivory satin with chantilly lace and pearl trimmings. A shower bouquet of roses and lilies of the valley completed the bridal costume."

The society reporter tapped out the story with nimble eager fingers while she smiled dreamily as she read the happy event of which she was writing.

[illegible] the [illegible] voice of the city editor [illegible] of the young reporter [illegible] womanlike was lost in the revel [illegible] beautiful gowns of the wedding party.

"The charming maid of honor in a gown of pink and silver," tapped the facile [illegible] of society events.

"I say, Miss [illegible]!"

The [illegible] awoke the young reporter with a [illegible] surroundings.

"Yes sir," she replied in the [illegible] of the newspaper worker.

"Call up Mrs. [illegible] and find just what kind of [illegible] their next party is going to be. Find out [illegible] what the [illegible] the correct [illegible] that Mrs. Fish-Butler wants made [illegible] the date of the charity ball. O, yes, here! Run out and cover this wedding. It's the most noted one of the season. Here's the picture of the bride, Constance Conniron. Al Babson, the college athlete, is the groom. Take the next train, and have the story for the early edition."

"Al Babson is the groom!" At the words the whole world seemed to swim into wild emotion, and then to settle down into a dreary heaviness that terrified her. Al Babson was to be married! He who had held her in his arms and pledged remembrance unto death! Like a flash she saw the station crowded with khaki-clad figures, heard low good-bys being whispered by those heroes departing for the war, and felt once more the reverent kiss of her departing lover upon her trembling lips.

With a despairing sob the brown head drooped to the toil-worn hands while the tired, lonely heart of the girl cried out her broken-hearted disappointment. It was the loud-[illegible] conductor bawling out the station that aroused her from her grief to the world of daily living. She stumbled uncertainly from the train to the station platform, furtively drying her tear-filled eyes behind the grateful concealment of her modish veil.

A smart-coated chauffeur approached her with silk hat held deferentially in hand. Without waiting for explanation or introduction he courteously directed her to a monogrammed limousine waiting grandly for an occupant.

There was a short, calm ride in a [illegible] through quiet streets [illegible] up before a story-book [illegible] hands bore [illegible] a white-furnished [illegible] like a sanctuary [illegible] the happy bride [illegible]

[illegible]

"My wedding! Jerusalem Ellen, did you think I was taking the high dive with that [illegible] Constance? It's my young cousin [illegible] who's holding the center of the screen today. I'm only the best man. Girl alive, don't you know there never could be anyone else but you?"

It was like a dream, a glorious dream come true. A well-trained actress in the beautiful play that she had witnessed so often with tremulous lips and wistful eyes from the spectators' seats, she heard the low words of the bride in the most beautiful service in the world and was carried to heaven by the heart-stirring music, and the press of loving fingers upon hers when the young bride whispered a soft, "I do."

After it was all over she looked up at the face bending over her with soft shining eyes.

"It might have been my own wedding," she sighed happily. "It was all so wonderful!"

"I'll say it was," agreed the deep, well-loved voice. "But when the best man carries off the society reporter your paper won't have to send a substitute, because it's going to be so quick and sudden that the city editor won't have time to sharpen his pencil."

EASY ENOUGH

By JACK LAWTON.

Copyright, 1921, Western Newspaper Union.

Alice turned to her friend a tear-stained face. "I dont know what I am going to do," she bemoaned, "it is dreadful to be born with a bashful disposition. And having to be tied constantly to Aunt's old fashioned apron strings, keeps me growing more painfully bashful all the time; or maybe its embarrassment, over my own luck of confidence. Anyway I never can have a good time wherever I am, while I am bound to remain tongue tied or stutter at every effort at conversation. It was not so hard to bear before George William Prescott arrived on the scene, but he is bashfully silent too, therin lies my present difficulty."

"Who," asked Cissy abruptly, "is this George William Prescott?" Her diffident friend sighed. "He's the man in my life," she confessed.

"At least, I never took much interest in any man before. He came to Aunt Letties, one evening to pay a duty call, being the guest of her friend Mrs. Seymour. My! it was an awful evening, we just sat and stared at each other, like two people at the dentists; and when I tried to make a remark it sounded insane, and when he did, he'd get red to the ears; but he has been mixing more or less with our set ever since, because Mr. Seymour has taken him into his office and Mr. Prescott is doing so well there, that he's decided to stay on in town. But no one has been able to become well acquainted with William, [illegible] very [illegible] that's what ails [illegible], because he is so diffident." Cecelia Rose wrinkled her pretty brows.

"What I am trying to find out," she remarked "is why anyone should care to."

The wide eyes of Alice were tenderly reminiscent. "Mr. Prescott is so wonderfully good looking," she mused, "his eyes look as if they were trying to say many wonderful things that his lips cannot. While his ways—"

"Mercy," interrupted Cissy, "I do believe you are in love. That would be a serious state of affairs, especially if your George William—oh! let's call him Bill, to take the stiffness away—if your Bill were also speechlessly in love with you. Fancy two frigid glaciers, shining upon each other!" "Cissy dear," begged Alice, "you have such drawing power, couldn't you draw George William—Bill, I mean, out of his shell, and make him approachable?"

"Approachable to you?" Cissy laughed. "Oh! I think it would be easy enough; but you must promise to take him off my hands afterward. I am too fond of being entertained myself to do all the 'drawing.'"

George William Prescott, standing aloof against the supper room curtain, looked as lonely and as uncomfortable as he felt. His stilted replies to several maidens who had ventured inviting remarks regarding the evening, or the success of Mrs. Seymour's party, were not encouraged to further sociability. Alice, breathless, and startled-eyed, had suggested that supper would soon be served, and was allowed to drift on, to the escort of a braver and newly arrived man. George William, mentally reproached himself for leaving the assured entertainment of books for an uncertainty of enjoyment, when a laughing voice accosted him.

"I am your fate as supper companion," Cecelia informed him. "Being guest of honor, Mrs. Seymour gave me the privilege of choice, and I," Cissy Rose smiled, "I chose you." Mr. Prescott started to bow perfunctorily, then bending, drew her hand instead through his arm. Alice, at an opposite side of the flower decked table, gazed wonderingly at her admired one's evident enjoyment of the occasion. Once she heard in accompaniment to Cissy's merry glance at him, her daring use of the name, "Bill."

An eager light showed for a moment in the young man's eyes, his work was also his hobby, then from the doorway Cecelia looked back on the two, and George William turned, dazedly, to the shrinking figure at his side. But it was not of his beloved art that he spoke, "Cissy Rose," he repeated softly, "Why, you'd think the name was made for her, wouldn't you? With the rose color in her cheeks, and that sort of saucy way, she has—"

It was a long speech for William, which may have been accountable for the long silence that followed. From this silence Alice was only rescued by her former supper escort. "Hello," cried that young man breezily, "been looking for you everywhere. I want you to play a certain song for us. Oh! yes you will," he waved her shy objections aside; "I will sit on the bench beside you and give my moral support."

Cissy was in despair. Also, she began to realize certain alarming symptoms of timidity upon her own part at the approach of Bill Prescott.

"I love you!" declared the man whose timidity Alice had deplored.

"You love me, Cissy Rose, and we are going to be married." "Mercy!" gasped Cissy, her trembling fingers were promptly imprisoned in a masterful grasp.

"I have been trying to draw you out for Alice's sake." She confusedly explained. "Oh! that's all right," George William happily replied. "Alice does not need your help, that admirable new acquaintance of hers has been doing some drawing himself—he tells me that they are engaged."

DISCUSSING NORA

By MOLLIE MATHERS.

Copyright, 1921, Western Newspaper Union

They were in the sun room, while out where the scarlet sage made a glory around her, sat Nora.

"This," remarked a determined-looking woman, "is the most reckless thing that she has done. I must confess to having been more or less shocked all along at Nora's actions. She is what one might call independently reckless. Of course, I don't believe all that I hear about her throwing this one and that one over. It is more likely that the Wilkin's man, for instance, did not reach a state of proposal. Eligible young men are not so easily cast aside. But it is certain that Nora went around with him here a lot."

A [illegible] haired, and very young girl [illegible] corner.

"Ted Wilkins was crazy about Nora," she said demurely. "Anyone could see that. So are all her admirers—and every man who comes here is an admirer of her's, open or secretly. But money doesn't move Nora Burton, or charm, or anything. She's just friendly with them all, and a mighty good friend at that. I ought to know. I've been with her enough."

[illegible] Glidden stared at the girl [illegible].

"[illegible] are too young to judge," she reproved, "or to join in [illegible]"

[illegible] girl bent to her knitting. [illegible]," she remarked.

[illegible] turned the topic. [illegible] this hotel," [illegible] one man, [illegible] girl, driving or [illegible]. And she is [illegible]

[illegible]

"[illegible] completely fascinated Nora," said Mrs. Glidden. "[illegible] Mrs. [illegible] insists [illegible] she will have no company of [illegible] if she continues in her friendship with the [illegible]."

"[illegible]," said Mrs. Glidden virtuously, "have done all I could to influence the young man against it; [illegible] him, when he was driving my car one day, and I entered casually but purposely into conversation that Nora acted in precisely this same manner to every new young man who came to the hotel, and that he, the Larry person, was not considered by her apart from his associates. The young man had the impertinence to laugh in my face and tell me I was mistaken."

"Knows of course," sighed Mrs. B[illegible]on, "of Nora's complete infatuation. I, instead, endeavored to bring her to her senses. Showed her the impossibility of the situation. But it was of no use. Nora smiled me down and picked up her book and left the room."

"Someone else is going to leave the room right now," said Helene explosively, and she went out to the garden, [illegible] deliberately to Nora, [illegible] the scarlet blossoms. Helene dropped down on the grass at her [illegible] side.

"For the love of Mike, Nora," she exclaimed, "tell me whether you are in love with that handsome driver or not. And if you are, what you intend to do about it. Those cats," she shrugged back toward the hotel, "are having a great time speculating. Will you really lose every cent of your Aunt Barron's money if you insist on marrying?"

Nora smiled.

"[illegible]," she answered cheerfully, "[illegible]."

The very young girl stared wonderingly.

"[illegible]," she murmured.

"You do love him, and so you [illegible]."

"[illegible] is worth loving," Nora [illegible] Hills where we were [illegible] he was repeatedly [illegible] at the Cliff hotel, where we are safe from aunt's surveillance and naturally, occasionally be thrown upon each other's companionship. [illegible] in this way to teach me to love him."

"And he has," cried Helene delightedly.

Nora's arm slipped round the girl's shoulders.

"We are going in to the city to be married tomorrow," she confided, "and when you hear, don't worry about my lost fortune. Lawrence Breyans will be able to take care of his wife, my dear; he is as successful at law, in the city, as he has been here—in love."

Nothing Better Than Buttermilk for Supply of Protein in Most Digestible Form.

There is nothing so good for an all-round feed for pigs and poultry as buttermilk. It furnishes protein in the most digestible form, and contains the vitamines that are now known to be absolutely essential for the growth of the young and the health of all animals.

SALES WEEK

Beginning Monday, December 12, and ending Saturday, December 17, we will give tickets for each dollar of Cash Purchase and for each dollar paid on Account.

Saturday evening a drawing will be made and the party holding the winning number will draw a prize of

A Fifteen Dollar Bedstead

There will be a big reduction in prices during the whole week

Goodridge Mercantile Co.

The Goodridge Banner

Entered as second class matter July 9, 1919 at the postoffice at Goodridge, Minnesota under the act of March [illegible] 1919.

Published every Friday at Goodridge Minn.

white throughout, free from any foreign color.

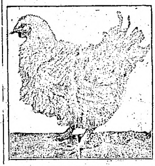
The Hamburg, said to have originated in Holland, although the name has come from the German city of Hamburg, is a small fowl, if anything, smaller than the Leghorn. There is more or less variation in size among the varieties, the Black and Silver Spangled tending to run largest. There are no standard weights for this breed. In type it resembles the Leghorn very closely. The birds are neat bodied, well rounded, and well finished throughout. The comb is rose, and runs rather large for the size of the bird. The ear lobes are of good size, white and nearly round.

Hamburg Popular in Europe.

The Hamburg lays white eggs, and the birds are classed as nonsitting and nonbroody. In Europe these birds have an enviable reputation as layers of large numbers of eggs, but they have not been kept and bred extensively along that line in this country. The small size of the egg has been one reason for this.

An interesting peculiarity of the Sumatra, one of the Oriental class, is the small red ear lobe on a hen laying a white egg. The breed is classed generally as broody, and the hens have the reputation of being excellent mothers. The Sumatras are black throughout, the surface having a very highly developed green sheen, while the undercolor is dull black.

The Frizzles, in the miscellaneous class, are peculiar birds. In an exhibition they are certain to attract attention. Their principal characteristic is the peculiar feathering. Instead of the feathers growing in the usual manner, they have a curled or curved appearance, the end of the feather tending to curl up and back toward the fowl's head. A considerable variation occurs in the amount of this curving, but the more pronounced it is the better. The comb should be single, and the number of toes four. A number of colors are allowed in the Frizzles, without dividing the breed into separate varieties. These are black, white, red, and bay, the only requirement being that each bird shall be a solid color unmixed with any others. Shown in pens the birds, male and female, shall be of the same color. Frizzles are not often seen in this country, and are kept only on account of their unusual appearance. They have no particular qualities to recommend them over normally feathered fowls.



Female Frizzle.

The bulletin referred to above, No. 1221, contains complete descriptions of many of these interesting and peculiar breeds and varieties of ornamental poultry.

BALANCED RATION IS ESSENTIAL FOR EGGS

New Things Discovered to Be Given Consideration.

To Overcome Acid in Feed Mixtures Necessary to Supply Meat Scrap or Something Similar—Fresh Milk Will Help.

Every person who keeps poultry is sure to be impressed sooner or later by the importance of feeding well-balanced rations, especially for the production of eggs. Ordinarily a balanced ration means a ration that has the proportions of carbohydrates, protein and fat that have been found by experience to produce the best results, but new things are being discovered that need to be given consideration in balancing a ration. For instance, it is now thought that it may be well to have a balance between the acid and alkaline feeds and that there is a possibility that the continued use of an acid-forming diet may lead to a greater susceptibility to certain diseases.

The grain mixtures that are commonly used by poultrymen are acid. Mash mixtures containing sufficient quantities of digester tankage, meat and bone meal, dried milk or dried blood will be alkaline. The acid in feed mixtures can be overcome by these feeds just mentioned and by ground limestone and oyster shell. This further emphasizes the necessity of feeding a mash containing meat scrap or some feed of this kind. Green feed and fresh milk also help to overcome acidity.

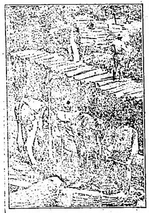
DURABILITY OF WOOD CUT IN COLD MONTHS

Method of Handling Logs Has Greatest Influence.

Fungi and Insects Are Conspicuous by Their Absence in Winter Season—There Is No Difference in Moisture Content.

(Prepared by the United States Department of Agriculture.)

Many of the theories advanced regarding the durability of wood attribute too much importance to the time of cutting, say specialists of the forest products laboratory, forest service, United States Department of Agriculture. As a matter fact, the time of cutting has very little effect upon the durability or other properties if the timber is properly cut. The method of handling logs at different times of the year, however, does influence their durability.



Durability of Wood Is Not Affected by the Time of Cutting.

Timber cut in late fall and winter seasons more slowly and with less checking than during the warmer months, and when proper storage or handling is impracticable, winter cutting is best. Fungi and insects do not attack wood out of doors in cold weather, and by the time warm weather arrives the wood is partly seasoned and somewhat less susceptible to attack. It is for these reasons that winter cutting is advantageous, and not on account of a smaller amount of moisture or sap in the wood in winter, as the popular belief has it. There is practically no difference in moisture content of green wood in winter and summer.

Ohio Experiment Station Favors Winter Application of Manure—Fertility Is Added.

Winter application of manure will aid the growing wheat crop, according to the Ohio experiment station, Wooster. Spreading manure over the wheat ground at the rate of four to six tons per acre affords winter protection and at the same time adds fertility that will later aid the wheat.

While no experiments have been conducted in the topdressing of wheat, the residual effect of manure on wheat shows that the yield may be increased from six to eight bushels per acre.

If manure is not available, nitrate of soda is sometimes applied in the spring, but this should be used in connection with or following the fall use of acid phosphate to get the best results.

When acid phosphate or steamed bonemeal has been used at seeding, nitrate of soda, which is a coarse salt, may be easily sown by hand. The most favorable time is in April, just as the spring growth of wheat is beginning.

SWINE PRODUCTION IN SOUTH

Gaining Considerable Popularity as Source of Feeders for Corn-Belt Section.

The Southern states, particularly Mississippi, have gained considerable popularity as a source of feeder hogs for the corn-belt states, reports the United States Department of Agriculture. Well-bred boars are now being used extensively in the hog-producing centers of the South, and satisfactory feeding shoats are now being produced in large numbers. In some areas cheap pork is made by the use of sweet-potato cannery wastes, these materials having valuable fattening properties. In large peanut-growing districts good gains are put on at a comparatively low cost.

TOO MUCH HAY IS INJURIOUS

"Haybelly" in Work Horse Is Induced by Prolonged Overfeeding on Bulky Roughage.

"Haybelly" in a work horse indicates inefficiency for labor. It is induced by prolonged over-feeding on bulky roughage. The average farm horse is fed too much hay. Experiments have shown that a work horse when fully fed oats requires daily only a trifle over one pound of good hay for each 100 pounds of his body weight. Feeding more is harmful and wasteful. Feed most of it at night, but also allow a pound or two at noon, while the horse is cooling off. Heaves is caused by over-feeding hay and immediately working a horse after his meals.

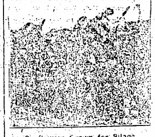
SUNFLOWER IS FOUND SUPERIOR AS SILAGE

Recommended for Use Where Corn Cannot Be Grown.

Dairy Farmers in Oregon Counties Discover They Can Reduce Cost of Production Materially—Many Silos Built.

(Prepared by the United States Department of Agriculture.)

In states where certain districts are high in elevation, so that corn cannot be grown in sufficient quantities to make it a feasible silage crop, the United States Department of Agriculture and the state experiment stations recommend sunflowers for silage. Up to a short time ago there were no sunflowers, nor, in fact, any silos, in eastern Oregon counties, but through the activities of the county agents of the department, co-operating with the State Agricultural college, the use of sunflowers has become quite widespread. Demonstrations are being carried on in Lake, Morrow and Umatilla counties.



Sunflowers Grown for Silage.

Dairy farmers in Wallowa county who fed sunflower silage last year found they could reduce their cost of production very materially. There are 70 silos in Wallowa county this year. Four years ago there were but three. A thousand acres of sunflowers were planted this year in the county, in spite of unfavorable season in 1920, when much of the crop was not harvested at all, or harvested too late to make good ensilage. Extension workers feel that this is a favorable indication of the appreciation of the crop on the part of Wallowa county stockmen. Five or six hundred acres were grown in Dechutes county, where orders for seed were pooled.

SEEDS OF ROMANCE

By VERRA M. HILLS

©, 1921, by McClure Newspaper Syndicate.

Senator Hibbard was returning to his "old home town" to do penance. He had not been there for over fifty years, not since he had been unceremoniously dismissed from high school and sent, by the wise parents, to work his way through a technical school.

Of [illegible] his boyhood pranks, the one which stood out clearest in his mind was [illegible] one which he had always regretted. Miss Betsy Perkins, a near neighbor of the Hibbards, had been at thirty even a real "old maid." But it was whispered that she still had "hopes." Then suddenly there had burst [illegible] the town the story of Miss Betsy's "romance." She was receiving notes from an unknown admirer. Miss Betsy grew younger-looking day by day, but Mrs. Hibbard was uneasy. "I'm afraid there's something wrong about it," she told her husband anxiously.

There came a day when Miss Betsy was to meet her lover at the park. Dressed in a new gown, and with shining eyes, she had been there at the appointed hour. Of course no man appeared. Among the boys hiding behind the trees to watch her, Walter Hibbard was the hero of the hour. He had enjoyed writing those notes, but he did not enjoy seeing Miss Betsy trailing desolately homeward, with quivering mouth, and hurt eyes. He found that he had a conscience, and that it was an uncomfortable possession.

Walter Hibbard, coming back as a prosperous senator, paused to speak to the proprietor of the general store. "Is Miss Betsy Perkins still living?"

He detected signs of surprise in the man's face.

"Betsy Perkins? Sure. Small white house on the left, up the street." He rang the bell and the voices ceased. After a moment of quiet someone ran upstairs and someone else opened the door.

She was a very pretty girl, and the senator liked pretty girls.

"May I see Miss Perkins?" he asked, smiling.

"I am Miss Perkins," replied the girl, "unless—unless you mean my sister, Elfreda."

"I was looking for a Miss Betsy Perkins, who would be quite an old lady."

"Won't you come in? You must mean Great-Aunt Betsy; but she died many years ago. Were you a friend of hers?"

They had just seated themselves when a stair creaked; there was a sound of a closing door, and the noise of an automobile in the street beyond. Betsy rose, trembling a little.

"Oh, will you excuse me a minute, please?" she said, and ran from the room.

In a few moments she stood, a tragic figure, in the doorway.

"She's gone; my sister's gone away to be married. She's only seventeen, and I was trying to persuade her not to—when—when you came. Oh, I must stop her some way."

She seemed very helpless, and the senator was used to thinking and acting quickly. Ten minutes later they were in a hired car, speeding in the direction of Allerton, a haven for elopers.

At the parsonage the woman told them that a couple had come and gone. "They went to get a ring," she said, and Betsy's sudden alarm died down again.

"We are in time," she whispered exultantly, and the senator no longer regretted having come.

They found the runaways in front of the jeweler's shop, disagreeing stormily. Elfreda was firm; if she couldn't have the kind of wedding she wanted, she would not be married. She thought she would spend a week in Allerton with Pussy Williams.

"Well, that's over—for a while," said Betsy, on her own doorstep. She held out her hand in farewell, but the Senator had other plans.

"Little Miss Perkins," he said, "you can't stay here all alone. Let me take you up to the city for a few days. Mother and I miss all our young folks. And besides, for your Aunt Betsy's sake—"

Because she wanted to see much, Betsy went. In the great city station, when a cheery voice said "Gramp!" at her elbow, she would have gone on, but the senator stopped abruptly. He had forgotten that Walter, his grand-son and namesake, was to meet him. But there the young man stood, hat in hand, looking expectantly toward the girl.

Betsy Perkins was very pretty, and Walter, like his grandfather, appreciated pretty faces.

Having introduced them, the senator watched them keenly; obviously they were getting on. Well—he had never regretted marrying young; Dana, his son, had married at twenty. Walter here was twenty-three, and Miss Perkins was a charming girl. It would never do for her to experience a misfortune like her great aunt's.

"Come, Walter," he said, "we'll have a cosy evening at home tonight, and tomorrow you can show Miss Perkins the sights of the town. It takes a young man to do that."

TWENTY YEARS

By ALICE L. EAGAN

©, 1921, by McClure Newspaper Syndicate.

Cornelia Marden sat by her open window, where the great maple tree swayed back and forth in rhythm with the old rocker. Her eyes were closed, and the sound reminded her of the surf on the shore. She had thought she would like to go to the theater, but her slim pocketbook would hardly permit of many luxuries. So she sat by the window till the moon rose; then a sudden impulse came to her. She would walk out with William—her William. It would not cost anything, and they could walk together as in the old days, 20 years ago.

She arose hastily to dress, then stopped to look at his picture. The large, serious eyes, the smooth combed hair of the square jaw—she caught her breath quickly, while a terrible longing came over her. Those moonlight nights—how he had loved them!

She went down the stairs quietly, so as not to be observed by the boarders in the living room. On her way, however, she heard Mrs. Morse, the smiling widow, remark to the new gentleman boarder:

"Yes, it would be a delightful evening to take a walk."

She also observed, from a corner of her eye, the hopeless expression of the two maiden ladies, who sat apart in melancholy silence. Was she doomed to be like one of them some day? Would she have to listen to the coquettish answers of the smiling widows, while her own heart ached in silence?

"Oh, William!" she cried aloud, as she turned the corner which led toward the park, "I need you!"

She had almost reached her destination in the park when a gentleman addressed her, and, to her surprise, she found it was the new boarder.

"Pardon me, but I saw you passing the living room on your way out, and felt I would like to know you. It's a lovely night; may I walk along with you?"

Cornelia was puzzled. Where was Mrs. Morse? Besides, this would spoil her walk with William—that dear, imaginary companionship. Before she could frame a fitting reply, he continued, not looking at her:

"You seem like a person of good discernment, so I am going to ask your advice on a subject of grave importance to me. They say a woman's intuition is keener than a man's, and somehow I feel I can trust you."

"I am listening."

A moment passed before he spoke.

"I am thinking of marrying," he said uneasily.

"Yes."

"Perhaps you may know Mrs. Morse, the widow up at the house?"

"Oh, yes."

"I have not told her—that is—I might say she seems like a pleasant person. At any rate, life might not be quite so monotonous."

Oh, the torture of it all! Cornelia was thinking.

How it brought the love of William back to her—all the sweet memory of the dear old days!

"But do you love her?" asked she venturing to look up at him. "Marriage without love would be—would be—"

She stopped suddenly, as he looked down at her. There was something in his eyes which drew her to him—a hidden something. What was it? She felt a quick impulse to gaze at him—to have the bright summer evening lengthen on—on—to have no end—to—

What was she thinking? This stranger—almost engaged to another—and William, the one she loved! Were her thoughts straying from him? She felt the color mounting to her pale cheeks.

"Cornelia! little Cornelia!"

In a wild ecstasy of joy she heard her name called by this stranger.

She startled. He had placed his hands on her shoulders and compelled her to look at him. Again the sense of fascination held her; of course William was held deep in her heart—but, somehow, this man— A little choking sob caught her breath, then slowly without her own volition, she reached up and touched his face, scanning his features as if searching for something long dead.

Then a look of great joy came over her face, and she asked in tones of awe:

"Answer me, please. O, answer me, is it William?"

She waited, it seemed a life time, for him to speak, while the charm of his personality held her in a trance. Then he answered:

"My love, it is 20 years!"

Norway Granite.

Granite is one of the exports of Norway, and it ships it to many countries which have granite of their own. Some of the granite which Norway sells to other countries is of the familiar gray color, but that which figures most in its trade is a granite which is found nowhere else. It is durable and it is beautiful and unique in its colors.

This is the so-called "Labrador granite," from the Larvik district. With its beautiful appearance and wonderful play of colors, it is the Norwegian stone that has attracted most attention as an ornamental stone, and it has been extensively used for that purpose not only in Norway, but also throughout Europe.—Washington Star.

THE CAPTURE

BY CLAUDE MAY PERRIN

©, 1921, by McClure Newspaper Syndicate.

"You need not deny it! You are proving yourself a flirt by allowing Bentley to drive you home day after day. You know his people disapprove."

"Hear me!" Dess stamped her foot, at the risk of attracting attention. "He is but an acquaintance, like every other. When it is rainy, or there's a deep snow—really, I am in the seat beside him before I know it."

"Well, can't you wait till he has gone? There are several who drive in that direction. He was to call for me last night to attend a rehearsal. But when I learned he had taken you in his car out of sheer pity—that was enough!"

"He did not stay longer than to dump [illegible]," defended Dess. "He dashed off [illegible] that might have [illegible] him. But he escaped [illegible] this morning—[illegible]"

The [illegible] sent them promptly to [illegible]. A school of the [illegible] the coming men [illegible] competitors were being trained [illegible] business mysteries, yet an [illegible] where, out of hours, the indisputable social hilarity swung as free as their superiors would allow.

Dess scrawled off her allotment of penmanship sheets, her mind roaming meanwhile up and down the streets leading to her home in the suburbs. Later—with Wall street mathematics to keep [illegible] with earth—she attem[illegible] a way by which she [illegible] accomplish the trip [illegible] funds on carfare. [illegible] day found her on t[illegible] had stood 24 hour[illegible]

Ni[illegible] toward the trolley [illegible] shelter of umbrell[illegible] rubbers. From the [illegible] building, Dess could [illegible] men departing in scores. She discerned Conrad Bentley, the impossible, scurrying off toward the garage. His comrades were sons of the city's best. Dess watched them until a trolley came rumbling by; her indignation rose to a high mark when she noted Nina Haller had let it pass.

"She's spying on me! I've a mind to go ask Con Bentley to let me ride. Spying—the idea!"

But Dess thought of another way. She knew, by woman's intuitive sense that Bentley must be careful. She imagined he liked Nina—unless it was the presupposed arrangement that deluded the two. As for herself, she was not sure if she cared for any one of her male friends above any other. Fun, lots of it—that was the principal thing. With a laugh that set her features in dimples, she started down the steps. The ranks were thinning rapidly; she must not loiter longer.

The rainfall was interchangeable with snow and sleet, with mischievous gusts sweeping along to lend life to the pedestrian. The umbrella problem was a serious one. She heard a heavy footfall back of her and drew aside to let the individual pass. A smile of recognition and a word of greeting, then a daring idea possessed her.

"Carey, would you please help me across the flats? I cannot possibly manage this wind."

"Surely! We'll be all right so long as this umbrella doesn't collapse. Take my arm—you'll slip. Now!"

She was too busily chatting to note when Nina should board the car, or Bentley glide past in his roadster. Carey Lavell, declared to be bashful and by prediction a bachelor, proved a safeguard against the two.

Nina complained no more—with Dess Richie's misdemeanors as her plea. She contrived to secure the attentions of the disputed Bentley a few times more than any other. But the close of the term found Carey Lavell waiting for Dess.

"I am to take a desk in my father's office, permanently. I mean, when school closes next year."

"And I cannot finish till a year later. Somehow, I envy Nina. She seems to master everything so quickly."

"Easily seen. You know, I have to laugh when she promenades with Con Bentley. Both families borrow heavily of my father—thousands."

Original "Free Lances."

In the days of chivalry—when milady was the idol of the blades of derring-do—many men of gallantry were attached to no particular prince or cause, but lent their prowess and their lances to such noble masters as might engage their service. They were, therefore, free lances, like those present-day writers whose quills tilt the inkhorn or whose keyboards tap the ribbon for any editorial accolade. Such was the origin of the term free lance as now applied to doughty soldiers of fortune in the writing confraternity.—Exchange.

The Continental Congresses.

The first Continental congress, with delegates from all of the colonies but Georgia, met in Philadelphia September 5, 1774, and lasted until October 26, 1774. The second, in which all the colonies were represented, met in Philadelphia May 10, 1775, and adjourned December 12. The third congress met in Baltimore December 20, 1776, and lasted until the Articles of Confederation went into operation March 1, 1781. The congress declared independence, carried on the war and in many respects governed the country.

FOUND

By BARBARA WOOD

©, 1921, by McClure Newspaper Syndicate.

Suddenly and quite unexpectedly the stillness was broken by a quick gentle sigh. But was it a sigh? It seemed almost like a sob to the man sitting upright in his chair in the library, straining his eyes to pierce the darkness, and his ears to catch the next sound that might break the silence. But no sound came, and after sitting tense and motionless for a few seconds he loosened his grip on the arms of the chair, rose, and walked quietly and unhurriedly to the open window opposite. The scene from the window was as peaceful as could be imagined.

Somewhere out there in the darkness was a human being—a girl, or a woman—who had crept up to his window with what intention it was impossible for him to guess.

With a sudden determination to find her, Roger Tilton put his foot over the window sill and in a moment more he had dropped noiselessly to the ground and was ready to begin his search.

"Oh, for a clue!" he whispered to himself. And then, gradually, it came to him that the air seemed to carry a very faint, sweet perfume.

He drew a flashlight from his pocket and threw its rays about the place where his feet had landed in the soft earth. Not two inches from the toe of his polished oxfords lay a crumpled little white handkerchief, and with a queer thrill of excitement he picked it up, smoothing it out between his fingers to see if there might be an initial in the corner. It was a small white square of linen, and it was still damp.

"So it was a sob, after all," he thought, and then his eyes caught the monogram—three letters embroidered very neatly and obscurely in one corner: RLB. The man looked as though he had been struck and after a moment he, too, caught his breath in something very like a sob.

"Ruth!" he whispered.

He felt as though someone had gripped his throat in a vice. At last, almost desperately, he breathed this prayer:

"Oh, God, if it is Ruth, please let me find her. Please; for I can't let her go again."

He moved slowly toward the west wing of the house.

It was then that one might have noticed the slight limp that was always with him, and perhaps, if his thoughts could have been read, one would have found a world of suffering and sorrow behind those clear, blue eyes that were eagerly searching every shadow and hiding place. For his memory had gone back to that day two years ago when he had come back from France—a victim of shell shock and bearing in his thigh an exceedingly disagreeable wound which would thereafter place an impediment on every step he took. That day was the hardest he had ever faced, for the thing he wanted most in all the world to do he could not do—to see Ruth Bradford; to go to her and to feel the comfort of her hot tears on his face.

He remembered with a twinge of pain the contagious ripple of her laughter, and he wondered whether she had learned to laugh again after he stopped writing. They had been engaged when he went to France and for months their letters were [illegible] frequent and comforting. Then came the shock and the wound followed by many weeks in a hospital. After that he had sent her no more letters. His pride and his sense of honesty forbade it, for he realized that it would not be fair to expect her to bind her perfect womanhood to one who was maimed for life.

All these thoughts and many more raced through his mind tonight and it was with a start of surprise that he found himself at the edge of the swamp.

It was only a matter of minutes before he found her, but it seemed like years. She lay face down in a patch of moonlight. Her hair was loosened so that it lay like a pool of gold about her shoulders. One foot was unmer[illegible] gnarled root of a tree [illegible] cause of her [illegible] beside her [illegible] enabled he [illegible] paper and [illegible] lifted [illegible] s and [illegible]; I— [illegible] her [illegible] with a [illegible] again.

"Ru[illegible]

His [illegible] again and again [illegible] minutes before either of them [illegible] remembered that they had voices.

"Roy," she said [illegible] she finally did remember, and the old familiar nickname sent a thrill of joy right straight to the man's heart. "Roy, you'll never hide from me again, will you? Oh, promise that you won't, for it's been almost too much to bear."

"No, dear, for I couldn't. I couldn't if I would; and I wouldn't if I could. Does that make you feel better?"

Ruth closed her eyes to hide the great wave of happiness that went surging through her heart, and it seemed to her that she could hear the music of children's laughter ringing in her ears.

CHECK OFF NEEDED REPAIRS

Good Plan to Make Note of Defects When Machinery Is Being Put Away for Winter.

When the farm machinery is being put away for the winter the owner can profitably check off the repairs that will be necessary before each machine can go out again next season. A five-cent pad of paper nailed to the door of the implement shed is suggested by the agricultural engineers at the Missouri College of Agriculture as a mighty handy means of jotting down what is needed on each machine. Then on a rainy day or in the slack season the work can be done. System on farms may not yield as big profits as it does in factories, but it pays nevertheless.

BUILDING IN SASKATCHEWAN

About 200 Miles of Road in Course of Construction to Cost at Least $200,000.

Road work totaling about 200 miles and costing at least $200,000, is now in course of construction, or about to be commenced, in Saskatchewan as part of the federal aid scheme. Some of the work is being done under contracts awarded by the Saskatchewan department of highways, while other sections are being constructed by departmental day labor gangs.

[illegible] With Corn Crack [illegible] Pressure

"Exact weights for a cubic foot of sunflower silage have not been accurately determined, but speaking from general observation, sunflower silage weighs one-third heavier than corn silage per cubic foot of silo capacity," says Charles I. Bray of the Agricultural college at Fort Collins. "For this reason, some silos that have proved satisfactory with corn silage have cracked under the pressure of sunflower silage.

"We saw one recently 50 feet high that had two bad cracks in it after filling with sunflowers, and were told of several more. For this reason, silos should be exceptionally well reinforced where sunflowers are to be used.

"There should be no danger with an ordinary well-built silo. The pressure on the walls of the silo increases 11 pounds per square foot of wall surface for each foot depth of corn silage. At 40 feet deep this would be 440 pounds pressure—with corn silage. This might mean almost 600 pounds pressure at the bottom of 40 feet of sunflower silage."

"They Satisfy"

Can't Explain It

There is nothing mysterious about modern banking methods. Most people know all about how to do business with a bank, but to those still unfamiliar, we offer the following information:

To open an account, merely bring your money to the bank. We will credit you with the amount and will give you a pass book on which the amount of your deposit will be entered. We will also give you a check book. When you wish any of the money or desire to pay a bill, write a check for the amount and sign it. When the check reaches the bank we will pay it, charging it to your account. Every additional deposit of deposit of funds will be entered on the pass book which you have. We keep a complete record and do all the bookkeeping free.

Farmers State Bank
OF GOODRIDGE

ERGOT IS CAUSE OF HUGE LOSSES

Disease of Rye and Occasionally Found on Wheat and Other Cultivated Crops.

PRODUCE SPORES IN SPRING

Ailment Has Become Widely Distributed Across Continent—Durum Wheats Seem to Be More Subject to Attack.

(Prepared by the United States Department of Agriculture.)

Ergot, a widespread disease of rye, and occasionally reported on wheat and the other cultivated cereals and related grasses, has this year been observed in North Dakota as a destructive disease of wheat. Samples of thrashed wheat sent to the United States Department of Agriculture from several points in northeastern North Dakota carry as much as 10 per cent by weight of the ergot bodies. This figure does not fully represent the probable amount of ergot produced by the crop, for an appreciable percentage of the sclerotia, or ergot bodies, would, of course, be blown out with foreign material either as a part of the screenings or with the straw through the blow stacker.

Ergot Has Become Very Destructive in Rye and Particularly Durum Wheats, Even Occurring to a Marked Degree in Barley.

Ergot can be distinguished in ripening wheat as large bluish black bodies, which in many instances are from three to eight times as large as the grain of wheat or rye which they displace in the head. Many of these bodies fall from the ripe wheat or rye head during the process of harvesting and lie on the ground all winter. They germinate in the spring and produce spores which infect the wheat or rye head when it is in bloom.

As a disease of wheat, ergot has become widely distributed across the country from New York to Oregon and from the Canadian border to the southern limits of wheat production, but not until within the past three years has it attracted more than passing attention. From such observations as have been recorded there is some reason to believe that the disease is becoming not only more prevalent but is also more widely distributed. The durum wheats seem to be more subject to attack than do the common wheats; at any rate, reports based on field observations and on samples of thrashed grain show a higher percentage of ergot in the durum varieties.

Ergot Is Poisonous to Live Stock.

The importance of ergot as a cereal disease lies not so much in its relation to crop yield as it does in its poisonous effect upon animals that unwittingly have been given a ration of screenings or other feed containing the ergot bodies. It is now generally accepted that flour made from wheat or rye is unfit for food if it contains more than one-tenth of 1 per cent by weight of ergot. Screenings obtained from wheat or rye affected with ergot would naturally include ergot bodies, and these when ground at the feed mill are scarcely recognizable as a part of the grist. Such feed, when fed to poultry or other live stock, may result in fatal poisoning.

As a cereal disease, ergot may be controlled by planting clean seed immediately after any other crop than wheat or rye in which there was an outbreak of ergot.

Winter rye volunteers readily, and these volunteer plants are almost always badly infected with ergot. Sowing wheat after rye, therefore, is bad practice, for, regardless of whether the ergot attacks the wheat, its presence in volunteer rye is sure to leave a considerable quantity of both rye and ergot in the wheat as it comes from the thrashing machine. This foreign matter is likely to lower the grade of the wheat as well as affect its value for bread-making purposes.

Freeing Seed Grain of Ergot.

Rye or wheat containing ergot bodies can be perfectly cleaned by pouring the grain into a vat or barrel containing a 20 per cent solution of common salt and stirring thoroughly to bring the ergot bodies to the surface. The difference in specific gravity between this solution and fresh water will bring all ergot bodies, or pieces of such material, to the surface where they can be skimmed off. The brine should then be drawn off and the grain should be washed in fresh water to remove any salt remaining on the seed.

RIGHT RULES FOR CONCRETE

Posts, Blocks, Floors, Troughs, Etc., Can Be Made by Following Simple Rules.

Good concrete for posts, blocks, floors and troughs can be made by observing a few simple rules.

Use cement that has been kept dry.

Use clean sand and gravel or crushed rock.

Measure the cement, sand and gravel in the proper proportions.

Mix the cement and sand thoroughly, then add the gravel and mix thoroughly.

Place the concrete immediately, and tamp thoroughly.

Protect from freezing for two days, or from drying for four days.

It is poor economy to try to save by not using the proper amount of cement in the mixture. The labor, forms, sand and gravel cost as much for a lean, weak mixture, which will not be permanent, as they do for a rich mixture which is suited to the place where it is to be used and which gives, at a slight additional cost for cement, both permanence and satisfaction.

FOWLS SUBJECT TO DISEASE

Chickens Should Be Properly Fed, Sheltered and Kept in Good Sanitary Condition.

Chickens that are not sheltered and fed and kept in sanitary condition are subject to disease which may extend to the neighbors' flocks. The farmer who likes pure-bred stock in horses and cattle and hogs, needs pure-bred chickens to match them. It speaks well for him to keep everything in stock from well bred lines.

ADVERTISE YOUR GOoDS

THE GOODRIDGE BANNER

VOLUME XV, No. 47. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, DECEMBER 16, 1921. $1.50 PER YEAR.

Division of Cost of Ditch 30

Division of costs for judicial ditch No. 30 was made by County Auditor T. P. Anderson of Pennington county, Auditor August Lundgren of Marshall county, and Engineer Irving Quist, at Warren on Monday. The assessed benefits for Marshall county total $62,588, and those for Pennington $67,055. The total cost of the ditch was placed at $97,224.75, of which amount Pennington county pays 51.72 per cent, or $50,284.64, and Marshall county 48.28 per cent, or $46,940.11. The assessments by townships in Pennington county are as follows: North, $2,150; Silverton, $15,410; Cloverleaf, $14,775; Goodridge, $17,610; Reiner, $16,610; village of Goodridge, $500. Following is the assessment for the Marshall county townships: Agder, $11,938; Grand Plain, $19,145; Moylan, $16,670; Esplee, $14,840.

The contract for the construction of this ditch has been let to the Union Drainage company of Crookston, and work will begin as early as possible in the spring.

The new judicial ditch is intended as an outlet for ditches No. 18 and 20 and has been in litigation during the past two years. It provides for the continuation of ditch No. 18 to the Thief River instead of emptying into No. 20 as is now the case. The latter ditch is unable to take care of the water drained into it in the spring or after a heavy rain and it is expected that the proposed improvement will prevent costly overflows in the future. The matter has been before the courts for about three years, the project being bitterly opposed by some of the land owners against whom the cost will be assessed.—T. R. F. Times

Without Foundation

The statement originating in Minneapolis that I had decided to retire from office is wholly unauthorized and untrue. In working for legislation in the interest of the farmers, especially regarding marketing and grading of grain, I know I have incurred the hostility of certain interests in the grain trade, and their wish to retire me is no doubt father to the thought. My grain grading bill is now on the calendar and a favorable endorsement by the congressional convention would greatly help in securing its passage.

HALVOR STEENERSON.

Legion Elects Officers

The annual meeting of Henry Svare Post of the American Legion was held Monday evening, Dec. 12. The reports of the secretary and treasurer were read and accepted, after which officers for the coming year were elected. Owen Olson, who served as post commander last year, was elected to hold the same position during the coming year. The other officers elected were as follows: Elmer Peterson, vice commander; Victor McLeod, post adjutant; B. O. Norby, secretary; John Nystul, treasurer.

Community Christmas Tree

At a meeting of the American Legion can Legion held last Monday evening it was decided to elicit the cooperation of the local business men to join hands in the preparation for a community Christmas tree. Arrangements are already under way and the plan is to place the tree in the center of Main street on Friday morning, Dec. 23. The tree will be electrically illuminated and have such other decorations as are necessary to make it attractive. A union program of all the pupils in the public school will be rendered in the school auditorium in the afternoon 1:30 p. m. Following the program the children will march in a body from the school house over to Main street, where they will surround the Christmas tree and await the distribution of peanuts, apples and other Christmas goodies. If the weather permits the local band will turn out to furnish music for the occasion. The entire community is invited to participate in these exercises. This will mark the first Christmas celebration around a community Christmas tree in the history of this village, so let us have a record breaking attendance and a real jollification. Remember the date, Friday, Dec. 23, 1:30 p. m.

Annual Meeting of Norwegian Lutherans

At the annual meeting of the Norwegian Lutheran church held Tuesday afternoon the following officers were elected: H. A. Halvorson, secretary; M. J. Stephenson, treasurer. George Wold and A. B. Mandt were elected trustees. Gilbert Gunderson holds office for two years more.

ERIE ECHOES

Mrs. Rouze, teacher in southeast Star school district, is to be congratulated upon her enterprise; besides her regular school instruction work she conducts night school on Monday, Tuesday and Thursday evenings, the hours being from 7 to 9 o'clock. Attendance to date is as follows: Knut and Ole Berg, John and George Hovet, Daniel Danielson, Iver Iverson, Z. J. Hole and Christian Amunpson.

Rev. Hoyum and Mr. H rson preached to a good size congregation in Clover Nook school house Sunday after-

Zacharias Hole, Glennie Lien, Arnold and Henry, were on a combined social and business visit at Sub-Urban's Friday evening.

Mr. and Mrs. Gust A. Iverson drove to the vicinity of Rhoda Saturday for a visit at the John Bannerud and Vrol Haatveit homes.

Mr. Loiland and sons have been making the rounds of the eastern part of Star township during the week sawing wood for the farmers and schools with their newly purchased saw rig.

Mrs. Rouze spent the week end with relatives and friends in Goodridge.

A lively race was seen on the Brown highway Sunday forenoon. Young Loiland with his sorrel horse and Jens Dahle with his Ford runabout were both running in "high" and Loiland was pretty well in the lead, at that. We have not yet heard as to the final outcome.

"Goodfellow" Makes Hit

A capacity house, in which standing room was at a premium, attended the home talent play given by the local post of the American Legion at the school auditorium last Friday evening, Dec. 9. Among the visitors from out of town were several people from Thief River Falls and Oklee.

The play was very well received and was repeatedly applauded throughout. Grom the general run of hame talent plays "The Goodfellow" proved different to the audience in the skill and understanding with which the various characters handled their parts. There was not a dull moment in the entire perpformance; even the usual delay in changing scenes was forgotten in keen enjoyment of the "between the acts" features which had been arranged.

Mrs. Theo. Tandberg, who played the leading role in the character of Jane Madison, displayed exceptional talent and did much to give the play its appealing quality. The part of Dora Woodruff was taken by Gladys Wilson, who played her part with exceptional success and just the right amount of of vivacity to create interest. Opposite Miss Wilson the role of the young newspaper reporter, Subbie Stebbins, was ably represented by John Nystul. Martha Peck, of uncertain age and reputed invulnerability, but withal a very lovable sort of person, was played by Sarah Vaughan and proved one of the most popular characters in the whole cast. The part of John Dawson, known as the "Goodfellow," from whom the play received its name, and whose recklessness and prodigality furnished the complication of the play, was played to good advantage by Harvey Ferdinandsen. "Old Man Hudson," the "man of mystery," of whose identity the audience remained in suspense and uncertainty until the rather unusual denouement, was very skilfully represented by E. J. Beithon. Richard Meadows, "meanest man in town" and of the "I-walked-and-saved-a-nickel" variety, proved a source of much merriment, particularly when he attempted to Sir Galahad Jane Madison. This part was taken by B. O. Norby and executed in a most satisfactory manner. Elmer Peterson played the part of Bacon, "of police headquarters." Woodstock, who is attached to Meadows in the capacity of a legal adviser and who declares himself to be "nearly paid" by his employer, was impersonated by Eilert Wiseth. Capt. Richards, in whose office the story is brought to a close with a "happy ever after" ending, was represented by Theo. Tandberg. Madison, the shiftless husband, who declares himself a "natural born detective" and boasts of having common kinship with Danuel Webster when it's a question of orthography and etymology, was played by Victor McLeod. Mrs. Madison, the only person in the whole cast whose character was consistently pathetic throughout the play, was represented by Mrs. Elmer Peterson, who showed no small ability in portraying this difficult character.

Between the acts the audience was entertained with a number of vaudeville stunts and musical selections. E. J. Beithon proved himself a versatile entertainer and responded to numerous encores. His appearance as a hula-hula dancer and black face comedian proved particularly popular. A five piece orchestra, consisting of Miss Gretta Gulrud, P. O. Tvedt, Joseph Christianson, Roy Olson and John Nystul, also contributed to make the entertainment a success.

BIRDS ARE HELP TO AGRICULTURE

Pesky English Sparrow Is Usually Nuisance and Often Injurious to Crops.

CROWS AND BLACKBIRDS BAD

Owls Have Long Been Persecuted, but Never Has Persecution Been More Unjust—Feed on Rats, Mice and Other Mammals.

(Prepared by the United States Department of Agriculture.)

The sparrow is a beneficial bird, says the biological survey, United States Department of Agriculture, and should not be regarded as a pest. The single exception to the department's indorsement is the pesky English sparrow of that species, "usually a nuisance and often injurious," and, says the department in a booklet, Farm Help From the Birds, "it must be remembered that the introduced English sparrow is but one member of the large family of sparrows and its habits are by no means characteristic of the native species."

Few Birds Classed as Injurious.

They are essentially seed eaters, the sparrows, but they consume also a fair proportion of insects, the department finds, and in general must be regarded as beneficial. Separating the sheep from the goats in the feathered kingdom of common knowledge to the farmer, the department places among the bad birds the jays, crows, ravens and blackbirds, a corporal's guard with the army of good birds, of aid to the farmer, placed in the other classification. Even the bad denizens of the air have some good in them, says the department, and the damage they do the farmer is largely because of overpopulation in the feathered ranks. Of that class, the department says:

"It would seem a good policy to accord them the same treatment long given the common crow. The crow is not specially persecuted; neither is it protected. About the best that can be said of birds of this family is that on the average they do about as much good as harm."

The Screech Owl Is Beneficial Bird to the Farmer.

Owls Perform Useful Service.

"Owls as a group have long been persecuted by man, but never has persecution been more unjust," says the biological survey. More than 50 varieties of owls feed on a great variety of rodents and have useful habits, the booklet continues. In Washington, D. C., the survey recently determined what 675 barn owls had for dinner. Here is the menu, by variety and number of dishes consumed: Meadow mice, 1,119; house mice, 452; house rats, 134; other small mammals, 3 per owl. And the service done man by the barn owl, the booklet says, is typical of that performed by hawks and owls in general. An occasional chicken is consumed, but this loss is far outweighed by the destruction of harmful rodents.

Firemen's Annual Meeting

The Firemen held their annual meeting Wednesday evening and re-elected the old officers, as follows: G. C. Gulrud, 1st chief; Carl Edseth, 2nd chief; M. J. Stephenson, secretary; Henry Rockne, captain 1st company; Albert Halvorson, captain 2nd company. At the conclusion of business the customary oyster stew was served at the Stephenson cafe.

VIA THE PINK ONE

By HESTER CALDERWOOD.

© 1921, by McClure Newspaper Syndicate.

Everyone he had met that day on his way to the office had said: "Good morning, Mr. Gilford; fine morning, isn't it?" And Larry Gilford had gazed into the sky and had seen that it was blue and cloudless and that the sun was shining, and had suddenly discovered that it was a fine day—outside. But when he opened the door of his business-looking office, everything was dingy and lonely—like his own thoughts.

Perhaps Erma Clark was to blame, perhaps she wasn't. Anyway, he had accompanied her to one of the usual twice-a-week theater trips that night, but he had not accompanied her home. She left him at the theater door and told him, very decidedly, that she preferred to go home alone.

So Larry plodded back to his two uninviting, rented rooms with a downcast heart and Erma's fiery words still ringing in his ears—words to the effect that he had become so engrossed in his business of late that he had neglected her to the point of rudeness.

A wonderful frame of mind to be in at the start of a long office day! Larry's head felt heavy and stupid and dull, too.

And the work that was before him! His desk was fairly swamped with letters. And right on top of the pile was a pink envelope, addressed in a feminine hand.

Larry gave a disgusted groan and threw the letter on the floor.

The door opened. Larry wheeled around in his chair and saw a tall, slender girl enter the room. She was dressed in soft, dark brown. But the chic French veil she wore was of such a dark, dense shade that it completely hid her features from him.

"Hello!" the person said. "Alone? Isn't that nice!"

Larry stared at her a moment, then, remembering that he hadn't risen to his feet, hastily did so and stood before her awkwardly silent.

Larry hadn't long to wonder, for the girl was already loosening the veil from her face, and then—

"Erma!" he cried joyously, springing toward her, "Erma—dear."

"I couldn't stay away any longer, Larry," she whispered softly, coming closer to him.

"But you said—"

The girl pressed a small hand over his mouth. "I know I said a lot of things, Larry dear, and I've come to be forgiven for them; the things I said about you being selfish and ugly, I mean."

"But I'm afraid I did neglect you, Erma. I didn't think—I had more business than I could attend to last week, and it simply wouldn't let me think of anybody or anything else."

"Larry, you didn't neglect me; you've been wonderful to me—always. I needed this lesson—the thought that perhaps you wouldn't forgive me—to make me understand."

Larry didn't answer. He only stood silently before her, too happy, too bewildered to speak.

"Dear," she was saying in her soft, low voice, "I know how to appreciate you now. I couldn't get along without you. I love you, Larry! I love you. Please, please, forgive me."

Then it was that Larry spoke. "Dearest," he cried hoarsely, "stay with me always; promise me. I love you, Erma dear, I love—"

His last words were lost as he gathered her close in his arms and smothered his face in her hair, his whole heart filled with a new, warm joy of having her back again. For several moments they remained thus, until the sharp striking of the office clock awoke Larry and he lifted his head, still quite dazed, from the letter-littered desk top.

So that was all! Erma was still lost, he was still alone; it had only been a dream.

He mustn't think about it any longer, he told himself. His work must be done and he would tackle the worst part first. So thinking, he picked up the pink envelope, which had fallen at his feet, and opened it. It read:

"Dearest Larry—In half an hour I will be at your office, so have all callers out by then. I'm coming to be forgiven for the horrid things I said to you, Larry dear. I've missed you terribly since last night, and I'm in such a hurry to see you that I can't stop to write any more.

"Lots of love,

"ERMA."

Erma had been lost and now she was found again. And happiness had come to Larry by the way of the pink letter.

Uncle Eben.

"Dishere thing day calls optimism," said Uncle Eben, "is whut used to keep de lottery business goin'."

HIGH QUALITIES OF FANCY FOWLS

Ornamental Varieties May Provide Attractive Revenue When Properly Developed.

HAMBURG IS PROLIFIC LAYER

Principal Characteristic of Frizzles Is Peculiar Feathering—Have No Particular Qualities to Recommend Them.

(Prepared by the United States Department of Agriculture.)

Eggs and meat for home uses or for marketing are not the only possibilities of the poultry industry. In addition to the fowls kept primarily for their economic value or utility there are many throughout the country whose owners breed them merely for pleasure and secondly for the profits more than likely to result in supplying others whose fancy takes the same channel.

Ornamental breeds and varieties may and often do possess considerable economic value and some of them undoubtedly could be developed, according to the poultry specialists of the United States Department of Agriculture, into birds having high utility qualities. For example, the Hamburgs are fowls which always have been rated as very prolific layers, although their eggs are small. Because they have not been extensively kept in this country and because they have not been bred very systematically for any purpose except exhibition, their utility qualities have not been developed to the highest possible point. In the same way the Polish fowls frequently are prolific layers, but the crests they carry, while unique in appearance and adding greatly to their beauty, are handicaps when the birds are kept for utility purposes.

In the Polish breed are these varieties: White-Crested Black, Bearded Golden, Bearded Silver, Bearded White, Buff Laced, Non-Bearded Golden, Non-Bearded Silver and Non-Bearded White. The Hamburg breed has these varieties: Golden Spangled, Silver Spangled, Golden Pencilled, Silver Pencilled, White and Black.

Farmer's Bulletin 1221, recently issued by the Department of Agriculture, credits the game breed with eight varieties: Black-Breasted Red, Brown Red, Golden Duckwing, Silver Duckwing, Birchen, Red Pyle, White, and Black.

The Oriental class includes two breeds, the Sumatra of which there is one variety, the Black, and the Malay with one, the Black-Breasted Red. The Standard of Perfection gives this class also the Black-Breasted Red Malay Bantam.

The miscellaneous class includes two breeds, the Sultan and the Frizzles, and the Standard of Perfection includes with it the Silkies, a bantam breed.

Types of Plumage and Form.

The ear lobes of all Polish chickens are white, the eggs are white, and the hens are classed as nonsitting or nonbroody. The legs and toes are slate blue in all varieties except the White-Crested Black in which they are a darker blue, approaching black. The skin is gray or grayish white, which does not recommend the birds for table purposes in this country where the demand is for yellow-skinned fowls. The crest which all Polish carry is characteristic of the breed and adds much to its beauty. The contrast between the white crest and the black body of the White-Crested Black makes this variety very beautiful, and rather difficult to breed in perfection.

Male Frizzle—Feathers Not Dried Like This From Recent Washing, but Grow in This Unusual Fashion.

The color scheme of the Bearded Golden Polish is very beautiful, the plumage being a golden bay laced with black throughout except for the fluff, which is light bay with some black mixture or tinge, and for the primary feathers which are bay with a black end. The color schemes of the male and female are identical.

The Bearded White Polish is a pure

EASY ENOUGH

By JACK LAWTON.

Alice turned to her friend a tear-stained face. "I dont know what I am going to do," she bemoaned, "it is dreadful to be born with a bashful disposition. And having to be tied constantly to Aunt's old fashioned apron strings, keeps me growing more painfully bashful all the time, or maybe [illegible] self-confidence. Anyway I never can have a good time wherever I am while I am bound to remain tongue tied or stutter at every effort at conversation. It was not so hard to bear before George William Prescott arrived on the scene, but he is bashfully silent too, therein lies my present difficulty."

"Who," asked Cissy abruptly, "is this George William Prescott?" Her [illegible] friend [illegible]. "He's the man in my life," [illegible] confessed.

"At [illegible] took much in[illegible]. He came to [illegible] going to pay a [illegible] of her friend [illegible] was an awful [illegible] and stared at [illegible] at the [illegible] to make a [illegible] and when [illegible] ears; but [illegible] with [illegible] Mr. Sey[illegible] his office and [illegible] so well there, [illegible] on in town. [illegible] able to become [illegible] with William, [illegible] calls him, [illegible]." Cecelia [illegible] brows.

[illegible] find out," she [illegible] should care [illegible]

[illegible] were tenderly [illegible] Prescott is so [illegible] he mused, [illegible] trying [illegible] that [illegible] his ways—"

[illegible] Cissy. "I do be[illegible] would be [illegible] especially [illegible] let's [illegible] the stiffness [illegible] speech[illegible]. Fancy two [illegible] upon each [illegible] Alice, [illegible] couldn't [illegible] 'Bill.' I [illegible] make him [illegible]

[illegible] Cissy laughed [illegible] be easy [illegible] to take him [illegible] I am [illegible] myself to [illegible]

George [illegible] sounding aloof [illegible] looked as [illegible] and a [illegible] able as he [illegible] to several [illegible] who [illegible] inviting [illegible] or the [illegible] Mrs. [illegible] were [illegible] sociability [illegible] and startled [illegible] supper would [illegible] be served and was allowed [illegible] on, to the escort of a braver [illegible] newly [illegible] man, George William mentally reproached himself for leaving the assured entertainment of books for an uncertainty of enjoyment, when a laughing voice accosted him.

"I am your fate as supper companion," Cecelia informed him. "Being guest of honor, Mrs. Seymour gave me the privilege of choice, and I," Cissy Rose smiled, "I chose you." Mr. Prescott started to bow perfunctorily, then bending, drew her hand instead through his arm. Alice, at an opposite side of the flower decked table, gazed wonderingly at her admired one's evident enjoyment of the occasion. Once she heard in accompaniment to Cissy's merry glance at him, her daring use of the name, "Bill."

An eager light showed for a moment in the young man's eyes, his work was also his hobby, then from the doorway, Cecelia looked back on the two, and George William turned, dazedly, to the shrinking figure at his side. But it was not of his beloved art that he spoke, "Cissy Rose," he repeated softly, "Why, you'd think the name was made for her, wouldn't you? With the rose color in her cheeks, and that sort of saucy way, she has—."

It was a long speech for William, which may have been accountable for the long silence that followed. From this silence Alice was only rescued by her former supper escort. "Hello," cried that young man breezily, "been looking for you everywhere. I want you to play a certain song for us. Oh yes you will," he waved her shy objections aside, "I will sit on the bench beside you and give my moral support."

Cissy was in despair. Also, she began to realize certain alarming symptoms of timidity upon her own part at the approach of Bill Prescott.

"I love you!" declared the man whose timidity Alice had deplored.

"You love me, Cissy Rose, and we are going to be married." "Mercy!" gasped Cissy, her trembling fingers were promptly imprisoned in a masterful grasp.

"I have been trying to draw you out for Alice's sake," She confusedly explained. "Oh! that's all right," George William happily replied, "Alice does not need your help, that admirable new acquaintance of hers has been doing some drawing himself—he tells me that they are engaged."

SALES WEEK

Beginning Monday, December 12, and ending Saturday, December 17, we will give tickets for each dollar of Cash Purchase and for each dollar paid on Account.

Saturday evening a drawing will be made and the party holding the winning number will draw a prize of

A Fifteen Dollar Bedstead

There will be a big reduction in prices during the whole week.

PETE

By MOLLIE MATHER

Copyright, 1921, Western Newspaper Union.

Dora turned her petulant gaze upon the young man seated before her. He was an idle, good looking young man, and as Dora's petulance merely added to her charms, he smiled good humoredly.

"Well, what's the affliction now? New car not turned out to be all as expected, or has Phipps developed distemper?"

"The new car," Dora answered crisply, "is all that was represented. And Phipps is a healthy dog. The trouble is, I wish Aunt Celesta had willed her valuables, (meaning house and garden) to some other dependable relation. The gift to me was unexpected because Aunt Celesta and I never did get along well. And she hasn't left money enough to properly care for the place, which, under the condition of legatee, I am obliged to occupy. Look at that lawn, Bertie Barlow, grass so tall and bushy one can scarcely walk through it, and no man to cut it down. Why don't you prove yourself a friend in need, and bring out the lawn mower? The exercise would do you good."

Bert Barlow glanced ruefully down his immaculate white flannels. "Wouldn't do the suit any good," he objected, "anyway I am out here for a vacation. What's the matter with asking the fellow across the way to come over and mow this grass when he is through with that job over there."

Dora hopefully regarded the khaki-clad figure, busily troweling the garden beds opposite.

"I am afraid," Dora said, "that the people over there hire him regularly. Thornton is the name on their mail box. I have not met Mrs. Thornton, but she is a sweet-faced, silvery-haired old lady, who frequently comes out to give the man directions regarding the pruning of trees and so forth."

Dora crossed the dusty highway and presented herself to the laborer. "I would like to engage you," she announced, "to mow my lawn—the garden opposite—I have also other odd jobs for you to do, if you work out by the day."

The man straightened from his task. He was tall and lissome, his dark eyes gravely regarded Dora, while he brushed the hair from his forehead with a grimy hand.

"I am the new tenant of the Harmon house," she explained, "when will you be able to come over and work for me?"

The man's eyes were still speculative. "Well, I've got a lot here to finish," he began.

"Tomorrow then?" Dora's tone was imperative.

The man smiled in sudden surrender. His white teeth flashed against the tanned brown of his face.

"Tomorrow then," he agreed.

Bertie was lolling on the veranda the following morning, when Dora's workman reported for duty. He still wore the dirty khaki suit, and set to work with a will. She went with him to hunt the cythe and mower with the garage and admired the free easy swing of his arms as he worked.

Bertie's indolent inactivity fretted her more than usual; Bertie was becoming each day more uninteresting. Dora was quite sure now that she could never marry him. His visit to the country had proven the fact.

"If you please," called the workman, "will you show me where to hang the hammock beneath the trees?"

Dora went to show him, and when the hammock was placed, she sat in it, and explained—while the man stood looking up into the branches—just how she would like the tree trimmed. And as he got out his pruning knives, he talked to her respectfully, yet with a pleasing humor, concerning the countryside and its residents.

Dora was utterly astonished when the noon whistle blew and quite indifferent to Bertie's resentment of her neglect.

"I am going," she told him after the noon meal, "to direct Pete in the arrangement of a flower bed. 'Pete' is the name the man told me to call him by. So you will have to amuse yourself this afternoon, Bertie, or go home."

Bertie, in his grievance, promptly went home. But as days passed with no word from her desirable admirer, Dora felt no regret.

She was busy—happily busy—in the planning out of an entirely new garden, which her workman was to bring to achievement; and sometimes as she sat at twilight, with only Aunt Celesta's housekeeper for company, Dora thought very wistfully of the strange contrasts in life—of Bertie and his kind, aimless, assured and tiresome; and of the other man, assured too, in some mysterious, masterful way, but tiresome. Oh! never; Dora sighed over her thought; the big man's mere presence was satisfying as no man's presence had ever been before. Through the shadowy garden, she saw him coming slowly toward her, not a khaki-clad figure now. She marveled at the trim, gray suit, the smooth, dark hair. "Pete," Dora cried, tremulously. And he took her hands in his clasp and sat down beside her.

"Otherwise Peter Thornton," he explained, "your neighbor across the way."

"And I went over," she murmured, confused, "and boldly engaged you."

Peter Thornton laid his bronzed cheek against Dora's clasped hands.

"And now, dear," he said, "I have come over boldly asking to be engaged to you."

CLEAN UP ALL GARDEN TRASH

Insects and Disease Spores Live Over Winter in Stalks, Vines and Other Rubbish.

Much of the success of next year's garden depends on cleaning up the trash left from this year's crop, says the United States Department of Agriculture. Insects and disease spores live over the winter in stalks, vines, and stubble. Weeds and vegetable debris should be raked into piles and burned or carried off as soon as it is convenient to do so. Pieces of cabbage, carrots, potatoes, and other vegetables which have been left on the ground in the harvest should be raked up and destroyed to avoid attracting insects and rabbits. The rabbits, tempted by these titbits, may remain to bark the fruit trees and damage bushes. Time given to this work at a period of year when other matters are not pressing will be well repaid in the spring and summer.

SODIUM FLUORID GETS LICE

Mixed With Road Dust It Has Been Found to Be an Excellent Remedy by Experts.

A combination of sodium fluorid and road dust, mixed one part of fluorid to four parts of dust, is an excellent remedy for body lice on fowls, according to investigations by poultry experts at the University of California. Sodium fluorid costs 40 cents a pound and that quantity is sufficient to treat 100 hens.

87-Year-Old Plant.

After lying in a warehouse in the Minories since 1834, a case of dried flora from the Azores has at last found a home in Kew gardens, to which it has been presented by the Royal Botanic society.

The circumstances of the case are remarkable. Last year a firm in the Minories, Messrs. Joseph Barber, asked the Botanic society to accept a case of dried plants, which had been lying in their warehouses for many years, and to which a docket was attached giving the name of the collector, Mr. Carew Hunt (H. B. M. consul at the Azores), the name and place of finding of the plants, and the date of collection—1834. The parcel was addressed to the Botanical society of London, which ceased to exist in 1850.—London Tit-Bits.

Glucose From Sawdust.

One of the latest triumphs of science is the production of glucose, or grape sugar, from sawdust.—Columbus Dispatch.

MISUSING GRADE NOT PROFITABLE

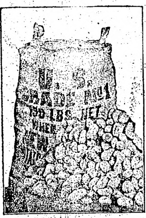
Misbranding Frequently Occurs Through [illegible] Rather Than [illegible] to Cheat.

[illegible] GRADING

[illegible]

(Prepared by the United States Department of Agriculture.)

[illegible] per cent of the [illegible] commercial [illegible] in the United States is now being [illegible] sold [illegible] basis of United States potato [illegible] according to the Bureau of [illegible] crop estimates, United States Department of Agriculture, and every producer contributing to that quantity of graded stock is vitally concerned with the elimination of dishonest grading practices. Growers and shippers whose honesty cannot be relied upon soon find it difficult to market their crops anywhere, for the news that they are undependable travels quickly in marketing circles. But in its larger aspect as concerning the whole body of producers and shippers who conduct their business on a basis of co-operation with the dealer, the misuse of a grade is a really serious matter for it tends to jeopardize the mutual feeling of confidence which is the very essence of business dealings.



This Sack, Labeled "U. S. Grade No. 1," Contained Run Stock Shown in the Foreground.

Flagrant Case of Misbranding.

Several instances of the misuse of United States potato grades have come to the attention of the department. In New Jersey a growers' organization was found placing in sacks labeled "U. S. Grade No. 1" potatoes that were actually field run of poor quality. Fully 25 per cent of the potatoes in each bag were culls and only a small percentage of the remaining 75 per cent would have graded No. 1.

A short time ago a jobber in a southern city ordered a car of U. S. Grade No. 1 Round Whites from a shipper in a northern state. Upon arrival, inspection showed that the two top layers of sacks contained stock that was sound and up to the grade requirements in every respect. But the potatoes in the bottom layers of sacks were badly smeared with dry rot from contact with decayed stock, these layers evidently being of stock that had been reconditioned at shipping points. The potatoes had to be resorted at the receiving point, and the shipper suffered a heavy monetary loss.

Blemished Stock Picked Out.

In a trip through the Minnesota potato district a representative of the department recently reported that in one house where a grading machine of the shaking screen type was used the screen was padded with burlap, leaving only about one and one-half feet of screen at one end uncovered. The manager stated that this was to prevent bruising the stock, and he seemed to be much surprised when it was pointed out that the burlap interfered with the proper sizing of the potatoes.

It was also reported that in some instances shippers were of the opinion that No. 1 stock was procured simply by running the potatoes through a sizing machine. In these cases it was necessary to call attention to the fact that blemished stock must be culled out by hand; also that when there is a heavy run of undersized stock, much of it may be carried over the grade if the potatoes are run through too rapidly.

Specifications of the federal grades can be had upon application to the bureau of markets and crop estimates, United States Department of Agriculture, Washington, D. C. The bureau will also be glad to advise growers and shippers with regard to detailed grading methods.

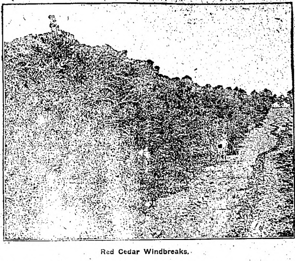
DEFECTIVE PAGE

ORDINARY FIELD CROPS BENEFIT FROM PROTECTION OF WINDBREAK



Red Cedar Windbreaks.

(Prepared by the United States Department of Agriculture.)

Whether the total effect of a windbreak is good or bad depends upon whether the benefits derived from its influence are greater or less than the injury resulting from the sapping and shading of the ground nearby. Some crops do better than others when shaded. Seeding crops, such as timothy and alfalfa, are least affected. Grains which develop early in the spring, such as oats and wheat, are most affected, and corn takes an intermediate position.

Windbreak Sometimes Injurious.

The old argument that a windbreak uses more ground than it is worth continues to bob up occasionally, supported mostly by farmers who have not investigated carefully. It is admitted, frankly, that the effect of a windbreak is not beneficial in every respect, and that there are ways in which it is quite plainly injurious. Every farmer knows that trees spread their roots extensively to fields seeking moisture; and they take not only the moisture; but some of the nitrogen content of the soil also. But this does not dispose of the question of having or not having a windbreak.

To determine the total effect, crop measurements were made by forestry experts in Nebraska, Kansas, Iowa and Minnesota. Average, rather than exceptional, conditions were used, the object being to discover the effect of those influences which are continuous, and affect every annual crop grown. These measurements convinced specialists of the forest service of the United States Department of Agriculture that the crop gain in fields of small grain, in the protected zone, is sufficient to offset fully the effects of shading and sapping.

In a wheat field protected by a dense windbreak the gain amounted to about ten bushels an acre where the protection was most complete, and gradually became less as the distance from the windbreak increased. The total gain was about equal to the amount of grain that could have been grown on the shaded ground near the trees. The season in which the measurements were taken was not one of high winds, nor did it lack moisture.

In another instance, on the south of an ash and honey locust windbreak, the crop benefited very materially from the accumulation of snow in the lee, and the conservation of this moisture. Here cultivation was possible within four feet of the trunks of the trees, so that the increased yield of the field, amounting to about fourteen bushels an acre at the highest point, was practically clear gain. The total gain for the whole field amounted to the yield of a strip of ground as long as the windbreak, and three times as wide as its height. Or, had the windbreak, which was 20 feet high, occupied a strip of ground 60 feet wide, the gain in the field crop would have paid the rental on all this ground.

Extent of Tree Belt.

The corn crop showed more consistent and marked benefits from protection than any others. In the region concerned the summer winds are almost wholly from the south, so that the only effective rows and belts extended in an east-west direction. The effect on corn was very marked for a short distance on the south side of such windbreaks, and for a much greater distance on the north side.

The effect was visible early in the season, which was rather cool. Height measurements on one field showed the plants to be 4½ feet high in the first 18 rows next to the windbreak, while beyond this protected zone the height was only 2½ feet. This luxuriant growth was still in evidence at the end of the season, and not only produced more fodder, but bigger and heavier ears. The field showed a production of 59 bushels to the acre in the protected part, and only 41 bushels in the exposed area. The net gain, including the area shaded by the trees, was equivalent to the yield of a strip twice as wide as the height of the trees, which were 38 feet high. The increased yield paid, then, for a strip 76 feet wide. The windbreak happened to be wider than this, but need not have been to afford the same amount of protection.

With ordinary field crops the farmer may come on a benefit from windbreak protection which will compensate for the loss of the area used by the trees. Under Middle West conditions—Illinois, Iowa, Minnesota, Dakotas, Nebraska and Kansas—a windbreak whose width does not exceed two or three times its height will more than pay for itself, regardless of the timber it may produce.

FROST FACTORS FOR POTATOES IN STORE

Jarring and Rough Handling Greatly Increase Injury.

Tubers Freeze More Quickly When Exposed to Rapidly Falling Temperature Than Slow One—Be Careful in Moving.

(Prepared by the United States Department of Agriculture.)

Jarring and rough handling when at a low temperature greatly increase the damage to potatoes by freezing, according to investigations made by the United States Department of Agriculture. It was also found that potatoes freeze more quickly when exposed to a rapidly diminishing temperature than when the temperature diminishes slowly. There are two general classes of frost-injured potatoes—those frozen solid and subject to collapse immediately on thawing and those that show evidence of injury only on being cut open.

Frost injury seems to be the result of actual ice formation within the potato tissue. It was found that where the temperature of the storage place was reduced gradually it could be carried to several degrees below freezing point before actual freezing took place, and that it was possible gradually to warm the potatoes and restore them to normal without their suffering injury. The actual freezing point of potatoes was fixed at from 2 to 3¼ degrees below the freezing point of water.

The effect of jarring upon undercooled potatoes is considerd extremely important to growers and shippers, since under some circumstances it would be entirely possible that a lot of potatoes, or even other products, might be undercooled considerably below the freezing point and escape injury if they remained undisturbed until their temperature was above the freezing point.

FIND USE FOR WAR BRIDGES

Steel Structures Made for Duty in France Now Being Placed in National Forests.

Sectional steel bridges, easily handled and ready for instant use, which were constructed during the war for use in France, have been turned over by the War department to the bureau of public roads, United States Department of Agriculture, and now are finding profitable peace-time duty on roadways in the national forests, where they are used to span streams in connection with roads built by the bureau in forest areas.

The sections were built in two sizes, one 17 feet 7¼ inches long, intended for the ends of the bridge; the other 11 feet 3 inches long and designed for intermediate sections. By combining the two kinds, bridges varying from 35 to 91 feet long can be built. The height of the trusses is 5 feet 11 inches and the bridges when erected have a roadway 11 feet wide.

Along with the bridges there have been turned over to the department great quantities of other material, including motortrucks and automobiles for use in road construction. The bulk of the material has been distributed by the department to the various states, to many of which it has been the means of preventing otherwise inevitable deterioration of their roads during the period of high prices.

PLANS FOR ICE HARVESTING

Farm Supply Can Often Be Gathered and Stored at Light Expense —Get Icehouse Plan.

It is time to plan for harvesting and storing the coming crop of ice. The farm ice supply can often be gathered and stored at light expense. Those who have the time and means to build a house with insulated walls should write the Office of Publications, University Farm, St. Paul, for blueprint No. 171, price 10 cents, showing plans for a 10-ton capacity icehouse.

PEA ROOT-ROT FOUND IN WESTERN STATES

Much of Seed Grown in Montana, Idaho and Utah.

Survey Indicates That There Are Incipient Cases of Disease in Nearly All of the Most Important Districts.

(Prepared by the United States Department of Agriculture.)

Does pea root-rot, so destructive in the pea-canning sections of the Eastern and Central states, occur in the important seed-producing sections of the West, or is there some basis for the belief of the growers there that their climate and soil safeguard them in some way from loss? Is there any danger of the spread of pea diseases with western seed.

Answers to these questions have been made by specialists of the bureau of plant industry, United States Department of Agriculture, who have studied the pea disease situation during the past season, which has been one of heavy loss in some of the older sections of the country, where pea root-rot has now become so common that many fields are unproductive and the continuation of the industry seems uncertain in some localities.

Much of the seed used in the East is grown in Montana, Idaho, and Utah, where the industry is relatively young. A survey of these states, however, indicates that there are incipient cases of pea root-rot in nearly all of the important districts and that under present conditions it will be only a matter of time before this type of trouble is as widespread as it is in the East.

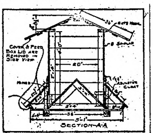
In the same way the western potato growers, who formerly escaped root troubles, now find their yields very greatly curtailed by Fusarium blight, Rhizoctonia, and other fungus parasites which have increased with the longer culture of the crop. The western climate cannot be depended upon to keep plants healthy. Growers should therefore watch carefully for the appearance of pea root-rot and practice the longest possible rotations to prevent its development. The situation is not one to justify undue alarm, but these findings should be taken seriously if the interests of the pea crop in later years are to be safeguarded.

The danger of spreading pea diseases with the seed is minimized by the department specialists, who point out that only one disease, the leaf and pod spot, is carried in this way, and this is not as general or extensive as has been believed.

ADVANTAGES OF SELF-FEEDER

Inverted "V" at Bottom of Device Compels Grain or Feed to Slide Out Into Trough.

This self-feeder for hogs, as perfected by Director Christie at Indiana experiment station, is made as shown by this cross section. It will be seen that the inverted "V" at bottom of feeder compels the grain or feed to slide out into the trough. The side gate can be adjusted to let out as little or as much feed as desired. The pigs will themselves raise the outside cover, which drops down when they are through eating. This feeder has some advantages over other types. Other types are described in Farmers' Bulletin 906 —free from Department of Agriculture, Washington.



Self-Feeder for Hogs.

DETERIORATION OF WOODLOTS

There Is Usually Almost No Young Growth of Tree Species Where Pastured Heavily.

Heavy pasturing of farm woods has been one of the chief causes of their deterioration, it has been found by the forest service, United States Department of Agriculture. The severity of damage depends largely upon the number of stock and the make-up of the woods. In heavily pastured woods there is usually almost no young growth of the valuable tree species.

Cattle, horses, sheep, or goats eat young seedlings, particularly the hardwoods, trample them out, or else break them off. Hogs eat some kinds of seed and thus prevent reproduction from starting or root young seedlings out of the ground and sometimes eat the roots.

In those parts of the southern long-leaf pine region where hogs run wild they are known to do a great deal of damage to the seedlings and often damage trees several feet in height. When driven out of the swamps by high water in the late winter and early spring they root up the long-leaf pine seedlings and devour the heavy roots. Observations carried on in Louisiana have shown stands of several thousand long-leaf pine seedlings per acre where protected against hogs and no seedlings on adjacent areas which were unprotected.

WELL-MET

By MILDRED WHITE

Copyright, 1921, Western Newspaper Union.

The girl sat in a luxurious chair, in the marble pillared balcony. Below in the lobby of the great hotel, people moved continually on their various ways; But the one for whom her violet eyes were seeking, had evidently been delayed. She arose to slip off her heavy fur cloak, and stood a slim figure in modish blue.

Impatiently, she swayed upon its chain, the key of her hotel room, she had decided not to leave it at the office until sure of being called for, yet she was anxious to leave, anxious for the homlier comfort of her father's fireside. Elaine dangled her key as she bent over the padded railing—then, dropped it. She was too astonished to draw back into obscurity, as she saw the weighted key land deliberately on a dark, uncovered head—a man's head, with no deep cushion of hair to relieve the blow.

The man painfully surprised, glanced up quickly, rubbing his parred crown; then he stooped to recover the key. Elaine saw him still smoothing his head as he read the room number on the metal tag attached, then he waved the key up to her in announcement that he would restore it. He came slowly up the wide stair, and he was young, and tall, and good to look upon.

"Your key, I presume," he said rather coldly.

"I am so sorry," she began confusedly, "so careless of me. I did not realize—"

The young man sat down promptly before her, "That you were aiming a blow," he finished. His own laughing eyes, now expressed open admiration, and his words might have intended a double meaning. Elaine flushed, very prettily, but her tone was severe.

"I was," she remarked, "waiting for —someone, the time seemed long." "It usually does seem long" the man responded pleasantly, "when one is waiting for a someone. Happy someone"; he added daringly, and sank further back in his opposite chair. Elaine turned to him, her round chin tilted, "You are—also waiting?"

Dismissal was in the question. The young man merely smiled. "For your apology," he told her, "you cracked me on the head." She did not want to laugh but the man's smile was as engaging as his manner was ridiculous. Elaine did laugh, and promptly regretted that friendliness.

"When my key slipped," she informed him, "I was standing there, looking for Tom. Tom, is the man I love. He is coming to take me away." The pleasing countenance immediately became forlorn. "Away," the young man echoed. Elaine nodded.

"To a home," she explained heartlessly, "of our own." Across the balcony the orchestra played. For a time the young man listened in silence, then his somberness lifted.

"Would you mind," he politely questioned, "telling me the name of this lucky Tom. I knew a couple of Tom's at college. Where did this particular Tom of yours go to college?—if he went." Elaine dimpled.

Tom attended college in this city. I think that is why he likes so much to come back. Tom's other name is Cavers." The stranger leaned forward and joyously clapped his knee "Well would you believe it?" he cried. "Tom Cavers, good old Tom! Why, he was the best friend I had here in school." Elaine raised her eyebrows. "That is amazing," she said. "Never hear Tom speak of Jerry Wraybourne?" the young man went on. The girl considered, then shook her head. "But it's not strange," she admitted. "I don't remember half the names of the people Tom talks about."

"You are going [illegible] to a home of your own," Jerry [illegible]bourne slowly repeated. He [illegible] dark head. "Oh! Well [illegible] every man ought to [illegible] one happy hour. [illegible] going to order [illegible] you are going [illegible] You [illegible] across [illegible] as I have [illegible] be," he [illegible]

[illegible] but [illegible] music [illegible]

[illegible] she [illegible] it [illegible] he, fo[illegible] me, to [illegible] so daringly [illegible] Wraybourne, [illegible] in self defense [illegible]sly. "There were [illegible]," he exclaimed. "[illegible] now, I want to stay and meet [illegible] father when he comes, may I?" Elaine settled back in the big chair. "Father is always so tardy," she remarked comfortably.

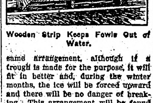
KEEP DRINKING WATER CLEAN

Overhanging Strip Prevents Fowls From Roosting on Edge or Getting Into Trough.

To keep drinking water clean, provide a low shelf on the inside of the poultry house for the water trough and an overhanging strip, as shown in the sketch. The wood strip is fastened just far enough above the top of the trough to allow the chickens to drink easily, but prevents them from roosting there, or getting into the trough. Pans or basins can be used with the same arrangement, although if a trough is made for the purpose, it will fit in better and, during the winter months, the ice will be forced upward and there will be no danger of breaking. This arrangement will be found excellent for feeding the flock hot mashes and other feeds, also.—Dale R. Van Horn of Nebraska, in the Farm Journal.



Wooden Strip Keeps Fowls Out of Water.

When Crushed and Added to Mash They Supply Material Necessary for All Hens.

Eggshells are too valuable to the poultry raiser for him to burn them or throw them away. If crushed and added to a mash, they will supply the material with which the hens may make more eggshells. However, it is always well to beat them up quite fine before feeding, so the fowls won't recognize them and thus contract the egg-eating habit.

SOILS NEED STABLE MANURE

Fertilizer Loosens Up Clay and Assists Sand to Retain Moisture Needed by Plants.

The chief virtue of sandy soil is that the roots of plants can pass through it readily; its chief fault is that it dries out too quickly. Clay soil holds water well, but it tends to pack and harden. Both types of soil need stable manure—it loosens up clay and helps sand to hold moisture.

PROFIT IN SWINE ON DIVERS CROPS

Demonstration in Covington County, Alabama, Shown to at Least 2,000 Farmers.

SOILING CROPS FORMED BASIS

Thirty Acres Were Divided Into Four Fields of Equal Size and Planted With Succession of Crops to Be Grazed.

(Prepared by the United States Department of Agriculture.)

No less than 2,000 farmers, it is estimated, have been shown a hog demonstration in Covington county, Ala. The county agent started last year the system on which this demonstration was based, when cotton was abnormally high and hogs so low that farmers were not making money on them the way they were producing them. He found a man conspicuously located who was willing to give special attention the year around to hogs, which were to be raised on soiling crops, together with a small amount of grain.

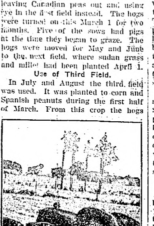
Thirty Acres Carries Ten Brood Sows.

The farmer making the demonstration offered to devote 30 acres to it. He bought ten brood sows and a good young boar and put up the proper houses and fences. The 30 acres were divided into four fields of equal size and planted with a succession of crops to be grazed. The program of crops followed was that recommended at a conference of farmers, bankers, and state and county agents.

The first field was planted January 1, 1920, to oats and Canadian peas. Later the county agent recommended leaving Canadian peas out and using rye in the first field instead. The hogs were turned on this March 1 for two months. Five of the sows had pigs at the time they began to graze. The hogs were moved for May and June to the next field, where sudan grass and millet had been planted April 1.

Use of Third Field.

In July and August the third field was used. It was planted to corn and Spanish peanuts during the first half of March. From this crop the hogs went in September and October to soy beans, planted the middle of May as the second crop in the first field. The second field, replanted July 1, was ready for November and December with sweet potatoes. By January 1 the rye and oats sowed in field No. 4 on October 1 were ready for the hogs, and so on the year around.



Hogs Feeding on a Soiling Crop in the South.

The 30 demonstration acres and ten sows cleared approximately $500 the first eight months. But the important object of this demonstration was to have a place to show farmers how they could raise hogs on soiling crops and have a few hundred hogs ready for market every month in the year. About 20,000 copies of this program were sent out to farmers in southeast Alabama, and it is expected that 100 or more such systems will be started in the near future.

ALFALFA NEEDS MUCH LIME

Like Other Member of Legume Family It Will Not Thrive Well in Sour Soils.

The reason why so many farmers have tried to grow alfalfa and failed is due largely to lack of lime in the soil. Alfalfa, in common with all members of the legume family, requires large quantities of lime for its growth; besides, it will not grow to advantage in a sour soil. This is probably due to the fact that the bacteria, which grow in the nodules on its roots, can't develop in a sour or acid soil. The way to get alfalfa started on sour soils is to give them a dressing of lime.

Weeds Along Fence Rows Spread Seed to Land Adjoining.

the fence; and do you know that one wild lettuce stalk yields from 8,000 to 240,000 seeds in one season—enough to infest several acres of land?

"Your hired man's case of poisoning is costing you practically a week's time, just when you can't afford it. And that was another case of line fence weeds.

"The importance of cleaning out weeds growing in waste places around the farm is not generally realized. They are frequently neglected under pressure of other work; but there is little work around a farm that pays better than keeping the weeds out of farmyards, barnyards and fence rows, and I am selfish and I can't keep my fields clean as long as you leave your side of the line fence foul."

Many common fence-row weeds are annuals and biennials, and, the United States Department of Agriculture points out, they can be killed by mowing twice a year, but the location is one that might better be kept clear of all vegetation than grown up to weeds; and perennials, like Canada thistles, can be killed out in these spots.

How to Deal With Weeds.

An economical way of dealing with perennials is to saturate them with waste oils from automobiles and tractors. The disposal of this oil is in itself often a problem. It is well to cut the weeds first, apply the oil and cover the ground with clean dirt for appearance's sake. Oil will make the ground sterile and bare for several years. It is less drastic to cover the ground with tar paper, old tin, or loose boards, or to apply dry agricultural salt at the rate of one pound per square foot.

On the whole, fence row and waste place weeds are the result of neglect. A little well-directed energy will keep them under control. A common saying is that a weed-free farm is the sign of a good farmer. It is a mark of distinction that can only be attained by keeping constantly at the waste places.

Sikta Rye Flour

Made from the best rye and ground almost as white as any wheat flour, is for sale at the Farmers mill, at $1.44 for 49 lbs.

Recipe for Buckwheat Cakes

Take 2 cups of buckwheat flour, 2 cups wheat flour, ½ yeast cake, 1 tablespoonful salt, 2 tablespoonfuls sugar.

Soak yeast cake and mix all the ingredients with lukewarm water. Beat well. In the morning add two teaspoonfuls of soda dissolved in hot water. Beat again and bake on a hot griddle. Save a little of the batter each time for yeast.

The Farmers Mill is grinding fine Buckwheat Flour, which sells for 76c for 24½ lb. sack.

CORN

The Farmers Mill has just received a carload of shelled Corn.

Stray—Came to my place about a week ago, a hog. Owner please claim property and pay expenses.
d2 3t JOHN MARKUSON.

Lost—A white calf with red spots. Left my place over two months ago. Finder please address
ANTON HORACHEK, Erie, Minn.

HISTORICAL SOCIETY

THE GOODRIDGE BANNER

VOLUME XV, No. 48. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, DECEMBER 23, 1921. 1.50 PER YEAR.

Christmas

Numerous, indeed, are the hearts to which Christmas brings a brief season of happiness and enjoyment. How many old recollections does Christmas time awaken? We write these words now, many miles distant from the spot at which, year after year, we met on that day a merry and joyous circle. Many of the hearts that throbbed so gaily then have ceased to beat; many of the looks that have shown so brightly then have ceased to glow; the hands we grasped have grown cold; the eyes we sought have hid their luster in the grave; and yet the old house, the room, the merry voices and smiling faces, the jest, the laugh, the most minute and trivial circumstances connected with those happy meetings crowd upon our mind at each recurrence of the season, as if the last assemblage had been but yesterday. Happy, happy Christmas, that wins us back to the delusion of our childish days and that can recall to the old man the pleasures of his youth!

Begins Round-Up Of Auto Taxes

Certifying tax-delinquent cars for confiscation and finishing a check of cars operating in Minnesota under licenses of other states, Mike Holm, secretary of state, said that a final state wide campaign to collect motor vehicle taxes will be carried on during the next ten days.

Delinquent lists are being certified to district court clerks in the various counties under the same law that requires the sheriff to forthwith force payments, confiscating the machines if machines if necessary.

Investigations of ownership of cars operated in Minnesota under foreign license tags is about completed, Secretary Holm said In the larger cities and some localities the police helped the state inspectors with the work. Enforcement proceedings are to be started in cases where Minnesota ownership is established.

Sales of 1922 automobile tags will open Jan. 3 at Secretary Holm's office at the capitol Application forms, however, may be procured at any bank or from the county register of deeds. Each application for a car now in use must be accompanied by the 1921 registration certificate, the secretary emphasized, and also a remittance covering all taxes, including any arrears with with penalties.

In spite of many protests following reductions in automobile prices, the tax rate is based on the factory list price on Nov. 1 of the model year. While this may make the tax higher on old than new cars of the same make, Secretary Holm explained that the legislature alone has power to change it.

Call for Clothing

The ladies of the Red Cross are asking for clothing and shoes to be given out to people in need of them. The ladies will repair and renovate the articles and they will be distributed where will do the most good. Those bringing in donations for this purpose will please leave them at the Winton-Nichols lumber office.

Notice for Sealed Bids

Sealed bids will be received at the at the office of the County Auditor in the city of Thief River Falls up to 3 o'clock in the afternoon on January 3rd, 1922, for the publication of the notice and the Delinquent Tax list for 1921, and for the financial statement and for all legal publications for Pennington county, Minnesota, for the year 1922.

The County Board reserves the right to reject any or all bids.

Dated at Thief River Falls, Minn., December 14th, 1921.

T. P. ANDERSON,
County Auditor.

ERIE ECHOES

S. Jacobson was busy hauling hay Saturday.

Mrs. S Rouze, Mrs. H. Dahlen and Master Olaf were pleasant callers at the Z. J. Hole and H. Iverson homes Sunday afternoon.

Carl Eevald sawed up a supply of wood for H. A. Dahlen and Iver Iverson Thursday.

Knut Berg and John Hovet were Goodridge business visitors Wednesday.

John Baner and Victor Johnson of Thief River Falls vicinity called on their friend Ludvig Johnson Tuesday.

Knut Danielson was a guest at Camp Sub Urban Sunday evening.

Knut Rerg, Tollef Berg and H. Iverson were callers at the T. Hovet home Wednesday evening.

The Gummer Trial

William Gummer, held in the Cass county, N. Dak., jail charged with the murder of Miss Marie Wick, the Grygla, Minn., girl who was killed in the Prescott hotel at Fargo, will be tried at Valley City on Jan. 17. The case was transferred from Fargo to Valley City upon application of the defendant for a change of venue.

The trial was to have come up at the start of the January term of court at Valley City and the later date is brought about by an order issued by Judge Cooley postponing the opening of the January term until January 17.

Christmas Seal Your Christmas Mail

Christmas mail, letters and cards, packages and gifts, are not complete without the Christmas seals. The Christmas seals put the final touch on your gifts. They denote that in remembering your personal friends you have not forgotten humanity as a whole.

The seals stand for a better public health through the education of the public. In Minnesota the seals have given the various types of clinics which have proved of inestimable value to thousands of mothers and children; the health crusade in the schools has reached over 200,000 children with its lessons of health; the publication of the Health Journal and the distribution of literature in enormous quantities have tended to awaken and arouse in the people an interest in their health.

These clinics by reaching into every county in the state have given an opportunity to almost every person in the state to derive some benefits. Prevention is the watchword of success! Nothing can bring greater success than the affording to every one the opportunity of an early discovery of defects which may exist in their physical make up. This the clinics have done.

INCREASE OF HESSIAN FLY

Parasitic Enemies and Unfavorable Weather Tend to Keep Pest Within Bounds.

If it were not for its parasitic enemies and unfavorable weather the Hessian fly would increase in such vast numbers that wheat growing in this country would be practically impossible inside of two years. The United States Department of Agriculture, as a result of recent studies now published in Department Bulletin [illegible]08, Rate of Multiplication of the Hessian Fly, by W. R. McConnell, found that the increase in breeding of the insect was much higher than had been before realized. The data collected afford an explanation for the very sudden development of a Hessian fly outbreak and furnish a basis for predicting more accurately the approach of a dangerous infestation.

TOO MANY POULTRY LOAFERS

Best Plan to Weed Out Nonproducers and Keep Only Good Laying and Breeding Fowls.

One reason some folks complain that "chickens don't pay" is because they compel one or two good hens to support a dozen lazy ones. There are some deadbeats in every flock, just as there are also some excellent laying and breeding hens.

The thing to do is always to weed out the least desirable fowls, then keep only the best ones and keep them well—in a good house, well managed and cared for.

ICE FOR DAIRY AND FAMILY

Amount Necessary Depends Greatly on Number of Cows Milked and Ways of Handling.

The quantity of ice needed for a dairy farm with 10 or more cows depends on its location, number of cows milked, and methods of handling the product. In the Northern States, the United States Department of Agriculture has found that, with a moderately good ice house, where the shrinkage from melting is not more than 30 per cent, half a ton of ice to each cow is sufficient to cool the cream and hold it at a low temperature for delivery two or three times a week. Suitable cooling tanks, however, are necessary under this estimate.

The half-ton-per-cow estimate for ice to be stored allows for a reasonable waste and also for ordinary household use. If whole milk is to be cooled the quantity of ice stored must be increased to 1¼ tons per cow in the North. To meet the needs of the average family on a general farm it will be necessary to store about five tons.

Notice to The Public

The stores of Goodridge will be closed promptly at 6:30 next Saturday night—Christmas eve., and they will be closed all day Monday.

SUGAR BEET CULTURE HAS LARGE GROWTH

Farmers Received $99,000,000 for Crop in 1920.

Any Fertile Soil Capable of Producing Good Yields of Other Crops Will, If Properly Handled, Prove Satisfactory.

(Prepared by the United States Department of Agriculture.)

The sugar-beet industry of the United States produced more than 1,000,000 tons of sugar and the 106 factories, 97 of which were in operation in 15 states, paid American farmers more than $99,000,000 for their beets in 1920.

In a comprehensive new bulletin, No. 995, "The Sugar Beet Industry in the United States," the United States Department of Agriculture says that almost any fertile soil capable of producing good yields of other crops will, if properly handled, produce good sugar beets. This statement, however, is restricted by considerations of climate, moisture, and topography as related to the question of producing enough beets of the requisite sugar content within reasonable hauling distance to maintain a sugar-beet factory.

The bulletin reviews the history of the sugar-beet industry from the first mill, built in 1870 at Alvarado, Cal; analyzes soil, climatic and topographic requirements; and deals at length with the necessary equipment, best methods of planting and cultivation; the important relation of the sugar-beet to the live stock industry; the management of parallel and rotating crops; the labor problem; insect and disease enemies of sugar beets; and the business of selling beets to the sugar manufacturers. "The successful production of sugar beets on any farm depends to a great extent upon the temperament of the farmer and upon his attitude toward the production of this crop," says the bulletin, adding that the man who handles cows, especially dairy cows, is more inclined to take up the growing of such an intensive crop as sugar beets and is more apt to succeed in this line than the grain or forage crop man.

A list of more than fifty department publications on different phases of the beet-sugar industry is included in the bulletin, which may be had free upon application to the Department of Agriculture, Washington, D. C.

SAVING SWEET POTATO CROP

Better Storage and Disease-Preventive Methods Arousing Widespread Interest.

The work of the United States Department of Agriculture for better utilization of the nation's sweet potato crop by better storage and disease-preventive methods has aroused widespread interest throughout the sweet potato producing states, which include more than 20 of the 48.

The department has published three farmers' bulletins useful to those interested in the production, harvesting, storage and marketing of sweet potatoes, which can be had on request. They are: No. 970, Sweet Potato Storage; No. 999, Sweet Potato Growing; and No. 1059, Sweet Potato Disease.

TIME FOR CUTTING TIMBER

Insects and Fungi Which Attack Wood Are Less Active in Fall and Winter Seasons.

Fall and winter are best for cutting timber. Insects and fungi which attack wood are then less active. Seasoning is slow and there is little excessive checking. It is easier to haul logs on sleds than on wheels, and labor suitable for woods work is usually more available.

VENTILATION IS IMPORTANT

Carbonic Gas Constantly Forming in Poultry House Must Be Carried Away at Once.

It doesn't take long for the air in a poultry house to become poisonous and unhealthy. Carbonic acid gas is forming constantly and as the air becomes laden with this gas it must be carried out by a proper ventilating system and replaced by pure, fresh air.

[illegible] there [illegible] the pro[illegible] county agent in [illegible] fall in 1920 [illegible] munity near Gantt [illegible] seriously [illegible] the very point [illegible] was anxious [illegible] make. Each had [illegible] 200 bushels of corn for sale. [illegible] sold his from the field at $1.20 per bushel. The [illegible] farmer stored [illegible] in the old [illegible] and sold it for [illegible]75, although it [illegible] gnawed by rats [illegible] eaten by [illegible]

The third man brought his 200 bushels in [illegible] in good even weight sacks, which [illegible] weevils, and received $2.25. He [illegible] shucked, shelled

Seed Corn [illegible] ly Sacked

[illegible] sacked it [illegible] at spare times during the fall [illegible] learned from [illegible] county [illegible] how to kill the weevils. The [illegible] expense he [illegible] although it [illegible] brought so much [illegible] price [illegible] for sacks and [illegible] weevil extermination. He said [illegible] were worth [illegible] all that for [illegible] or his corn. This gave him [illegible] for 200 bushels of corn than [illegible] neighbor who [illegible] the same day.

ORGANIZE BULL ASSOCIATION

Success Depends Great Deal on Care in Forming—County Agent Can Give Assistance.

Success in the operation of a co-operative bull association depends a great deal on the care than is used in its organization. To begin with, those interested should obtain as much information as possible regarding the plan of operation and should consult with the county agricultural agent. He may be able to give valuable information from experience, or at least will know where it can be obtained, and he can help greatly in starting the organization. If a county agent is not available, write to the state agricultural college or to the United States Department of Agriculture at Washington, D. C., either of which will be glad to give advice and assistance. It is advisable, if possible, to visit some nearby bull association in order to study the methods of operating, for the more information there is available the better will be the prospects for a well-organized and successful association.

No One's Ears Alike.

Few persons possess a pair of ears that are exactly alike. In nearly every case one ear is larger than the other, is set further back from the eye, or is higher on the head. It is likewise true that few persons can hear equally well with either ear.

Test it for yourself and you probably will be surprised at the result. Close one ear and then the other while riding in a train; not only will there be a difference in the volume of sound, but in the tone. This difference is more noticeable while listening to music. The various notes are apt to sound much more metallic in one ear than in the other.

[illegible] Jabez Thorpe

By CALVIN HENDRICKS.

Copyright, [illegible], Western Newspaper Union.

"One foot in the grave and the other on a banana peel—that's Jabez Thorpe, to my way of thinking."

"Exactly my opinion. A man of his age crossing the ocean! Never was [illegible] miles away from his own [illegible] before. It's a terrible [illegible] thing!"

[illegible] gossiping neighbors of the [illegible] the proposition of Thorpe [illegible] the current [illegible] when hard[illegible] old Jabez Thorpe an[illegible] he was going to England [illegible] the [illegible] of a dis[illegible] had [illegible] a nine days [illegible]

[illegible] was [illegible] the pleasant [illegible] word. It had a pret[illegible] poorly fur[illegible] after he had [illegible] the house [illegible] of his land. [illegible] and adopted [illegible] second cousin, Nellie [illegible] into his life [illegible] and supper [illegible] was when he [illegible] to [illegible] the entire [illegible] during his absence [illegible] to understand [illegible] her.

[illegible] hard as I fancied," [illegible] to Evan Pearson, her [illegible] clerkship in [illegible] Uncle Jabez does not [illegible] right on with [illegible] I want to prove [illegible] housekeeper I [illegible] return. Besides that, [illegible] own home—[illegible] but sure to [illegible] as I do."

[illegible] was selling milk [illegible]

[illegible] interruption—[illegible] The [illegible] which [illegible] Thorpe had sailed [illegible] trip was reported [illegible] the Canada coast. Only a few [illegible] passengers had been saved [illegible] name of Jabez Thorpe was [illegible] the list. A week later it was [illegible] accepted in the village [illegible] had met a watery fate.

And then, much to the discomfort of Nellie, the heirs apparent began to arrive. There was the relict of a brother of Jabez Thorpe, in weeds, and always sniffling and pitying herself. There was a fantastic, fussy old maid cousin who entertained great hopes because Jabez Thorpe had once sent her a birthday gift. There was a callow youth studying for the bar, who claimed near relationship, and a vast deal of knowledge as to the legal phases of the estate. There was a shiftless youth, besides, and all these planted themselves about the premises.

Never would the faithful, persevering Nellie forget one bright afternoon as she went about the house attending to her manifold duties. The young imp of the law was smoking a pipe in the sitting room, the other male watcher of the slow development of the estate was asleep with his feet on the table. In the parlor the sniffling relict and the fussy old maid were chattering away like magpies, when Nellie heard a roar.

She dropped the plate she was holding, and it was smashed to smithereens at her feet. Then with a scream of delight she darted into the sitting room, gave one glance at a sturdy, wrathful figure filling the doorway, and bounded straight into the arms of—Jabez Thorpe.

"Oh, uncle! uncle!" she cried. "I am so glad—so glad!"

"Yes, and the only one who is," replied the old man, as he placed a sheltering arm about her. "You young sprig of insolence!" he shouted at the astonished smoker, "out of here with that vile pipe of yours! Here, wake up and march!" he added, pulling the sleeper from the chair. "As to you, ladies," he sang out to the occupants of the parlor, "I've heard in the village of how you've all flocked here like a flock of crows after a carcass. Well, old Jabez is alive and kicking, after all. And before the day is over he's going to save you the expense and trouble of coming to any more funerals by leaving what he's got, when it's ready to leave, to the only one among the crowd of you who is worth two pins—and that's Nellie."

It was after the dejected, disappointed mob of fortune seekers had left that Nellie proudly exhibited her bookkeeping. It ended by the old man manifesting real affection for his loyal and faithful housekeeper in the words:

"You have proved what you are, dear child—true and good, with a heart of gold. We will have Evan Pearson down here Saturday evening, and make a new deal all around."

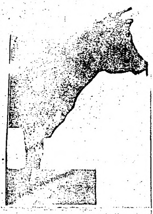
[illegible]RITY

[illegible] Flocks

[illegible] Has Been [illegible] Survey [illegible]

([illegible] Department [illegible])

[illegible] of a [illegible] proportion [illegible] Fre[illegible] purebred [illegible] are [illegible] than the [illegible] to throw [illegible] United [illegible] has [illegible] survey [illegible] York, [illegible] work of [illegible] in [illegible] in [illegible] the de[illegible] of the [illegible] revealed the



Pu[illegible] Contributing Factor [illegible] Farm Prosperity.

fact that only about 50 per cent of the sires used in the dairy herds of the county are purebred. The remainder are either grades or scrubs. About [illegible] per cent of the cows listed are purebreds. These animals are for the most part scattered through a large number of herds, showing that the average [illegible] is working into purebreds [illegible] as financial conditions [illegible]

In [illegible] census it is noticed immediately that the most prosperous sections of the county have high grades and purebreds. This is not confined entirely to the valley farms, since the town of Tioga contains the largest number of purebreds—35 bulls and 1,226 cows of any town in the county. Newark valley is in hilly country for the most part, but it is a prosperous farming section. It boasts of 68 purebred bulls and 94 purebred cows among 1,693 animals or nearly 10 per cent. In another town in similar hilly country the agriculture is more backward. The purebred cattle are limited to 11 bulls and 18 cows out of 506 animals, which is but little more than 5 per cent. Similar differences were noted in six other townships surveyed.

The Tioga county farm bureau is starting on a campaign to eliminate the scrub sire from the herds of the county. At the fall county fair in September a purebred bull sale was held on the last day. The animals were sold to the highest bidder regardless of price. In some cases the farm bureau will arrange with men to own a sire as a community enterprise, and to exchange sires from one community to another as time goes on. Every effort is made to eliminate inferior stock and to place purebred bulls and heifers wherever possible on grade farms.

VEGETABLE FOOD IS NEEDED

Fertility of Eggs and Vigor of Chicks Is Increased by Feeding Beets and Oats.

The farm flock needs more vegetable food in spring than in winter. The fertility of eggs and the vigor of chicks is increased by the feeding of beets and sprouted oats and any other sort of succulent green food.

Prose and Poetry.

"A great man leaves footprints on the sands of time." "That is beautiful poetry," replied Senator Sorghum. "But the man who is really useful is liable to be digging in a garden instead of tramping around the seashore."

THROW LIGHT ON POTATO GROWING

Information Regarding One of America's Largest and Most Distinctive Crops.

MANY QUESTIONS ARE ASKED

Bureau of Plant Industry Has Conducted Series of Experiments in Tuber Growth of Much Interest to Growers.

(Prepared by the United States Department of Agriculture.)

How do potatoes grow?

Why do some vines produce many tubers and others only a few?

Do big pieces produce better potatoes than small pieces?

When does the tuber begin to form?

When does moisture have the most effect on the production of potatoes?

What is the relation of soil to potato production?

Experiments Conducted.

These are a few among many questions which have been asked about the growth and yield of America's largest and most distinctive crops, and which former observers have been able to answer only incompletely. The bureau of plant industry, United States Department of Agriculture, has conducted a series of experiments in potato growth, the results of which are published in department Bulletin 958, "Development of Tubers in the Potato," which has just been issued. The information contained is of interest not only to the plant physiologist but also to the practical grower, as a knowledge of the relation of the setting and subsequent development of tubers of the potato may, to a certain extent, be put to practical use.

Tuber formation, it was found, begins in general at about the end of the period of flower-bud development, although this is not in all cases an exact criterion. Experiments showed that the number, as well as the size, of potatoes in a hill increased for several weeks after the first potatoes were large enough to dig. A small increase in the weight of tubers was found to occur even after the vines had been killed by frost. The maximum rate of growth of the tubers was found to occur about the last of August or first of September, which was approximately 80 days after planting.

An interesting development of the experiments was that the number and weight of tubers per hill were found to be influenced by the size and the kind of seed planted. Whole potatoes used as seed yielded heavier than half potatoes, and these more than quarters, and the larger the seed piece the greater the yield per hill. A whole potato used as seed yielded more than a half or quarter potato of equal weight.

The experiments showed that apparently light soils are better for potatoes than heavy soils. The lowest production of tubers, with respect to both number and weight per hill, was on the heaviest soil; the highest numbers and yields were produced on the lightest soil. The department thinks it possible, however, that these results might be modified somewhat under different climate conditions.

Harvesting Potatoes.

Resulted in Increase.

Two-year tests with irrigation indicate that the early application of water before tuber formation had started resulted in an increase in the number of tubers, as well as in the weight per hill. Late irrigation actually increased the weight but made little difference in the number of tubers per hill. The irrigation experiments were not carried to a final conclusion, but indicate that each application of water at almost any period in the growth of the plant, provided excessive quantities are not used, may be expected to produce an increase in the weight of the crop, but that little or no increase in the number of tubers is likely to result from irrigation after tuber formation is well started.

The bulletin contains an interesting description of the tuber-bearing parts of potatoes and their method of growth. It may be obtained free on request to the division of publications, United States Department of Agriculture.

MANY ACCIDENTS HAPPEN ON FARM

Falls and Refractory Animals Cause of Hurts That Could Be Avoided.

DIVERS MISHAPS DELAY WORK

Careless Use of Unprotected Machinery Takes Toll of Limbs That Would Be Prevented With Use of Safety Devices.

(Prepared by the United States Department of Agriculture.)

Farmer Brown was driving the doctor back to town, after he had set neighbor William Johnson's fractured leg and dressed three caved-in ribs. Johnson seemed to be in bad luck constantly, and the neighbors were circulating a subscription paper for him and arranging a "bee" to do up his unfinished work.

Earlier in the season a hold-back broke on a hill. The horse ran away throwing Johnson to the ground and confining him to bed several days in a busy period.

A little later one of his little boys stepped on a garden rake which had been left back down on the ground and ran a tine through his foot. The child was taken to the doctor to have the wound dressed, but not until infection had set in, and he would always be a trifle lame.

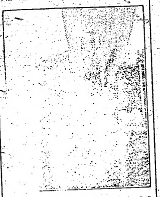
Delays Farm Work.

A hired man stepped through a loose board of a barn loft, and farm and household work was delayed while he recovered.

This latest misfortune was the worst of the season. Johnson had been shingling the barn, using a common prop scaffolding, made by placing wooden brackets against the side of the building and supporting them with two-by-four scantling set at an angle of 45 degrees and anchored at the foot with stakes and stones. He had undertaken to carry a bunch of shingles to the roof. An upper rung, previously broken from the ladder, had been replaced with a two-inch shingle band, nailed on with eight-penny nails. The wood in the side of the ladder was dozy and the nails gave way under Johnson's weight. The jolt as he struck the next rung upset the ladder, and down tumbled Johnson, ladder, scaffolding and shingles, all in a heap on the ground.

"Pretty tough on Johnson," observed Brown. "They talk about farming being a safe and healthful pursuit; but I'll bet he didn't think so when that bunch of shingles pursued him and smashed his ribs."

"Farming is healthful," said the old doctor, "providing people would take reasonable care of themselves. It ought to be safe as any ordinary occupation; but the observations of the United [illegible] Department of Agriculture and [illegible] National Safety council show that [illegible] year hundreds of people are [illegible] and killed in farm accidents, [illegible] part of which are preventable. [illegible] know where some farmers [illegible] in keeping a horse that [illegible] at anything and kick anyone who comes near him. Perhaps they like to feel their mastery, but the horse usually gets his inning in the end. And of course there is danger to inexperienced persons.



[illegible] Should Be Oft-Inspected at Least Once Every

"No bull above two years old should be [illegible] in a pasture, even if dehorned, as all bulls should be. Even an ugly ram has been known to kill a man. Savage dogs ought not to be necessary on a farm. But you find them, and often they find you first.

"Farm machinery, such as corn shredders, take a toll of limbs that would be prevented to a large degree if the most ordinary safety devices were installed and kept in working order.

Making Thrashing Safe.

"In some states the boiler inspection laws do not apply to steam thrashers. Every thrashing machine owner ought to have his boiler inspected once a year, whether there is a legal requirement or not.

"I could talk for another hour or so on farm accident breeders that might be eradicated. A country doctor's practice is full of them; but here we are at the house. Come in to dinner before you go back."

"Much obliged," returned Brown, as he cramped his flivver around in the roadway. "I guess I'll hurry back to the farm and fix up a few things before the neighbors have to get up a 'bee' to tide me over a broken leg."

DISEASED CONDITION OF SEED SWEET CORN

Much Damage Done by Ear Worm and Rot Molds.

Growers Urged to Exercise Greatest Care to Insure Quality of Next Year's Supply—Test With Rag-Doll Germinator.

Because of the damage which has been done to sweet corn throughout the Middle West this season by the ear worm, followed by root and ear-rot molds, corn growers are urged by the United States Department of Agriculture to exercise every possible care to insure the quality of their seed for next year's crop. These molds have in many cases rendered a considerable percentage of the ears wholly unfit for any purpose. Other ears, but partly overrun with molds, are unfit for seed but should be used for feed only after the moldy part of the ear is shelled off. This applies especially to the corn which has been grown for seed. In certain fields in the corn belt the damage has been so great that the corn was rendered unfit for harvesting as seed, practically no ears being found which were not injured.

These observations and reports to the department are all based on the evident and conspicuous defects that have been found in sweet corn and dent varieties. It is known, moreover, that many of the apparently good ears in these damaged fields are diseased and unless special precautions are taken, for example testing with the rag-doll germinator, they may pass as good seed corn.

During the past three years it has been found that much of the sweet corn seed which has been purchased in the open market has been badly infected with mold and ear-rot organisms. The quality of seed obtainable for use next spring depends, then, upon how the seed grown last year has been cared for, and upon the attention given the selection of seed from this season's crop.

SELECTING FARM VERY IMPORTANT

Many Things to Consider That May Have Decided Bearing on Home and Business.

FERTILITY [illegible] DESIRABLE

Essential to Success of Enterprise Is High Quality of Live Stock—Look to Source and Dependability of Water.

(Prepared by the United States Department of Agriculture.)

The wise selection of a farm is vital to the success and satisfaction of farm life. Choosing a farm often means choosing a place in which to live and work for a lifetime. It is important, of course, to decide wisely in buying for investment, says the United States Department of Agriculture, but in making a selection for a home it is doubly important to consider various features that may have a decided bearing on the farm business or that may make the home life attractive.

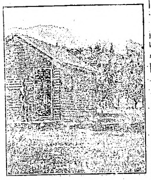
Home and Business Inseparable.

The home side of the question must always be kept in mind, for the farm home and the farm business are inseparable. The desirable farm from a business standpoint many times is found undesirable if it has no social or community advantages. On the other hand, desirable living conditions are of little or no advantage unless supplemented by a successful farm business.

In selecting a farm it should be borne in mind that it requires a farm business of considerable size to provide an income that will merely cover maintenance charges and that these charges are relatively larger for small farms than for large ones. A farm must be of such a size as to furnish most of the supplies needed in the farmer's living, such as garden and fruit, and enough income to pay the taxes and running expenses. Unless, however, there is a margin above these annual maintenance charges no progress can be made toward accumulating a surplus.

Another feature which the farm seeker should see to is that prospects for crop yields are more than sufficient to balance the cost of production. Soils of low fertility are handicapped—some are found to be a positive liability if it is necessary to farm them. It is well to inquire thoroughly into crop yields, not only those that have been obtained on the farm itself for a period of years but those realized on adjacent farms.

Equally essential to the success of the farm business is high quality of the live stock enterprise. To handle live stock so it will pay for feed, care, and labor is more than a mere matter of management, for it is dependent not only on cheap roughage, pasture, market, and securing labor at reasonable rates, but also on the quality of the animals kept.



A Deserted [illegible] Farm [illegible] the Northwest—The Owner Failed Because of Poor Soil and Lack of Irrigation.

Crop land, in itself, is of little value unless it is so situated that it can be made to yield profitable returns through the use of labor and machinery. A farm of 160 acres, valued at $100 an acre, may be a much better purchase if practically all of the land can be put to some profitable use, than another farm of 160 acres, at $50 an acre, of which large areas are practically useless, owing to streams, and swamps that cannot be drained, or rough stony tracts poorly suited even for pasture.

Another factor is ease of cultivation. If the land is very steep or broken it is not practicable to use improved machinery and it is often difficult to harvest the crops and remove them from the land by the usual methods. This is particularly true in loading hay and grain on steep hills.

The experienced farmer in selecting a farm generally looks first to the source and dependability of the water supply. He knows that a farm without and adequate supply of water is most undesirable. Attention should be directed to the quality of the water, the question of whether the supply is dependable at all seasons of the year, and to the cost of obtaining it. The cost of upkeep and supply of water on a farm is often a big item.

As an aid to persons about to buy farm land, the Department of Agriculture has published Farmers' Bulletin 1088 entitled, "Selecting a Farm." Copies of the bulletin may be had free by addressing a request to the department at Washington, D. C.

DOUBLE MATING FOR EXHIBITION COLORS

Barred Plymouth Rocks Have Peculiarity of Feathers.

Breeders Producing Standard-Bred Fowls Must Maintain Two Separate Flocks in Order to Keep Show Birds Uniform.

(Prepared by the United States Department of Agriculture.)

The Barred Plymouth Rock, the most popular breed of poultry on the farms, and therefore the most numerous of the many now raised in the country, has a peculiarity from which arises special breeding problems. This is the plumage marking of dark and light bars that has been known for so long and which makes it almost essential to make two separate matings to get standard color in both the males and the females.

The alternating dark and light bars give a bluish cast or shade to the general color, which should be even throughout the surface. It is common for solid black feathers, or feathers which are partly black, to occur in practically all strains of this variety, but this is not a sign of impure breeding. Black spots are also common occurrences on the shanks, particularly in females, but this does not indicate impurity. There is a decided tendency for the males of this variety to come lighter in color than the females, and for this reason breeders are usually obliged to resort to two separate matings, one for the production of males of standard color and the other for the production of females of standard color. The system of double mating, of course, complicates the problem of producing high-class Barred Plymouth Rocks

Breeding Flock on Government Poultry Farm at Beltsville, Md.

In mating for males of exhibition color a male of about standard color is used with medium dark females, or those two or three shades darker than females of exhibition color, in which the barring is as distinct and as narrow as possible. This mating is known as the cockerel mating because it produces a greater percentage of standard-colored males, while the females produced are too dark, but are suitable for continuing this line of breeding. In mating for females of standard color, females of about the desired color are used with a medium light male or one that is two or three shades lighter than standard and with good barring. This is known as the pullet mating, because it produces a greater percentage of females of the proper color, while the males are too light but good for carrying on this line of breeding.

Those who produce standard Barred Plymouth Rocks, therefore, must have what amounts to two separate flocks in order to keep their exhibition birds uniform. The average farmer however does not usually exhibit or sell breeding stock and will still continue to make a single mating as he has always done.

NEST EGGS OF NAPHTHALENE

Instead of Acting as Destroyers or Repellants of Lice, They Are Injurious.

Nest eggs made of naphthalene, claimed or suggested by manufacturers to be destroyers or repellants of lice, might be called bad eggs rather than "lice-exterminating eggs," "lice-killing nest eggs," and "medicated nest eggs," for they do not seem to inconvenience the lice or mites, but they do have a bad effect on the fowls that sit on them. In fact, the entomologists of the United States Department of Agriculture who have examined and tested these so-called "eggs" say that they are very injurious to fowls, but not in a single case were they found effective against the parasites. Even the nest boxes in which they were placed remained badly infested with mites and they were frequently observed crawling over the naphthalene eggs.

ESSENTIAL FEED FOR SHEEP

Clean Clover Hay or Corn Stover Makes Good Winter Roughage—Alfalfa Is Fattening.

Feed the sheep properly. An overfed flock pays but little better than an underfed one. Clean corn stover or clover hay makes good roughage for winter feed. Alfalfa is also good, but must be fed sparingly, as it is too fattening for in-lamb ewes if fed in large amounts.

AN AWAKENING

By ISABELLE ENGLAND

©, 1921, by McClure Newspaper Syndicate.

"Mary, darling," murmured Ted. "Love me lots? Hummm? Why, what's the trouble now—what the deuce—?" For his fiancee's expression had become anything but flattering. She looked, indeed, decidedly bored.

"You're a sweet boy," yawned Mary, "but really, you're horribly tiresome. One can be so sure of you. Oh, Ted! I do wish you weren't so faithful and adoring and—well—unthrilling. Now, if you'd only make love to Cynthia, next door, or something like that! I want excitement, and freedom. I want to be kidnapped by a big, bad man with rough hands, and be pulled by the hair, and kissed brutally, until—Oh-h-h-h——!"

Ted regarded her, open-mouthed, with a half-dazed, incredulous expression. Then his face hardened.

"I'm sorry," he retorted sneeringly, no longer the meek and perfect lover, but a very angry boy. "Sorry I had the great misfortune be born respectable. Sorry I'm not a ruffian. Drag you by the hair, eh? A spanking would be more effective!"

Mary [illegible] smiled [illegible] [illegible].

"Of course you can't comprehend my [illegible]. Your life is so shallow, so [illegible]. Your highest ambition is to [illegible]. Ye [illegible]! What have I [illegible] to deserve such a fate. If you were half a man you'd abuse me once [illegible], or do something to make life interesting."

"Mary!" Startled, but once more adoring he knew not what to say.

"Anyhow, don't stand there gazing at me with that adoring, calf-like expression!" she scolded.

Ted was all at sea. His dignity had been completely swept away. He appeared grieved and meek, and a little uncomprehending, entirely unbelieving.

"Mary—Mary, I can't understand—I can't see what the deuce is the matter. Didn't you like the violets I brought you?" And he gave an injured glance at the discarded offering.

Mistress Mary, quite contrary, shrugged disdainfully.

"Not so bad," she answered, "but it would have been much more interesting if you'd given them to some other girl. Please run home and don't bother me any longer!"

Mary laughed gayly as Ted's dejected back passed from view at the bend of the road.

"What an utter bore!" she sighed. "I wonder if I'd look more piquant and bohemian with my hair bobbed? And Ted hates bobbed hair—— Oh, could anything get him really mad, and keep him mad? Inspiration!"

. . . .

"Oh, mamma! Where's my comb? And oh, yes, the scissors, too? And, mamma, you wouldn't mind getting me the hand mirror, would you? Thank you!"

Mrs. Doran, a worried-looking little woman, fidgeted nervously about her over-temperamental daughter until the latter unmistakably excused her.

"I hope you're not going to do anything rash, Mary," murmured the nervous little mother rather apologetically.

"Oh, for heaven's sake, do go away, or I certainly will!" ejaculated Mary crossly. "Can't I have a minute's peace?"

Mary yawned. Really, she was so tired!

She pondered deeply a moment. Then, her decision made, she raised the scissors gingerly and trusted to luck—the flapper's god!

Several hours later a rather different Mary tripped down the stairs—a girl with short, stiff, uneven hair, resembling nothing so much as a futurist puzzle. Mary's eyes were suspiciously red. She held her head defiantly as she swept by her horrified father and her nearly hysterical mother, to the front porch.

The stars glittered dreamily; the town was quiet. What's more, Mary felt lonely.

She smiled in self-satisfaction. Of course she would take the poor boy back—after he had sufficiently suffered and repented his stupidity. In her mind she had the reunion almost staged, when——

"You darling!" Ted's voice sounded. It was dreamy, soft. The porch swing next door, at Cynthia's house, ceased squeaking, a gurgle of delight. Then, silence—silence——

Mary gasped and groped feebly for the door. That funny feeling in her heart was almost intolerable. All her sensations seemed to grow vaguer—stranger. She fell. . . . . . .

Mrs. Doran, hurrying into Mary's room, discovered her daughter in a tumbled heap on the floor in front of the easy-chair from which she had just slid.

"Didn't hurt yourself, dear, did you?" inquired Mrs. Doran. "I'd have called you before; only you were sleeping so peacefully. How on earth did you happen to fall out of that chair? Bad dreams?"

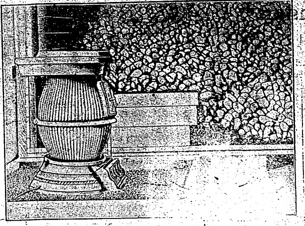
Mary picked herself up and anxiously felt of her hair. As her fingers encountered the loose coils she sighed with relief.

"Did Ted call up while I was asleep?" she asked. "Yes? And he's coming over this evening? Oh, joy and thrills! Is my organdie ironed?"

"Why, bless my soul!" exclaimed Mrs. Doran. "What can have got into the girl?"

But Mary didn't answer as she skipped gayly down the stairs. For, after all, dreams have little effect on youth.

LINING AND HEATING CARS TO PROTECT POTATOES IN WINTER



False floor stringers correctly built [illegible] from cold. Circulation is not block[illegible] ers were run across the car ins[illegible] car, but [illegible] the ceiling.

(Prepared by the United States Department of Agriculture.)

Warm air weighs less than cool air—and here lies the basic principle of properly heating box cars in winter to protect potato shipments against frosts that nip into the farmer's profits as well as into the potatoes. Next to providing heat, the matter of getting it to circulate so that it reaches practically all the potatoes in the car is of greatest importance.

The directions for preparing a box car for potato shipments given herewith are in accord with recommendations of the United States Department of Agriculture, and apply to winter shipments of sweet potatoes destined for northern points, as well as to the white variety.

Suitable Lining Is Important.

A stove will warm enough air to protect a car of potatoes from freezing even in severe weather, providing the car lining is built and kept in such a condition that the warm air can get down to the floor and [illegible] where it is needed. To accomplish this [illegible] [illegible] the [illegible] to [illegible] car. [illegible] with [illegible] this a false [illegible] running [illegible] creating air chan[illegible] inches deep, exten[illegible] false floor from the [illegible] to either end where [illegible] vertical air passages formed by false walls built four to six inches from the car ends. Likewise false walls are built a few inches from the sides and a false door is erected at one side for a stovepipe to go through.

Bulkheads are put across the car at either side of the door to form a well for the stove. These walls, as well as the center bulkheads, rise well toward the ceiling. The bins are lined with paper, the same as the car walls. The false floor supports permit the cool air to settle below the false floor and to move toward the base of the stove, where it rises as it is heated and circulates toward the ends of the car, [illegible] the ceiling. [illegible] and [illegible] by [illegible] [illegible] under[illegible] ers' Bulletin [illegible] United States De[illegible].

[illegible] not to load [illegible] filling that they [illegible] then there must be a large [illegible] spacing for the warm air to pass down to the floor after it has spread the length of the ceiling from the heater. The circulation is slow and labored, and to limit it by piling the sacks so that they extend beyond the false walls causes serious interference. In placing potatoes in sacks on the false floor next to the walls care should be taken to set them a few inches from these partitions, since they are in the region where the frost first becomes effective if the car is not properly heated.

Lined Cars Returned to Shippers.

It is recognized that preparation of the car in the manner indicated involves a considerable initial expense. Usually, however, shippers plan to use both the stove and the lumber for repeated shipments. In Maine cars are equipped substantially in the way described and used by shippers repeatedly, the cars being returned to the starting points free of charge to the shipper.

The general rule west of the Mississippi is to permit the return of linings and stoves by freight free of charge. In other regions the regular freight rate usually is charged. Efforts are being made to have an arrangement, similar to that existing in Maine, applicable throughout the country, and where the car lining and stove are removed it has been recommended that the railroads return them to the shipper at one-half fourth-class rate.

TRAP NESTS HELP BREEDERS

Some Facts Have Recently Been Learned as Result of Device in Improving Flock.

Trap nesting hens to find the most profitable layers does not appeal to the average farmer and back-yard poultry man as being practical. Besides the original cost of making the nests, there is the extra labor required in looking after the layers. However, some facts that were learned as a result of using the trap nest may be applied in the improvement of the flock, say poultrymen of the United States Department of Agriculture. For instance, the trap nest has shown that the late moulter is the most profitable bird in the flock. Now, without the use of the trap nest, a man may select the late moulters and be sure that he is picking the cream of the flock. And it seems reasonable to believe that this characteristic breeds on from generation to generation.

GEESE RETURN GOOD PROFIT

Fowls Are Quite Easy to Keep and Breeders See Bright Future for the Industry.

Experienced raisers of geese assert the goose is one of the most profitable and easy fowls to keep, and express belief in a bright future of expansion for the [illegible] industry. The Toulouse, African [illegible] Embden are the three [illegible] breeds, the Embden be[illegible] type, considered ideal f[illegible].

"They Satisfy"

There's a Reason

When you are sick, why do you send for a certain doctor? Because you have confidence in him. You employ a certain lawyer because you think he is competent.

The same motives should guide you in selecting a bank. Confidence is vital. There should be mutual confidence between a bank and its patrons.

Such confidence DOES exist at our bank. We have confidence in our customers. Ask any of them about their confidence in our reliable BANK. We cordially invite you to accept our modern banking accommodations.

THE
Farmers State Bank
OF GOODRIDGE

OUR greatest asset is the good will of our customers and we sincerely value the business you have given us. May your Christmas be Merry and your New Year Better and more prosperous than ever before.

An "Old Fogy's" Sweetheart

By MALCOLM BROWN.

Copyright, 1921, Western Newspaper Union.

The great audience hall was crowded to suffocation, the stage was a brilliant glow of color and life. A beautiful young girl had just enraptured her listeners with a violin solo that seemed to sweep the responsive strings of every heart.

It was the annual graduation day of a leading conservatory of music. As the solo closed, the thunders of applause told that the fair violinist, Miss Orthello Blain, had won the honors of the day.

There was humid joyousness in her radiant eyes. Then there came one gratified flash of pride as she glanced at a corner of the room where a man, tall, spare, intellectual looking, sat beside a woman, his sister. They were Adrian and Mary Worth.

"Oh, brother!" quavered the woman, her face a thrill of rare delight—"it was rapturous."

"She has outdone every expectation," murmured Adrian Worth, and his tones were husky with emotion.

"A blessed moment—after all the years!" whispered his sister.

Two manly young fellows hovered about the flushed, excited beauty as she came down among the audience. A pang shot through the sensitive heart of Adrian Worth at the sight of them. His fine, statuesque face quivered with a strange pain at heart he did not seek to analyze. Then it gladdened, for Orthello had eyes only for him. She came to his side. She clasped his cold, trembling hand.

"Dear Guardy," she breathed, eagerly, her utterance rare incense to his famished soul, "did it please you?"

"Oh, my child, my gifted, glorious Orthello!" he cried, and could speak no further.

Mary Worth had opened her house to the young friends of her petted ward.

Adrian Worth did not appear in the festivities. While the function was at its climax he was seated in his study, lost in reverie.

Eighteen years previous, when he was a youth of fifteen, he had found one stormy wintry night on the door step of the house of which his elder sister, Mary, was the mistress, a basket containing a tiny little child.

A note gave to the abandoned child the quaint name Orthello.

Kind-hearted Miss Worth had heeded the pleadings of Adrian to adopt the tiny waystarer. Orthello had become the passion of his life.

The door opened and the shaded lamp cast a flitting reflection across the floor. Orthello was at his side. She seated herself on the arm of his chair and rested a fond arm upon his shoulder.

"Guardy, dear," she said with a little pout, "why have you deserted us all the evening?"

"I—I have had books to look over," he said, stumblingly.

Orthello kissed his cheek till he thrilled—and ran away, a veritable sprite of fleetness and grace.

"This cannot continue," spoke Adrian, seriously. "I must not mar her life—I need not make my own wretched. I must go away."

One morning a fashionable turnout halted in front of the Worth cottage. An elderly, elegantly attired lady alighted. She had seen the name of the fair graduate in the newspaper. "Orthello," an odd name—it was her own. Her sister——

Then the story came out; a sister, driven from home by an angered father for marrying a poor man. They had heard of his death, but of his widow—never a trace.

And now the name "Orthello" had revived hope. She was wealthy, she must take her niece to her own home.

And Orthello went, and gloom and sadness enveloped the rose embowered cottage.

At the end of a week Orthello wrote them—grieving for them truly, but fascinated with the glare and glitter of her new life.

And then one evening Orthello burst in upon Miss Worth.

She was pale, wearied. She threw herself into the arms of the dear soul, a true mother to her. Her words were:

"And, Guardy? Oh, do not tell me he has gone away!"

"No, dear," answered Miss Worth. "He is not going at all. He—he has changed his mind."

"You—you—you!" cried Adrian, hearing her voice and coming into the room. She flew to his arms, laughing, crying, resting there like a wandering bird returned to its home nest.

"Yes, I have come back. I have run away from Auntie to get back. And I mean to stay!" declared Orthello.

"But—your aunt, the new home, so splendid, the prospects, wealth, society—" voiced Adrian, incoherently. "You are a young lady now, Orthello. You must look to your future. An old fogy like me—"

She seized his hand, she swayed before him, looking him straight in the eyes.

"Oh, must a poor, tired little girl tell you everything!" she cried. "Don't you understand? Must I say it, that I love you, always loved you better than anybody else in the world? Oh take me, keep me, let me work for you, slave for you, only—love me, love me, or my heart will break!"

And at last Adrian Worth understood, and heaven seemed to open for him in a glorified vision of rapturous delight.

Sikta Rye Flour

Made from the best rye and ground almost as white as any wheat flour, is for sale at the Farmers mill, at $1.44 for 49 lbs.

Recipe for Buckwheat Cakes

Take 2 cups of buckwheat flour, 2 cups wheat flour, ½ yeast cake, 1 tablespoonful salt, 2 tablespoonfuls sugar.

Soak yeast cake and mix all the ingredients with lukewarm water. Beat well. In the morning add two teaspoonfuls of soda dissolved in hot water. Beat again and bake on a hot griddle. Save a little of the batter each time for yeast.

The Farmers Mill is grinding fine Buckwheat Flour, which sells for 76c for 24½ lb. sack.

CORN

The Farmers Mill has just received a carload of shelled Corn.

Lost—A white calf with red spots. Left my place over two months ago. Finder please address
ANTON HOR-CHEK, Erie, Minn.

Wanted—Flax Straw. Will pay $2.50 per ton for good dry Flax Straw, delivered at Goodridge.
d9 tf OLIVER RESAN.

O. N. Urdahl was quite ill Thursday night with one of the attacks to which he is subject, and Dr. Adkins was called. He is reported better this morning.

Christ Vad of Erie came in Wednesday and paid his subscription to date and for one year in advance. If about 500 more would do likewise it would not be such hard times in this office.

The graveling operations on the road east of town were finished Saturday for the present. Besides putting in shape a nice stretch of road this work has furnished employment and some little spending money to a number of people to whom it came quite handy.

School Notes

We wish you all a Merry Christmas.

School closes Friday afternoon with a union program of all the pupils, together with a jollification around the community Christmas tree which will take place down on Main street.

The grade rooms have all been artistically decorated this week with a variety of Christmas trimmings, many of which were made by the pupils.

The teachers will spend their Christmas vacation at their respective homes, as follows: Miss Hegland, Fosston; Miss Vaughan, Thief River Falls; Miss Giefer, Thief River Falls; Mr. Beithon, Duluth; Mrs. Breen, Duluth; Mr. Nystul, Goodridge; B. O. Norby, Fosston.

THE GOODRIDGE BANNER

VOLUME XV, No. 49. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA De[illegible]ER 30, 1921. [illegible] YEAR.

Jurors for February Term of District Court

Evil doers in Pennington county will have added cause for being apprehensive at this time. As members of the grand jury which convenes on Tuesday, Feb. 7, three women will serve, this being the first time in history that such a thing has happened. The pioneers in this field are Mrs. Andrew Bottelson, Thief River Falls; Mrs. G. W. Hooper, St. Hilaire, and Mrs. J. W. Denhart, River Falls township. Other members of the grand jury are as follows: L. E. Miller and Jorgen Eide, North; Herman Ortloff, Sanders; N. A Nelson, St. Hilaire; Lars Fevig and John Bye, Star; Carl Beiswinger, Smiley; Christ Thompson, Hickory; Stephen Singer, Kratka; A. T. Nelson and Henry Eliason, Highlanding; G. W. Leimers, Roy Lambert and Ralph M. Sheldon, Thief River Falls; Charley Johnson and J. W. Bugge, Numedahl; John Maakrud and T. J. Sumpter, River Falls; J. M. Sebie, Cloverleaf; Theodore Berg, Reiner.

There are no women members of the petit jury, which will be made up of the following: Tom Belland and Oleander Uglem, Reiner; Thor Sanders, Smiley; Arne Gunderson, S. J. Jervold and Gunder Olson, Kratka; Bernt Tanem, Goodridge; T. T. Kyale, Hickory; George Singer, Deer Park; C. M. Evenson, B. E. Dalquist, Frank Mousley and Emil Griegstein, Thief River Falls; O. K. Sevre and J. A. Anderson, Sanders; Olof Mosbeck, Polk Center; Fred C. Dols, Norden; Stuart McLeod, Anton Kotlan and T. J. Skaar, Cloverleaf; Ole Ottum, Silverton; James Ramsey, Highlanding; Henry Luttmer, Bray; Albert Nash, St. Hilaire.

The Northwert School Of Agriculture

The first term at the Northwest School of Agriculture closed for the holidays Thursday, December 22, which enabled the students from this vicinity to spend their vacation at home. In spite of the situation in many parts of the northwest, the attendance at the farm school has been very large. There were 175 students enrolled. The second will open Wednesday, January 4, and will close March 31. There were a number of students from this locality who were unable to attend the first term but who are planning on attending the three months after Christmas. There will be classes arranged for those who are entering as new students. Some of the courses open to new students are, Dressmaking, Music, Farm Engineering, Farm Mechanics, Shop Work, Livestock Judging, Grain Judging, Business English and Accounting. All new students should arrive some time Tuesday, January 3, in order to be ready for classes the following morning.

Approves the Road

George W Cross, Indian agent at Red Lake agency, has given his formal approval to the project of the construction of a highway east across the reservation to the Red lakes. The approval was secured when Dan Shaw and J. R. Johnston of Thief River Falls visited the agency a short time since.

Notice for Sealed Bids

Sealed bids will be received at the at the office of the County Auditor in the city of Thief River Falls up to 3 o'clock in the afternoon on January 3rd, 1922, for the publication of the notice and the Delinquent Tax list for 1921, and for the financial statement and for all legal publications for Pennington county, Minnesota, for the year 1922.

The County Board reserves the right to reject any or all bids.

Dated at Thief River Falls, Minn., December 14th, 1921.

T. P. ANDERSON,
County Auditor.

Grygla Man Dies Suddenly

George W. Calhoun, whose home adjoins the townsite of Grygla, died last Friday, December 23, at the Northwestern hotel, Thief River Falls, of heart trouble. He had just arrived there, having ridden from Grygla with Henry Hope, of the Grygla transfer line. He was seized while sitting in a chair and was dead before any aid could be rendered him.

He is survived by his wife and twelve children, five of whom are living at home. The remains were taken Tuesday by his son William to Mount Pleasant, Iowa, the former home, for interment.

ERIE ECHOES

Happy New Year!

A good size crowd attended the X-mas tree party given in the Tharaldson district last Tuesday evening. A good little program was given by the scholars, who all acquitted themselves in a creditable manner, considering they are most of them tots.

Alsiak Nerhus and George Hovet were pleasant callers at H. Iverson's X-mas day.

Alvin Loiland was a guest at the Ben Reindal home Sunday.

Mrs. Myrtle Rouze, teacher in the Tharaldson district, is spending her holiday vacation with relatives and friends in Goodridge.

Iver Iverson is visiting with friends in the Rhoda vicinity.

"Pretty snappy, ain't it?" was our genial R. F. D. carrier, "Teddy" Rustad's answer the other day when asked what he thought about the weather.

Facing the New Year

The clock strikes 12 on December 31 and we are ushered a New Year—with how many plans for the future—new resolves, many, alas, that are made to be broken. But let us welcome the untrodden paths and grasp the new conditions with a firm hand, grateful for the blessings that the old year has brought to us.

The Gray-Haired Woman

By WINIFRED DUNBAR.

Copyright, 1921, Western Newspaper Union.

"Come here, girl; don't look at me as if I were a dragon!"

Elsie went forward and looked at Miss Ingleby with an expression of so much mingled hatred and admiration that the elder woman flashed her white teeth and her eyes twinkled exactly as they did in the posters with which almost every billboard in the United States had been decorated at one time or another.

She went forward defiantly, but a moment later somehow she found that she was crying upon Miss Ingleby's shoulder, while the singer caressed her and patted her hair gently.

"So I have stolen her beau away from her and she wants him back!" whispered Miss Ingleby. "Isn't that so, dearie?"

Elsie raised her head. "I shouldn't mind—if you meant to marry Tom," she sobbed.

"How old are you, child?" inquired Miss Ingleby.

"Twenty," said Elsie defiantly.

"And Tom?"

"Tom is twenty-five. And you must be nearly thirty," said Elsie. "So I know you don't mean to marry Tom. And we were to be married at Christmas and now—now he won't speak to me."

The match between Elsie Lennon and Tom Banks was approved by all Kentville, for Tom was a rising young business man of the town and Elsie's father, old Major Lennon, who kept the summer hotel, had been one of the first settlers. And they had been sweethearts for years.

"Never you mind, you shall have your Tom again," whispered Miss Ingleby encouragingly.

But it seemed a harder problem than Miss Ingleby had expected. She had not meant to lead Tom on. But a woman of the world often forgets that the light interchange of repartee and badinage may be the cut and thrust of mortal earnest to an inexperienced young man.

It was Tom who furnished her with her opportunity that evening when they sat together on the piazza.

"Miss Ingleby," he said, "I want to tell you something. You are going away on Thursday—but I don't want you to go out of my life. You have made me love you—"

"Love you!" she exclaimed. "Why, you are nothing but a boy!"

"I am twenty-five," he answered sullenly. "I know you may be a year or two older than I am. But where love exists age does not count. I—"

"Mr. Banks, listen to me," said the singer. "Do you think it the part of an honorable man to make love to one woman when you are engaged to another?"

"No, I don't," he cried. "But how can one help whom one loves?"

"On Thursday morning I will give you my answer," she answered.

Elsie dreaded the evening meal. There were but three other guests at that season; her father and herself sat at a table facing Miss Ingleby, and Tom, who had boarded at the hotel ever since their engagement.

The door opened and a woman came in. A gray-haired woman, with wrinkles round her eyes and mouth, and pallid cheeks. She was dressed in a plain black suit of antiquated cut; she was just a motherly looking body of forty-odd years. The major looked up and stared hard.

"Who is that, Elsie?" he whispered, as she seated herself at Tom's table.

"Miss Ingleby!" stammered the girl in amazement.

The rest of the meal was passed in absolute silence. Elsie's eyes took in every detail of the incident. She saw the expression of amazement that crept into Tom's eyes, saw him attempt to speak, choke, and at last rise and hurry from the room. And Miss Ingleby, brave Miss Ingleby, who had stripped herself naked of her little artifices to save another woman, sat there unconcerned, the cynosure of all eyes making a courageous show of eating until the last course was served. Then she went to her room.

There Elsie found her afterward. She understood that the elder woman had made atonement for her offense.

"Why did you do it?" whispered Elsie.

"Because," answered Miss Ingleby slowly, "I was young once, and sweet and innocent—like you."

She kissed her good-by, and none of them saw her again. But on the piazza Elsie found Tom, walking like a madman. When he saw her he came humbly up to her.

"Elsie," he said, "you know what sort of a fool I have been. I suppose we can never be the same to each other again, but if you will give me a chance—"

"Perhaps we can be more, Tom," she whispered. And she knew that from that moment hers would be the stronger soul; that the innocence of youth had yielded to the knowledge of maturity; that the sheltering love she bore Tom was immeasurably stronger than the girlish adoration which was gone forever.

Lucia Finds a Real Man

By CLAIRE SMITH.

Copyright, 1921, Western Newspaper Union.

Daniel Forsythe considered himself one of the most fortunate men in the world when he became a partner with Roger Bell. He was getting old, his [illegible] business cares would be light, and Bell was a money maker. Besides [illegible] Denzil Bell and Lucia Forsythe were engaged.

It was true that young Bell was by no means the man the old business veteran would generally have selected for a son-in-law. The scion of the Bells was idle, without ambition, fickle and a spendthrift.

Then, rudely, unexpectedly, came the darkest day in the life of old Daniel Forsythe. With a crash the great house of Bell, Forsythe & Co. went down in ruin. All of the Forsythe fortune was involved. The Bells, however, were notorious for having ever "an anchor to windward." When the creditors were settled with the Bells flew as high as ever. Mrs. Bell had a fortune of her own, and on that the family could drift along very pleasantly. The first thing shallow, mean-spirited Denzil Bell did was to break the engagement with Lucia. She had expected it, and was devoutly glad that it had come about.

"We are paupers!" mourned her father. "And now the engagement is broken. It crushes me to think of you, Lucia. I had so counted on your trip abroad to finish up your art and music. Now—"

"Now, dear papa," cried Lucia, almost joyously, "I am free to have my own way, to really live, to be of some actual use in the world."

"Even if the crash had not come," declared her father, "it would not have meant much to me, for I am gradually breaking down in health."

"Nonsense!" cheered his hopeful daughter. "A month up among the pines with Aunt Carrie will soon drive away all such megrims. Papa, you have taken care of me all my life—now I am going to pay you back."

Years previous Mr. Forsythe had given his widowed sister a small home at Wareham and had secured a permanent pension to her. This was now their refuge.

Lucia had arranged in the city to do some illustrating for two publications. A music house, too, had agreed to pay her something for arranging songs, so she began her new life with quite an encouraging income. Her work did not take up all her time, and she became immensely interested in the children of the poor factory workers of the town.

"I declare, papa," she said, one day about six months after their arrival in Wareham, "I believe I never knew what real happiness was until now. Think of it, this grand air and exercise have made you twenty years younger, the bank is willing to pay you well for a few hours of your time as adviser, I am earning a nice little sum, and [illegible] children. Mr. Page has selected those who seem to have the musical and art instinct, and Saturdays I have four different free classes."

The Mr. Page she had alluded to had come into Lucia's life quite prominently of late. He had charge of a school supported by the manufacturing plants at the edge of the town. The work was purely philanthropic.

Lucia would never forget to her dying day one golden afternoon when she was strolling by the riverside with Harold Page, discussing her plans for the benefit of their mutual work. Suddenly Harold had sprung from her side. Then she saw that a little girl playing in a boat tied to the shore near the mill dam had fallen into the water. Just in time Mr. Page made a plunge that rescued the imperiled child from sure death.

The little girl was more frightened than hurt. When Page carried her to a grassy plot, Lucia sat down to care for the weeping child, and her rescuer hovered near by to soothe her with gentle words. "Oh, dear Mr. Page! You was so good, so grand to jump in and get all wet and mussed up, just for a bad, naughty little girl!"

She was so grateful, so happy, that she seized his hand. She drew it close to that of Lucia and kissed them both and held them there so close together that Lucia blushed and Page looked embarrassed. It nerved Mr. Page to speak out what had been in his heart for some time.

"Miss Forsythe," he said, as they walked slowly homeward, "anybody would be pardoned for the common belief that you are a princess in disguise, and really I was led to believe that you were the great heiress they said. But I have learned that your work here is real soul labor. I have something more in worldly wealth than my humble but glad position here would seem to indicate. Let me share it with you."

And on such a dreamy, mellow evening, and with such earnest words from such a man, Lucia Forsythe could not say him nay.

The Tramp's Orchard

By MALCOLM BROWN.

Copyright, 1921, Western Newspaper Union.

"The phenomena of conversion," said the evangelist to the psychologist, "may be, as you say, the culmination of a series of obscure mental impressions, but the condition itself is the result of a moment. Something which was not in the sinner's heart enters there and drives out something that was there.

"I knew a man—never mind who or what he was. He was uneducated, the sort of average American countryman who is the staple human product of this nation. At the age of thirty he was a tramp, plodding along a country road in Carolina.

"It was early spring and the orchards were aglow with peach blossoms. As he passed outside a long line of blossom-bearing trees he saw a girl standing on the other side of the fence, her arms full of spraying boughs. She was about sixteen.

"He learned something of her circumstances. Her parents had been compelled to mortgage their farm; they were heavily in debt; they feared the loss of their home. And she—her dearest wish to obtain an education could not be fulfilled. If her father were rich, she said, it might be.

"The ragged man could see that this was the type of girl whom education would bring the highest success. He learned her name and that of the post office, thanked her for a drink of water that she gave him, and, as he heard her mother's harsh call from the house, went on his way.

"He jumped a freight train and made his way by stages westward. He obtained a menial position, and every penny that he could hoard he put away in a bank. When he had a hundred dollars he sent it anonymously to the girl. 'For your education,' he wrote on the envelope. Then he began saving again.

"Gradually the memory of this girl took possession of his life. As the months changed into years he pictured her, first completing her course in high school, then going to college. Seven years later he was a man of moderate means, and he had spent $2,000 on the peach-blossom girl.

"What was she to become? No stenographer or clerical assistant in my business, of that he was resolved. Why, she should go to Paris, of course, and achieve triumphs there. He set aside his whole accumulation of money—$7,000—and sent it to her.

"And at last the day came when he turned his dreams into actual plans. He would return and humbly ask her to be his wife.

"It was not until he actually descended from the train at the obscure little Georgia village that the futility of his dreams suddenly dawned upon [illegible]. He had heard nothing from her [illegible] ten years. It might be that his [illegible] had never reached her.

"When [illegible] heard the harsh voice of [illegible], he told me of [illegible]," the evangelist [illegible] absurd desire [illegible] he had [illegible] ten [illegible] seeing [illegible] man of [illegible] and she [illegible] circum[illegible] [illegible]nt of [illegible] good [illegible] friend and [illegible] speculation. [illegible] on the [illegible] though things [illegible] still in the [illegible] wished that they [illegible] into a city—[illegible] find purchasers for [illegible] land in that section of [illegible].

"[illegible] one trouble I've got,' she [illegible] and that's Bessie. She de[illegible] to go to a city. She [illegible] says if I go she's [illegible] out somewhere. Jim re[illegible] give her an education. She [illegible] high school and Jim [illegible] money.'

"[illegible] that moment the farmer stamped [illegible] room, casting a suspicious [illegible] the visitor. The woman in[illegible] him. 'This gentleman talks [illegible] the farm,' she announced. [illegible] farmer's visage cleared. 'May[illegible] would like to come and talk it over [illegible],' he said, and my friend followed him.

"And then, coming through the [illegible] my friend saw the peach-blos[illegible] and the old sense of peace [illegible] back to him. Except for a certain maturity of face and figure she [illegible] the same as when she was sixteen."

"Well," said the psychologist, "I can guess the rest. They were married [illegible] settled down on the farm and [illegible] a life of idyllic happiness."

"That's obvious," answered the evangelist. "But now, that you have the story, you must endure the moral. Suppose that the money had reached [illegible] would it have benefited either of [illegible] so much as that which actually occurred? He had come back, an ignorant man, not daring to ask what he had so long dreamed, and he found an ignorant country girl of his own station in life in place of a fine, vain lady. And the years of toil and discipline had not gone for nothing. So you see, conversion is a matter of the soul, and whatever results it brings about, one may be sure that it can have only good to follow it." He hesitated a moment. "If ever you gentlemen are passing down my way," he said, "you must come and visit my peach orchard."

The Lion and the Tyrant

By DOROTHY WHITCOMB.

Copyright, 1921, Western Newspaper Union.

Nero had not been quite the same for several weeks. Signor Blanco, his trainer, had perceived nothing amiss, because his eyes had lost their fine keenness and his brain had grown sodden and bewildered. Nero obeyed as quickly as ever, but when he sprang at the word of command, upon his pedestal, there was a slight quivering of his sides, a lashing of his tail, which would have told Blanco a story—once. But Blanco was mad with drink and jealousy of his young wife, Minetta.

Every trainer knows that the old story of Daniel and the lions is true. The lion fears a good man more than anything in the world. But let the trainer drink or give way to any base impulse and his power is gone.

Minetta was only nineteen and they had been married two years. Blanco was forty-five. He had found Minetta starving on her arrival from Italy to marry Giuseppe, who came from her village, and to whom she had been pledged ever since they were children.

Minetta has missed Giuseppe, for Blanco, having seen her photograph, had cunningly contrived to send Giuseppe astray. He trailed her for three days until her money was exhausted. Then he made himself known to her at her boarding house.

"Giuseppe has another girl," he told her. "I am Signor Blanco. No, I do not know where Giuseppe is now. Marry me and I will hang diamonds round your neck."

Poor little Minetta, helpless and hopeless, fell an easy victim to Blanco. It must be admitted, though, that he was deeply infatuated with her girlish beauty. So they were married and lived happily three months. And then—Giuseppe came back.

Blanco had taken advantage of the raw youth's ignorance to have him shanghaied aboard a Chesapeake oysterman. He came back to find Blanco married to Minetta.

"Pooh, that is nothing!" Blanc[illegible] airily [illegible] run away. It was [illegible] [illegible]ed her. Listen [illegible] assistant again [illegible] I will give you [illegible]

The [illegible] Giuseppe. And [illegible] for nothing [illegible] his beloved, Minetta [illegible] the day [illegible] help her [illegible] at his [illegible]

[illegible] ways to kill [illegible] Nero and sent [illegible]. But Nero [illegible] his feet [illegible] Minetta [illegible] loving [illegible]'s in[illegible] the face.

[illegible] etta!" [illegible] done?

[illegible] sobbed [illegible] time.

[illegible] Nero [illegible] as [illegible]. The [illegible] Giuseppe [illegible] through [illegible]

[illegible] draw[illegible]. But [illegible] Minetta [illegible] her [illegible]

[illegible] and prayed, [illegible] and it seemed [illegible] he could do.

[illegible] stepped forward, Nero and cut [illegible] savagely across the loins. He took his eyes from Nero. He knew that he could reach the door and close it on his wife before Nero could spring.

He leaped for the door, tripped, and stumbled. He had fallen upon Minetta's whip, which she had cast aside. He strove wildly to rise. He saw a great shape darken the daylight over him.

It was Minetta's scream that called Giuseppe from the collection box. When he arrived he saw her beating with her little fists on Nero's face, while the lion blinked and snarled over the body of Blanco.

SPECIAL RATION FOR FOWLS

Great Deal of Concentrated Feed Is Given Where Table Scraps Are Fed to Flock.

Owners of back-yard flocks, and sometimes farmers, depend to a considerable extent upon table scraps as fe[illegible] [illegible] ment of [illegible] ration spe[illegible] that receive [illegible]. The mash of [illegible] of three pounds co[illegible] one pound bran, one pound middlings, one-half pound meat scrap. The scratch feed contains two pounds cracked corn, one pound wheat and one pound oats. If scraps are not available, feed five pounds of cooked vegetables daily to 80 hens. Two per cent of bone meal may be added to the mash without changing any of the other constituents. Five per cent of bone meal may be added if the amount of meat scrap is reduced [illegible].

Our Friends and [illegible]s

We wish you all

MERRY X-[illegible]

and a

HAPPY NEW YEAR

And we take this opportunity to express our appreciation of the good will you have shown us during the past year and our hope that the same cordial relations may continue in the future.

A Poor Country Mouse

By CLAIRE SMITH.

Copyright, 1921, Western Newspaper Union.

"Oh, Millie, I am so glad," said Lucy Wainwright. "I hope the same happiness will come to me some day," she added wistfully.

"Why, you little goose, any girl can get a man if she wants him," answered her cousin Millie. "And Mr. Lawson is as rich as Croesus—at least his father is."

"But you love him, Millie?" inquired Lucy anxiously.

"Quite well enough," answered Lucy's cousin. "Of course when a girl gets to be twenty-five she has acquired a little common sense. How old are you, Lucy?" Millie continued.

"Just twenty," Lucy answered.

"Then you have five years to wait, my dear," said Millie. "Come, let us go downstairs. Tom will be here in a few minutes and I want you to meet him.

Lucy was visiting her cousin in Virginia.

Tom Lawson was the son of old Peter Lawson, whose speculations in Mexican oil fields were reported to have netted him a fabulous amount of money. And when Tom came in Lucy had to admit that he looked a rich man's son. The high-power automobile, his faultless clothes, his university manners made him a splendid catch for any girl. But what Lucy liked most about Tom Lawson was just himself.

How she envied Millie. The magnificence of her cousin's home was like a wonder world to Lucy.

She did not know that they were living upon their capital and that Millie's shrewd mother had staked her fortune upon her daughter's making a brilliant match.

Millie had certainly done her credit. It was to be a marriage of youth and health and plenty of cash thrown in.

As the days wore away Lucy began to feel less and less comfortable in her new surroundings.

Her mother had died two years before and her father had been called west on an important business matter.

Another thing which troubled her was Tom Lawson's evident liking for her society.

Lucy resolved to keep away from Tom. But one afternoon he came in unexpectedly, when Millie and her mother were out driving.

"My cousin is out," said Lucy, as she opened the door.

"I'm glad of it," said Tom brusquely. "I didn't come to see Millie; I came to see you."

"Mr. Lawson!" stammered Lucy indignantly.

He came in and sat down in a chair.

"My father's lost every penny," he said bluntly. "The house is going to be sold, and I'm going to work. I wanted to tell you."

"Me?" asked Lucy, feeling her heart throb unpleasantly, and conscious that she was looking extremely foolish. "Why me?"

"Because—" began Tom, and suddenly caught her in his arms and kissed her.

Poor Lucy! It was her first experience of love. And then she found that she was crying.

"There!" Forgive me!" said Tom. "I'm a cad, I know. Lucy, do you know I have loved you every minute since I saw you? Haven't you cared for me a little bit?"

"Yes," answered Lucy truthfully. "But Millie—"

The thought maddened her; she sprang out of his arms and hurried from the room.

Her eyes were still red when she came down to dinner, but nobody noticed it, because Millie's mother was half hysterical herself.

"I don't know what we shall do!" she burst out petulantly. "Do you know the Lawsons are beggars? Positively beggars. And Tom has written to Millie asking to be released from his engagement because he can't support her."

"Never mind, mother," said Millie. "Think how nearly I was deceived by him!"

"But you aren't going to let him go, Millie!" exclaimed Lucy in amazement. "Don't you love him?"

"Don't talk nonsense, child," said Mrs. Wainwright with asperity. "How can she love a pauper?"

"I wish he'd taken to you, Lucy," sobbed her cousin. "Now I've been engaged once, and it isn't so easy to be engaged again when you've had an affair already."

Lucy went home next day, for a telegram from her father arrived, announcing that he had returned. Everything was greatly changed, she found. Mr. Wainwright had accepted a profitable position which would render them fairly prosperous.

"By the way, my dear," said Lucy's father that evening. "I have a piece of news for you. My assistant in the adjusting department is to be a young fellow named Lawson, who comes from the same town as your aunt. I've asked him to dinner tomorrow evening, and I want you to like him, because he seems a thorough gentleman, and we're likely to make a profitable thing out of our new concern."

"I'll try, father," answered Lucy demurely.

And Mr. Wainwright wondered why his daughter's face became so radiant.

Mentally Fatigued.

Alice—I'm tired of golf.

Virginia—I didn't know you played.

Alice—I don't. My husband does.

AFFECT FARM VALUES BY CHANGES IN TYPE

Certain Crops Have Ceased to Be Profitable.

Farmer in Making New Selection Will Do Well to Look Back and Follow Economic Changes That Have Occurred.

(Prepared by the United States Department of Agriculture.)

Many farmers, before buying a farm, have saved themselves future losses by looking well into the matter of a probable change in the type of farming practiced in the region they have under consideration. Certain crops may cease to be profitable owing to the development of other regions more favorably situated for their production and marketing. Some crops may have to be abandoned because of disease, insect pests or other causes. The United States Department of Agriculture suggests the test question: Is the farm selected adapted to such possible changes?

For instance, the farm selected may now be growing beans, potatoes, corn, oats, clover and hay, with the prospect that beans and potatoes will soon cease to be profitable. The question then arises—can some other crop or crops be found to replace them? Very few regions have a wide range of crops, especially in general farming, and adaptability to new crops is a very important consideration.

Can the beef-cattle farm be made over into a dairy farm? Can the dairy farm be made into a sheep farm? Can the fruit farm be made into a hay, grain or live stock farm? In many instances it will be found that the farm in question demands a type of farming that cannot be easily changed to meet the needs of changing conditions.

When making a selection, look back and follow the local economic changes that have occurred in the last 30 years, and then judge for yourself whether the farm you have under consideration has the adaptability necessary for meeting the changes that are bound to come in the future.

English Not Fickle

One of the best characteristics of Englishmen is the steadiness of their character and their attachment to those who have won a place in the galaxy of Great Britain's famous men or women. It is the true "Land of Steady Habits," and the one who has once been fortunate enough to win a place in British hearts need not fear being dispossessed at short notice by a later comer.—New York Tribune.

The Goodridge Banner

Entered as second class matter July [illegible] 1919, at the postoffice at Goodridge, [illegible] the [illegible] March [illegible] 1919.

[illegible] Fridays at Goodridge

"What a handsome young lady!"

I turned at the words and glanced at a carriage passing in the street, and lost my peace of mind thereby.

What was I, to view and send my heart out to a lady of evident wealth and fashion—I, Norman Earle, out at elbows, out of work and very nearly out of money!

"Who is she?" I heard one of the two men near me ask.

"Miss Stella Virden—the niece of the big mine owner."

"And the man with her?"

"Blackleg, gambler—Rodney Beale."

The man who held the reins of the spirited steeds attached to the light elegant spired trap looked it. And then a clanging bell rang out, shouts, the clicking of iron hoofs and a fire engine crossed the intersection, and, alarmed by it and driven to wild flight, the mettled horses came dashing into view again.

I saw in an instant what had happened—one line had snapped at the bridle ring. In furious flight the team swept the frail trap across the cobble stones like a whip lash. The man showed his teeth in vicious rage for a moment. Craven that he was, he leaped from the vehicle, leaving his charge helpless and in peril. In the nick of time I was swaying from the carriage pole.

Twice my head had struck the shaft, I was dizzy, the damp of blood where the contact had come, but I held to the trembling steeds. I faintly heard a little cry of joy and thankfulness from the lips of the imperiled girl—huzzas from the crowd on the sidewalk.

Then the man Beale, who had played the coward, came rushing up. He seized the bridle from my hand.

"I am Rodney Beale," he said. "Call at my office for a check."

I could have struck him, but just then I noted the girl in the seat.

"You grand hero!" she spoke. "How may I thank you!"

She wore a rose at her breast. I pointed to it.

"Give me that," I said, simply.

She handed it to me with a smile and a blush. I never went near Beale for that check. I stole many a glance at his fiancee, however, at a distance. When my little store of money gave out I found work in the Desaba mine.

Meantime I had learned all about Miss Virden. Desaba was a rough town and her uncle, an unprincipled money maker, Jacob Virden, practically owned it. She was an orphan, he her guardian; the man Beale a partner of Virden, running the gambling hells about the place, where he took away from the miners the money Virden paid them.

I knew nothing about practical mining, but I knew enough to do patrol service as a night watchman inside the diggings. Every night I was let down in the cage.

I was resting from my routine rounds one midnight and had sat down to my lunch. A shadow flitted across the lantern's rays. I looked up to view a dusky figure garbed in the conventional miner's costume and wearing the usual eye and mouth mask. It was removed. Miss Virden stood before me.

She had stolen from the house where they were bound to marry her to the man Beale the day previous. She had hidden in the mine, disguised. She must get far away from Desaba. Would I help her?

I made the poor, hungry girl partake of my lunch.

It was the Canadian border and the home of a married sister that we made for, and then the law invoked, and Stella safe.

Because she needed my protection I lingered near her new home. A good position offered, and when the legal end of her trouble was settled I could not go away, nor did Stella wish to have me do so.

It was when, one starlit night, I spoke out of my soul into her willing ear that I said:

"I have something to give you, and something to keep—love."

"You mean?" she inquired in her fluttering, entrancing way.

For answer I placed on her finger an engagement ring. Then I pressed to my lips—a faded rose.

Four New Year Days.

The Jewish calendar includes no less than four New Year days. The first of Tishri—that which was recently celebrated—is, however, the only one which is universally observed. It is the beginning of the political year and commemorates the creation of the world. There is also the first of Nisan, the beginning of the political year, from which Jewish kings dated the length of their reigns, this being the month of the Egyptian Exodus, and the political birth of the nation. The first of Elul was the beginning of the year as far as cattle tithes were concerned. And the fifteenth of Shebhat—generally about February—which bears the picturesque name of "The New Year for the Trees," was also connected with tithes.

Elsa Gets Her Picture Hat

By WINIFRED DUNBAR.

Copyright, 1921, Western Newspaper Union.

"I wish I had one of those new picture hats," sighed Elsa Dunbar and knew that she sighed in vain, but did not know that her idle wish had been overheard—and by a veritable little [illegible].

The village picnic was due the next day and two girls had passed the Dunbar home with the new feminine fad in millinery—picture hats. Elsa saw and wished.

Elsa was a great favorite with the children in Wharton. They had come to hear her tell them stories—little Nettie [illegible] and her brother. They stood outside the fence where Elsa did not see them and they heard the wish uttered.

The wise little Nettie was impressed by the deep, earnest manner of the speaker. In fact, a slight shade of [illegible] on the face of her great favorite caused [illegible] to remark on [illegible].

"Come, brother," she said to her companion. "Miss Dunbar is sad and worried and we won't bother her today. Did you hear what she said?"

"That she wanted a picture hat? Yes. What's a picture hat, Nettie?"

"You know how girls keep pictures in lockets and in the backs of watches, and that?" replied Nettie. "Well, I'll bet a picture hat is where a girl gets the photograph of her beau and pins it in her hat—see?"

She went to the picnic the next day and so did all the town, Elsa included. The latter wore the hat she had worn all summer. She saw that her father and mother were comfortably bestowed in a shady spot. Then she placed her hat and light wrap alongside the lunch basket and wandered about the grounds.

The moment Elsa was out of sight Nettie stole up to the discarded hat. She proceeded to pin the photograph of a very handsome young man inside the hat. Father Dunbar was dozing and his wife was reading.

Now by another strange freak of fate, a young man, a stranger in Wharton, strolled by that spot a few moments later. His name was Lisle Devon. He had come to the town on very important business the day previous. He had met with the loss of a wallet containing important papers—and could do no business until he had found them. He had sauntered down to the picnic grounds to put in the time.

"Impossible!" abruptly exclaimed this model young man, and he paused with a shock as his eye lit upon Elsa's hat with the photograph pinned upon it—for it was his own portrait.

The recognition of his property must have excited him greatly, for he unceremoniously picked up the hat and approached Mrs. Dunbar.

"Madam," he said in haste and eagerness, "can you tell me to whom this hat belongs?"

"Why, yes, to my daughter, Miss Elsa Dunbar," replied her mother wonderingly.

"Is she here? Can I find her? Excuse me, but an extraordinary thing has happened and—"

Still marvelling, Mrs. Dunbar told him that her daughter was somewhere about the grounds.

Lisle Devon heard voices and through a leafy copse he made out the figure of a crafty-faced old man and a lovely young girl—Elsa herself.

"I've said my say," the old man was observing; "I buy what I want in this world and I offer to buy you. If you won't, I shall foreclose that five hundred dollar mortgage on your home."

Elsa shrank from the outstretched hands of the old man as if they were those of a vulture. "I would die before that—are you heartless?" she asked.

"Decide by tomorrow," said old Silas Bounderly, and he hobbled off chuckling.

The young man amazed Elsa by addressing her and explaining about his photograph. They returned to its present resting place.

"I cannot understand how your picture came there," she said, and just then a laugh of mischief from behind a near tree disclosed little Nettie.

Yes, she had placed the picture there; she confessed readily. Where did she get it? She had found a big wallet lying in the road. It was full of papers and the photograph. That was all she wanted to make dear Miss Dunbar a picture hat! And the wallet? Oh, she had tossed that in the old unused chicken house.

"There is one contract there the loss of which would mean the loss of $20,000 for our city house," Lisle Devon explained to Elsa.

Business kept him in Wharton for a week. Naturally he saw Elsa again. He bought Nettie a great handsome doll as a reward. He told Elsa that only for her he might never have recovered the precious papers.

Secretly he paid off the mortgage to old Silas Bounderly. Then one eventful evening he came to the Dunbar home with a vital question on his lips.

Would Elsa allow him to buy all her hats, picture hats included, for the rest of her life?

And Elsa answered blushingly: "Yes."

Purely Practical View.

"Do you believe our early ancestors were simians?"

"Why worry?" said Miss Cayenne. "Even if they were, they didn't leave any estates worth arguing about."

The Old Woman Next Door

By CALVIN HENDRICKS.

Copyright, 1921, Western Newspaper Union.

"Isn't she dreadful, John!" whispered Joyce, casting a glance sidewise toward the old woman next door.

The old woman was watering her rose trees. She was a horrible old woman, in outward aspect, at any rate.

"Poor old lady!" said John Durham. "To think that people can live to be so old as that."

"Do you think she was ever a young and beautiful girl, dearest?" asked Joyce contentedly, nestling down into the fold of her lover's arm.

"I guess she was young all right, but I am sure she never was beautiful," said John.

Joyce Lamont and John Durham had been engaged for three months and their wedding was to take place that fall. John Durham was a newcomer to Catesville, where he had opened a law office and was already securing a fair measure of business, which gave promise of a comfortable livelihood. As for Joyce—well, if you have ever spent even a week in Catesville you will certainly have heard of the Lamonts. Daniel Lamont was one of the first American statesmen in the time of President Buchanan. The death of Joyce's mother, a few months before, had left Joyce alone in the old house, to which she had just returned after several years of absence at school and abroad, and everybody was glad that she was to be married, now that she was sole mistress of the manor.

Joyce remembered the old woman next door in a vague way. She had gone there to live after the death of Joyce's father, seven years previously. She had not seemed so homely then, so far as Joyce could remember.

"I wish we could pay her to go away," she said to John. "She'll spoil our happiness, just seeing her there. Why should there be ugly things in life, dearest?"

Joyce was not unkind, but she had always lived among beautiful things. She could not bear ugliness. Her home was superbly beautiful, though simple, and the hall was hung with the portraits of the Lamonts—all handsome, dignified and fine to look upon. Joyce had never dreamed that any human being could grow to look like the old woman next door.

She passed along the hall, looking at the portraits. It made her very happy to think she had had ancestors like those—from John Lamont, a colonel in Washington's army, to Fanny, her father's beautiful cousin, who was supposed to have broken his heart when he was a young man by marrying an obscure and worthless Frenchman, who took her to his own country and there deserted her, and to her father, the hero of twenty battles and the honored governor of his state.

Then the day came when Joyce and John quarreled. No need to give the cause of lovers' quarrels. They are inevitable; but it is only when pride intervenes that they become important.

Days went by; they slipped into weeks. John never came back. Joyce was heartbroken. But she was too proud to speak. She sat upon the porch, waiting hopelessly for John to come.

A light footfall made her start up, her heart beating wildly. Then despair and terror seized her. It was not John. It was the hideous old woman next door, crawling along the porch toward her.

"Well, young lady, so he has not come back," began the old creature.

"I've watched you," continued the witch. "I know who you are and who he is. I know you've quarreled. And both are sorry and both are too proud. Come here, my dear!"

She laid her skinny fingers upon Joyce's arm and, to the girl's amazement, opened the door and led her into the hall, passing from portrait to portrait until she stood beneath Fanny Lamont's.

"You know who that is, my dear?" she asked. "But you wouldn't know that she was I, would you? Look!"

To her amazement Joyce perceived the unmistakable likeness. The proud, beautiful young woman was the skinny old crone.

"I loved your father, my dear," said the old woman, "but we quarreled and I made a fool of myself and ruined my life. Ah, well, I thought when he was dead I could come back and nobody would know me. But now I've told you. Do you understand a little better what life is, my dear? Do you see that we have our own lives to make or mar, and that we shall mar them if we let pride stand in the way of our happiness?"

Joyce understood better now. Only love could bind up the separate links of life. One must live, one must be true, one must cast out pride like a serpent from Eden.

She hurried out upon the porch and stood under the stars, and her whole heart went out to John. If only he would forgive!

A step upon the gravel, a footfall on the porch. Joyce was running, with arms outstretched. She felt herself clasped in her lover's embrace. He bent his lips to hers. And she knew that life was Eden still.

Duty in the Midst of Pleasure.

"You hold no resentment toward the traffic policeman who bawled you out?"

"No," replied Mr. Chuggins. "I don't blame a man for getting kind of grouchy when he has to stand in the middle of the street all day instead of being out in a flivver of his own."

The Surgeon's Delusion

By MARVIN ST. JOHNS.

Copyright, 1921, Western Newspaper Union.

It was after the meeting of the International Congress of Surgeons that a few men lingered behind to exchange reminiscences and cigars. Barth, the famous surgeon, had recognized an old colleague from St. Bartholomew's in O'Leary, professor of anatomy at Royal college.

"I'm going to tell you something, gentlemen, that I have never told anybody before," he said. (The discussion had run upon the curiosities of surgery and thence branched into strange fields of psychology.)

This was the story:

The head nurse looked in at the house surgeon's office just as he was preparing to go home.

"Can you operate in fifteen minutes?" she asked. "It's an emergency case—an automobile accident."

"I can," he said. "You can't find Dr. Turner?"

"No, sir. You are the only surgeon in the hospital at this minute."

"Very well," answered the house surgeon. "Name?"

"Stephen Reynolds, the traction magnate. He was crushed under his auto. His wife has been notified."

The house surgeon nodded his head. He knew Reynolds. He had loved Reynold's wife for three years before their marriage. The engagement had been broken off because of a foolish quarrel and Lillian Reynolds and the house surgeon had never met since.

The house surgeon hurried into the operating room and the unconscious patient was wheeled into the theater.

There was just one chance to save Reynold's life, and it was so small that only the present desperate circumstances would justify taking it. The nerve which controlled the heart's action was uninjured, but the artery which supplied it with blood was ruptured. The house surgeon knew that if he could suture the broken coat of this artery, the nerve would continue to function. If he failed to attempt this the nerve would gradually cease to perform its task; the heart's action would quietly stop, and Reynolds would be dead by morning. The house surgeon, intent as he was upon his task, was well aware of what was happening around him. There was no one present who had the technical knowledge which he possessed. He could apparently complete the operation and yet leave this artery untouched. No one would know what he had failed to do. The thought of Lillian and of the worthless man upon the table urged him like a goad. What was the Hippocratic Oath which every doctor takes, that it should weigh in the balance against the happiness of two people who loved each other?

With perfectly steady hands the house surgeon picked up an adjacent artery and sewed its coats together with a fine needle, leaving that which supplied blood to the heart nerve untouched.

The surgeon sewed up the external wound as swiftly as possible—roughly, almost.

"Finely done, sir," said the chief surgeon, when the operator had concluded.

The house surgeon looked at him. He knew that the chief surgeon had seen everything. He wondered at his words.

"If your patient lives," said the chief surgeon, "you will become the most famous surgeon in this country. That process of cross-connection between an artery and a vein will open an epoch in surgery."

The house surgeon went home. He was amazed to learn that Reynolds was recovering.

Unconsciously, unintentionally, the house surgeon had stumbled upon a revolutionary principle in surgery.

That day he met Lillian by the patient's bedside. She rose and followed him outside the room.

"You have saved my husband's life," she said.

The house surgeon bowed his head. He had nothing to say.

"I think you are the noblest man I have ever met," she continued. "It was wonderful." She stretched out her hands impulsively. "Oh, I understand," she said.

Stephen Reynolds got well and left the hospital in due course of time. And the house surgeon became one of the most famous surgeons of the day. And he carried his secret shame with him everywhere. The irony of it ate into his soul.

Three years after this event Stephen Reynolds died. Six months afterward the house surgeon met Lillian. They were married a week later.

"I'm glad you told me this, Barth," said O'Leary, raising his white head and looking at the speaker with his direct, disconcerting glance.

(As the story progressed all had known that Barth was laying bare his own past.)

"My God, man, have you carried that delusion in your mind for fifteen years?" O'Leary continued. "I saw the operation from beginning to end and I can tell you that your idea is absolutely a delusion from first to last."

Barth got up slowly and looked at O'Leary with a dazed expression which suddenly gave way to joy. I never saw a man so transformed. He looked ten years younger.

"Thank you, O'Leary," he said quietly. "Excuse me, gentlemen. I must go home. I—"

We knew that he had gone to open his heart to his wife.

ARTIFICIAL LIGHTS FOR FOWLS INCREASE PRODUCTION OF EGGS

The Use of Artificial Light Has Produced Satisfactory Results in Production of Flocks in a Number of States.

(Prepared by the United States Department of Agriculture.)

Artificial lights properly operated will materially increase the winter egg production of pullets, the United States Department of Agriculture believes. The use of lights may also slightly increase the yearly egg production of individual hens, though not to any marked extent. The opinion of the department's poultry division is fully corroborated by many of the state experiment stations, particularly those in California, Indiana, Kansas, Washington, Connecticut, Pennsylvania, North Carolina, New York and New Jersey. County agents working in New York and New Jersey report considerable activity in this project, in which the Department of Agriculture usually co-operates with the state agricultural college through the county agent.

Lighting as a Feeding Measure.

It should be well understood that artificial lighting is intended primarily as a means of getting the hens to feed longer than they otherwise would during the short days of fall and winter. An extra feeding of scratch grain should be provided, so that the flock is induced to eat not only enough for maintenance but an amount comparable to what is eaten in the more active laying seasons.

Lights are used soon after September 1 in New Jersey, but in most localities they are started November 1 and continued to April 1. Conditions vary in different states. What may be good practice in New Jersey may not work in Kansas. In the latter state electricity is considered the only practicable kind of light, while in other states kerosene lamps and gasoline mantles are sometimes used. Electricity is the most practical method to use wherever it is available.

How to Use Artificial Light.

The total daylight, real and artificial, should be about fourteen hours. There are three ways of increasing the apparent length of the day—by turning on lights very early in the morning, or by keeping them going several hours at night, or by using them both morning and night. While all three methods have given good results, the first is usually found most convenient, because the lights merge into daylight and no ill effects result if they are not turned off promptly.

In using the second method some dimming device is needed with electric lights to lower the illumination gradually. The hens do not get to their roosts if the light is suddenly extinguished. Gasoline and kerosene lamps have to be turned down.

Artificial lighting can be abused with disastrous effects on the flock [illegible]

[illegible] flock [illegible] all. When [illegible] on. Bro [illegible] of [illegible] the house together [illegible] same way. They sh[illegible] pullets and flocked a[illegible] age. Lighting makes it [illegible] to carry February-hatched p[illegible] through the first fall and winter producing period with less moulting. Yearlings and two-year-old hens are better if started with artificial lights in January, and the method is not as profitable as with pullets. It is considered a questionable practice to turn lights on culled hens to stimulate egg production. In New Jersey, where the largest amount of work has been done with artificial lighting, it is thought better to sell the culls and buy good birds.

Artificial lights should be suspended from the ceiling so that the entire floor space is lighted. If the roosting closet partition casts a shadow on the roosts, the chickens will go to sleep in the shadow.

Results in New Jersey show that in general the use of lights nearly doubles production during the period of high prices of eggs and greatly increases the usual net return over the cost of lights and feed in the lighted pens. The lighted flock showed better health than the unlighted ones, and the subsequent laying was as good among the birds which had had winter lights as with any of the birds.

A record was kept of 14 New Jersey flocks for five months. The birds averaged 3,802 in number and laid 280,511 eggs altogether. This was a 41 per cent production, whereas a 22 per cent production was usual before the experiment. This meant an increase of 127,158 eggs.

An experiment was made at the agricultural experiment station, New Brunswick, N. J., in which 600 unlighted pullets made a profit of $3.20 per bird, but 500 lighted birds cleared $5.07 each. The lights were turned on in the morning. Where an evening lunch was given to 100 pullets the profit per bird was $5.48. The fuel and operating cost for 1,100 birds was 4.4 cents per bird. An increase of a single egg per bird pays this cost.

BEEF CATTLE BENEFIT FARM

Possible for Farmer to Make Greater Use of Dry Roughages—Need Little Attention.

The use of beef cattle in connection with general farming throughout the corn belt, says the United States Department of Agriculture, offers the following advantages:

It is possible to make greater use of dry roughages produced on the farm, as beef cattle consume larger quantities of these feeds than any other class of live stock.

Beef cattle can be used profitably on rough land unsuitable for crop production; also on low, wet land unsuitable for either crops or for other classes of stock.

Beef cattle use the total production of grain and roughages on the average farm, without the purchase of other feeds, more efficiently than any other class of live stock.

Beef cattle on the farm favor a well-balanced distribution of labor throughout the year. They require very little attention during the summer and fall, when crops need attention, and during winter and early spring, when there is little field work to be done, farmers can utilize their time to advantage by caring for the breeding herd, wintering the stockers and feeders, or fattening some steers.

Entirely Different.

"People's public utterances very often disagree with their private opinions."

"I have observed that," rejoined Senator Sorghum, thoughtfully. "My wife's relations would never think of going out on the stump and making the same speeches about me that they make in our home circle."

WINTER IS SPLENDID TIME FOR REPAIRING

Note Defects on Thrashing Machine When Storing.

Implement Should Be Put in Thorough Working Order Before Start of Working Season—Make Adjustments Later.

(Prepared by the United States Department of Agriculture.)

Overhauling the thrashing machine during the winter means dollars in time and grain saved next year. Proper repairs should be made and the whole machine put into thorough working order before the beginning of the working season. While certain adjustments must be made during operation, it is possible by putting up the machine properly at the close of the season to have all parts in such condition that the necessary operating adjustments can be made readily, accurately and with little delay.

Many times defective parts are overlooked or neglected, in the hope that they will last through the season, when they should be replaced during the season of disuse. When they fail in the midst of the working season, serious losses often result before the repairs can be made. During or just before the thrashing season new parts are difficult to get promptly because of the unusual rush of orders from the many who have left the matter off until the last minute.

In a series of bulletins on the care and repair of farm implements issued by the United States Department of Agriculture is one on grain separators known as Farmers' Bulletin 1036. Copies may be had free upon application to the department at Washington, D. C.

Should Be Carefully Grown and of Variety Well Adapted to Keeping, Say Experts.

Cabbage for storing should be carefully grown and handled and of a variety well adapted to keeping, say the vegetable specialists of the United States Department of Agriculture. The heads should be solid and all loose leaves removed and practically free from injuries caused by insects and diseases. They should be placed in a storage house so constructed and arranged as to prevent drip from the structure striking the stored heads. It is also essential that moisture and ventilation be so controlled as to prevent the condensation of moisture on the cabbage while in storage. The temperature maintained in common storage houses may vary from 32 to 45 or 50 degrees Fahrenheit, depending on outdoor conditions. In no case should the cabbage be allowed to freeze.

The usual type of construction employed in commercial storage houses is that of a broad, low house with an alley sufficiently wide to admit a team and wagon through the center, and with the storage bins or shelves arranged on either side. The cabbage is placed on shelves in layers, one to three layers deep, or in crates or ventilated bins. Banks, pits and cellars are also largely used for the keeping of the crop.

Call for Clothing

The ladies of the Red Cross are asking for clothing and shoes to be given out to people in need of them. The ladies will repair and renovate the articles and they will be distributed where will do the most good. Those bringing in donations for this purpose will please leave them at the Winton-Nichols lumber office.

Miss Vivian Thoreson entertained a few of her young girl friends yesterday afternoon in honor of Miss Esther Bennes of Thief River Falls, who has been her guest since Monday.

Farm Management School

A farm management school will be held in Thief River Falls on Friday, January 13, and in Goodridge Saturday, January 14. Mr. W. L. Cavert of the University farm and O. N. Olson of Moorhead, Minnesota, will be the principal speakers. Others will be secured before that time. The meetings will be held at 10 a. m. and 1:30 p. m., closing 4:30 p. m. in order to give farmers a chance to get home early. The meetings will be held in the Farm bureau office at Thief River Falls and in the school house at Goodridge.

A meeting of the dairymen interested in organizing a milk testing association will be held at the same time. The purpose of this meeting will be to determine whether a successful testing association can be formed in Pennington county and the employment of a man to have charge of the work. Every farmer in the county should plan to take in these meetings as they concern the vital elements of good farming of today.

Articles of Incorporation Of New Railroad Company

Articles of incorporation of the Red Lake Northern Railway and Construction company have been filed with the secretary of state and the stock has received the approval of the state securities commission. According to officers of the company, it is the intention to put surveyors into the section between Gatzke and the reservation early in January. Money to pay the cost of preliminaries is to be realized by the sale of stock having a par value of $20 per share. The plan of the company, as set forth in the prospectus, is completing of the survey of a railway extension or branch from a point at or near Nebish, Minn., on the R. L. M. & M. railway, west and north across the Red Lake Indian reservation through the Grygla and Goodridge districts to a point on the Great Northern railway at or near Roseau, a connection to be made later with the Canadian Northern railway.

Officers of the company are: J. J. Opsahl, president; Leo J. Opsahl, secretary, and John Moberg, treasurer, all of Bemidji; A. J. Anderson, vice president, and O. J. Johnson, assistant secretary, both of Grygla.—T. R. F. Times

Farm Bloc Serving Whole Nation

"The agricultural bloc in congress is working for the best interests of all citizens, without selfish motives or secret dealings," James R. Howard, preident of the American Farm Bureau federation, said in his address at the opening session of the Minnesota Farm Bureau federation's third annual state convention at St. Paul

For the first time Mr. Howard disclosed that the agricultural bloc was organized in the Washington office of the farm bureau federation in an effort to force the passage of constructive legislation "to save not only the farmer but the industries of the whole nation." The farm bloc is responsible for practically every piece of constructive legislation enacted in the last six months, he declared.

Mr. Howard's address was devoted to a vigorous defense of the agricultural bloc. Insisting that the bloc is "not a menace, but a national asset," he said that there have been "blocs galore" in congress, but that the farm bloc is the only one ever organized "without selfish motives and in the interests of all citizens."

"The American Farm Bureau federation deplores conditions that make bloc legislation necessary," he said. "No organization has been more pronounced in its opposition to class legislation or the development of class consciousness. The federation "never has advocated and never will advocate any policy that is not for the well being of all Americans."

With Mr. Howard on the program of the first day of the convention were Congressman Sydney Anderson, chairman of the joint congressional commission investigating agricultural conditions; Mrs. [illegible] Richardson, an Iowa farmer's wife; Governor J. A. O. Preus, and W. C. Coffey, dean of the college of agriculture. The first day's sessions were at University farm, where the day was set aside as "Minnesota Farm Bureau Federation Day" of Farmers' and Home Makers' week. Sessions during the remaining two days of the meeting were scheduled for the state capitol.

"Present lending machinery is not adapted to the farmer's requirements," Congressman Anderson told the farm bureau delegates, summarizing the findings of the congressional commission. "The fundamental requirement of agricultural credit is that the note or obligation must be of such maturity that when it becomes due it can be paid, not by making another note, but out of the proceeds of the farm. That requires a longer period of maturity than the six months which is now allowed in the case of paper discounted with the Federal Reserve bank. We must find some means to make it possible for the farmer to get a production credit of a sufficient length of maturity that he can pay the note when it becomes due out of the proceeds of the farm. That means paper running from six months to perhaps three years. The principal reason which prevents bankers from taking paper of such maturity now is that there is no way by which the banker can get the money on the paper if it becomes necessary for him to get it before the paper becomes due. So long as the banker finds it impossible to get money on the paper before maturity, if he needs it, he is going to be unwilling to make loans for that length of time.

To meet this situation it is necessary to provide a facility through which this paper of longer maturity can be discounted, so that the banker can raise the necessary cash if he needs it. There are three ways by which that can be done. One is to create in the Federal Land banks a Farm Credit department. Another is to create an entirely new agency, and another way is to modify the War Finance corporation in such a way as to enable it to do that sort of business. My own judgment about it is that the [illegible] plan is to create in the Federal Land banks a Farm Credits department having authority to discount for banks—state and national, incorporated livestock associations, all banking institutions—paper of this character. This paper could be made the basis of an issue of short time deventures, just as farm mortgages are now made the basis of farm loan bonds under the present farm loan system.

"What I think we need, so far as this longer time credit is concerned, is nothing more or less than a reserve bank through which this paper can be discounted and through which the farmer can reach the investment pool of the country

Red River Valley Essay Contest

The Red River Valley Winter shows, which will be held at Crookston February 5 to 10, 1922, will carry out the essay contest again this year. This contest is open to all school students up to and including the eighth grade.

The subject should be of special interest: "The Future of the Red River Valley." This portion of our country is known world wide. It is as yet only in the beginning of its development, but has possibilities that one can realize only after sound study.

Participation on the part of school children will serve a double purpose—to enlighten them on some of the facts of this wonderful valley and to offer material for language work. A committee was appointed by the Northwestern Minnesota Educational association to have this matter in charge, consisting of Supt. S. A. Aas, Fertile, Supt. Jos. [illegible], Erskine, and Supt. David Johnson, Warren. They have sent the rules and regulations to all schools in this district. Teachers would do well to get their pupils to work on this subject. Write to the Northwest Experiment Station at Crookston for material.

ERIE ECHOES

Happy New Year!

Mrs. John Tofteland, formerly of Erie, but now residing in western Canada, has been spending the holidays visiting with her daughter, Mrs. Olga A. Danielson.

Alain Bannerud of Rhoda was a guest at the home of his brother-in-law, G. A. Iversen, between Christmas and New Years.

Miss Thora Nerhus and Sub-Urban were impromptu callers at Clover Nook Thursday evening.

Ole and Alvin Lolland and Iver Iverson were pleasant callers at Christian Amundson's Sunday evening.

Railroad Week

Last Friday was an unusually busy day in the Leigard railroad yards. Here had not been for a long time so much freight traffic as was going on that day. But the day did not go by without a serious accident which, to make things still worse, culminated in a heart-rending tragedy. A north bound through freight had just crossed the Red Lake river bridge when bang and crash its engine collided with that of the south bound local freight train. The division train dispatcher, as was learned later, had unluckily got the "wires crossed." Yet happily no killing resulted other than a cow that had miscalculated her steps, getting between the engines, was cut "square in two." A middle aged, heavy weight lady chancing to be walking a block's distance away from the scene of the disaster and well within view of it jumped right up in the air and hollered "Murder."

Mr. Fagan's Secretary

By MALCOLM BROWN

Copyright, 1921, Western Newspaper Union

"So you're the young man that thinks he can act as my secretary, hey?" inquired Mr. Fagan, swinging round in his swivel chair and staring at Blake under a pair of bushy gray eyebrows. "Nine and twenty I've turned down today, but if you think you can manage—shake hands!"

He gave Mr. Fagan his hand and felt a peculiar pressure of the fingers, which his own leaped to meet. Then:

"I left college last year, sir," he began. "I can—"

"Tut, tut, young man!" replied the eccentric. "Consider yourself engaged. It warms my heart to meet you. I'm a judge of men and—we're both Irishmen, ain't we?"

"Indeed we are," said Blake enthusiastically. And so he went to work and proved highly efficient.

Blake had two troubles about this time. One was his ability to discover how it could be that a man of Fagan's apparent limited education had gone through college. The other was Fagan's daughter, Muriel. It was a case of love at first sight with both the young people.

It was about two months after his introduction to the manufacturer's house that he found himself seated beside Miss Muriel upon the piazza. He took her hand, and drew the girl to him and kissed her.

"Muriel, dearest," he said, "do you know I have loved you ever since I set eyes on you?"

Muriel blushed so divinely that there was nothing to do but repeat the episode.

"But I don't know what your father will say," he said, with the timid fear of lovers. "If he discharges me—will [illegible] even?" she whispered. "Besides, I can [illegible] over papa. What is a papa?"

So it happened that when he stood before his employer and stammered out his story [illegible] approach [illegible] old [illegible] Fagan's eyes [illegible] themselves [illegible] Blake's [illegible] and [illegible] needle-like [illegible]

"May I ask [illegible] you're [illegible] a green tie [illegible] day of [illegible] Mr. Blake?" he [illegible] calm.

"Why," [illegible] today is the anniversary [illegible] Battle of the [illegible] day [illegible] to all good Irish[illegible]—"

Blake's [illegible] the [illegible]

Fagan [illegible] his [illegible]

"Scoundrel [illegible] by [illegible] I'll [illegible] I—"

"Come [illegible] is [illegible] about?" [illegible] voice.

"He's [illegible] green [illegible] day [illegible] father."

[illegible]

"But he's [illegible] and—and [illegible] it!"

"Tell him [illegible] father," pleaded [illegible]

"It ain't [illegible] treachery," [illegible]

[illegible]

"The [illegible] men's Brotherhood [illegible]

"The grip [illegible] Blake, "was [illegible] fraternity [illegible] helped a man [illegible] it. I [illegible]"

Old Fagan [illegible] wonder. "Then [illegible]

"Give me the [illegible] Blake, [illegible] delivered [illegible]

"My faith," [illegible] acknowledged [illegible] your thumb [illegible] place. It [illegible] made [illegible] Well [illegible] fellow, maybe [illegible] let you keep [illegible] job."

"And how about Miss Fagan?" inquired the other.

"Muriel? My daughter! I'll [illegible]—I—er—now don't cry, Molly [illegible] I guess she goes with the job."

LENA'S BABY

By MARY J. HITCHCOCK.

©, 1921, by McClure Newspaper Syndicate.

Angela put the pan of biscuits down on the table and looked out of the pantry window. At the foot of the lane Amos was talking with the rural delivery man. Angela's sigh became a sob. How much of her present unhappiness would be gossip tomorrow? A tear splashed onto the bread board—another and another. Angela put her head down on the table and cried.

Summer heat, the time when romance calls to the blood; blood heat, the period when desire sings through one's veins—Angela had known each, and now it was zero!

"It wouldn't be so hard if I had someone else to love—a baby, now—"

But the thought was fresh torture to Angela's bruised heart. Hadn't she hoped from the first that there would be children at Meadowbrook? Hope had become prayers and heaven had been deaf! That was the added bitterness to her present grief. If Amos left her for that other woman there would be nothing but the long, lonely years Angela knew. She had matured early, faded soon, and she had none of Lina's limp prettiness in her own lean, lank hapelessness.

And Lina Summers, who had laughed at the love of two men, was claiming Amos for her own.

"What you going to do about it, now that you know about us?" Amos had demanded. "There ain't no use our trying to go on same as if you'd never found it out. You'll have to say—"

But Angela had said nothing. Not then, nor through the long night which she had spent in the spare room. In the morning she had come to the homely tasks of every day.

And out in the lane Amos was turning toward the house—walking quickly, as he was apt to do when excited or troubled.

"Lina ain't expected to live the day out," he cried, standing white and anxious eyed in the doorway. "She [illegible] at the Corners last night and [illegible] was there. They [illegible] go [illegible] with [illegible] jumped into an auto and [illegible]. "I've got to [illegible]—"

[illegible] when the sound of [illegible] activity [illegible] had seemed dead [illegible] throb [illegible] for[illegible] of her strength [illegible] Amos [illegible] and [illegible] after [illegible]

[illegible] by [illegible] too [illegible] care [illegible]—"

[illegible] away [illegible] she didn't [illegible] to [illegible] He [illegible] with [illegible] little girl [illegible] to take care of [illegible] she didn't run [illegible] on h[illegible] and—"

[illegible] no longer listening [illegible] slipping into her [illegible]

[illegible] commanded, and again [illegible] through the door-yard [illegible]—"Hurry!"

* * * * *

[illegible] chamber where Lina [illegible] her life two men [illegible] watched her labored [illegible] moved close to the [illegible] of humanity that had slipped [illegible] Lina [illegible] cried out. Amos [illegible] the door as the doctor re[illegible] from below stairs.

The woman on the bed opened heavy [illegible] eyes.

"I've made a lot of trouble—for all of you—" Her gaze left the others, [illegible] itself on the husband who [illegible] over her. "I'm sorry!" With an effort she turned her head toward Angela. "If I had been like you. You're a born mother. Could you—?" The dim eyes finished the question.

"I've been promising God I'd be a good mother—if—oh, I want to be!" Angela cried.

* * * * * * *

"Queer, you ain't never said a word to me about it since Lina died," Amos said to Angela one day. "But I want you to know—I wasn't as ready to leave you as you thought. She wasn't the kind to please me for long. I don't know what got into me—"

"It had to happen." Angela was humming at the sewing machine where she was making up tiny dresses for Lina's child. "I'd been praying for years for children I wasn't never meant to get. Maybe there wasn't no other way of making it come true!"

"Making what come true?" Amos asked.

"The power and the glory," Angela answered, and would say nothing more.

DISCUSSING NORA

By MOLLIE MATHERS.

Copyright, 1921, Western Newspaper Union.

They were in the sun room, while out where the scarlet sage made a glory around her, sat Nora.

"This," remarked a determined-looking woman, "is the most reckless thing that she has done. I must confess to having been more or less shocked all along at Nora's actions. She is what one might call independently reckless. Of course, I don't believe all that I hear about her throwing this one and that one over. It is more likely that the Wilkin's man, for instance, did not reach a state of proposal. Eligible young men are not so easily cast aside. But it is certain that Nora went around with him here a lot."

A red haired, and very young girl spoke up from a corner.

"Ted Wilkins was crazy about Nora," she said defiantly, "anyone could see that. So are all her admirers—and every man who comes here is an admirer of her's, open or secretly. But money doesn't move Nora Barron, or charm, or anything. She's just friendly with them all, and a mighty good friend at that. I ought to know I've been with her enough."

Mrs. Gladden stared at the girl coldly.

"You are too young to judge, Helene," she reproved, "or to join in discussion."

The young girl bent to her knitting.

"Some discussion," she remarked succinctly.

Mrs. Benton continued the topic.

"Ever since I came to this hotel," she said, "it has been one man or [illegible] driving or wee[illegible] in turn. And she is utterly [illegible] of criticism. Strange [illegible] yet dancing [illegible] evenings [illegible] And Nora is old enough [illegible] better [illegible] I realize [illegible] is positively reckless [illegible] positively [illegible]

[illegible] "he's [illegible] I know [illegible] day."

"My [illegible]," corrected Helene's mother [illegible] have [illegible] enthusiastic and [illegible]

"The [illegible] Nora," Mrs. Gladden [illegible]

"[illegible] Mrs. [illegible] she will have to [illegible] her [illegible] in her friendship with [illegible]"

[illegible] Mrs. [illegible] "have done all I could to bring [illegible] him, when he was driving [illegible] day, and I entered [illegible] but purposely into conversation that Nora acted in precisely the same manner to every new young man who came to the hotel, and that he, the Larry person, was not considered by her apart from his [illegible]. The young man had the impertinence to laugh in my face and tell me I was mistaken."

"Knows of course," sighed Mrs. Benton, "of Nora's [illegible] I myself endeavored to bring her to her senses. I gave her [illegible] [illegible]ibility of the situation, but it was of no use. Nora smiled [illegible] picked up her book and left the room."

"Someone [illegible] going to leave the [illegible] Helene [illegible] positively, and she went out to the garden, crossing deliberately to Nora [illegible] scarlet [illegible] Helene dropped down on the grass at her [illegible]

"For the love of Mike, Nora," she [illegible] "[illegible] whether you are in love with [illegible] And if you are, what you intend to do about it. They [illegible] she [illegible] toward the hotel, "are having a great time speculating. Will [illegible] every cent of you[illegible] Barron's money if you insist on [illegible]

Nora smiled.

"I suppose so," she answered cheerfully, "but what matter?"

The very young girl stared wonderingly.

"So that's love," she remarked.

"You do love him, and so you don't care about anything else."

"He is worth loving," Nora said softly. Her brown eyes deepened in tenderness. "Larry has tried long and patiently to know me better, and to teach me to know him. But I missed a lot of my youth, Helene; it has only been on outings like this, that I came to know people at all. So, when Larry tried for our brief meeting in the Hills where we were guests last summer, to call upon me later in the city, he was repeatedly refused and conceived therefore, this idea of playing groom at the Cliff hotel, where we are safe from aunt's surveillance and naturally, occasionally be thrown upon each other's companionship. He intended in this way to teach me to love him."

"And he has," cried Helene delightedly.

Nora's arm slipped round the girl's shoulders.

"We are going in to the city to be married tomorrow," she confided, "and when you hear, don't worry about my lost fortune. Lawrence Brevans is well able to take care of his wife, my dear; he is as successful at law, in the city, as he has been here—in love."

THE BROCADE BAG

By KATE EDMONDS

©, 1921, by McClure Newspaper Syndicate.

Olive swung the bag carelessly as she walked; it was a beautiful thing, created of oriental brocade in peacock shades. Larry [illegible] had given it to her on her birthday, shortly after their engagement, and she cherished it above all her treasures save the beautiful cluster of diamonds on her finger.

"The cord will break and you will lose the bag," cautioned Larry.

"It is quite strong," retorted Olive, quite unpleasantly.

"I don't suppose it would matter if you did lose it," went on Larry in a frigid tone.

Olive pondered provokingly. "There are some really precious things in it—my vanity case, my gold purse, the philopena gift Joe Watterson gave me, one of his letters, and—"

"Isn't that enough?" glared Larry, for they had been disagreeing about Joe's attentions to Olive.

As he helped her out of the car at her home and she released her hand, he discovered that she had left the cluster-of-diamonds ring in his palm. He grew white and stared at her.

"You mean that, Olive?"

"Of course."

"Why?"

"You do not trust [illegible] are jealous."

[illegible] that—I [illegible] my [illegible] does it [illegible] If [illegible] you could not [illegible] way. Good-by," [illegible] the drive.

On the veranda, Olive [illegible] the [illegible] Larry [illegible] When [illegible] mother [illegible] the [illegible] lost [illegible] brocade bag.

"[illegible] Dave. "Perhaps [illegible] I'll [illegible]?"

"No—no [illegible] given Larry [illegible] lost his [illegible] of them [illegible] Dave in a [illegible] tone.

"You have [illegible] something [illegible] cious," [illegible] her mother [illegible]

"The bag [illegible] have [illegible]—just a bread [illegible] from Joe Watterson and a few other [illegible]

"I did not mean [illegible] Larry," was [illegible]

* * * * * * *

"Some bird," ejaculated Larry, as the little gray car poked along through a pleasant byway on the road home. His gaze was fixed on a bit of brilliant blue-green perched in a shady bush beside the road.

"Olive's bag!" he ejaculated, recognizing it with a pang, and the little gray car stopped abruptly. Larry took the bag from its perch and studied the gorgeous peacocks woven into the fabric. She had said Joe Watterson's letter was there—ruthlessly he pulled the bag open and looked; the golden purse, the foolish pencil Joe had given her—it looked like a stick of peppermint candy—some letters which he recognized as his own—and one penciled scrawl which might be Joe's. Suddenly he did not care about Joe. His own letters made the bag precious to her—naughty little thing. Just then he heard footsteps, hurrying.

Larry hung the bag on the shady bush and the little car scampered to a bend in the road and waited breathlessly. Larry peered through the underbrush.

It was Olive.

She was hatless and there were traces of tears on her soft cheeks and her lips were very pathetic.

When she saw the brocade bag she uttered a soft cry of pleasure, and snatching it from the bush, hugged it to her lips.

"You dear, dear thing!" she sobbed, "you are all that I have left—"

That is what she really said, for Larry had stolen upon her and heard her just in time to hold her very tightly in his strong arms.

"Is it too late for happiness, dear?" he asked the repentant girl.

"Not—if you can forgive my folly," she whispered.

"Then—let us say it will never happen again—and the ring is in the bag—"

At last when they were seated in the car and Larry had started it, Olive turned swiftly.

"What was that sound?"

Larry said he didn't know, but I think he suspected it was a quiet chuckle from the sympathetic little gray car.

Regular Zoological Garden.

We snipped this question from a contemporary and asked some of the wives for their answers to it:

"What does your husband do?"

Here are the answers:

He always is growling—he's a bear.

He always is barking—he's a dog.

He is always crowing—he's a rooster.

He never says a word—he's a wise old owl.

He is always saying neigh (nay)—he's a horse.

He is always kicking—he's a mule.

He's always scratching (for money)—he's a cat.—Cincinnati Enquirer.

Calhoun's Attitude on Slavery.

John C. Calhoun, American statesman, (1782-1850), was a supporter of slavery. At first his advocacy of slavery was merely incidental to his faith in states' rights, but gradually he came to look upon it not merely as necessary but as desirable. He was largely responsible for the admission of Texas to the union and therefore for the swiftly following Mexican war, but he ardently opposed that conflict. To the last he was active in his efforts for his beloved South, writing a final great speech in 1850 when he was so weak and ill that he had to allow it to be read by a colleague.—Kansas City Star.

BELOW ZERO WEATHER Is Here

And it is time to buy what wearing apparel you need for the extreme cold weather.

Our stock of heavy underwear, caps, mittens, mackinaws, socks, felt shoes, overshoes and other winter goods is the best we could buy, and we are selling it RIGHT. See our big line of Martin wool goods. If you need a mackinaw, we can get you a Martin at rock bottom price. Your neighbor deals with us---ask him if he does not get the best values at the

UNFAIR METHODS IN SELLING HAY

Conditions and Practices Often Tend to Make Producer and Buyer Suspicious.

[illegible] SUGGESTI[illegible]

[illegible] Observations Made at Principal Markets for the Purpose of Eliminating Loose Methods in Handling Product.

(Prepared by the United States Department of Agriculture.)

Hay is marketed too often under conditions and practices that tend to make the producer somewhat suspicious of the buyer and the buyer suspicious of the producer. Such practices should be eliminated altogether, in the opinion of the bureau of markets and crop estimates, United States Department of Agriculture, and in a new bulletin, No. 979, "Marketing Hay Through Terminal Markets," federal officials make suggestions as to how that may be brought about. Copies of the bulletin may be obtained upon application to the department at Washington.

Loose Methods of Business.

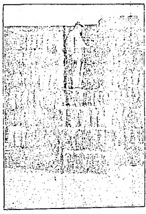
"While a good many unfair methods," says the bulletin, "are at present practiced by those concerned in the marketing of hay it appears that most of them are related to loose methods of business on the part of various agencies engaged in the handling of hay. On the basis of careful observations made throughout the hay producing and consuming sections, and at the principal markets, it is thought that some improvement in the methods of marketing hay can be obtained by observing the following suggestions:

"On the part of the country shipper: More care in grading, weighing and loading the hay; better forms for use in confirming sales, tabulating and stating weights, and for invoicing hay; and more care and accuracy in stating terms of sale.

"On the part of dealers in terminal markets: The elimination of the practice of allowing the state of the market to influence the fulfillment of contracts with country shippers; more uniform methods of handling in terminal markets; better weighing methods and more consideration of contents of weight certificates; more uniform grading practices; grading inbound and outbound hay on the same basis when hay is bought and sold in grade designations; and the elimination of the practice of boosting grades on out shipments.

Suggestions to Dealers.

"On the part of dealers in consuming sections: More careful weighing of purchases; elimination of rejections



Hay Taken From a Car in "Plug" Method of Inspection.

when price decline is the only factor; and better records relative to contents and weight of a car when unloading."

The bulletin goes into the details of methods followed in shipping and disposing of hay at various cities; cites common trade practices and faults; illustrates methods of car loading and of selling, and contains much valuable information relative to the industry.

Do not overlook the fact that there is as much news in the Ads as in any other department of the paper.---Star.

[illegible] INCREASED SOIL FERTILITY

[illegible] in Quantity of Different Elements Is Necessary to Promote Plant Growth.

[illegible] CROPS SUPPLY HUMUS

[illegible] of Enriching Properties of Stable Manure Is Wasted by Unwise [illegible]—Wheat and Corn Need Potash.

(Prepared by the United States Department of Agriculture.)

Richness and fertility are often supposed to mean the same thing when applied to soil, but there may be a wide difference, says the United States Department of Agriculture. The difference is one that may mean success or failure in crop production.

By fertility is meant the ability of the soil to produce a good crop. A soil is rich if it contains a considerable quantity of each of the elements required by the plant in the progess of growth. Unless, however, these elements are available to the plant and the physical conditions of the soil are such as to promote plant growth, the soil cannot be said to be fertile. Certain elements are always available to the plant; others must be acted upon by certain substances under suitable conditions to become available or soluble.

Soils may be rendered infertile through natural causes, such as leaching, and through artificial causes, such as single cropping, improper rotation, and the improper proportion of live stock to crop production. One of the principal methods of increasing soil fertility is through addition of humus in the soil, either by stable manure or green crops plowed under.

Leaching May Waste Manure.

Too much of the fertilizing properties of stable manure is wasted either by leaching in the barnyard or by evaporation when spread on the land and left on the surface. If the manure is spread and cannot be plowed under quickly, it should be disked, unless the ground is frozen. If manure must be left on the surface of the field, it is much better left in piles and spread just before it is plowed under. The effect of stable manure on the land is cumulative, and frequently is more marked with the second crop than with the first.

Green crops plowed under provide another source of soil improvement. Such crops as peas, beans, clover and alfalfa are among the best for supplying humus to the soil. These crops should be plowed under in the soil so as to have abundant opportunity to decay before the growing season begins the following spring. If a leguminous crop cannot be grown for green manure, other crops, such as oats, rye, barley, or even sorghum, may be used.

If the required elements are not in the soil or are not readily available, the need should be supplied by commercial fertilizers. The composition of fertilizer used will depend upon the requirements of the crop to be grown and upon the condition of the soil which is used for crop production. A sugar beet crop, for instance, should have [illegible] potash, while for a wheat or corn crop attention should be given to the nitrogen supply.

Stable [illegible] Increase [illegible] by Adding Humus to the Soil.

Fit Fertilizer to Soil Needs.

A complete fertilizer consists of nitrogen, phosphoric acid and potash. Materials containing these elements are mixed in different proportions for different crops and for different soil requirements. It frequently appears that a complete fertilizer is not required. For example, there may be present in the soil an abundant supply of available potash, but the supply of nitrogen and phosphoric acid may be deficient.

Under certain conditions commercial fertilizers do not seem effective. This may be due to the fact that the fertilizing elements are not used in proper proportions, or it may be due to the physical conditions of the soil. The greater benefits are obtained from commercial fertilizers when the soil is well supplied with humus. There should, of course, be a sufficient supply of moisture in the soil to dissolve and hold in solution the plant foods that are already present or that may be supplied in the form of commercial fertilizer.

COST OF MILK PRODUCTION

Dairymen Should Be Interested in Knowing How Much Feed and Labor Are Required.

Dairymen throughout the country should be interested to know how many pounds of grain, hay and silage, and how many hours of labor it takes to produce 100 pounds of milk in the different sections of the United States. The bureau of animal industry, United States Department of Agriculture, began a series of studies in 1915 on groups of dairy farms to obtain accurate information of this kind.

The results are shown for southeastern Louisiana in department bulletin 85. The figures for northwestern Indiana are contained in department bulletin 858; North Carolina and western Washington in department bulletin [illegible]9; and for Vermont in department bulletin 923, which may be purchased from the superintendent of documents, Washington, D. C., at five cents a copy. The various tables are based upon figures obtained during a two-year study, and weighted averages of the records were used whenever they would express the results more accurately. The surveys include also an inventory of dairy buildings, live stock, and equipment used.

AVERAGE PASTURE FOR FI[illegible]

From Fifteen to Twenty Is Recommended by Iowa Station—More [illegible] the Grass.

Fifteen to twenty pigs, weighing about 100 pounds each, will be all an average pasture can stand. More than this number is liable to spoil the pasture and the danger from spreading disease is increased, says the animal husbandry department at Iowa State college.

Christopher "Colombo."

Washington Irving's life of Christopher Columbus gives his correct name as Colombo. "He Latinized his name to Columbus in his letters, according to the usage of the times, as Latin was the language of learned correspondence. In his subsequent life in Spain, he recurred to what was supposed to be the original Roman name of the family, Colonus, which he abbreviated to Colon to adapt it to the Castilian (Spanish) tongue." In Spanish history he is known as Christoval Colon. In Latin the name "Colonus" means an agriculturalist or colonist.

Not for Him!

"We will make you feel quite at home," said the obsequious hotel manager to his distinguished visitor. The visitor—(oh, yes, he was married)—packed and left within the hour.

SALT ESSENTIAL FOR STOCK

Dairy Cow Requires Ounce or More Daily—Best Plan to Let Animals Help Themselves.

Salt is required by all animals. The United States Department of Agriculture says that the dairy cow requires an ounce or more a day and, while she should be given all she needs, she should not be forced to take more than she wants. It is best, therefore, to give only a small quantity on the feed, and to place rock salt in the boxes in the yard, where the stock can lick it at will.

DEFECTIVE PAGE

FIRES ON FARMS CAUSE BIG LOSS

Numerous Disastrous Conflagrations Could Be Prevented With Ordinary Care.

LIGHTNING IS LARGE FACTOR

Frequent Inspection of Buildings Should Be Made and All Rubbish and Inflammable Material Removed.

(Prepared by the United States Department of Agriculture.)

Farm fires cost about $20,000,000 a year [illegible] .710 in [illegible]. Of the fires [illegible] per cent were from causes classed as preventable, 37 per cent from partly preventable causes and 30 per cent unknown but believed to have been [illegible] preventable. With inadequate fire-fighting equipment on farms, fires are hard to control. Prevention is the best way to deal with them.

Defective chimneys and flues took toll to the extent of $1,992,031; sparks on roofs, $1,151,171; careless use of matches by smokers and others, $1,071,[illegible]; petroleum and its products, $732,067; and stoves, furnaces, boilers, and their pipes, $674,968. The largest item listed as partly preventable is lightning, $3,[illegible].

Inspect Premises Frequently.

The Department of Agriculture advises a frequent looking over of the premises to see that the buildings are in the best practicable shape to prevent and resist fire, that inflammable rubbish is cleared away, and that habits of safety be instilled in the handling of matches, lamps, stoves and kerosene and gasoline.

Gasoline has come to play an important part in farm life that special care should be taken to see that it is not stored in inflammable buildings and is never opened in the presence of uncovered flame. If lanterns must be used in barns, they should be kept in good condition, kept hung in a safe place, and never filled or lighted in the barn. Kerosene lamps should be examined to see that the burners are in good condition and should never be left where they may be upset. Kerosene and gasoline receptacles should be kept apart, and should be so different as to avoid possibility of a mistake.

Numerous disastrous fires are caused by threshing machines, both by scattering sparks and embers and by dust explosions in the separators. All smokestacks should have spark arresters and the ground around the boiler should be kept clean and wet down, if necessary. Dust explosions are largely preventable. The department has made exhaustive studies of the subject and is prepared to recommend adequate safeguards.

Serious losses are caused by sparks from locomotives, which ignite dry wooden shingle roofs and start many fires in straw, stubble, and grass during dry seasons. If a railroad runs through the farm it will pay to plow a few furrows along the right of way as a firebreak.

A Fire-Fighting Outfit for a Country Community.

Never Smoke in Barn or Garage.

Ordinary friction matches should be kept safe in receptacles, away from children, and never carried loose. Smoking in barns and garages never should be permitted. Fire marshals of western states report greater fire losses in grain and straw the past season from carelessly thrown matches, engine sparks, and automobile and tractor backfire than ever before.

Buildings may be made safer by seeing that the chimneys are without cracks and free of soot, which may take fire and scatter sparks on dry roofs. Flues which may become hot should be covered with asbestos and any near-by walls and ceilings protected. There should be a sheet of metal under every stove.

Out of all the losses by lightning not one was on a building protected by lightning rods. It is now definitely known that lightning rods afford protection. If installed intelligently they reduce the risk from lightning almost to the vanishing point.

Precautionary measures will do much to cut down a loss that takes millions of dollars out of the possession of rural Americans every year and leaves nothing in its place. Prevention is better than regret.

When Morton Was of Age

By MARVIN ST. JOHNS.

Copyright, 1921, Western Newspaper Union.

"You are a pretty hard old taskmaster, Adam Brill, and you can't make babies of your children forever."

"I'm a man of system, Asa Dunn. I bring my children up on a strict, right basis, and if anybody wants to dispute it, I'm here to protect my methods—not forgetting that, man and boy, for forty years, I have been the champion wrestler, boxer and sprinter of the county," and the speaker put up a sample arm that a blacksmith might have envied.

"No, no, friend Adam!" laughed his nearest neighbor, retreating promptly. "None of that for me! I know your prowess too well. Only I think you draw the line too tight with those two children of yours. Not but that both are the finest in the town. Morton is a model young man, and as to Luella, I envy the man who gets her for a wife."

"That will be some time ahead, if I have anything to say about it," declared the stalwart parent. "They have been motherless since they were very young, and I've felt a double responsibility in bringing them up right. Discipline and system have been my rule. It's going to continue until Morton is twenty-one—why, say, that's tomorrow!" exclaimed Brill, "and I came near forgetting—"

It was the twenty-first birthday of Morton Brill tomorrow, sure enough, and his father recalled it half with sadness, partly with a comical look on his face, as if it revived some whimsy that pleased him. Ever since Morton was fifteen years of age, Adam Brill had put in force an iron-clad regulation of his own fierce tempered sire. Exactly one minute before the midnight hour he had made his son remove his coat. Regularly he had administered the strap—the strokes corresponding to the years attained. Then, when the performance was over, he would place in the hands of the lad exactly as many bright silver dollars as he was old.

"The last time!" ruminated the obstinate old fellow, as he reached home and removed from a drawer in a kitchen cabinet the time-honored strap of castigation.

At nine o'clock that night Luella came into the house from the garden, where her unsuspecting father supposed she had been with some girl friends. The old man glanced at the clock, placed the strap over the back of a chair, took off his coat and went out into the garden.

"I told Morton to be here at nine o'clock sharp," grumbled the old man, "and it's after ten now. Then as he entered the summer house he ran straight into someone.

"You, Morton?" he cried, grabbing the figure. "Sneaking out of the way, eh?"

In one instant the athletic blood of the old man was on fire. His captive had resisted his iron grasp. Then with a superb clutch he had his adversary on equal terms. Adam Brill was tripped and sent hurtling five feet away upon the soft grass, prostrate.

"You've done it, Morton," he chuckled, "and I'm proud of you!"

"I am not Morton," interrupted a calm, even voice.

"Eh!" ejaculated Adam Brill, arising to his feet in wonder and staring strangely at an utter stranger. "Who are you, then?"

"A respectable college graduate," was the evasive reply.

"Should think so, and you've got a new wrestling trick I'll give you ten dollars to teach me."

"Tomorrow!" laughed the stranger, gaily, gave a run, a leap and was over the rear fence and out of sight in a twinkling.

"Well, I never!" gasped the old man.

Adam Brill returned to the kitchen. He fell asleep, to awaken and find his son seated in a chair opposite to him.

"Well! Been asleep, have I?" exclaimed the old man. "On hand and waiting for the annual, eh, son?"

"Not this time, father. It's ten minutes after twelve, I'm of age, and we'll just shake hands and call it square."

"Cheated out of my regular pleasure, eh?" stormed the old man, in a pretended rage. "Well, I won't be mean. Here's your present," and he extended a clinking bag. "Forty-two dollars, and when you get ready to settle down come to me for more."

"Why, father," admitted young Brill a little confusedly, "I'm ready right now. Myra Walcott has been waiting for me for over a year, and—you won't object?"

"Seeing as you are your own master, I don't see how I can interfere," answered the father.

"And, father—"

"Well?"

"A young man was here tonight—I met him and he told me about it. You had a bout in the garden."

"Eh! Who is he?" challenged the father, sharply.

"Clyde Worthington, as fine a young fellow as you need to know. He's coming here again tomorrow—"

"Yes, to teach me that double elbow clutch of his!" cried old Brill, eagerly.

"Yes, and to ask you for sister's hand in marriage."

Adam Brill stormed, and fumed, but Clyde Worthington made so fine an impression when he called the next day that there was a double wedding in the old Brill homestead.

AN AWAKENING

By ISABELLE ENGLAND.

©, 1921, by McClure Newspaper Syndicate.

"Mary, darling," murmured Ted. "Love me lots? Hummm? Why, what's the trouble now—what the deuce—?" For his fiancee's expression had become anything but flattering. She looked, indeed, decidedly bored.

"You're a sweet boy," yawned Mary, "but really, you're horribly tiresome. One can be so sure of you. Oh, Ted! I do wish you weren't so faithful and adoring and—well—unthrilling. Now, if you'd only make love to Cynthia, next door, or something like that! I want excitement, and freedom. I want to be kidnapped by a big, bad man with rough hands, and be pulled by the hair, and kissed brutally, until—oh-h-h-h——!"

Ted regarded her, open-mouthed, with a half-dazed incredulous expression. Then his face hardened.

"I'm sorry," he retorted, sneeringly, no longer the meek and perfect lover, but a very angry boy. "Sorry I had the great misfortune be born respectable. Sorry I'm not a ruffian. Drag you by the hair, eh? A spanking would be more effective!"

Mary smiled, maddeningly.

"Of course you can't comprehend my feelings! Your life is so shallow, so petty. Your highest ambition is to marry me. Ye gods! What have I done to deserve such a fate. If you were half a man, you'd abuse me once in a while, or do something to make life interesting."

"Mary!" Startled, but once more adoring, he knew not what to say.

"And don't stand there gazing at me with that adoring, calf-like expression!" she [illegible].

Ted was all at sea. His dignity had been completely swept away. He appeared pale and meek, and a little uncomprehending, entirely unbelieving.

"Mary—Mary, I can't understand! I don't see what the deuce is the matter. Didn't you like the violets I brought you?" And he gave an injured glance at the discarded offering.

Mistress Mary, quite contrary, shrugged disdainfully.

"Not so bad," she answered, "but it would have been much more interesting if you'd given them to some other girl. Please run home and don't bother me any longer!"

Mary laughed gayly as Ted's dejected back passed from view at the bend of the road.

"What an utter bore!" she sighed. "I wonder if I'd look more piquant and bohemian with my hair bobbed? And Ted hates bobbed hair—— Oh, could anything get him really mad, and keep him mad? Inspiration!"

. . . .

"Oh, mamma! Where's my comb? And oh, yes, the scissors, too? And, mamma, you wouldn't mind getting me the hand mirror, would you? Thank you!"

Mrs. Doran, a worried-looking little woman, fidgeted nervously about her over-temperamental daughter until the latter unmistakably excused her.

"I hope you're not going to do anything rash, Mary," murmured the nervous little mother rather apologetically.

"Oh, for heaven's sake, do go away, or I certainly will!" ejaculated Mary crossly. "Can't I have a minute's peace?"

Mary yawned. Really, she was so tired!

She pondered deeply a moment. Then, her decision made, she raised the scissors gingerly and trusted to luck—the flapper's god!

Several hours later a rather different Mary tripped down the stairs—a girl with short, stiff, uneven hair, resembling nothing so much as a futurist puzzle. Mary's eyes were suspiciously red. She held her head defiantly as she swept by her horrified father and her nearly hysterical mother, to the front porch.

The stars glittered dreamily; the town was quiet. What's more, Mary felt lonely.

She smiled in self-satisfaction. Of course she would take the poor boy back—after he had sufficiently suffered and repented his stupidity. In her mind she had the reunion almost staged, when——

"You darling!" Ted's voice sounded. It was dreamy, soft. The porch swing next door, at Cynthia's house, ceased squeaking, a gurgle of delight. Then, silence—silence——

Mary gasped and groped feebly for the door. That funny feeling in her heart was almost intolerable. All her sensations seemed to grow vaguer—stranger. She fell.

Mrs. Doran, hurrying into Mary's room, discovered her daughter in a tumbled heap on the floor in front of the easy-chair from which she had just slid.

"Didn't hurt yourself, dear, did you?" inquired Mrs. Doran. "I'd have called you before, only you were sleeping so peacefully. How on earth did you happen to fall out of that chair? Bad dreams?"

Mary picked herself up and anxiously felt of her hair. As her fingers encountered the loose coils she sighed with relief.

"Did Ted call up while I was asleep?" she asked. "Yes? And he's coming over this evening? Oh, joy and thrills! Is my organdie ironed?"

"Why, bless my soul!" exclaimed Mrs. Doran. "What can have got into the girl?"

But Mary didn't answer as she skipped gayly down the stairs. For, after all, dreams have little effect on youth.

EGG-EATING HEN DIFFICULT TO CURE

Cut Her Head Off as Habit Is Practically Incurable.

Providing Well-Balanced Ration Is Insurance Against Development of Practice—Causes for Feather Pulling.

(Prepared by the United States Department of Agriculture.)

An egg-eating hen is a bolshevik that is liable to corrupt the rest of the flock with her uneconomic notions regarding rations. She should be removed to a place where her example will have no effect on her sisters, or she should have her head cut off, for the habit is practically incurable. Poultrymen of the United States Department of Agriculture say it can be prevented by taking proper precautions.

Eating eggs begins usually when an egg has broken in the nest, or when it has been cracked by freezing and then thawed out. Keeping the nests well supplied with straw or other nesting material will reduce the danger of breakage, and darkening them will reduce the chances of broken eggs being found by hens. It is a good idea to gather the eggs twice a day in cold weather so that none will be frozen.

Hens that are not properly fed will have a ravenous appetite for eggs, both the shells and the contents, so that providing a well-balanced ration is some insurance against the development of the habit. In winter there is particular danger that some lack in the feed will develop an abnormal appetite, so plenty of animal matter, such as meat scraps, and lime in the form of oyster shells or bone, should be taken to provide it.

Another bad habit enjoyed by these dietetic bolshevists is feather plucking from themselves or from other members of the flock. Improper feeding, insect pests, and too close confinement are the usual causes for starting this habit. But it is not so hard to cure as egg eating. A plentiful supply of animal and green feed and good range or plenty of exercise by feeding in a deep litter, and freedom from insect pests will usually bring the fowls back to a normal appetite.

FLY-WHEEL AIDS GRINDSTONE

Jerky Movement That Is Destructive to Good Work on Ax or Chisel Is Eliminated.

To sharpen tools many people have to turn the grindstone without assistance, using the foot on a treadle and the hands on the article to be sharpened. This gives a jerky movement to the stone that is destructive to good work in putting an edge upon an ax or chisel. One needs a fly-wheel, and this can cheaply be found in a second stone of cement, and mounted on a frame beside the grindstone, as shown. Make a circle of stiff pasteboard upon a smooth surface and fill in with cement, with a few old wires to bind the whole together. Extend the iron shaft of the grindstone to enter the cement, with a square section made on the shaft, but leaving the shaft round on either side for bearings.—Farm Journal.

Fly-Wheel Steadies Grindstone.

The Cynical One.

Constant Reader writes in to say that he has never seen a deaf, dumb, and blind politician, paralyzed in every limb, who wasn't honest.—Chicago American.

[illegible] TIMES DAILY

Additional Amount of Milk and Butterfat May Hardly Pay the Extra Expense.

Cows milked and fed three times daily will produce more milk and the average test will be higher than though they were milked only twice. The rule is that milking three times daily is advisable where records are being made or where cows are milking so largely it is burdensome for them to carry their milk-making nutriments for periods of twelve hours each. Under practical conditions the question of time is the determining factor. It costs more to milk three times daily than only twice and if extra help must be hired the additional amount of milk may hardly pay the extra expense.

MAKE DEFINITE PLAN OF GARDEN ON PAPER

First Get Exact Dimensions of Available Land.

Ascertain Which Spots Will Be Best to Certain Crops Requiring Sunshine—Run Rows North and South.

(Prepared by the United States Department of Agriculture.)

A definite plan for the garden should be drawn on paper before any planting is done, suggest garden specialists of the United States Department of Agriculture. First determine the exact dimensions of the available land; then [illegible] which parts of the garden will be best adapted to certain crops, especially those that require a large amount of sunshine. [illegible] the garden plot on paper and sketch in the crops that are to be planted upon each part.

In planning the garden it should be borne in mind that certain crops, such as lettuce, radishes, and early beets, can frequently be grown in the same rows with other crops and be removed before the main crop attains sufficient size to require the entire space. It should also be remembered that carrots, beets, salsify, early turnips, parsnips and all crops of that type may be grown in rows of 12 to 18 inches apart and will occupy a comparatively small amount of space if grouped together. The taller growing crops, such as pole beans, tomatoes trained to stakes, and sweet corn, should be planted at one side of the garden where they will not shade the smaller crops.

Setting Out Plants Started in Hotbed.

It is generally conceded that the rows should run north and south; however, it is more important to arrange the rows for convenience of cultivation than for exposure to the sunshine. Due consideration should be given to both companion and succession cropping. By companion cropping the plan of planting two or more crops together and removing those that mature first is followed. By successive cropping one crop follows another, keeping the land fully occupied all the time. Thus, early cabbage may be followed by celery or late tomatoes; early corn or early Irish potatoes may be followed by turnips, late beans, late beets, or late cabbage. The arrangement of crops, however, depends somewhat upon the locality and length of the season.

Detailed directions for locating and planting gardens are contained in free publications of the United States Department of Agriculture, which will be sent upon application to the department.

SUNFLOWER SEED IS COSTLY

Ordinarily It Does Not Pay to Use Product for Feed Except in Case of Chickens.

It ordinarily costs considerable more to produce 100 pounds of sunflower seed than 100 pounds of corn or oats, and for that reason sunflower seed is ordinarily so high in price that it does not pay to use it as a feed, except perhaps in the case of chickens. Sunflower seed contains in every 100 pounds 11 or 12 pounds of digestible protein and 92 units of energy, whereas corn contains in each 100 pounds about six or seven pounds of digestible protein and 80 units of energy. Theoretically, 100 pounds of sunflower seed should be worth around $1.60 a hundred when corn is worth 70 cents a bushel.

PREVENT INJURY IN ORCHARD

Clear Away All Litter, Such as Weeds and Grass From the Base of Fruit Trees.

Guard against mice and rabbits by first clearing away all litter, such as mulch weeds and grass from the base of fruit trees. They form ideal places for mice to spend the winter. Little damage occurs in the cultivated orchard except from the rabbits. Soil can be mounded about the base of the trees before the soil freezes. If this is done and the grass and weeds removed, little damage can be expected from mice. Such mounding is not a protection against rabbits, however.

There are many methods of tree protection that give good results.

Local News Items

It pays to go to church.

Knut Hegtvedt was in the village Tuesday.

Miss Christina Bundhund visited Thief River Falls Monday.

SPROUTED OATS FAVOR EGGS

Without Succulent Sprouts All Other Aids in Increasing Winter Production Would Fail.

Probably the greatest single discovery for the production of eggs during the winter months was that introduced to the industry by the sprouting of grain, particularly oats, and feeding the tender and succulent sprouts to the hens. Without sprouted oats, practically all of our other aids in increasing winter egg production would fall by the wayside; at least, the results they would obtain would be considerably less than is possible where sprouted oats are used in the ration.

AVOID ROUP BY VENTILATION

Good Plan Not to Use Muslin Curtains at Any Time Except to Keep Out Rain and Snow.

Roup is largely a question of ventilation, and properly ventilated chickenhouses seldom contain chickens that have roup. In the openings in the front it is a good idea to have chicken wire, and not use the muslin curtains at any time of the year except to keep out snow and rain.—G. S. Vickers, Ohio State University.

THE GOODRIDGE BANNER

VOLUME XV, No. 50. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, JANUARY 13, 1922. $1.50 PER YEAR

Farm Management School Tomorrow

A Farm Management school will be held at the Goodridge school house tomorrow, January 14. A very interesting program is announced. Subjects of vital interest to the farmers of this locality during the present depression will be discussed. A similar meeting is being held at Thief River Falls today.

Wm. M. Cavert, farm management demonstrator for the university of Minnesota, will talk on the business side of farming, emphasizing the keeping of records, milk testing associations, more economical feeding and factors entering into the cost of placing farm produce on the market. He will discuss the cost of producing butterfat and feeding rations that should be used to secuse better returns.

J. H. Hay, deputy commissioner of agriculture, will address the farmers. Mr. Hay has been very active the past months in assisting dairy sections to organize co-operative creameries and testing associations. His talk will be of great interest to everyone in Pennington county.

The question of fixing farm prices and co-operative marketing will be fully discussed by G. Halvorson and W. J. Brown of Thief River Falls.

Lunch will be served at noon and during the afternoon by the domestic science class of the school

Autos Must Register by Feb. 1

The 1922 motor vehicle registration began Jan. 2. The registration must be made and the tax paid before Jan. 31 and the registrar is given three months in which to issue the number plates.

A motor vehicle owner whose application for registration has been approved by the registrar, and to whom the register has issued a receipt for the payment of the 1922 tax, may operate his motor vehicle bearing the 1921 registration plate until such time as the registrar can issue the 1922 plates, but not after March 31. After March 31 no motor vehicle may be operated on the public streets and highways without displaying a regular 1922 number plate issued for that particular vehicle.

A Promotion

Morlan Bishop, son of Mr. and Mrs. J. M. Bishop of Thief River Falls, this week resigned as examiner with the state banking department to accept a position as assistant cashier in the state treasurer's office. He will assume his new duties next Monday.

Ira C. Richardson Dead

Ira C. Richardson, formerly postmaster of Thief River Falls and judge of probate of Red Lake and also of Pennington counties, died Sunday morning at his home in Thief River Falls as a result of a paralytic stroke which occurred three weeks ago, ending an active career as a public official and practicing attorney. He was 67 years of age and leaves his wife and two sons to mourn his loss.

Rural School Spelling Contest

Abel Svoondny and Frances Hincil represented the rural schools of Pennington county in the 1921 Red River Valley Rural School spelling contest. This year another contest will be held, in which children of the rural schools are urged to take part.

This annual contest is held during the winter shows and Northwest school Farmers' week meetings at Crooksten, which come this year from February 6 to 10. The rural school spell down will be held on February 10, lasting all day, with the final oral spell down taking place in the evening. Cash prizes will be given to the best spellers in the eleven valley counties in addition to free railway fare.

KEEPING CHICKENS IN YARD

Two-Foot Slats Nailed to Posts Will Prove Effective—Fowls Are Thrown Back.

Chickens can be kept in their pen by nailing two-foot slats at an angle to the posts and stringing a number of strands of thin wire through them as shown in the drawing. The chickens do not see these wires and when they attempt to fly over the fence, they strike the wires and fall back into their yard. After a number of futile attempts, they will not try to fly over again.—E. Bade, in Popular Science Monthly.

Wires Stretched as Shown Here Will Effectively Prevent Chickens From Wandering Into the Neighbors' Yard.

ERIE ECHOES

Miss Ollie Olson left for Sharon, N. Dak., where she is engaged as saleslady in a department store.

S. Jacobson was the guest of Berg brothers the latter part of the week.

Sub Urban was a transient business visitor in Goodridge Monday and Tuesday en route to and from Thief River Falls.

Christ Amundson of southeast Star vicinity bids fair to win the "prize" for telling ridiculous yarns. He told the other evening of a man who had jumped clear across the Mississippi river. Yet Amundson never resents it much should anyone take occasion to remind him that his stories sound "fishy. "But then," he added after a little, "you see he had a nine mile run."

Ole and Tom Berg returned from the east of the lake lumber region the first part of the week.

Halvor Folkedahl departed Thursday for Northwood, N. Dak., to consult "Doc Kirby" in quest of medical treatment! G. A. Iverson escorted Mr Folkedahl as far as Goodridge.

Omund Lovrak is visiting at the Halvor Swenson home in the vicinity of Highlanding.

Mrs. Bertina Hovet was a caller at the Knut Roisland home Thursday evening.

T. Loiland sawed up a supply of wood for Knut Danielson Friday.

Elmer Vraa returned to his home in Reiner Tuesday from a visit with relatives and friends at Climax.

Alfred Aubol transacted business in Goodridge and Thief River Falls Tues River Falls Tuesday.

Hilmer Iverson visited at the home of his brother, Gust A. Iverson, Thursday evening.

Hans Solberg and family and Messrs. John Rnstad, Oscar Thoreson and H. Eidelbis were Goodridge business visitors Monday.

Unite Forces To Get Road Results

Nearly twice as much money available now for improvement of county and town roads as is provided regularly for use on the trunk highways in Minnesota. Charles M. Babcock, state highway commissioner, this week urged early good roads conventions in all counties of the state at which county commissioners, town supervisors and the county highway engineers can agree on a definite program of co-operation to get the biggest possible results for county, town road expenditures.

"Pennington county can secure a complete system of good local roads in the shortest time and with least expense," said Mr. Babcock, "by adopting a definite plan of systematic improvement covering several years and then pooling town with county funds to carry it out under modern road-building methods, with the right equipment, and so forth. Funds for local road purposes—exclusive of trunk highways—in Pennington county last year exceeded $75,000, and the importance of prompt action is obvious. Renville, Carlton and some other counties already are working with success in this direction, but I believe that good roads conventions in these counties will accomplish much as in all counties. The plan will end patchwork road development and the public will gain in every way.

"County and town road authorities and the engineers can consider at these meetings the needs on every county and town road and make provision for them in the longer term program. Township lines should be ignored, just as the state disregards county lines on trunk route plans. Counties will assist the towns as the state department advises and works with the counties on state aid and other important undertakings. The town funds may be pooled with those of the county and used under the direction of the engineer. Heavier machinery and better methods can be employed generally to get bigger results at less cost, and farmers can be given more jobs than in the past.

"Public road officials are all working to get the best results now and, I am confident, will co operate to adopt the new plan and make it yield maximum results. The fault has been with the old time methods, not with the efforts of our present local road authorities."

Annual Meeting

The stockholders of the Goodridge Cooperative Creamery association will hold their annual meeting Saturday, January 28. A full attendance is an absolute necessity.

MELODY ANN

By FRANCES E. GOODRICH.

© 1921, by McClure Newspaper Syndicate.

Melody Ann sat on the back step, looking across the mist-filled valley. As usual she was singing, otherwise she would not have been Melody Ann.

"When Melody Ann takes them high notes it makes shivers go right up your backbone," said Deacon Brown, and the other villagers agreed with him.

"Too bad Melody Ann is so odd," they said. "If she'd only dress herself up a bit and not look so gawky she might get a fellow as well as the other girls; but land's sake, all she thinks of is getting off by herself somewhere and singing."

She was odd. When the other young people were enjoying themselves with lively country amusements, Melody Ann was roaming through the woods or by the river, singing in her high, untrained voice.

* * * * * * * *

The mist slowly dissolved itself in pink, glistening dawn, and Melody Ann caught her breath for a moment with the beauty and mystery of it. Then, like a bird carolling the new day, her voice rose sweet and piercing in a hymn of praise.

She did not hear the automobile that stopped by the gate, nor see the heavily built, black-bearded man who left the car and walked toward the back of the house, so she was much startled when a gruff voice said "Great! Do that over again, girl." Jumping up, she looked into black eyes that shone with eagerness. She stood looking at the stranger in astonishment, when his impatient command again broke his silence. "But—but—I don't know what I was singing," stammered Melody Ann. "I just sing that way most all the time."

"Well, you can sing the scale, can't you?" he asked.

"Oh, yes, sir. We are taught to sing that way in school," and, always glad to oblige when she could, she sang the scale. Then an octave higher, then still higher, but the man raised his hand. "That will do. Where are your parents? I want to see them."

"My father and mother are dead and I live with grandmother. Won't you come in?" and she led the way into the little kitchen, where the table was laid for breakfast. Mrs. Carwin appeared and with simple hospitality made a place for the stranger at the table.

With shy amazement Melody Ann heard him tell her grandmother that her voice was a remarkable one. It was his business to find and train just such voices as Melody Ann's.

Mrs. Carwin listened eagerly; then with tears in her eyes slowly shook her head. "I know her voice is different from most, but we haven't any money for to have it trained now. Perhaps as soon as she gets to work herself she can earn a little and take lessons."

But the man shook his head impatiently. "Poof; we cannot wait until she can earn the money. The time to start this training is now, and the money will be provided. In New York there is a man of great wealth who gives liberally to train such girls as your granddaughter."

* * * * * * * * *

That evening the little house overlooking the valley was closed and Mrs. Carwin and Melody Ann went away in the big car to a new life.

Then began work such as Melody Ann had never dreamed of. There were many nights when she crept into bed, wishing with all her heart she was back in the little house on the hill, singing just as she liked.

For some time a thought had troubled Melody Ann. It seemed so ungrateful not to see her benefactor and thank him, even if he would have to wait a long time until she could repay him. She broached the subject to the teacher, but he discouraged it. "Wait until your first public appearance, and then you shall meet him," he said.

At last the day, the hour, the moment, and Melody Ann, in a simple frock of white, stood alone before that swaying sea of faces. A strange faintness held her for an instant, then the orchestra began the familiar air, the faces faded and before her lay the mist-filled valley, and she was welcoming the dawn.

The music stopped and her eyes saw the lights again and the faces, and she felt the tense silence. Then applause rolled like thunder through the great hall. She saw her teacher, rather white faced, but smiling, and grandmother, nodding happily with tears rolling down her cheeks.

At last the crowd was gone and Melody Ann stood face to face with the man who had made her success possible.

A year later Melody Ann sat on the back step waiting for the first pink flush to waken the gray mist to life, but she was not alone. A strong hand held her own tenderly, and Melody Ann looked into her husband's eyes with a great love shining in her own.

"We will help many other girls just as you helped me, won't we?" she murmured and got her answer with his lips against her own.

The pink swiftly spread over the gray and Melody Ann's voice rang joyously down the valley.

RECKLESS EVENING

By MILDRED WHITE

Copyright, 1921, Western Newspaper Union.

The little woman ran lightly up the steps and passed on through the long hall. As she opened the living room door a girl bending over a book glanced up questioningly.

"Why, Aunt Priscilla!" she exclaimed, "where have you been? It is after ten o'clock."

The little woman laughed softly as she paused diffident in the doorway. It seemed, as her dark eyes twinkled into the reproving face of her young niece, that the two had changed places.

She tossed her demure gray hat to the couch and sank into a chair.

"Really, I hardly know how to account for my lateness or my rashness, Lois," she said. "The past two hours have been like a foolish, adventurous sort of dream, and I thought that I had outgrown adventurous fancies, Lois."

"You will never outgrow adventure, Aunt Prissy," said Lois. "Now, tell me what happened."

"I took old Mrs. Dale home in the car," Priscilla began, "and was hurrying back along the avenue when I came upon a wedding party. The bridal couple were evidently about to make their escape in a white taxi, while the other cars were maneuvering to follow. And I, wedged suddenly into the narrow line, found myself, by degrees, exactly before the house entrance. And while I leaned back a tall man came swiftly down the carpeted steps and deliberately to the door of my coupe.

"'Now,' he said pleasantly, 'you can start.' As I turned to stare at him, the limousine and all the cars before it were off in a mad rush. The bridal couple had slipped into their taxi, and the attendants madly agreed to follow—where no one knew.

"The man at my side was a fine looking man, his face aglow with interest and enthusiasm.

"'Shall I take the wheel?' he asked eagerly. 'I want to be there with the others when they stop at the station.'

"And, Lois, I don't know what influence seized me then; it may have been the sheer masterfulness of the man's tones, or it may have been an infection of daring from the occupants of the cars all about us; but I bent to my wheel and I chased that wedding party.

"'I don't remember seeing you at the reception,' my companion said presently. 'But I take it for granted that you are Mollie. "Go right out, now," Ned said to me, as they made their escape, "and you will find Mollie waiting for you in the car at the door." Ned used often to speak of his sister Mollie when we were college boys together. Now, possibly, you are married; if so, I am unacquainted with your new name.'

"Lois," Priscilla leaned forward, "do you know what answer I made to do all that? I did not say, 'You are mistaken in your person. You have been mistaken all along, Mr. Take-It-for-Granted.' No; all I said was, 'I am not married.' Then, all at once my companion snapped open his watch and looked into my face.

"'I am sorry,' he said; 'I have forgotten something important. I must ask you to let me out here.'

"I came sharply to myself and to a realization of my own recklessness, and as I reached to unfasten the door I was thankful that I had not corrected the man's wrong impression. 'I will see you again,' he said."

Priscilla's gaze was on the fire, abstracted—long. The girl awakened her.

"And then, oh, unruly aunt," she mocked, "what happened?"

"I came home," Priscilla ended abruptly. She lifted her arm.

"Why, Lois," she exclaimed. "My jeweled bracelet; do you see it about anywhere? I had it on this evening when I drove Mrs. Dale home. I recall her admiration of the diamond clasp. Lois—I have lost it!"

The girl arose from a search. "The bracelet may be in the car, Aunt Prissy," she said crisply. "But my opinion is that your fine confident stranger has it in his possession."

Priscilla was on her feet. "Lois," she cried, "if I never see that man again, I know that he is innocent."

"Even," jeered Lois, "if your jewel were to be found in his pocket."

The door bell interrupted. Lois flew to answer its summons. A tall man stood in the doorway, his voice pleasing, vibrant, reached Priscilla. He held the bracelet out to her.

"Most amazing!" he exclaimed. "I found this trinket in my overcoat pocket when I felt for my gloves. It must have dropped in from your arm. I am happy to return it to you. When I called up Ned's home I found that I had mistaken another person for his sister, and it is fortunate chance, perhaps, that revealed you to me as I passed your lighted window. I," said the pleasing stranger, "am the minister who tonight tied my old friend's nuptial knot."

Japan Enlightened by China.

There appears to have been no written language in Japan till Chinese characters were introduced into Japan from Korea in the reign of Emperor Ojin, A. D. 285. The convenience caused by Chinese characters led afterward to the invention of katakana and hiragana, the Japanese syllabary, which contributed much toward improving the nation's language.

A PINK GERANIUM

By LAURA MONTGOMERY

© 1921, by McClure Newspaper Syndicate.

"And so," finished Betty breathlessly, "mother and I have decided to buy in some nice suburb near Chicago. I never felt really at home in New York."

"How perfectly lovely," returned Grace, wistful dark eyes on the other's face, "to move into a cottage and feel that the roof is really all your own, to step out into a grassy yard and be free to dig about and set out shrubs. Why, Betty, I wouldn't care if the cottage was only three rooms and far out in the country——"

Betty smiled. "Just as romantic as ever," she teased. "You used to talk about a kitchen done in blue and white, with crisp white curtains blowing out from casement windows, and I believe you insisted upon a pink geranium in the pot on the shelf above the sink. Now, for myself, I am quite willing to leave culinary decorations to the servants."

"Shall you keep a maid?" asked Grace, who went downtown daily to an office and clung to a strap twice a day.

Betty's head lifted pridefully. "My dear, I haven't had a chance to tell you yet, but that uncle of mother's in Australia died and left us a lot of money. We never cared for the East, and we decided to come back here and get a fine little home where we know everybody."

"Then of course you'll buy in Briar Cliff," said Grace confidently. "I'm determined to get a house on the lake," replied Betty," and think how you'll enjoy your week-ends out there. We'll golf every spare——"

"I don't know how." Grace thought of an old friend of hers back in that happy past, who had discouraged the learning of the popular game. He had told her how he admired her domestic tastes and she, thinking confidently of the little blue-and-white kitchen, had not learned to play. That Don had not been to call on her for over two months had been a source of keen disappointment to her.

"You'll soon pick it up," laughed Betty. "Suppose we taxi out to Briar Cliff this afternoon and look at houses? Mother is tired out from her trip and wants to rest, but I like to be doing something every minute."

Grace looked about the handsome foyer of the Michigan boulevard hotel with rather awed eyes.

During the swift ride out to the suburb the bracing lake air sent a dash of color into Grace's white cheeks. She scarcely listened to her chum, who chattered on of sunrooms, terraces and refrigerators cooled by electricity.

"At last we can have just what we want," went on Betty, "a low rambling bungalow type."

Grace roused herself: "Won't a bungalow of that type cost a lot of money?"

Betty nodded: "We expect to spend about thirty thousand dollars for it," she said, enjoying Grace's start of amazement, "and—" here the tender-hearted youth of her was crystallized into rather shy speech—"I remember how dreadfully we wanted a home of our own, never dreaming that Uncle Don would think of us in his will, and I have made up my mind that I will buy from a young salesman, some one who really needs that commission to get a start."

Grace, mentally computing the per cent that would be paid to a real estate firm's assistant, gasped. On thirty thousand dollars even the smallest per cent sent to the salesman would be considerable. Don had once talked of going into real estate in Briar Cliff and she wondered if he had a little office near the station. "I would love to ask her to let me look around a little before she goes to Van-Murray's office," she thought, "but perhaps Don would be vexed." She had a lively recollection of Don's pride.

Betty did not notice her chum's silence, for already the taxi man had been paid off and Betty entered the office of Van-Murray. She looked about her swiftly and her eager, amused eyes went past the portly man seated at a handsome desk who rose courteously to receive her. The young man by the window did not look up until Betty stood before him and voiced her request. "Wouldn't you prefer to have Mr. Van-Murray show you the list for such a place——"

"No," said the caller briefly, "you will do. I will look at the photographs, for I want style, and my friend," she indicated Grace, who had flushed to a lovely rose, "will look into the drains and culinary arrangements. She is domestic, whereas I—" she waited as Don paused beside Grace's chair and shook hands with her. "Do you know each other?"

"Have you been out here before, Betty?" she asked confusedly.

Betty nodded calmly. "I remember things," she said cryptically, while Don stared uncomprehendingly. "I remember some mighty good times given me when you had plenty and I had almost nothing."

"Grace," whispered Don two hours later as Betty lingered on the terrace of the little bungalow on the lake's edge, "she has decided to take this if her mother approves. The sale means that I can make a down payment on a little cottage. Shall you be satisfied to start that way?"

"Satisfied," breathed little Grace, her dark eyes on his. "Yes."

"And we'll have a pink geranium on that shelf," teased Betty, returning to the absorbed couple.

OVERFEEDING CAUSES SHRINKAGE OF STOCK

Weakness in System of Co-operative Shipping.

Partly Due to Disposition of Some Shippers to Overfill Animals Before Loading—Best Plan Is to Always Play Fair.

(Prepared by the United States Department of Agriculture.)

Reports to the effect that excessive shrinkage of live stock at central markets is frequently experienced are sometimes received from members and managers of co-operative live-stock shipping associations by the United States Department of Agriculture. In some cases these reports take the form of complaints, and at times the shrinkage feature is pointed to as a weakness in the whole system of co-operative shipping.

While many things can and frequently do result in excessive shrinkage in live stock, investigations have shown that at times it is at least partly due to a disposition on the part of some shippers to overfill their stock before loading. This custom seems to be a relic from the days before co-operative shipping came into vogue and when most small producers sold their stock to country buyers. Under the system of marketing wherein live stock was usually sold on the basis of home weights or at most shipping point weights it was usually to the producer's advantage to obtain a generous "fill" on his stock before turning it over to the country drover.

The co-operative system of shipping live stock, however, practically eliminates the incentive to excessive home or shipping point fills. Stock that is fed heavily just before loading is not only quite likely to sicken and sometimes die while in transit, but seldom takes a good fill when it arrives at market. Furthermore, where co-operative shipments are graded at the shipping point the man whose stock has been given a heavy fill receives more than his just proportion of the net returns. Home grading of co-operative shipments is, in most instances, highly desirable, but it can be successful only where the individual members "play fair" with each other or, in other words, where they really co-operate.

"Professor Diggs, have you ever discovered a buried city?"

"Oh, yes."

"And what do you chiefly enjoy about that kind of work?"

"Well, for one thing, when you unearth a city that has been buried for 2,000 or 3,000 years you don't have to listen to the reminiscences of the oldest inhabitant."—Birmingham Age-Herald.

AVOID ROUP BY VENTILATION

Good Plan Not to Use Muslin Curtains at Any Time Except to Keep Out Rain and Snow.

Roup is largely a question of ventilation, and properly ventilated chickenhouses seldom contain chickens that have roup. In the openings in the front it is a good idea to have chicken wire, and not use the muslin curtains at any time of the year except to keep out snow and rain.—G. S. Vickers, Ohio State University.

BELOW ZERO WEATHER Is Here

And it is time to buy what wearing apparel you need for the extreme cold weather.

Our stock of heavy underwear, caps, mittens, mackinaws, socks, felt shoes, overshoes and other winter goods is the best we could buy, and we are selling it RIGHT. See our big line of Martin wool goods. If you need a mackinaw, we can get you a Martin at rock bottom price. Your neighbor deals with us--ask him if he does not get the best values at the

Goodridge Mercantile Co.

GOODRIDGE MINNESOTA

WHO'S AHEAD?

By MARION E. LEIGHTON

©, 1931, by McClure Newspaper Syndicate.

Radiating the perfect joy of a happily married young woman, Annette stepped noiselessly through the open doorway and into the dark hall with the ecstasy of a successful shopping tour still animating her immaculate little person. Then she stopped short. Howard, her adoring husband, was talking unguardedly into the telephone, blissfully unconscious of her presence.

"All right," he said, "you take Hester and I'll take Mollie. Same place of course—where we left 'em Tuesday night. But it's absolutely the last time, Fred—I don't want Ann to get wise—think she's suspicious now. That paint I got off of Mollie's nose nearly gave me away."

Annette was stunned for a moment, then righteous indignation stiffened her spine and drew her pretty mouth into a straight, hard line.

The brute! The abominable hypocrite! And with a woman like this Mollie person who painted her nose! thought Annette.

After the dishes were washed Howard advanced a lame excuse—it sounded very lame, indeed, to Annette—and departed to keep his appointment with Fred.

Two minutes later she burst into Mrs. Fred's kitchen with her tragic tale of broken faith.

"Oh, Beth, what do you think? Howard—Fred—o-o-o-h!"—

Her voice broke—ended in a wail of misery.

Beth turned to Annette a white face from which the glow of happiness had all departed.

"I know," she said with icy composure.

"I stepped into Fred's office this afternoon," Beth told her, "he was talking with Howard over the 'phone about—two girls—tonight. I heard Fred mention—Hester—and I fled!"

Annette seized Beth's arm in a frantic grip.

"Come on, get your coat and hat and we'll follow them and have it out, tonight," Beth gasped hysterically.

"Where—where do you suppose they went?" asked Annette, when they were in the street.

"I know," Beth replied tersely. "The river."

Behind a clump of bushes, they stopped at the sound of voices and gripped each other with a warning clasp.

Two glistening motor boats were drawn up to the bank. Bending over the engine of one was Fred, while Howard was fussing with the tiller ropes of the other.

Just then Howard stood up straight and addressed his fellow culprit.

"Gracious, Fred—aren't they two beauties?" he enthused.

"You bet they are," agreed Fred. "Won't the girls be surprised?"

Beth gasped and clutched Annette's arm in a vise-like grip.

"Oh—the hypocrites!" she hissed.

A puzzled look crept into Annette's eyes.

"Why—I believe—they're talking about us—and the boats," she whispered.

Beth gasped again—this time with amazement.

"Look! There on the side of Fred's boat! Isn't that a name?"

"Why—its—Hester!"

"And the other one"—both craning their necks—"it's Mollie!"

"I think we owe them one for that," Annette said, after a time.

"All right—let's pay it," agreed Beth.

When Howard and Fred parted that evening in front of the latter's bungalow, it was all arranged for the surprise to be staged the following evening—two brand new motor boats for "the girls."

Howard ran whistling into his cozy porch, stepped into the hall, and switched on the light. It struck him that the house was strangely dark and silent.

He called loudly for Annette. No answer.

A letter placed conspicuously on the newel post caught his eye and he picked it up.

With a sense of foreboding, he tore it open and read:

"Your cruel faithlessness is breaking my heart. I have gone home to mother. It is useless to follow me—my lawyer will arrange immediately for a divorce. ANNETTE."

Stunned, he leaned against the staircase for support, unable to grasp the meaning of it.

Just then Fred burst into the hall with a like missive, waving it wildly in front of him.

Howard looked at his friend's face and passed a hand wearily across a troubled brow.

"My heavens, your's too?" he groaned.

It was five minutes before they could talk coherently, then Fred sat down heavily on the bottom stair.

"I—rather guess—we're behind in this surprise game, old man," he said hoarsely.

Came an audible snicker from the living room and Howard sprang across the threshold and turned on the light.

Seated on the couch with their arms about each other and two radiant faces turned to the light were the two feminine imps.

"Who's ahead now?" gurgled Annette.

First Fashion Paper.

The first fashion paper for women was published in Frankfort in the Sixteenth century and written in Latin.

AVOID DISAGREEABLE SMELLS

Unless Scrupulous Care Is Taken Unpleasant Odors Are Likely to Hurt Products.

In winter smells are apt to find their way to milk and butter quite as readily as in summer. Now these products must be kept in the house, and some artificial heat must be used to keep them from freezing. This close confinement is very apt to bring an unpleasant smell or taste to milk and butter unless the most scrupulous care is taken. Milk ought never to be kept anywhere near the kitchen. If it is, some bad smells will surely be imparted to the milk and cream.

CHARCOAL GOOD PREVENTIVE

Has Great Purifying Effect in Absorbing Noxious Gases—Aids Digestive Disorders.

The value of charcoal can scarcely be over-emphasized, and it should be fed to fowls of all ages as a preventive of bowel disorders and disease. It is best to keep it before the fowls at all times, as there is no danger of them eating too much. Charcoal has a great purifying effect in absorbing noxious gases, and will correct many digestive disorders.

GOOD DAIRYMAN IS DEFINED

Among Other Things He Should Meet and Know Other Men Who Can Handle Cows.

To be a good dairyman you must meet and know other dairymen who know how to handle cows. Read the agricultural papers, and the paper devoted to your breed. Be familiar with the weak and strong points of each animal in the herd and strive to prevent a recurrence of the weak points in the offspring by skillful mating.

HERDS HEADED BY PUREBREDS

Cow Testing Associations in West Reach Mark of 100 Per Cent—Disgrace to Use Scrub.

One—two—three! One cow-testing association in Washington, two in Colorado, and three in Idaho have reached the mark of 100 per cent of their herds headed by purebred bulls. This was the count in the spring of 1921 in the territory of the western office of the dairy division of the United States Department of Agriculture. In the fall of this year one-third of the associations in the western states were 100 per cent in their use of purebred bulls. In some localities it is coming to be considered a disgrace for anyone to use a scrub bull.

Marvin Farrar paced up and down the office of Peter Moore, lawyer, in a no enviable frame of mind. The very thought that he was forced to wait and possibly later truckle with an individual of the homo-hyena genus, Moore, irritated him.

Moore, pettifogger and rascal, had not yet arrived, and young Farrar galled under a yoke already fitted to his shoulders. There was a timid knock at the door, and he said "Come in," mechanically.

"Are you in want of an office boy?" inquired a lad.

What cared Marvin Farrar for office boys! He started a scowl at the intruder. Then something in the wistful earnest face appealed to his better instincts.

"I fancy not, son," replied the higher self Farrar, who did not, however, feel particularly elevated at just that moment. "Looking for work?"

"For three days, and no luck," was the reply, "and"—the little fellow choked up, then manfully dashed away a stray tear or two and added resolutely; "I've got to find something today."

"You mean—hungry?" guessed the quick-witted Farrar. "Here, go get a good square meal and you'll be in better trim to buckle up against disappointment. Try the department stores," he shouted after the boy, as the latter, bubbling over with gratitude and delight, a bright silver dollar in his hand, went on his way with a shining face.

On the heels of the departing lad Peter Moore bustled.

The lawyer threw up the window opening on a court for ventilation, and briskly drew some documents from his desk. He selected one. He held it up for the inspection of his visitor.

"There is your note, Mr. Farrar," he said, "due a month ago; sum $2,000, duly signed and no notation of payment. It is one of a number of notes which Luke Darrell put up with us for collateral six months ago. He failed to redeem it. As our property, we must insist on payment."

"But it has been paid already, as I wrote you," declared Farrar insistently.

"Have you a receipt?"

"I took none. I had every confidence in the world in Luke Darrell. I met him on the street, on my way to his office to take up the note. He accepted the money, and promised that the cancelled note would be mailed to me next day. The ensuing one I learned he had absconded—a bankrupt, forger, and fugitive from justice."

"We will give you forty-eight hours to pay the note or renew it with your property as security," was the lawyer's ultimatum, and he accompanied his grim perturbed visitor to the door.

Marvin Farrar went on his way with a heavy heart. He had begun fond dreams of another savings period to furnish up a home for his fiancee, Winifred Thearle.

And now—two years' hard work lost, a mournful message to take to poor Winnie! It was pitiful, but he could not afford to lose heart. Within an hour he was at the Thearle home and was telling the whole sad story to Winnie, sobbing brokenly on his shoulder at his misfortune and distress.

The little fellow Marvin had helped, and then completely forgotten, had made for the nearest restaurant with his precious silver dollar. And it further chanced that the lively-eyed Tom Chubbs—for that was his name—noted two papers fluttering along the pavement in his course. He glanced over one. It was a letter from another city, and it was signed "Luke Darrell." The other paper was the note Lawyer Moore had shown Marvin Farrar.

The note was made out to Luke Darrell and the letter was signed Luke Darrell.

Then he set at work to locate the signer of the note—Marvin Farrar.

"I am looking for a Mr. Marvin Farrar," reported young Tom, as he came up the steps to face the lovers, seated in a hammock.

"Hello!" ejaculated Marvin. "Why, I seem to have seen you before."

"Why, so you did!" cried Tom, brightening up as if by magic. "Isn't it queer, sir? I've been looking for you a long time."

"What for?"

"These"—and Tom handed over letter and note. "Are they yours, sir—are they of any importance?"

That question was not answered for Tom, except in the finding for him the next day of an excellent situation. The letter referred to "pushing every claim, collected before or not," and the note once paid, placed Marvin in a position to readily unmask the tricksters and avoid their further extortion.

So Marvin and Winnie did not have to wait two years, and Tom Chubbs was a guest of honor at their wedding.

The Fanshawe Estates

By CALVIN HENDRICKS

Copyright, 1922, Western Newspaper Union.

Everybody of consequence in London had come to know Herbert Fanshawe, the American who was claiming the Fanshawe estates, covering thousands and thousands of broad acres in the most smiling part of the Midlands.

Brand new evidence had been brought to light, and the issue was a foregone conclusion. Sir Thomas Fanshawe was in despair. He was an old man, and if he lost, his daughter, his only heir, born to him when he was well past fifty, would be turned out of her historic home, penniless.

Fanshawe had journeyed to Elmsdale to meet his solicitor and the defendants. He was shown into a spacious room, where Sir Thomas, a gray old man, sat toasting his feet at the fire.

"Mr. Fanshawe," said his lawyer, "Sir Thomas Fanshawe has made a singular proposal with a view to settling this trouble out of court. That is why I asked you to come down here."

"Yes," said the young American briskly. "I am in your hands."

"Not in this instance," answered his lawyer sharply. "Sir Thomas proposes that you drop your suit, leave him in possession of the estates until his death, become his heir, and marry his daughter, Miss Mary, whom you were kind enough to say you admired when you saw her in court."

Fanshawe gasped at the cold-bloodedness of the proposition.

"What does Miss Fanshawe say?" asked the young man.

The old man spoke. "Mary!" he called. The girl glided into the room and stood looking at Fanshawe without expression. "Are you willing to make this sacrifice, my dear?" her father asked.

She nodded, and looked at Fanshawe as though he were an inanimate object.

"Are you willing, Mr. Fanshawe?" asked his lawyer.

"I'm willing," answered Fanshawe, thickly.

"Then," said one of the lawyers, "the ceremony may as well take place now. I am the registrar for this division.

That was all. They were soon man and wife.

Fanshawe put on his hat. Ten minutes later he was on his way to London.

He slept over his problem, and, when he opened his morning paper, he saw a brief notice that Sir Thomas had died suddenly the preceding evening. Apoplexy was given as the cause of death.

Outside in the street he saw, in flaring letters on a huge poster FANSHAWE CASE—RESULT. He bought a copy, and then, seized with a sudden thought, instead of opening the paper, he put it in his pocket unread and hurried back to Elmsdale. He could gather no impression of what the verdict had been from the butler's impassive demeanor.

"May I see Mrs. Fanshawe?" asked the young man.

"What do you want of me?" she asked.

"I want to say," said Fanshawe thickly, "how sorry I am for the loss you have suffered. Please do not think that I shall intrude upon your grief. But I have to have an explanation. Why did you make this abominable bargain?"

"To please my father," she answered, showing for the first time a trace of emotion. "Now, then, why did you make the bargain?"

"Because I love you," answered Fanshawe unsteadily.

"You love me?" she repeated incredulously.

"I love you," he answered doggedly.

He drew the paper from his pocket and placed it, still folded, upon the table.

"Of course you know the verdict," he resumed. "But I do not. Strange as it may seem, I have not looked at this newspaper. I resolved before doing so to visit you here and say to you: whatever the verdict has been, whether in my favor or in yours, will you give me a chance to win your love?"

The girl had stepped nearer to him and was gazing at him in amazement. Her face was flushed, her eyes shining.

"You really love me?" she said incredulously. "And you have really not seen the verdict? Suppose—suppose that it was in your favor!"

"I still hold to my proposition," he answered.

She was seemingly overwhelmed by his self-revelation. She looked at him as though stupefied. Fanshawe stretched out his hand toward the paper, but she anticipated him.

"No, wait!" she said. "I accept your offer."

Suddenly she went up to him.

"I am your wife," she said softly, and raised her lips to his. And Fanshawe knew that he had gained her.

Presently she slipped out from the room and he looked at the newspaper. It made no difference, but—

The trial had been adjourned.

Fictitious Biographies.

A large number of biographies of wholly fictitious botanists were included in a well-known American reference work, published about thirty years ago, and have been copied in subsequent works, along with the titles of the writings, equally imaginary, attributed to these persons.

The Unknown Bidder

By WINIFRED DUNBAR

Copyright, 1922, Western Newspaper Union.

"Bob, I would give up my life to save you—can't I do something to help?"

Bob Ralston bestowed a fond and gentle glance upon the speaker. Never was there a more earnest, loyal friend than this same Ned Melvin, and no one knew it better than Bob.

"You are a royal good fellow, Ned," said Bob—"never a better. You can help me. The Leslie Art works are to be sold out at auction within an hour. I want you to take this pocketbook. There's a thousand dollars in it. I don't know what may be bid—maybe $1,000, maybe $5,000. If you find the bids running up, try all you can to hinder, to delay the sale."

With the words Bob Ralston flashed into an automobile and was gone, leaving Ned holding the pocketbook in his hand, looking solemn, worried, excited, all at once. Ned had heard that his cousin would be in the city that morning, and had spent his last cent coming over to greet the best friend he had in the world.

Ned did not at all understand the situation, for Bob had no time to explain. It was a peculiar one. Bob had arrived in town only two hours previous after an absence of a year, to claim pretty Ruth Leslie as his bride. Where he had expected to find joy and brightness he had been met with despair and gloom. Robert Leslie, the father of his prospective bride, was on a sick bed, slowly recovering from a severe fit of illness brought on by anxiety over his business affairs. Mr. Leslie had for years owned the Art Metal works, a small but congenial business. An unjust claim had been foisted upon him by a rival—Tipton & Co.

"It is not the business, for it is only a small one, although it brought in a comfortable living," Ruth had sobbed on her lover's shoulder. "There are original designs and patterns, though, that represent half father's life tasks. If he should know that all these are swept away it would kill him."

Oh, if I had only known this before!" groaned generous, tender-hearted Bob, and he had hurried away to meet Ned, had given him rather forlorn, hopeless instructions and jumped into an automobile, and had offered the chauffeur double, triple, quadruple pay if he could make Taunton and back within the hour.

For while Bob had thousands invested in the West he could not hope to raise a dollar in a hurry. At Taunton, however, there was an old-time banking friend. It was a question of minutes.

A representative of the Tipton interest was on hand at the auction, as Ned found when he reached the works.

The auctioneer had made a platform of one box set flat, and a desk of another tilted on end. His hammer beat a tattoo as a call to order.

"The entire plant will be sold without reserve," announced the man with the gavel—"contents only and lease of the premises. Terms will be strictly cash. What am I bid?"

"Two hundred dollars."

An untidy man who suggested the typical junk dealer made this tender. The Tipton agent directed at him a withering and contemptuous glance and said coolly:

"Fifteen hundred dollars."

Poor Ned groaned inwardly.

"Fifteen hundred dollars!" cried the auctioneer, hammer poised, "I am offered—"

"Sixteen," interrupted him.

"Four thousand," snapped the Tipton man.

"Five," came tranquilly from he of the grave visage.

"Six," as promptly proceeded from the direction of the fat individual.

The man from Tipton's hurriedly drew out his pocketbook. He glanced it over, frowned and bolted from the place.

"Six thousand dollars," rattled on the auctioneer. "Time and tide wait for no man."

"Twenty"—everybody stared. "Twenty!" he shouted. "Do I hear twenty-one? No? Then sold to—cash. Step up to my clerks, sir, and close the transaction."

"Were you speaking to me?" inquired the fat man.

"Certainly, you bid in this property—"

"Me!" ejaculated the fat man. "Nonsense! I haven't spoken a word since I entered this room."

There was a vast hubbub. It was ten minutes before it was guessed that some mischievous ventriloquist in the crowd had played a clever trick on the auctioneer.

Then the bidding was resumed. Ned had stepped forward again. Every minute gained was precious time for dear Bob, but the bids ran up beyond the thousand.

It was at $1,500 that the auctioneer's "Going! going!" was echoing out, when there was a sharp whir outside and a moment later Bob Ralston dashed into the room—"sixteen hundred," "eighteen hundred," "twenty hundred," "and sold to—?" "Robert Ralston." The breathless representative from the Tipton's dashed into the place just as the hammer fell.

"I got all the money I needed from my friend," Bob related later, "but if you hadn't learned ventroloquism amid your varied travels, Ned, and delayed that auction sale, my dream of happiness would have been blasted."

"So I'm some good after all," said Ned Melvin proudly.

Lady Brown of New England

By CLAIRE SMITH

Copyright, 1922, Western Newspaper Union.

Little Miss Brown had one bright spot in her otherwise drab life; that was her friendship for Merton Caldwell.

Caldwell was no hero; he was just a New York business man. He spent his summer vacation at Cape Cod, in the village where the little schoolmistress taught.

"I shall not be here next summer, Miss Brown," said Caldwell one bright afternoon in August. They had been strolling together along the shore.

"I am going to take six weeks and visit England," he continued, not knowing that Miss Brown was suddenly quiet. "I am going to take in all the old Northumberland castles and—"

"Northumberland!" echoed Miss Brown.

"Yes. My family came from there."

"But so did mine," said Miss Brown quickly. "The Brownes of Constable castle are supposed to be relatives of mine. If you go there you must visit the place, and tell me all about it. It is one of the show seats of the county."

They parted soon after; Miss Brown went back to her school, and Caldwell to his office. Next summer he sailed for England, and in due time found himself at Constable castle.

The castle was itself notable, but more so the old Norman church.

The sexton, a grumpy old fellow, expatiated upon the history of the statue with shrewd calculation that the American visitor would bestow largess upon him.

"That's the tomb of Sir Roger," he croaked. "He lay there—all but his heart, which is buried in Jerusalem. But his lady don't lie by him.

"Now, John, you're telling the story wrong," interrupted a laughing voice, and Caldwell turned to find himself gazing into the eyes of a singularly pretty girl of twenty years or so. "You are Mr. Caldwell?" she inquired. "We heard about you in the castle, and my father wants you to come up to dinner and make our acquaintance."

Merton Caldwell found his welcome singularly unaffected and warm. After a pleasant evening he was invited to make the castle his headquarters, and the upshot was that, a week later, he was still a guest there, and his host, the squire, resolutely refused to let him depart, at least until the relationship had been cleared up.

"I think," he said, "that you and Lucy are twenty-ninth cousins."

Lucy was the most delightful cousin he had ever had.

She proved a mine of genealogy.

"Why, I do believe I didn't finsh that story of the legend," she said one day, when they stood side by side at the tomb. "You know Lady Browne was really a bad woman. She ran away to Lyonesse, in the west somewhere—a mythical country far out in the Atlantic—while Sir Roger was in the Holy Land. When he came back he prophesied that in eight hundred years she would come back to him, and he would recognize her and rise out of the grave and pardon her."

There was a newcomer at dinner—a Caldwell. He was a young fellow just down from Cambridge, and evidently an old friend.

"I'd have known you for a Caldwell any day," he said to Merton. "Do you know you are the exact image of Sir Roger?"

After dinner the squire took him aside. "I ought to tell you," he said, innocently, "that Mr. Caldwell and Lucy are to be married next autumn. They have been engaged for a year. So if they are a little inhospitable you—you'll understand, eh?"

"Yes," answered Merton, dismally.

An hour later he was in the Norman church, beside the tomb. He must leave on the morrow.

A beam of moonlight lit up the ancient lady's marble face, and, as it did so, Caldwell started back with an exclamation of amazement.

The face of the knight was his—so much he had seen. But that of the lady was—not Lucy's, but Miss Brown's.

Half an hour afterward he was bidding his host good-by in the hall of the castle.

If Miss Lucy had guessed his feeling she would have thought herself mistaken when she looked into his frank face.

"I hope you will both be very happy," he said. "And perhaps the old alliance between the Brownes and Caldwells will be repeated many a time."

They did not quite understand—until they received his wedding announcement.

For, important as his business might have been, Merton Caldwell hurried first to Cape Cod. And he found Miss Elizabeth walking upon the sands alone.

She stopped and looked at him in astonishment, and the color flamed in her cheeks.

"You—have come back?" she stammered. "You didn't like England, then?"

He laughed. "I love it," he answered, "because—because—did you ever hear about the legend of Sir Roger Browne?" he asked.

"No," said Miss Elizabeth, innocently. "Why?"

"I'll tell you on our honeymoon," he answered. "You see, you committed a great wrong eight hundred years ago, and now you've got to atone for it by marrying me."

THE ASSISTANT

By BERTHA M. JONES

©, 1921, by McClure Newspaper Syndicate.

Stanley sat with his thin little legs curled up on the window seat and his nostrils pressed against the green shutters, half closed against the hot sunlight. He was watching a maimed electric car being repaired in the car-barn across the street.

Stanley's world was bounded by electric cars. For the last five of his eight years he had studied them from the shutter chinks, had listened to their comings and goings, until he had come to know the difference in sound between a car on wheels of cast iron and one on wheels of steel.

And then car "78" became distinguishable from car "53" just by its own special clank and clatter; and he could tell car "53" from car "618" in the same way.

These were his pet cars, the ones which passed the window seat oftenest.

Stanley was always unique. He was six years old before his frail little frame decided it could move around and carry the weight of his well developed head.

So Stanley remained in his window nook and studied the street cars. On cool summer days, when the shutters were wide open, the chairman of the tram company, who lived in a beautiful house near the car-barn, sometimes came over and spent a few minutes talking with Stanley, giving and receiving information. And he it was who put upon the little chap the honorary title of "Assistant Manager of the Tram Company"—a title by which Stanley loved to designate himself to any new visitors whom Grandma Beverely might entertain.

The greatest day of all his life had been when the chief engineer took him for a ride all around the city in the observation car.

And now had come a day when Stanley, in the window seat, watched with unusual solicitude the maimed car which had been pulled into the car-barn. It was car "53," driven by Mr. Ross, his favorite driver, who so often waved to Stanley while passing his observation nook.

An accident had happened to "53" and Driver Ross had been discharged from service. The news came to Stanley through Grandma Beverley.

The accident happened away out of sight of the window nook.

Stanley had noticed how beautifully "53" appeared that last morning on the rails when she came out of the barn, newly painted and newly fitted. How fine Driver Ross had looked there by the wheel! But before noon the news came to Grandma Beverley that "53" was piled against a house with her machinery broken. A loose brick in the old street pavement had caused her to slide from the rails so easily that the driver never noticed. And then a turn in the street came, and "53" did not respond to the brakes, but rolled ignominiously into the wall of a house, much to the terror of passengers and residents, and most horrifying to Driver Ross.

"Grandma, what will become of Driver Ross in his old age?"

"Dear me, how can I tell? He'll maybe have to go to another city and hunt for a long time for even one day's work."

"He can't go to any other place, Grannie, for his wife is sick all the time."

"That's so, child."

"Grandma," Stanley pressed between the old lady and the stove and stood with arms folded. "Grandma, I feel like going over and consulting with the chairman about this."

"Very well, dear, perhaps that would be better," and Grandma winked at Billy, the cat.

Stanley put on his broad sailor hat, and holding Grandma's hand, he walked over to the beautiful home of the chairman of the tram company.

"Mr. Fraser," he said, when the maid had brought him into that gentleman's office, "I have come to speak with you about Driver Ross.

"Yes, Stanley," said Mr. Fraser, "and I'm pleased to have you come. Now let's sit down and talk."

"You see, Mr. Fraser, it's this way with Ross, he's been with your company so long he won't understand how to start in any other business. And then it's not fair to turn a good man off for his first offense."

"Well, Stanley," Mr. Fraser began, looking kindly on the quaint little chap, "you must admit it was a gross error, the worst accident we've had on our cars in years. The public won't stand for blunders like that."

"Mr. Fraser, if you worked hard for twenty years and never made one bad mistake till then, you wouldn't want to be turned down, would you?"

"No, it would be hard. But what can we do? Ross is getting old and evidently rusting out."

"I'll tell you, Mr. Fraser, what to do," and Stanley folded his small, boney hands enthusiastically. "You make Driver Ross over into Conductor Ross and let him go on '53' just the same." And in his excitement Stanley rose and patted Mr. Fraser's arm nervously.

The chairman of the tram company thought awhile and then said slowly: "I like your idea, Stanley. I'll put it before the company tonight."

When "53" went again on the rails, newly fitted and looking splendid, it was Conductor Ross who waved a joyous greeting to Stanley in his window nook.

MISS SILVER LINING

By MOLLIE MATHER

Copyright, 1921, Western Newspaper Union.

Rain, rain, and sombre clouds, an unfamiliar village street, and a man trudging along, gloomily. At the farthest end of the street, a weather-beaten house, its faded green blinds closed against possible sunshine, its verandas bleak, and wind-swept.

To this uncomfortable goal, the stranger forced his way. He questioned a passer-by as to where entertainment might be found, and was directed uncertainly, to the shabby house at the end of the street.

"Mebbe Miss Perkins will take you in", offered the passer-by.

When Philip Clogston agreed to run out to the country to look over the farm his elderly sister anticipated buying, he expected to drive the fifty odd miles in his car. Minerva was imperative that he should go no later than Wednesday, and on this Wednesday afternoon of stormy weather, roads leading to the unfrequented country were almost impassable. So Philip, impatient with this new whim of his whimsical sister, boarded the train.

Upon his arrival at Lynden village, he found that the next returning train would not leave until eight o'clock that evening, the farm which he was to pass judgment upon, was four miles up an isolated road. He decided, still angrily, to go back at eight o'clock without fulfilling his errand.

What did Minerva want with a farm any way? But then why did Minerva enter into any of the foolish business ventures which claimed her purse and attention.

The shabby old house was opened by a grim-faced woman who eyed him with hostility.

"I was directed here," said the confident man of big enterprises.

"Come in," said Miss Perkins, and he followed into the dismal parlor.

"I kin give you some ham an' home-made bread an' coffee," the woman offered laconically, "if you want to git warm, come out to the kitchen."

"Thanks," Philip returned drily, "I will wait here." He settled down in his overcoat frowning. "Woman are queer," he reflected, "wherever you happen to meet them." His memory of his own mother was that of an exacting invalid. Minerva, with whom he made his home was a creature of changing, unreasoning mood. Then here, was this stolid, unconcerned, village woman. He smiled satirically, as an engraved motto caught his eye. "Every cloud," said the motto, "has a silver lining." "Great promise that, in this tomb of a room," he meditated. Then across the rattle of wind and rain outside came a ripple of soft laughter.

"Well, that's my last splashing I hope," called a girlish voice. Philip looking through the window saw a young woman turn to wave to an old man who had evidently brought her to the shabby house in his buggy. He heard her explaining to Miss Perkins.

"I came out from the city as a surprise to visit Aunt Ellen, and I find that Aunt Ellen has gone away shopping until tomorrow. Will you take me in for the night, please Hannah."

"Well, mebbe," Hannah, graciously complied. "They's a man in there, come to supper," she added.

"Good afternoon," she greated Philip pleasantly, and turned quickly to light the forbidden fire.

"We are going to be cheerful" she told Hannah firmly.

"Hannah," cried the girl "I am coming out to the kitchen to make a fluffy omelette to go with that ham; you used to let me play about in the kitchen when I was a little girl, and we will toast the bread, and have our meal here on the little table before the fire. No, you must not object, you shall be company this evening in your own home."

Clogston threw aside his outer coat, the room, all at once was full of rosy light from fire and lamps. The visiting girl hummed happily as she laid the white cloth on the small table. She wore a dress of vivid scarlet which matched the color of her lips.

"It's my old gray crepe," she informed Hannah, laughingly. "I dyed it to wear on days like this, when I'm alone; it makes me feel cheery."

Later, as Hannah washed the dishes, the girl answered a bit ruefully to his questioning concerning her identity.

"Who am I? Oh, I am just a failure, I went four years ago to the city to study art. I was to be a great illustrator. Aunt Ellen still believes in me, so that she would sell her farm in order to come on and help me. But I won't have that sacrifice, so I hurried home to prevent it. I grew up, you see, in Aunt Ellen's care."

"My name is Clogston," Philip abruptly announced, "and yours?" But the girl smiling, shook her head.

"Tomorrow," she told him, "we shall have gone our separate ways, and names will mean nothing to us. Good night."

Philip arose: "When you came here," he said, "I was lost in a cloud of gloom, you gave to that cloud a silver lining. Tomorrow and through all the tomorrows to come, I shall never forget you. And now, good night, Miss Silver Lining." She glanced at him, moved by his earnestness, and her blue eyes widened, in new soft wonder.

And as the train bore him citywards, Philip sat, lost in a great content. For he knew that he would find again, and win for his own, this girl whose bright presence had vanished so miraculously all his past years, of gloom.

Farmers State Bank
OF GOODRIDGE

ENORMOUS DAMAGE BY RATS TO FOODSTUFFS

Loss of $200,000,000 Annually in United States.

To Effect Complete Extermination of Rodent Pests United Efforts of Every Home Owner and Tenant Are Needed.

(Prepared by the United States Department of Agriculture.)

Damage totaling $200,000,000 in stored foodstuffs, grain, field crops, and other injurable materials is done by rats in the United States annually. Only the united efforts of every home owner and tenant can effect the abolition of these rodent pests. The Biological Survey, United States Department of Agriculture, is starting a big campaign against rodents throughout the eastern United States. Much already has been accomplished in the matter of control in the Western and Middle Western states, where effective cooperation was secured. On the other hand, residents of the Eastern and Southern states, as a rule, have been exposed to widespread ravages and attacks from rodents for such long periods that they have become so accustomed to the nuisances as to accept them as a matter of course. Uncle Sam is doing his utmost to awaken these sections to the need for eradicating rats.

To illustrate the enormous damages which rats annually accomplish in grain and corn fields, the experience of the state penitentiary farm, covering [illegible] the rats overran the prospective cornfield, leaving in their wake paths of destruction. Undeterred, the farm manager planted the field to corn a third time, and ultimately secured a poor stand, which resulted in the production of about one-third of a normal corn crop.

Rats Menace Food [illegible] With Disease and Cause Much Loss and Waste.

[illegible]

"Read the Riot Act."

The use of this expression really applies to giving warning to those engaged in wrong-doing, and has its origin in the Riot act, an English statute of 1775. It provided that if 12 or more persons were assembled unlawfully and disturbing the peace, any mayor, justice of the peace, sheriff or undersheriff by proclamation could command them to disperse. If they refused and remained together for an hour after the proclamation, all of the persons participating were guilty of felony. Also anyone interfering with or preventing such proclamation was guilty of felony.

Local News Items

Mrs. Nick Bundlund was shopping in Thief River Falls Tuesday.

B. G. Walker of Thief River Falls was a Goodridge visitor Thursday.

Mr. and Mrs. Carl Christianson were Thief River Falls visitors Tuesday.

Miss Agnes Aakre left Monday to begin a term of school near Wanke, Minn.

H. B. Rockne left Tuesday evening on a business mission to the Twin cities.

Miss Della Urdahl left Thursday for Mizpah, Minn., where she will visit friends.

Prof. Norby returned Saturday from Fosston, where he spent the holiday vacation.

Mrs. J. P. Jensen and daughter, Miss Ruby Jensen, were shoppers in Thief River Falls last Saturday.

Mrs. J. J. McCabe and little boy left Wednesday afternoon for Northfield, Minn., to visit Mrs. McCabe's mother.

Rev. Cook of Thief River Falls will conduct services in the school house next Sunday at 11 o'clock in the morning.

Mrs. Ole Prestebak and infant daughter returned last Friday to their home at Thorhult, after a visit at the parental home.

Mrs. Christina Vake and daughter, Oscar Kulseth and Anton Lien visited at the home of Mr. and Mrs. E. Grimley Sunday.

Misses Gretta Gulrud and Della Urdahl returned Tuesday evening from a visit with Mrs. Ole Prestebak at Thorhult.

E. J. Beithon returned Tuesday from his holiday visit to Duluth. He was delayed one day on account of a sprained ankle.

Misses Theresa Aakre, Louise Besancon and Lizzie Johnson returned Monday to resume their studies at school in Thief River Falls.

Misses Gretta Gulrud and Della Urdahl returned Tuesday from Thorhult, where they have been visiting Mrs. Ole Prestebak.

Mrs. Will Wayne and children returned Monday to their home after an extended visit at the home of her parents, Md. and Mrs. Jay Payne.

The firemen have a dance sceaduled for tonight at the Goodridge hall. Oyster supper will be served at the Stephenson cafe, and the ladies are asked to bring cake and other accessoriee.

Eugene and Jesse Tanner, the Frie wolf hunters, were in town Tuesday on an expedition against their enemy—the wolves. They caught three wolves within two days the latter part of last week.

A baby girl was born to Mr. and Mrs. Henry Limesand on Sunday, Dec. 4. Though some oversight mention of it was omitted from these columns, for which we beg the pardon of all concerned.

An electric light meeting was held Monday evening, called at the instance of Councilman Carl Edseth, to consider the matter of alleged inconsistencies in the charges. It was thought that the difficulties could be arranged and after considerable discussion an informal vote was taken, which showed a majority in favor of retention of the meters.

School Notes

School opened again after the usual holiday vacation on Monday with a strong attendance.

The midyear state examinations for high school subjects will be given on Thursday and Friday of next week in the following subjects: Commercial Arithmetic, Senior American History, Botany, Animal Husbandry.

The classes now pursuing the above studies will register for the following half year subjects the second semester: Commercial Law, Civil Government, Zoology, Manual Training and Mechanical Drawing.

The Domestic Science classes will serve lunch to the public on Saturday afternoon. Remember the day, attend the Farm Management school, and stay for lunch.

Oscar Kulseth went to Thorhult Tuesday morning.

Carl Lindstrom has been on the sick list this week.

Mrs. Elmer Olson was a Thief River Falls passenger this morning.

Owen Olson and Victor McLeod have been busy hauling wood this week.

Alfred Lund of Thief River Falls was visiting friends in this vicinity Wednesday.

Olaf Fjose, who has been stopping with his friend, H. Hermanson, was in town a few days this week.

Rev. Opsata was at the O. K. restaurant Wednesday night on his way returning from the Twin cities to Espiee.

Henry Tharaldson, the fur man, recently purchased a stock of furs from Stephen Singer of Kratka amounting to more than $800 00.

We have been well supplied with inspectors this week. There has been a hotel inspector, a boiler inspector, a postoffice examiner, and not long since a bank examiner. Goodridge appears to have stood the shock fairly well.

Urgent Call for Clothing

The ladies of the Red Cross wish us to announce that there are several calls for clothing. Will anyone who has anything that can be made over leave it at the Winton-Nichols lumber office, so that the ladies can remodel the articles ready for wear.

The call is urgent.

Readjustment of Light Rates Planned

The village council, at a meeting on Wednesday evening, evolved a plan for re-adjustment of the electric light rates. The proposition is to make a flat rate per month to each patron, to be in effect throughout the year. A tenntative schedule of rates was proposed which was thought to be just to all patrons. This list will be submitted to the public at a meeting to be held tomorrow, Saturday, evening for discussion, amendment and adoption or rejection.

Every user of electric light is urgently requested to be present express his opinion in regard to the rates and to see that justice is done to himself and to all concerned.

Potato Growers' to Meet

Mr. R. C. Rose, extension specialist of the university of Minnesota and a representative of the Minnesota potato exchange, will be in Thief River Falls on Jan. 24, St. Hilaire Jan. 25 and Goodridge Jan. 26. The program in each place will start at 1:30 p. m. and close in time for farmers to go home early. The program offered will be of special interest to all potato growers Plans will be made to have a potato exhibit at the Farm Crops show at Crookston on Feb. 6 to 10. The topics taken up by Mr. Rose will be on seed treating, potato spraying, seed plots, storage troubles, and means of avoiding same by improper handling

ERIE ECHOES

Edw. Singer, Justin Hanson and Andrew Nelson were Goodridge and Thief River Falls business visitors Tuesday.

Alfred G. Iverson visited with his cousins, Olaf and Alice Dahlen, Sunday.

E. A. Tanner et al. have shot five wolves this season and K. Sauaren and Obi Oiatlid have each trapped a "lobo."

A dance social took place at the Oliver [illegible] home Saturday evening. All attendants report a good time.

Mrs. S. Rouze spent the week end at her mother's home in Goodridge.

Notice: The bachelor who got away with————hand-bag is known and had better return same to owner without delay or take the consequences of having his premises visited on the authority of a search warrant. Diapers are not logical things to use for dish towels, anyway.

Mrs. Ida Johnson and Mrs. Myrtle Rouze called on Mrs. Z. J. Hole on Wednesday afternoon.

The Sad Side

From "[illegible] of Interest'' gleaned on trip [illegible] north woods and, as it happens, [illegible] is no ''spin uy.''

It was one of the coldest and ugliest of winter days. By the way, there was a young man, a returned soldier, employed in the camp who had recently married a girl a few years younger than he. A bright and beautiful baby girl had already come to them. The young husband had, shortly, arranged with the concern for living quarters in a small room, an adjunct to the camp's office. But this was available no longer and the ''adventurers'' were obliged to seek some other abode. All the places were filled, so the young lady had not succeeded in obtaining work in the camp kitchen, as had been part of their little plan. ''I don't see what that man is thinking about: taking his wife and baby to a place like that,'' remarked Jim, the Barn Boss, disapprovingly, to his fellow lumber jacks when they were gathered around the huge bunk house stove in the evening. Jim, just returned from the trip, further related his taking the young couple with their two year old [illegible] also accompanied by the wife's young brother, to a place about three miles out from the camp. Their household outfit, consisting of a few blankets and other few items of the most needed kitchen utensils, they had packed down in a dry goods box. Here at their new location they had planned to make their home pending the time daddy was at work in the woods. The shack had no door except some boards placed up against the door opening. The windows were broken, no floor. When the barn boss left the party the girl wife was sitting on the trunk in the shack with her little, huddled up in a blanket. And hardly is it necessary to add that she was crying.

The Gummer Trial

The trial of William Gummer, charged with the murder of Marie Wick of Grygla at a hotel in Fargo on June 7, 1921, began last Tuesday at Valley City, N. Dak., where the case was taken on a change of venue from Fargo. The empanelling of a jury occupied the first two days. All the jurors chosen are farmers.

Hans Wick, father of the murdered girl, was the first witness called yesterday, and told of her leaving home June 4, to Pettibone, N. Dak.

Annual Meeting

The stockholders of the Goodridge Cooperative Creamery association will hold their annual meeting Saturday, January 28. A full attendance is an absolute necessity.

j13 2t STUART McLEOD, Secy.

Farm Bureau Calls For Machinery Cut

Prices of farm machinery manufactured at the state penitentiary must be drastically reduced, representatives of the Minnesota Farm Bureau federation told the state board of control at a conference last week.

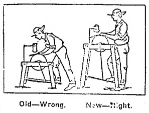
The demand for reductions in farm machinery prices was one of the first acts of the new farm bureau administration. The delegation representing the farmers was headed by J. F. Reed, new president of the state federation, and included F. E. Lammers, vice president, and J. J. Jacobson, George Freeman, Thomas E. Cashman and J. D. Pyle, directors.

The farmers' dollar is worth only 61 cents in comparison with the price of products he has to buy, the farm bureau representatives said. Prosperity cannot be restored until the cost of machinery and other commodities the farmer must purchase is brought down somewhere near the value of the things he has to sell, they declared. The penitentiary, a public institution serving the whole state, is now supported entirely by the farmers, Mr. Reed said. He argued that machinery prices should be cut and all citizens, if necessary, share the expense of maintaining the prison. The machinery plant was established originally to compete with private manufacturers and compel them to charge reasonable prices, the farmers pointed out. A drastic price cut is necessary, they said, to make the prison machinery plant a real competitor with private firms and carry out the intent of the law.

PLAN TO MOUNT GRINDSTONE

Best Way Is to Have Legs Long Enough That Person Using It Won't Have to Bend Over.

The time-honored way of mounting a grindstone is on a stand with short legs so that both the person grinding and the one turning the stone have to stoop over and get a crick in the back. The new way is to have the grindstone mounted on a stand with longer legs so that both grinder and turner can stand almost upright. The turner is done away with by the foot lever shown above, contrasting the wrong mounting with the right standard. Still better is it to attach a small fly wheel and belt to the grindstone so that it can be operated by power from the engine on spray rig when not otherwise used, or from any movable or stationary engine available, or from an electric motor.—Farm and Home.



Old—Wrong. New—Right.

PREPARING GROUND FOR OATS

Many Successful Farmers Have Proven That It Pays Well to Disk Before Planting.

Experiment stations and many successful farmers have proven that it pays to put the ground in good seed bed condition before sowing oats. Disking of the stalk ground has proven better under most conditions than plowing, as it provides a seed bed that is better adapted to the requirements of the crop. As for wheat, the seed bed for oats should be firm underneath with a few inches of mellow surface soil. This sort of a seed bed can be produced by disking.

TILLIE

By CAROLINE H. WILSON

©, 1922, by McClure Newspaper Syndicate.

"Once upon a time Christmas was Christmas! It hasn't seemed like it for the last few years. Last year, you remember, Tillie, father and I spent it in a New York kitchenette with Anna. You know when she came from France she stayed in New York and continued her nursing there. The year before we went to Andrew's, and after traveling that distance the house was filled with his in-laws. John's three children were mere babies the year before, and I spent all Christmas day helping Jennie do the housework. No, a good old Christmas at home is a cherished memory of the past, Tillie," finished Mrs. Swain, with a sigh.

"Well," said the faithful old maid of all work, "we all grow old and Christmas loses the charm it had for us in our childhood."

"I suppose so, but father and I both feel it. He never really grew up. Not one of his children ever enjoyed Christmas any more than he did preparing it for them. He'd like to spend Christmas at home and have John, Andrew and Anna, just as they used to come home from college on their vacations."

While mother was pouring the coffee, a few mornings later Tillie handed her a letter from John.

"It is from John, father," said mother Swain before she had even opened it. "Of course we'll have to go, but I had hoped to stay at home," tearing the letter open sharply.

"Why, how sorry I am! The children are all in quarantine with the measles! No Christmas party there this year.

The next day a similar letter came from Andrew.

"Sorry, mother, but the wife and children are going to spend Christmas with her folks in Illinois.

Nothing, not even a Christmas card, was received from Anna.

"But we could not expect her to give up such a brilliant career for us," excused mother.

"I suppose not," said father, thoughtfully.

"I guess you and Mr. Swain will spend Christmas at home this year after all," said Tillie, with the freedom of speech born of 35 years of loving service.

"Well, I'll be glad to," said mother, looking hastily at father.

"Hang up the stockings just as we used to do if you'd think you'd enjoy it, mother. I'll buy the train of cars and the jew's harps, and the jackknives to fill them. You might dress a doll and make some candy. Guess after the day is over we might drag in somebody off the street to take them off our hands," said Mr. Swain, thinking he had hit upon a brilliant idea.

It began to snow. "A regular old timer!" exclaimed mother, in delight. "But it's going to be lonesome," warned Tillie, watching her make the red tulle candy bags.

"I'll have to put a stop to their quixotic plans for Christmas, somehow," Tillie murmured.

Next morning Tillie mailed three letters and then did a little private shopping of her own.

Christmas eve Mr. and Mrs. Swain appeared just in time to hang up the stockings before the roaring fire. Tillie watched them in silence and then hung up another one, a gray wool one that she had intended for the Red Cross. Mother and father were safely tucked in bed. Tillie stole out into the kitchen and unlocked every door that Mr. Swain had so carefully bolted. Then she went into John's room, and Andrew's, and Anna's and turned down the sheets. Then softly, on tip toes, to the little guest room in the attic next to Tillie's, where the children used to put their overnight friends.

"It seems just like heaven," father. I seem to hear someone singing." Just then a full quartet was heard under the window, singing "Holy Night." They dressed and came downstairs in wonder. The first sight that greeted their eyes was a gorgeous Christmas tree, although it was hardly yet dawn. Tillie stood by the stockings, beckoning to the singers. They trooped in and took mother and father in their arms. "I was coming as a surprise," said Anna, drawing Harold forward. "But it was Tillie who got the boys to come. And see my ring—I am going to spend every Christmas with you from now on, for I'm to be mistress of the Winslow house."

Mother and father were nearly in tears.

"The three children are yours again," said Tillie.

"Tillie, you are a Christmas fairy," said father, "but let us look at your stockings, children. I want to spin a certain musical top."

"Up to your old tricks, dad," laughed John.

CHIMNEY-CORNER SCHOOL BIG AID

Latest Information on All Subjects Is Available for Improving Farm Work.

MANY BULLETINS PUBLISHED

Important That Farmer Should Read Up on Textbooks for Purpose of Making Better Crops and Raise Better Stock.

(Prepared by the United States Department of Agriculture.)

Old pioneer stories tell of boys who, after working all summer in the clearing, attended school in the winter. Conditions have changed but little today, so far as spare time for study in the summer is concerned, but winter still offers its opportunities, and no matter how old or young the farmer is, he can generally find time at this season for a few extra licks at "reading up" on some phase of farming that will come in handy next year.

A School Around Fireplace.

His schoolhouse may well be in his own chimney corner. He has a wide range of subjects to pick from and is bound to find something on practically every question of farming with which he is concerned. During the year there have been printed a considerable number of good textbooks on farming. The United States Department of Agriculture, as well as the various state agricultural colleges, has embodied in bulletins the results of long and patient labor on various things pertaining to farming, and have put into type facts that will mean dollars to the farmer who learns them and puts them into practice.

The Chimney-Corner College of Agriculture May Well Be Coeducational.

Of course, this chimney-corner school of agriculture allows its students much leeway. The curriculum is largely elective. The farmer may study one subject and leave another alone, as his interests and his business may dictate.

The Department of Agriculture has been publishing bulletins for a great many years. Hundreds of Farmers' Bulletins have been issued and every one of them discusses something that means money or better living to a large class of farmers. Many of the subjects have been supplemented and localized by state agencies—the agricultural college or the state department of agriculture.

There is no reason why any farmer may not have all the scientific information that exists on all phases of agriculture that mean anything in his particular operations. All he has to do is to read and study by his own fireside. If he needs tutoring, there is the county agent, whom he can consult when he goes to town on Saturday—or he might possibly have the agent out to supper and a session by the fireside some night.

The Department of Agriculture has printed lists of its various publications. Any farmer—or any city dweller or suburbanite who is interested in chickens or a garden or any of the things that pertain to farming—can have a copy merely by writing for it.

Then he can mail this checked list to the Department of Agriculture, and the bulletins checked will be sent to him without charge. There are a few bulletins the supply of which has become exhausted and copies are no longer given away, but they may be bought for a few cents each from the superintendent of documents at Washington. The procedure is explained on the list that is furnished by the department.

It Pays to Go to School.

Every farmer owes it to himself and his family to find a little time to go to school every winter—to read 5, 10 or 20 bulletins that will help him to make better crops, better live stock, to carry on his operations with less exhausting strain on himself.

It should be mentioned, too, that this chimney-corner college of agriculture is coeducational. A large number of the bulletins are devoted to household subjects. They contain information that will enable the farmer's wife better to carry her half of the load—to feed the family better with less work, to realize more for the portion of the farm output that comes under her direction, to have the minimum of inconvenience in the house and to get the maximum of comfort out of it—a thousand things that will help along in making farm life pleasanter and more profitable.

"MACBETH"

By JENNIE LITTLE

©, 1922, by McClure Newspaper Syndicate.

"Sizzling hornpouts! This bloomin' racket again. This is goin' to stop," and the irate lodger began a hasty toilet with murderous eye. Ten minutes later a stalwart policeman thumped on the door of a tiny cottage sandwiched between tall tenements like filling in a cream pie. In the patchwork square of a back yard a young chanticleer stood filling the air with lusty efforts at grand opera. A little woman, puckering her brows near-sightedly, opened the door, starting nervously as a policeman's bulk loomed up.

"Ma'am," he said, sternly, "that pestering fowl is a public nuisance and peace disturber. A night watchman has that room yonder and he claims that when he tries to sleep mornings that bird starts crowing.

"Oh!" gasped Mrs. Sarah Lib, "I had no idea. I love to hear him. I pretend we're in the country, and it's all the enjoyment I get."

"Well," said the officer kindly, for he caught a tremble on her lips, "no harm done if you subdue him so there won't be any more complaints."

Next morning golden silence made a background for the lodger's dreams, but he turned restlessly and woke often. But the second day his ire burned high as the familiar strains rent the stillness.

The officer knocked again, and now the quiver of Sarah Lib's lips was disconcertingly evident. "Oh, dear!" she faltered, "you won't arrest us, will you? I put adhesive plaster round his bill and it worked fine at first, but he's clawed it off."

"You'll have to get rid of him, ma'am."

"Her eyes blazed. "Eat Macbeth? I'd sooner eat a relative! Please give him another chance!"

"We-ell," said Burke slowly, as if canceling a life sentence. Turning to go, he sniffed a delicious aroma. "Say, that's the first real coffee I've smelled for ages. Bet you can rival what mother used to make. Nowadays I try to guess if I'm drinkin' tansy or dish-water."

Her face lit up like a sunrise, and right there the officer got a jolt. Why, she wasn't bad lookin'. She faltered, visibly frightened at her own temerity. "Would you stop and have a cup? I'm just getting breakfast."

The rest of the day, though coping with the painful problem of suppressing Macbeth's musical talent, a warm feeling glowed in the back of her maidenly heart, and when she prepared the meals she blushingly laid two plates as a reminder of what had been. After tea she had to go several blocks to match material for a gown which was promised for next day, and as she waited to cross the crowded street, her policeman himself brought traffic to a standstill with majestic gestures, then piloted her across with strong hand under her elbow. "Wait here two minutes, ma'am, till I'm relieved. I'm just taking the place of a pal that got hurt, and when his sub comes on duty I'll see you home. You shouldn't be out alone as late as this."

Sarah Lib, dutifully obeying, slipped home beside her protector.

Alas, how sorrow treads upon the heels of Joy! At 5:30 a. m. under friend lodger's window came that song, "and nearer, clearer, deadlier than before," for Macbeth stood on the ridge-pole of the cottage, challenging the world.

When her officer arrived he found a tableau in the yard. Beside a block stood Sarah Lib, hatchet in hand, and chicken clasped to her breast, a life-size representation of Niobe mourning prematurely for her children.

"Here," she sobbed, thrusting weapon and victim upon him. "Wait till I get in and put the pillow over my head. Take the remains where I'll never know. I shut him in a box in the attic and he got the slats off. 'Tain't fair. Why ain't I called Sadie, wearin' blue ribbons instead of dark ginghams. Oh, dear!"

The kindly officer drew them both into the grapevine shelter. "Ma'am, I've thought considerable the last day or so, which is a fair sized stunt for [illegible]

me. I know the neatest little farm up country with no neighbors, where this biped can crow his head off, if you'll marry me and go there. I'm sick of rough-necks, and I want to raise beets instead of being everlastin'ly on one. Be married in blue—Sadie, and I'll always be true. Hm?"

Well, a woman can't keep a secret, but Mrs. Sadie never knew that ex-Officer Guard and the lodger were one. She almost chokes sometimes from quaffing the draughts of happiness, while Macbeth has won a blue ribbon at the Bingham poultry show, to match the ones his mistress wears, and wastes his vocal sweetness on the country air.

Would Save Historic House.

The house in which General Emilio Aguinaldo lived when he was captured by General Frederick Funston has been virtually consumed for fuel by the inhabitants of Palanan, Isabella province, only a few posts of the structure being left standing, according to a report of J. H. Butler, superintendent of schools of Isabella, to the director of education. The superintendent thinks the house should be of historic importance, and suggests that steps be taken to preserve the site and what is left of the building.

SILAGE IS FAVORED BY CATTLE FEEDERS

Rapidly Attained Use Among Producers of Beef.

It Will Not Fatten Animals Unless Accompanied by Concentrates of Some Kind—Most of Cornstalk Is Used.

(Prepared by the United States Department of Agriculture.)

It has not been many years since corn silage was considered merely as a feed suitable chiefly for dairy cows, but it has rapidly attained a wide use among beef producers in the corn belt. Now all feeding that is not done on pasture may be divided into two classes—that in which silage is fed and that in which it is not fed. As a whole the two classes are now about equally divided, but in some states the difference is very marked. Surveys by the United States Department of Agriculture covering the last two winters showed that 83 per cent of 4,556 cattle fed in Indiana received silage in their rations, 87 per cent of 7,2[illegible]0 in Illinois, 30 per cent of 8,2[illegible] in Iowa, 8 per cent of 6,1[illegible] in Nebraska, and 50 per cent of 8,9[illegible] in Missouri.

Where silage is used it supplies most of the roughage. Nearly all the silage is made from corn, probably 99 per cent of the total. Sorghum, sunflowers and legumes are sometimes used in localities on the extreme edge of the corn belt, such as western Kansas and Nebraska and western and northern South Dakota. A greater use of silage depends largely upon the supply and value of other roughage.

The main facts about the use of silage in fattening cattle are thus summarized by the department: The greater the proportion of silage to corn the cheaper the gains. The greater the quantity of corn the less silage consumed. Silage will not fatten cattle unless accompanied by concentrates. In silage most of the cornstalk is used. Cattle fed on silage will eat more straw or stover. If purchased protein feeds are added to the feed, the resultant manure is richer. Silage-fed cattle do not finish quite as well as those strictly dry-fed. Adding corn to the silage produces a better finished animal that usually brings a better price, and it also results in better gains on hogs that follow the cattle. Silage-fed cattle shrink more than those fattened without silage. The price of corn and the value of other concentrates should be a guide to the limit of corn in a silage ration.

TUBERCULOSIS HITS CATTLE

Disease as Apt to Affect One Breed as Another—Immunity Depends on Management.

Tuberculosis is as apt to affect one breed of cattle as badly as another. No breed is immune and no breed shows greater immunity than another, according to a study by government officials of official tuberculin-test records of nearly half a million animals. The beef breeds seem to be as badly affected as purebreds. The relative freedom of a herd from disease depends upon the management which it receives.

Just Said to Be.

Absent-mindedness is said to be much more prevalent among men than women, but the true explanation of this may be that a woman might go down the street with her hat on hind side before and no one would ever know the difference.—Ohio State Journal.

B LOW ZERO WEATHER Is Here

And it is time to buy what wearing apparel you need for the extreme cold weather.

Our stock of heavy underwear, caps, mittens, mackinaws, socks, felt shoes, overshoes and other winter goods is the best we could buy, and we are selling it RIGHT. ESTIMATE FEED COST OF EGG PRODUCTIO

Records Show About What Amounts Are Used by Fowls.

Value of General-Purpose Breeds for Market, or for Hatching and Breeding Makes Them Most Desirable Birds.

(Prepared by the United States Department of Agriculture.)

Careful poultrymen like to know what it costs them to produce a dozen eggs, but it is not possible for anyone to tell them. With certain information obtained through experimental feeding to start with, they must figure it out for themselves. Since the feed constitutes the principal cost, it is possible to get some idea of the real cost if the amount of grain used in making a dozen eggs is known. The United States Department of Agriculture has kept records that show about what amounts are used by general-purpose fowls and Leghorns, and by using the local price for grain in connection with these figures the feed cost of a dozen eggs can be obtained with fair accuracy.

The grain consumed to produce a dozen eggs will vary a great deal depending upon the skill of the poultryman, but it is assumed that he knows how to feed economically. The general-purpose fowls and Leghorns used in this feeding work were kept on the test while pullets and yearlings. As pullets the general-purpose fowls produced 130.5 eggs a year and 88.1 as yearlings. The Leghorns produced an average of 138.7 eggs as pullets and 124.9 as yearlings.

The general-purpose pullets ate in a year an average of 6.7 pounds of feed per dozen eggs produced, and the yearlings ate 9.6 pounds. The Leghorn pullets ate 4.8 pounds and the yearlings 5.5 pounds. The general-purpose pullets ate 1.9 pounds more feed in producing a dozen eggs than the Leghorn pullets, and the difference increases very rapidly with the age of the stock, the general-purpose yearlings consuming 4.1 pounds more feed per dozen eggs than the Leghorn yearlings; therefore the Leghorn yearlings produced eggs upon much less feed than the general-purpose breeds.

The value of the general-purpose breeds for market, or for hatching and breeding, makes them usually the most desirable breeds for the general farmer and the backyard poultry raiser, while the Leghorns are especially adapted for the commercial egg farms, say the poultrymen of the department.

The Pseudo Husband

By DOROTHY WHITCOMB

Copyright, 1922, Western Newspaper Union.

Mrs. Edith Durham bowed slightly to the gentleman who took his seat beside her at her table aboard the trans-Atlantic steamship. The card upon his plate read "Mr. Durham," and evidently the steward had mistaken him for her husband. She smiled a little at this, because her husband was not accompanying her to New York.

Their conversation was of the usual polite, fragmentary order common to ocean travelers at their first meal.

They paced the deck together, and it was in the late afternoon when Edith Durham turned suddenly upon her companion.

"Does it strike you as ordinary," she asked, "that you have not told me your name?"

"My name?" inquired the man, taken aback. "My name is—James Richmond."

"I asked," said the woman coldly, "because I fancy most people in the first cabin believe that you are my husband. And," she continued, "it seems to me that you have done nothing to dispel that belief. You have not only taken Mr. Durham's seat, but you have kept at my side in an ostentatious manner."

"Mr. Durham is not aboard this ship," replied the other quietly.

"And pray how do you know that?" she demanded.

"I'm going to throw myself upon your mercy, Mrs. Durham," he said.

"Let me tell you all before you say a word," Richmond continued.

"Two days ago I had dined at Princess' restaurant, in Piccadilly. I strolled up toward Hyde Park in the evening, enjoying the summer air and thinking of my future. I had used life successfully; I was becoming known as a leader at the bar. Everything seemed roseate. I had reached Hyde Park before I was aware of it, and, entering, I seated myself upon a chair. As I sat there, concealed by a tree from passers-by, a hansom stopped. A man and a woman in evening dress got out. The man was mad with excitement; the woman was calm.

"He was talking like a maniac, threatening her, apparently.

"I gathered that they were husband and wife. He wanted her to divorce him and she refused. And at last he took her by the shoulders and struck her across the mouth.

"I sprang from my seat and drove my fist into his face. He fell back, striking a lamp-post with his head, quivered a moment, and lay still. When I raised him I could see at once that he was dead.

"I took the first train for Southampton and bought a ticket to America. I booked as James Richmond; my real name is Carlyle. I found, by inquiry, that you were traveling alone though your husband's name was down upon the list."

He looked up for the first time. "If you will let me keep your husband's name," he said, "it will not harm or compromise you in any way. And I can land; otherwise I shall be arrested in New York."

Edith Durham placed her hand lightly on his.

"I will do as you ask," she said, in a voice trembling with emotion, "because of your sister's sake, and yours—and also for the sake of that unknown woman whom you so chivalrously defended, because—because I think she must be glad."

He carried Edith Durham's suitcase down the gangway at New York unmolested.

He helped her into a taxicab and placed her suitcase at her side. He raised his hat.

"I thank you for my sister's sake," he said. "We shall not meet again. I shall go West and you will return to England—"

"I shall never go back to England," she said with sudden vehemence.

He felt that she had something of import to add. He waited. Suddenly she bent toward him.

"Don't you know me?" she asked, with a half sob. "That man was—my husband!"

Observation.

After living in this great big world for three and a half years one just begins to hear all kinds of curious things said—and it is such fun to copy them. Pat's little table was just next to the big one at which daddy and mother sat, and she listened, and she remembered. One night daddy had thoughtlessly not given her any water, so she held her glass up high and cried, "How about a little water for Pat?"

But now she had heard something else, and her reply to almost anything was, "Yes, I noticed it." Daddy's older sister, Marion, had come to the house and one day mother said, "Pat, what do you think? Daddy is Marion's baby brother!"

"Yes," said Pat, nonchalantly, "I noticed it."

Some Aspects of the Farmers' Problems

By BERNARD M. BARUCH

(Reprinted from Atlantic Monthly)

I

The whole rural world is in a ferment of unrest, and there is an unparalleled volume and intensity of determined, if not angry, protest, and an ominous swarming of occupational conferences, interest groupings, political movements and propaganda. Such a turmoil cannot but arrest our attention. Indeed, it demands our careful study and examination. It is not likely that six million aloof and ruggedly independent men have come together and banded themselves into active unions, societies, farm bureaus, and so forth, for no sufficient cause.

Investigation of the subject conclusively proves that, while there is much overstatement of grievances and misconception of remedies, the farmers are right in complaining of wrongs long endured, and right in holding that it is feasible to relieve their ills with benefit to the rest of the community. This being the case of an industry that contributes, in the raw material form alone, about one-third of the national annual wealth production and is the means of livelihood of about 49 per cent of the population, it is obvious that the subject is one of grave concern. Not only do the farmers make up one-half of the nation, but the well-being of the other half depends upon them.

So long as we have nations, a wise political economy will aim at a large degree of national self-sufficiency and self-containment. Rome fell when the food supply was too far removed from the belly. Like her, we shall destroy our own agriculture and extend our sources of food distantly and precariously, if we do not see to it that our farmers are well and fairly paid for their services. The farm gives the nation men as well as food. Cities derive their vitality and are forever renewed from the country, but an impoverished countryside exports intelligence and retains unintelligence. Only the lower grades of mentality and character will remain on, or seek, the farm, unless agriculture is capable of being pursued with contentment and adequate compensation. Hence, to embitter and impoverish the farmer is to dry up and contaminate the vital sources of the nation.

The war showed convincingly how dependent the nation is on the full productivity of the farms. Despite herculean efforts, agricultural production kept only a few weeks or months ahead of consumption, and that only by increasing the acreage of certain staple crops at the cost of reducing that of others. We ought not to forget that lesson when we ponder on the farmer's problems. They are truly common problems, and there should be no attempt to deal with them as if they were purely selfish demands of a clear-cut group, antagonistic to the rest of the community. Rather should we consider agriculture in the light of broad national policy, just as we consider oil, coal, steel, dyestuffs, and so forth, as sinews of national strength. Our growing population and a higher standard of living demand increasing food supplies, and more wool, cotton, hides, and the rest. With the disappearance of free or cheap fertile land, additional acreage and increased yields can come only from costly effort. This we need not expect from an impoverished or unhappy rural population.

It will not do to take a narrow view of the rural discontent, or to appraise it from the standpoint of yesterday. This is peculiarly an age of flux and change and new deals. Because a thing always has been so no longer means that it is righteous, or always shall be so. More, perhaps, than ever before, there is a widespread feeling that all human relations can be improved by taking thought, and that it is not becoming for the reasoning animal to leave his destiny largely to chance and natural incidence.

Prudent and orderly adjustment of production and distribution in accordance with consumption is recognized as wise management in every business but that of farming. Yet, I venture to say, there is no other industry in which it is so important to the public—to the city-dweller—that production should be sure, steady, and increasing, and that distribution should be in proportion to the need. The unorganized farmers naturally act blindly and impulsively and, in consequence, surfeit and dearth, accompanied by disconcerting price-variations, harass the consumer. One year potatoes rot in the fields because of excess production, and there is a scarcity of the things that have been displaced to make way for the expansion of the potato acreage; next year the punished farmers mass their fields on some other crop, and potatoes enter the class of luxuries; and so on.

Agriculture is the greatest and fundamentally the most important of our American industries. The cities are but the branches of the tree of national life, the roots of which go deeply into the land. We all flourish or decline with the farmer. So, when we of the cities read of the present universal distress of the farmers, of a slump of six billion dollars in the farm value of their crops in a single year, of their inability to meet mortgages or to pay current bills, and how, seeking relief from their ills, they are planning to form pools, inaugurate farmers' strikes, and demand legislation abolishing grain exchanges, private cattle markets, and the like, we ought not hastily to brand them as economic heretics and highwaymen, and hurl at them the charge of being seekers of special privilege. Rather, we should ask if their trouble is not ours, and see what can be done to improve the situation. Purely from self-interest, if for no higher motive, we should help them. All of us want to get back permanently to "normalcy;" but is it reasonable to hope for that condition unless our greatest and most basic industry can be put on a sound and solid permanent foundation? The farmers are not entitled to special privileges; but are they not right in demanding that they be placed on an equal footing with the buyers of their products and with other industries?

II

Let us, then, consider some of the farmer's grievances, and see how far they are real. In doing so, we should remember that, while there have been, and still are, instances of purposeful abuse, the subject should not be approached with any general imputation to existing distributive agencies of deliberately intentional oppression, but rather with the conception that the marketing of farm products has not been modernized.

An ancient evil, and a persistent one, is the undergrading of farm products, with the result that what the farmers sell as of one quality is resold as of a higher. That this sort of chicanery should persist on any important scale in these days of business integrity would seem almost incredible, but there is much evidence that it does so persist. Even as I write, the newspapers announce the suspension of several firms from the New York Produce Exchange for exporting to Germany as No. 2 wheat a whole shipload of grossly inferior wheat mixed with oats, chaff and the like.

Another evil is that of inaccurate weighing of farm products, which, it is charged, is sometimes a matter of dishonest intention and sometimes of protective policy on the part of the local buyer, who fears that he may "weigh out" more than he "weighs in."

A greater grievance is that at present the field farmer has little or no control over the time and conditions of marketing his products, with the result that he is often underpaid for his products and usually overcharged for marketing service. The difference between what the farmer receives and what the consumer pays often exceeds all possibility of justification. To cite a single illustration. Last year, according to figures attested by the railways and the growers, Georgia watermelon-raisers received on the average 7.5 cents for a melon, the railroads got 12.7 cents for carrying it to Baltimore and the consumer paid one dollar, leaving 79.8 cents for the service of marketing and its risks, as against 20.2 cents for growing and transporting. The hard annals of farm-life are replete with such commentaries on the crudeness of present practices.

Nature prescribes that the farmer's "goods" must be finished within two or three months of the year, while financial and storage limitations generally compel him to sell them at the same time. As a rule, other industries are in a continuous process of finishing goods for the markets; they distribute as they produce, and they can curtail production without too great injury to themselves or the community; but if the farmer restricts his output, it is with disastrous consequences, both to himself and to the community.

The average farmer is busy with production for the major part of the year, and has nothing to sell. The bulk of his output comes on the market at once. Because of lack of storage facilities and of financial support, the farmer cannot carry his goods through the year and dispose of them as they are currently needed. In the great majority of cases, farmers have to entrust storage—in warehouses and elevators—and the financial carrying of their products to others.

Farm products are generally marketed at a time when there is a congestion of both transportation and finance—when cars and money are scarce. The outcome, in many instances, is that the farmers not only sell under pressure, and therefore at a disadvantage, but are compelled to take further reductions in net returns, in order to meet the charges for the service of storing, transporting, financing, and ultimate marketing—which charges they claim, are often excessive, bear heavily on both consumer and producer, and are under the control of those performing the services. It is true that they are relieved of the risks of a changing market by selling at once; but they are quite willing to take the unfavorable chance, if the favorable one also is theirs and they can retain for themselves a part of the service charges that are uniform, in good years and bad, with high prices and low.

While, in the main, the farmer must sell, regardless of market conditions, at the time of the maturity of crops, he cannot suspend production in toto. He must go on producing if he is to go on living, and if the world is to exist. The most he can do is to curtail production a little or alter its form, and that—because he is in the dark as to the probable demand for his goods—may be only to jump from the frying pan into the fire, taking the consumer with him.

Even the dairy farmers, whose output is not seasonal, complain that they find themselves at a disadvantage in the marketing of their productions, especially raw milk, because of the high costs of distribution, which they must ultimately bear.

III

Now that the farmers are stirring, thinking, and uniting as never before to eradicate these inequalities, they are subjected to stern economic lectures, and are met with the accusation that they are demanding, and are the recipients of, special privileges. Let us see what privileges the government has conferred on the farmers. Much has been made of Section 6 of the Clayton Anti-Trust Act, which purported to permit them to combine with immunity, under certain conditions. Admitting that, nominally, this exemption was in the nature of a special privilege,—though I think it was so in appearance rather than in fact,—we find that the courts have nullified it by judicial interpretation. Why should not the farmers be permitted to accomplish by co-operative methods what other businesses are already doing by co-operation in the form of incorporation? If it be proper for men to form, by fusion of existing corporations or otherwise, a corporation that controls the entire production of a commodity, or a large part of it, why is it not proper for a group of farmers to unite for the marketing of their common products, either in one or in several selling agencies? Why should it be right for a hundred thousand corporate shareholders to direct 25 or 30 or 40 per cent of an industry, and wrong for a hundred thousand co-operative farmers to control a no larger proportion of the wheat crop, or cotton, or any other product?

The Department of Agriculture is often spoken of as a special concession to the farmers, but in its commercial results, it is of as much benefit to the buyers and consumers of agricultural products as to the producers, or even more. I do not suppose that anyone opposes the benefits that the farmers derive from the educational and research work of the department, or the help that it gives them in working out improved cultural methods and practices, in developing better yielding varieties through breeding and selection in introducing new varieties from remote parts of the world and adapting them to our climate and economic condition, and in devising practical measures for the elimination or control of dangerous and destructive animal and plant diseases, insect pests, and the like. All these things manifestly tend to stimulate and enlarge production and their general beneficial effects are obvious.

It is complained that, whereas the law restricts Federal Reserve banks to three months' time for commercial paper, the farmer is allowed six months on his notes. This is not a special privilege, but merely such a recognition of business conditions as makes it possible for country banks to do business with country people. The crop farmer has only one turnover a year, while the merchant and manufacturer have many. Incidentally, I note that the Federal Reserve Board has just authorized the Federal Reserve banks to discount export paper for a period of six months, to conform to the nature of the business.

The Farm Loan banks are pointed to as an instance of special government favor for farmers. Are they not rather the outcome of laudable efforts to equalize rural and urban conditions? And about all the government does there is to help set up an administrative organization and lend a little credit at the start. Eventually the farmers will provide all the capital and carry all the liabilities themselves. It is true that Farm Loan bonds are tax exempt; but so are bonds of municipal light and traction plants, and new housing is to be exempt from taxation, in New York, for ten years.

On the other hand, the farmer reads of plans for municipal housing projects that run into the billions, of hundreds of millions annually spent on the merchant marine; he reads that the railways are being favored with increased rates and virtual guaranties of earnings by the government, with the result to him of an increased toll on all that he sells and all that he buys. He hears of many manifestations of governmental concern for particular industries and interests. Rescuing the railways from insolvency is undoubtedly for the benefit of the country as a whole, but what can be of more general benefit than encouragement of ample production of the principal necessaries of life and their even flow from contented producers to satisfied consumers?

While it may be conceded that special governmental aid may be necessary in the general interest, we must all agree that it is difficult to see why agriculture and the production and distribution of farm products are not accorded the same opportunities that are provided for other businesses; especially as the enjoyment by the farmer of such opportunities would appear to be even more contributory to the general good than is the case of other industries. The spirit of American democracy is unalterably opposed, alike to enacted special privilege and to the special privilege of unequal opportunity that arises automatically from the failure to correct glaring economic inequalities. I am opposed to the injection of government into business, but I do believe that it is an essential function of democratic government to equalize opportunity so far as it is within its power to do so, whether by the repeal of archaic statutes or the enactment of modern ones. If the anti-trust laws keep the farmers from endeavoring scientifically to integrate their industry while other industries find a way to meet modern conditions without violating such statutes, then it would seem reasonable to find a way for the farmers to meet them under the same conditions. The law should operate equally in fact. Repairing the economic structure on one side is no injustice to the other side, which is in good repair.

We have traveled a long way from the old conception of government as merely a defensive and policing agency; and regulative, corrective, or equalizing legislation, which apparently is of a special nature, is often of the most general beneficial consequences. Even the First Congress passed a tariff act that was avowedly for the protection of manufacturers; but a protective tariff always has been defended as a means of promoting the general good through a particular approach; and the statute books are filled with acts for the benefit of shipping, commerce, and labor.

IV

Now, what is the farmer asking? Without trying to catalogue the remedial measures that have been suggested in his behalf, the principal proposals that bear directly on the improvement of his distributing and marketing relations may be summarized as follows:—

First: storage warehouses for cotton, wool, and tobacco, and elevators for grain, of sufficient capacity to meet the maximum demand on them at the peak of the marketing period. The farmer thinks that either private capital must furnish these facilities, or the state must erect and own the elevators and warehouses.

Second: weighing and grading of agricultural products, and certification thereof to be done by impartial and disinterested public inspectors (this is already accomplished to some extent by the federal licensing of weighers and graders), to eliminate underpaying, overcharging, and unfair grading, and to facilitate the utilization of the stored products as the basis of credit.

Third: a certainty of credit sufficient to enable the marketing of products in an orderly manner.

Fourth: the Department of Agriculture should collect, tabulate, summarize, and regularly and frequently publish and distribute to the farmers, full information from all the markets of the world, so that they shall be as well informed of their selling position as buyers now are of their buying position.

Fifth: freedom to integrate the business of agriculture by means of consolidated selling agencies, co-ordinating and co-operating in such way as to put the farmer on an equal footing with the large buyers of his products, and with commercial relations in other industries.

When a business requires specialized talent, it has to buy it. So will the farmers; and perhaps the best way for them to get it would be to utilize some of the present machinery of the largest established agencies dealing in farm products. Of course, if he wishes, the farmer may go further and engage in flour-milling and other manufactures of food products. In my opinion, however, he would be wise to stop short of that. Public interest may be opposed to all great integrations; but, in justice, should they be forbidden to the farmer and permitted to others? The corporate form of association cannot now be wholly adapted to his objects and conditions. The looser co-operative form seems more generally suitable. Therefore, he wishes to be free, if he finds it desirable and feasible, to resort to co-operation with his fellows and neighbors, without running afoul of the law. To urge that the farmers should have the same liberty to consolidate, and co-ordinate their peculiar economic functions, which other industries in their fields enjoy, is not, however, to concede that any business integration should have legislative sanction to exercise monopolistic power. The American people are as firmly opposed to industrial as to political autocracy, whether attempted by rural or by urban industry.

For lack of united effort the farmers as a whole are still marketing their crops by antiquated methods, or by no methods at all, but they are surrounded by a business world that has been modernized to the last minute and is tirelessly striving for efficiency. This efficiency is due in large measure to big business, to united business, to integrated business. The farmers now see the benefits of such largeness, union and integration.

The American farmer is a modern of the moderns in the use of labor saving machinery, and he has made vast strides in recent years in scientific tillage and efficient farm management, but as a business in contact with other businesses agriculture is a "one horse shay" in competition with high power automobiles. The American farmer is the greatest and most intractable of individualists. While industrial production and all phases of the huge commercial mechanism and its myriad accessories have articulated and co-ordinated themselves all the way from natural raw materials to retail sales, the business of agriculture has gone on in much the one man fashion of the backwoods of the first part of the nineteenth century, when the farmer was self sufficient and did not depend upon or care very much, what the great world was doing. The result is that the agricultural group is almost as much at a disadvantage in dealing with other economic groups as the jay farmer of the funny pages in the hands of sleek urban confidence men, who sell him acreage in Central Park or the Chicago city hall. The leaders of the farmers thoroughly understand this, and they are intelligently striving to integrate their industry so that it will be on an equal footing with other businesses.

As an example of integration, take the steel industry, in which the model is the United States Steel Corporation, with its iron mines, its coal mines, its lake and rail transportation, its ocean vessels, its by-product coke ovens, its blast furnaces, its open hearth and Bessemer furnaces, its rolling mills, its tube mills and other manufacturing processes that are carried to the highest degree of finished production compatible with the large trade it has built up. All this is generally conceded to be to the advantage of the consumer. Nor does the steel corporation inconsiderately dump its products on the market. On the contrary, it so acts that it is frequently a stabilizing influence, as is often the case with other large organizations. It is master of its distribution as well as of its production. If prices are not satisfactory the products are held back or production is reduced or suspended. It is not compelled to send a year's work to the market at one time and take whatever it can get under such circumstances. It has one selling policy and its own export department. Neither are the grades and qualities of steel determined at the caprice of the buyer, nor does the latter hold the scales. In this single integration of the steel corporation is represented about 40 per cent of the steel production of America. The rest is mostly in the hands of a few large companies. In ordinary times the steel corporation, by example, stabilizes all steel prices. If this is permissible (it is even desirable, because stable and fair prices are essential to solid and continued prosperity) why would it be wrong for the farmers to utilize central agencies that would have similar effects on agricultural products? Something like that is what they are aiming at.

Some farmers favored by regional compactness and contiguity, such as the citrus-fruit-raisers of California, already have found a way legally to merge and sell their products integrally and in accordance with seasonal and local demand, thus improving their position and rendering the consumer a reliable service of ensured quality, certain supply, and reasonable and relatively steady prices. They have not found it necessary to resort to any special privilege, or to claim any exemption under the anti-trust legislation of the state or nation. Without removing local control, they have built up a very efficient marketing agency. The grain, cotton, and tobacco farmers, and the producers of hides and wool, because of their numbers and the vastness of their regions, and for other reasons, have found integration a more difficult task though there are now some thousands of farmer's co-operative elevators, warehouses, creameries, and other enterprises of one sort and another, with a turn-over of a billion dollars a year. They are giving the farmers business experience and training, and, so far as they go, they meet the need of honest weighing and fair grading; but they do not meet the requirements of rationally adjusted marketing in any large and fundamental way.

The next step, which will be a pattern for other groups, is now being prepared by the grain-raisers through the establishment of sales media which shall handle grain separately or collectively, as the individual farmer may elect. It is this step—the plan of the Committee of Seventeen—which has created so much opposition and is thought by some to be in conflict with the anti-trust laws. Though there is now before congress a measure designed to clear up doubt on this point, the grain-producers are not relying on any immunity from anti-trust legislation. They desire, and they are entitled, to co-ordinate their efforts just as effectively as the large business interests of the country have done. In connection with the selling organizations the United States Grain Growers Incorporated is drafting a scheme of financing instrumentalities and auxiliary agencies which are indispensable to the successful utilization of modern business methods.

It is essential that the farmers should proceed gradually with these plans, and aim to avoid the error of scrapping the existing marketing machinery, which has been so laboriously built up by long experience, before they have a tried and proved substitute or supplementary mechanism. They must be careful not to become enmeshed in their own reforms and lose the perspective of their place in the national system. They must guard against fanatical devotion to new doctrines, and should seek articulation with the general economic system rather than its reckless destruction as it relates to them.

V

To take a tolerant and sympathetic view of the farmers' strivings for better things is not to give a blanket endorsement to any specific plan, and still less to applaud the vagaries of some of their leaders and groups. Neither should we, on the other hand, allow the froth of bitter agitation, false economics, and mistaken radicalism to conceal the facts of the farmers' disadvantages, and the practicability of eliminating them by well-considered measures. It may be that the farmers will not show the business sagacity and develop the wise leadership to carry through sound plans; but that possibility does not justify the obstruction of their upward efforts. We, as city people, see in high and speculatively manipulated prices, spoilage, waste, scarcity, the results of defective distribution of farm products. Should it not occur to us that we have a common interest with the farmer in his attempts to attain a degree of efficiency in distribution corresponding to his efficiency in production? Do not the recent fluctuations in the May wheat option, apparently unrelated to normal interaction of supply and demand, offer a timely proof of the need of some such stabilizing agency as the grain growers have in contemplation?

It is contended that, if their proposed organizations be perfected and operated, the farmers will have in their hands an instrument that will be capable of dangerous abuse. We are told that it will be possible to pervert it to arbitrary and oppressive price-fixing from its legitimate use of ordering and stabilizing the flow of farm products to the market, to the mutual benefit of producer and consumer. I have no apprehensions on this point.

In the first place, a loose organization, such as any union of farmers must be at best, cannot be so arbitrarily and promptly controlled as a great corporation. The one is a lumbering democracy and the other an agile autocracy. In the second place, with all possible power of organization, the farmers cannot succeed to any great extent, or for any considerable length of time, in fixing prices. The great law of supply and demand works in various and surprising ways, to the undoing of the best laid plans that attempt to foil it. In the third place, their power will avail the farmers nothing if it be abused. In our time and country power is of value to its possessor only so long as it is not abused. It is fair to say that I have seen no signs in responsible quarters of a disposition to dictate prices. There seems, on the contrary, to be a commonly beneficial purpose to realize a stability that will give an orderly and abundant flow of farm products to the consumer and ensure reasonable and dependable returns to the producer.

In view of the supreme importance to the national well-being of a prosperous and contented agricultural population, we should be prepared to go a long way in assisting the farmers to get an equitable share of the wealth they produce, through the inauguration of reforms that will procure a continuous and increasing stream of farm products. They are far from getting a fair share now. Considering his capital and the long hours of labor put in by the average farmer and his family, he is remunerated less than any other occupational class, with the possible exception of teachers, religious and lay. Though we know that the present general distress of the farmers is exceptional and is linked with the inevitable economic readjustment following the war, it must be remembered that, although representing one-third of the industrial product and half the total population of the nation, the rural communities ordinarily enjoy but a fifth to a quarter of the net annual national gain. Notwithstanding the taste of prosperity that the farmers had during the war, there is today a lower standard of living among the cotton farmers of the South than in any other pursuit in the country.

In conclusion, it seems to me that the farmers are chiefly striving for a generally beneficial integration of their business, of the same kind and character that other business enjoys. If it should be found on examination that the attainment of this end requires methods different from those which other activities have followed for the same purpose should we not sympathetically consider the plea for the right to co-operate, if only from our own enlightened self interest, in obtaining an abundant and steady flow of farm products?

In examining the agricultural situation with a view to its improvement, we shall be most helpful if we maintain a detached and judicial viewpoint, remembering that existing wrongs may be chiefly an accident of unsymmetrical economic growth instead of a creation of malevolent design and conspiracy. We Americans are prone, as Professor David Friday well says in his admirable book, "Profits, Wages and Prices," to seek a "criminal intent behind every difficult and undesirable economic situation." I can positively assert from my contact with men of large affairs, including bankers, that, as a whole, they are endeavoring to fulfill as they see them the obligations that go with their power. Preoccupied with the grave problems and heavy tasks of their own immediate affairs, they have not turned their thoughtful personal attention or their constructive abilities to the deficiencies of agricultural business organization. Agriculture, it may be said, suffers from their preoccupation and neglect rather than from any purposeful exploitation by them. They ought now to begin to respond to the farmers' difficulties, which they must realize are their own.

On the other hand, my contacts with the farmers have filled me with respect for them—for their sanity, their patience, their balance. Within the last year, and particularly at a meeting called by the Kansas State Board of Agriculture and at another called by the Committee of Seventeen, I have met many of the leaders of the new farm movement, and I testify in all sincerity that they are endeavoring to deal with their problems, not as promoters of a narrow class interest, not as exploiters of the hapless consumer, not as merciless monopolists, but as honest men bent on the improvement of the common weal.

We can and must meet such men and such a cause half way. Their business is our business—the nation's business.

What Really Counts

It is not what you spend, that's sure. Men have spent fortunes and have finished much worse off than when they started. Here is the answer. It is the amount you save that counts.

Therefore, decide how much you intend to save. Then each month, each week, each day, deduct the sum from what you make and deposit it in our bank. Spend the rest if you care to or need to, for you are still on the safe side and making progress. We will safeguard your savings.

TIME FOR BLASTING STUMPS

Better Results Obtained When Soils Are Wet Than When Dry Because of Resistence.

In blasting stumps the nature of the soil is one of the important factors that must be considered in fixing the size of the charge. The more resistance the soil offers to the force of the explosion the greater will be the force exerted against the stump. Hence, the United States Department of Agriculture points out, stumps in loose, sandy soils must be more heavily loaded than those in firm, stiff soils. It is generally agreed that so-called highspeed explosives give better results in sandy soils than do low percentage dynamites or stumping powders.

Since water cannot be compressed, its presence in the pores or open spaces in loose soils adds something to the resistance that is offered to the explosive force and thus makes the explosion somewhat more effective. It follows that, especially in sandy soils, better results will be obtained in blasting stumps when the ground is wet than when it is dry. It should be remembered, however, that moist soil in this connection refers to soil near the charge—2 or 3 feet underground—and not surface soil.

Small Island Valuable.

Only 300 miles off the north coast of Australia, Timor is the last link in an island chain sweeping from Singapore, the southeast corner of Asia, to the big south continent, and by virtue of this location, it may become an important way station for aerial trade between Australia and Asia and Europe. Sir Ross Smith, Australian airman, in his famous trail-blazing flight from London to Australia in 1919, landed in Timor, and from there "hopped off" on the last leg of his inter-continental journey.—National Geographic Society Bulletin.

FACTS ABOUT RUST OF GRAIN

Extensive Studies Have Been Made in Greenhouse at Purdue University, Indiana.

Investigations of the leaf rust of grains and grasses are being made by the United States Department of Agriculture in co-operation with the Purdue university agricultural experiment station. These studies consist principally of experiments to determine the relationships of the leaf rust of wheat, rye, [illegible] the determination of [illegible] forms of [illegible] of plants as possible [illegible] hosts [illegible] the leaf rust of wheat to [illegible] they serve as hosts [illegible] rust.

Extensive studies have been made in the greenhouse at La Fayette, Ind. [illegible] collected from [illegible] have been [illegible] varieties of [illegible] which possibly [illegible] hosts. The existence of [illegible] forms of leaf rust [illegible] has been discovered, and it is now known that these forms have a wide range of grass hosts.

In addition to the greenhouse studies more than 200 wheat varieties and selections were sown in Tennessee, Indiana, Illinois, and Wisconsin, and several varieties resistant to leaf rust are being grown at a number of stations in the southeastern states. Progress is being made in the breeding of wheat for resistance to leaf rust, and it has been demonstrated that the high-yielding, hard red winter wheat, Kanred, which is resistant to stem rust, is also resistant to leaf rust.

A Round Meal.

Gentleman—So you are looking for a square meal, eh?"

Tramp—No; I'm looking for a round one.

Gentleman—I never heard of such a thing. Pray what is a round meal?

Tramp—One that hasn't any end to it, sir.

Taste is a matter of tobacco quality

We state it as our honest belief that the tobaccos used in Chesterfield are of finer quality (and hence of better taste) than in any other cigarette at the price.

Potato Meeting A Huge Success

A Record Breaking Attendance

On Thursday afternoon of this week a large representation of farmers living tributary to Goodridge, Highlanding and Erie assembled in the school house to listen to discourses on potato diseases and their control given by R. H. Rose, a potato specialist, and County Agent J. J. McCann.

The farmers are enthusiastic over the possibilities in the potato industry for this section of the country. Those present at this meeting expressed themselves in favor of putting in an acreage of from to ten or twenty-five acres this coming season.

Another meeting will be held here on February 24 for the purpose of getting together on a limited number of varieties of potatoes and also to discuss the advisability of organizing a potato shipping association.

Red Lake Flood Control

The Red Lake flood control and conservancy project is now officially before the Interior and War departments, with favorable recommendations from the directors of the Red Lake Drainage and Conservancy board. At a recent conference held in Washington the officials expressed themselves as being in hearty accord with the plans as made. It is hoped that work on this project will begin at an early date.

Conventions March 18 and March 31

Republicans of Minnesota will meet in St. Paul at 11 a. m. March 31 to endorse party candidates for state office and formulate a party platform under a call recently issued by the Republican state central committee.

Representation in the state convention was fixed at 1,088 delegates. County conventions will be held on March 18 at 1 p. m., while district conventions will be held March 30 at 1 p. m. The Ninth district convention will be held at the Moorhead court house.

Pennington county is entitled to six delegates in the state convention, Four counties—Hennepin, Ramsey, St. Louis and Stearns—will have a majority of the delegates at this gathering. In the district convention Pennington county will be entitled to three delegates while Red Lake county has but two, Clearwater three and Marshall eight.

His Term Four Years

Judge of Probate Lars Backe will not be compelled to seek re-election with most of the other county officials next fall, according to a decision handed down by the state supreme court. According to this decision all judges of probate will hold over until Jan. 1, 1922.

Democratic Conventions

The democratic state central committee in session in St. Paul Tuesday voted to comply with the pre-primary convention law. The committee was persuaded that it would be a risk to ignore the law and that party organization could be best built up by county conventions.

After three hours of debate the committee issued convention calls as follows: State convention March 31, at 2 p. m., at Minneapolis. This is the same date as the republican convention, called for St. Paul, Congressional district conventions, March 30, 2 p. m., at places te be fixed by the executive committee. County conventions, March 21, at 2 p. m. It was decided that counties shall have one delegate for each 100 votes cast for L. C. Hodgson, demo- for governor in the last election, and three delegates at large from each county. This means a convention of about 1,020 delegates.

Big Week Planned

The Red River Valley Winter Shows to be held at Crookston February 6-10 are creating much interest. Pure bred livestock sales will be held on Wednesday and Thursday, February 8 and 9. See list of livestock to be sold given in another column. Leading speakers are coming during the week, including Dean W. C. Coffey, W. I. Nolan, J. F. Reed, Governor Preus and President Coffman. Farm crops, livestock and poultry exhibits will be held. The song festival, which will take place on Wedneeday evening, Feb. 8, will include over 200 voices from 12 Valley communities.

Economizing

The Thief River Falls Tribune will hereafter be published once a week only, with publication day on Tuesday.

THE Gummer Trial

The murder trial at Valley City, N. Dak., is making slow progress. The fact that Marie Wick was assaulted and then murdered is about all that has been established as yet. Wednesday it was made known that important new developments entered the case when the state asked of Judge Cooley permission to have the name of one John Murphy entered on the information. It is reported that Murphy will be an important witness for the state.

The trial was postponed from Tuesday to Wednesday and from Wednesday until next Monday on account of the continued illness of the prosecuting attorney.

BIG INCREASE FROM SHEEP

Yields of lambs and wool depend largely upon the breed of sheep selected. With ewes of any one of the medium-sized mutton breeds, the United States Department of Agriculture points out that 115 per cent of lambs can be raised, and 150 per cent is not infrequently reached. The wool clip varies from seven to eleven pounds per ewe. The larger mutton breeds yield more, as do also the fine wools, but the value per pound of the latter has in normal times been less on account of the greater proportion of grease. In comparison with cattle and swine, sheep can be made to yield practically the same net returns on the value of the land, if well cared for, and if kept on lands reasonably well adapted for sheep raising.

FEED NECESSARY FOR HENS DURING WINTER

Insects and Green Stuff Are Plentiful in Summer.

Provision Must Be Made in Severe Weather for Animal Food and Succulence—Essential for Production of Eggs.

(Prepared by the United States Department of Agriculture.)

During the summer months the farmer's flock balances its ration of grain and seeds with insects, worms, and green stuff, and the farmer need not worry about egg production if his fowls have been well culled. But winter feeding requires that provision be made to supply the deficiency of animal feed and succulence. The absence of these essential to good egg production is responsible in large degree for the falling off in yield during cold weather.

Animal food, or other feeds rich in protein, may be easily supplied on most farms, particularly where skim milk or buttermilk is available. The liking of hens for these dairy by-products is a good indication of the need for what they contain. Meat scrap is another excellent protein feed that has become standard in poultry rations. Clover and alfalfa leaves provide a combination of protein feed and green stuff. Often enough of them may be swept up from the barn floor where the hay is handled. A good way to prepare them for the flock is to pour boiling water over them, cover the container and let them steam for a time, when they will be ready to feed alone or in a mash.

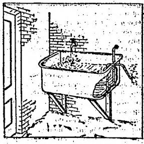
Sprouted oats has become one of the best-known providers of succulence in winter. Plans for making sprouters may be obtained from the United States Department of Agriculture. Mangels and cabbage, as well as many other vegetables, are appreciated by the hens.

In general, winter feeding is much the same as summer feeding. On the government poultry farms the same rations are used in summer and winter. Of course, in summer it is unnecessary to feed succulent feed when the birds have range and are able to get plenty of grass, alfalfa, or similar feed. The farmer's flock, however, is an exception to this rule, as in many cases there is enough waste grain, seeds, etc., in summer to supply much of the feed required.

NOVEL PLAN TO HEAT WATER

Exhaust From Gas Engine Keeps Troughs From Freezing—Idea Shown in Illustration.

On a farm in the southwestern part of Michigan they use the exhaust from the gas engine to keep the water in the stock watering troughs from freezing. The exhaust is discharged into an old hot water tank and from there is piped through the wall of the building to a rectangular frame of pipe resting on the bottom of the trough. An elbow over the rim of the tank permits the exhaust to discharge into the air.—Michigan Farmer.



Using Exhaust From Gas Engine to Keep Water in Trough From Freezing.

BUY FARM THAT IS EQUIPPED

Gives Newcomer Chance to Work Out Changes and Assures Self-Sustaining Business.

Often it is a distinct advantage when buying a farm to purchase the equipment, live stock and materials already on the place. In this way, the United States Department of Agriculture points out, an income is obtained almost from the outset, which usually makes possible the operation of the farm without a loss, and thus gives the newcomer a chance to work out changes and plans and at the same time have a self-sustaining farm business.

If only the bare farm is purchased it usually takes some time to supply all the equipment and live stock and put the place on a paying basis. In the meantime overhead costs and other expenses amount to a large item. Hence the advantage that so often is gained in buying a farm that is a going concern.

ARTIFICIAL ICE MADE BY FARMER

Freezing Weather and Pure, Clean Water Are Two Things Absolutely Necessary.

METAL CANS OR BAGS USEFUL

In Very Cold Sections Water May Be Run Into House and Frozen in Layers—Must Be Cut or Chopped Out With Ax.

(Prepared by the United States Department of Agriculture.)

To make natural ice, one essential is water, and the other is freezing weather. The trouble is that in many cases there is plenty of the right kind of weather, but little or none of the water, at least the kind of water that will be still long enough to be frozen. There are several ways of getting around this difficulty, according to "Harvesting and Storing Ice on the Farm," a farmers' bulletin issued by the United States Department of Agriculture.

In Times of Cold Weather Prepare for Summer — Harvesting Ice in a Northern State.

Making an Ice Pond.

Suppose a farmer finds no suitable lake or pond in his neighborhood. He can create an artificial lake by diverting a stream into an excavation, or by building a dam across a low piece of ground. Some farmers have made artificial lakes in their front yards, and they have been pretty in summer as well as useful in winter. One thing that must not be forgotten is to keep these lakes pure and clean. How to do that is described in the bulletin.

But suppose a farmer has no place for a lake, although cold weather prevails in his part of the country for several weeks at a time. He can freeze his ice in metal cans or special paper bags.

"The cans may be made in any convenient size by a local tinsmith," says the bulletin, "and should be of galvanized iron, reinforced at top and bottom with iron strips.

"The bottom is made smaller than the top to make the removal of the ice easier. The cans are placed near the water supply, filled with water, and left exposed to the weather. A shell of ice soon freezes around the inner surface, and when the shell is from 1 1-2 to 2 inches thick, hot water is poured over the outside of the can and the shell removed. A hole is broken through at the top of the shell and most of the water inside is then poured out. As the freezing progresses water is poured into the shell, a little at a time, until a solid block of ice is produced. By this method only a few cans are required, which keeps the cost low.

Advantage of Bags.

"About the same method is employed when special paper bags are used, although they do not last so long as the cans. The advantage of the bags over the metal cans is mainly in cheapness, for they are not so convenient to handle.

"Another method that can be used in very cold sections of the United States is to run water into the ice house and let a layer freeze. This is done by first constructing a dam of snow around the floor of the house ten or twelve inches from the walls in order to allow sawdust insulations next to the walls. The interior of the house is then flooded with a few inches of water, which soon freezes, the procedure being repeated until the house is filled with ice. It is then covered with sawdust and closed up until ice is needed. A great disadvantage of this method is that in order to remove ice it must be cut or chopped out with an ax, which results in uneven and irregular pieces and considerable waste of ice."

A BLUE UMBRELLA

By AGNES G. BROGAN

Copyright, 1922, Western Newspaper Union.

It was a blue silk umbrella, with a lovely white bracelet handle, and a Blue B engraved on the white knob. I have to be very careful in describing it, for this is part of the story.

Our new professor at college is always harping on "preparedness," and what a great advantage it is to success. Well, my thinking of carrying the blue umbrella that day when it looked like rain, wasn't any advantage to my success; but that begins the story.

Mother sent me down to Baillie's for some taffeta to match the dress she was going to wear to the reception that the faculty were giving for our noted professor; I hurried along, preferring to walk the short distance, and when I met Nan Paige on the way we stopped first, and had a soda. And Nan told me of the books this Professor Laidlaw had written on the deepest subjects, and how his picture had been in magazines, and everything, and I was just wild to see him. She said that he looked like anyone's favorite movie actor, and was an idol with the women wherever he went. But Nan said he was stern, too, and would not stand for nonsense or familiarity from his pupils, and we had better impress him with our dignified behavior.

Nan isn't very dignified herself, but I can be, on occasion. So as I walked the rest of the way alone to Baillie's, I decided that I would ask mother to let me wear the plain navy blue dress, which makes me look so old.

Aunt Betty is critical where men are concerned, and is always asking who they are, and what they have accomplished, until Janet is often provoked, regarding her own young men. Janet has plenty of beaus. And mother says that Aunt Betty might have married times over, if she had not been so particular. Aunt Betty is awfully pretty and jolly. But there I stood waiting for that taffeta to be wrapped up, and down came a shower, outside the street grew suddenly dark, and I was glad that I had brought my umbrella. I drew it with some difficulty from before a man who stood beside me at the counter, and stared reprovingly at him, when he failed to beg my pardon. And as I was hurrying down the aisle that man came after me. This time he did say "Beg pardon," but it was with the affrontary of claiming the umbrella, or trying to claim it, for I certainly did not give it up to him. "Beg pardon," he began, "you have taken my umbrella, under a mistaken impression, no doubt, that it is yours."

"Mistaken?" I asked disdainfully, "I certainly know my own blue silk umbrella. You will notice the letter B; my name begins with B." The man stood still and stared at me disconcertingly.

"Notwithstanding the fact of your name beginning with B," he said, "the umbrella is mine."

A crowding female with two jostling boys at her side came between us just then, and I fairly laughed back at the imposter over their heads, then to save trouble and publicity, I ran out of the store, and down the street and on to a street car; and it was not until I had handed in my fare that I took time to realize how brazen that man had been. And he was a nice looking man too, with fine features that any physiognomist would say placed him above petty crime. When I took the taffeta into mother, Aunt Betty was there, and Janet, and they were all talking excitedly about the evening's guest of honor, whom Aunt Betty called "a young man of sterling character."

Nan had spoken more concerning his eyes. Which reminded me of what very nice eyes the thief had. For even if it's only an umbrella you are trying to steal, you're a thief. And by and by when I'd got on my second best dress, I started down the stair. Aunt Betty was going to have one of her friends in to dinner. And then I stood stock-still on the stair. For she was talking to her friend in the hall that minute, and he was my umbrella man. Yes, really. And I couldn't help hearing him apologize to her for not bringing back an umbrella she'd loaned him, and which, he insisted, had been pulled right out from under his arm in a store. And all at once I felt chilly; for the reason that Janet had given me a blue silk umbrella for Christmas was because I had so admired Aunt Betty's, and Aunt Betty Baisley's name, naturally, begins with a B.

So there I stood, mystified, yet beginning uncomfortably to see daylight. For it occurred to me that perhaps I had forgotten to take my umbrella with me to Baillie's store, which upon later investigation proved to be true. The two silk umbrellas with their white bracelets stood side by side in my clothespress. And when I came guiltily into the dining room, you may fancy my next humiliation. "Bab's," said Aunt Betty, "let me introduce you to Mr. Laidlaw, the new college professor."

Well, I don't know how I ever should have come out if it had not blessedly happened that Professor Laidlaw is to be one of our family. He's engaged to Aunt Betty. And he really was a good sport, and left me out of his explanations when he was able later to return Aunt Betty's property. But, as Nan says, it was all perfectly thrilling.

THE SILENT ONES

Mother Howland took her visiting daughter's worn coat and smoothed it on the "spare" room bed with lingering touch. Her eyes were thoughtful.

"You didn't get the new fur one, did you, Janet?" she queried.

"No, mother—not yet."

Janet unrolled a half-finished sock as they drew chairs near the cheerful log fire in the sitting-room.

"Are you getting plenty of coal, mother?" she asked.

Mrs. Howland smiled at the obvious attempt to bury the matter of the coat.

"Hood and I had quite a time," Janet went on, rather hurriedly, "what with burning wood in the kitchen range and coaxing the furnace along on small rations—phew! quite a hustle!" She smiled into her mother's eyes.

Hood Junior's school work was next discussed, the eyes of both women warm with love for the boy. At last silence fell—the silence for which mother waited.

Mother knew the value of silence, that trap for the unwary.

"Mother, I know you think it strange—about the coat; but I've thought perhaps I wouldn't get it this year." It was Janet speaking.

"Then you've spent Uncle Gideon's Christmas present for something else?" Mother Howland asked, feeling a trifle guilty with her success.

"Oh, no," replied Janet, letting the knitting fall to her lap. "But, somehow it seems as if—as if Hood didn't want me to buy it." Her face was tragic.

"It isn't that Hood says anything when I mention getting the coat; it's just that he says nothing at all," there was a quiver in Janet's voice.

"Child, have I ever told you about Sue Ella Gay?" asked mother. "No, I don't think I have," she went on.

"Sue Ella married Luke Somers. She was an orphan. Your grandmother Howland raised her—that's how I came to know what happened," mother stated in her homely and leisurely way. "Luke was a taciturn kind of man—so silent at times folks wondered how he ever managed to propose to Sue Ella, she was so lively and gay. But he did, anyway, and the wedding was at your grandmother's.

"The Howlands were sea-faring folk, as you know, and when the wedding took place, your uncle was away on a voyage. He thought the world of Sue Ella—loved her like an own sister.

"He was a great business man, Luke was. He and Sue Ella moved to the city right away after the wedding.

"They had one child but lost it, and Sue Ella's health began to fail. Then your Uncle Gideon sent Sue Ella a thousand dollars.

"That should have remedied things, but it didn't. Luke had grown into a way, your grandmother told me, of settin' silent and sort of sad when Sue Ella mentioned anything so foolish as clothes; he was living in big things, Luke was; he had so many irons in the fire, Luke had, that Sue Ella felt real sorry for him; and in the end, her thousand was invested along with all the rest—sunk in such a way, the chippin's wouldn't buy anything worth while.

"Your Uncle Gideon came home from sea and was shocked at the change in Sue Ella. He talked it over with Luke and a specialist was called in.

"An operation was necessary, a severe one, and would cost a lot of money.

"Luke got more silent and sad as he looked at Sue Ella. Luke raised the money at the bank, but the operation came too late to save Sue Ella."

Mother Howland confronted a pair of hurt gray eyes filled with tears.

"Mother! you aren't implying that Hood is—is that kind?"

"No, my child, I'm not. Hood is a dear good boy—if he is the silent kind," said mother, gently. "And Luke wasn't that kind, either—at first; he just got headed wrong; Sue Ella, poor thing, hadn't enough ground under her, initiative, I suppose you'd call it. Goodness!" Mother glanced at the clock—"I must hurry with lunch. Junior will be racing in from school in a few minutes."

"We'll all come to dinner with you Sunday, mother," smiled Janet at parting; "and—" her cheek pressed her mother's as she whispered: "I'll wear my new fur coat; won't you invite Uncle Gideon, too?"

Her mother kissed her—in silence.

BELOW ZERO WEATHER Is Here

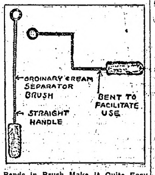
BENDS IN SEPARATOR BRUSH

Straight Handle Is Inconvenient and Requires Much Twisting of the Wrist.

The wire bristle brush which is used to clean certain parts of the average cream separator is straight and to do a thorough job requires lots of bending of the wrist. By making two right-angled bends near one end, thus forming a sort of crank, it will be found that the brush can be used to greater advantage than before. Cut off the loop in the end and operate the brush by turning the handle as a crank.—Farm and Home.



Bends in Brush Make It Quite Easy to Clean Parts of Cream Separator.

PROMPTNESS ADVISED IN SHIPPING HIDES

Advice Is Particularly Applicable to Sheepskins.

Sell Direct to Tanners, Thus Eliminating Middleman or Agents—Repeated Handling Tends to Reduce Quality.

After country hides and skins have been properly and securely bundled and tagged ship them to market without delay, advises the United States Department of Agriculture. Do not let the bundle remain in the sun, drafts or water, or against rusty or corroding metals. Promptness in shipping and delivery is always advisable, but applies particularly to sheepskins. They heat rapidly after being bundled, and in hot weather especially must reach their destination quickly.

Hides and skins should be shipped as directly as is practicable and economical to reliable dealers who sell direct to tanners, thus eliminating unnecessary middlemen or agents. Repeated handling tends to reduce the quality of hides and skins. For most farmers, ranchers and small butchers it would be desirable if they could dispose of their hides and skins immediately after removal, without salting and curing them, but this is generally impracticable, since only a few are near enough to tanneries or dealers equipped to handle their products.

Whenever thus favorably situated, producers find it both profitable and practicable to sell the hides and skins in the green, unsalted condition. In no case, however, should this method be considered unless the producer is certain that the green hides and skins will be delivered promptly. As a rule, 24 hours after skinning is the maximum time advisable.

KEEPING CHICKENS SHUT UP

If Hoppers Are Not Provided Then Clean Off Place to Throw Feed On—Avoid Roup.

Sometimes when stormy one has to keep the chickens shut up and feed in the same building; if you don't have hoppers to feed from, clean a place off to throw the feed unless you want roup. Have plenty fresh air but avoid drafts. The word roup makes one sit up and pay attention, especially one that has had it in his flock. It is the most dreaded of poultry diseases and the chopping block is about the only and safest cure.

URGE ACTION TO PROTECT TIMBER

Policy Favored Which Will Insure Adequate Supply of Various Forest Products.

LUMBER SHORTAGE IS ACUTE

Nation-Wide Protection From Fire Is First and Most Essential Step, According to Chief Forester W. B. Greeley.

(Prepared by the United States Department of Agriculture.)

A demand is growing on the part of wood-using industries and the public at large for a national policy of forestry which will insure adequate future supplies of timber and other forest products, according to Chief Forester W. B. Greeley. Figures gathered by the forest service this year, his annual report states, showed the extent of the depletion of the nation's forests, and have served to focus attention on the fact that the country is short of growing forests and that something must be done at once. The acute shortage and skyrocketing prices of lumber and newsprint early in the year also contributed to the growth of the movement.

A Good Stand of Young Short-Leaf Pine Which Ranges From New Jersey to Texas.

The forest service is advocating a program based on the conviction that the problem is national and not local, and must be handled as such. Nation-wide protection from forest fire for all classes of forest land, Colonel Greeley states, is the first and most essential step. It is his belief that the police powers of the states offer the best means of enforcing reasonable requirements against forest destruction.

Legislation Needed.

The expense of fire protection, the forester says, should be borne jointly by the landowner and the public. He holds that federal legislation is needed to provide for a comprehensive plan of co-operation with the states in fire prevention and the development of forestry practice, and the extension of the national forests through purchases, through the inclusion of other timber lands now in federal ownership and through exchange.

There are still large quantities of timber in the United States, the report states, but they are not in the right place. More than 60 per cent of what is left lies west of the Great Plains, far from the bulk of the country's population, agriculture and manufacture. The country is taking about 26,000,000,000 feet of wood from forests each year and is growing only 6,000,000,000.

Idle Forest Land.

"We have used up our forests without growing new ones," says the report. "At the bottom of the whole problem is idle forest land. The United States contains 326,000,000 acres of cut-over or denuded forest containing no new timber; 81,000,000 acres of this amount have been completely devastated by forest fires and methods of cutting which destroy or prevent new timber growth.

"The area of idle or largely idle land is being increased by from 3,000,000 to 4,000,000 acres annually as the cutting and burning of forests continues." These facts, together with the steadily increasing distance between the average sawmill and the home builder, "have had a vital bearing on the high cost of lumber, which during the year reached a prohibitive figure for many uses and checked the building of homes which is so urgently needed."

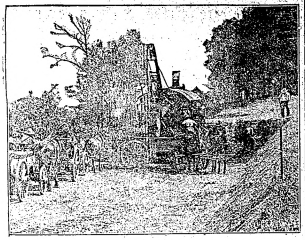
FEDERAL HIGHWAY ACT PROVIDES WORK FOR QUARTER MILLION MEN



About One-Half of All Roads That Are Being Built Are Being Aided by the Government Financially.

(Prepared by the United States Department of Agriculture.)

Seventy-five million dollars becomes available as federal aid for road construction in the various states, the money to be spent under the supervision of the bureau of public roads, Department of Agriculture, under the federal highway act, signed November 9, by the President. In addition, $15,000,000 is appropriated for national forest roads. The $75,000,000 represents the federal government's appropriation to the work of building highways in the various states and must be matched, dollar for dollar, by funds from the state treasuries, except in states where more than 5 per cent of the area is unappropriated public land.

Part of Money Now Available.

The $75,000,000 appropriated is for the fiscal year ending June 30, 1922. Here is how the money will be apportioned among the 48 states:

Ala.	$1,653,420.67	Neb.	$1,581,159.50
Ariz.	1,063,281.44	Nev.	953,436.78
Ark.	1,254,142.29	N. H.	365,625.00
Calif.	2,462,095.53	N. J.	942,870.95
Colo.	1,341,175.69	N. M.	1,189,823.34
Conn.	482,557.78	N. Y.	3,695,447.97
Del.	365,625.00	N. C.	1,769,333.90
Florida	866,825.69	N. D.	1,164,714.42
Georgia	1,997,557.58	Ohio	2,823,004.65
Idaho	938,526.38	Okla.	1,752,339.44
Illinois	3,256,281.07	Oregon	1,182,663.90
Indiana	1,958,856.41	Penna.	3,398,953.97
Iowa	2,102,842.74	R. I.	365,625.00
Kansas	2,262,251.51	S. C.	1,061,237.34
Ky.	1,417,173.68	S. D.	1,204,060.31
Louisiana	966,996.64	Tenn.	1,647,692.24
Maine	625,160.25	Texas	4,425,172.41
Md.	640,659.91	Utah	849,417.21
Mass.	1,096,173.04	Vermont	365,625.00
Mich.	2,244,572.43	Virginia	1,456,898.47
Minn.	2,123,397.07	Wash.	1,103,769.77
Miss.	1,294,936.22	W. Va.	862,355.77
Missouri	2,418,128.62	Wis.	1,894,815.86
Montana	1,546,885.32	Wyo.	934,617.63

Of the appropriation of $15,000,000 for the improvement of national forest roads $5,000,000 is made available for the fiscal year ending June 30, 1922, and $10,000,000 for the following fiscal year.

The federal highway act in a general way resembles the federal-aid act of 1916 but contains several new features. Administration of the act by the secretary of agriculture, and under him the bureau of public roads, remains unchanged.

Apportionment of the fund to the states is almost the same as in the previous act, the fund being divided into three parts, one part apportioned according to population, one according to area, and one part according to mileage of rural and star mail routes. A new feature is the stipulation that no state shall receive less than one-half of 1 per cent of the total fund which, in this case, amounts to $365,625. This stipulation will increase the amount received by four of the smaller states, i. e., Delaware, New Hampshire, Rhode Island and Vermont.

Change in Use of State Allotments.

There is considerable change, however, in the manner in which a state may use its allotment. Each state must select a connected road system not exceeding 7 per cent of its road mileage for improvement with federal aid. This system will be divided into two classes, one of which will be known as interstate highways and the other as intercounty highways. The interstate highways must not exceed three-sevenths of the system selected; on them not more than 60 per cent of the state's allotment can be spent without the joint approval of the secretary of agriculture and the state highway department. The intercounty highways, which consist of the remainder of the system selected, will receive the remainder of the state's allotment.

Except in states where more than 5 per cent of the area is unappropriated public land, the amount of federal aid received on any project must not exceed 50 per cent of the estimated cost. In states where more than 5 per cent of the area is unappropriated public land the 50 per cent allotment is increased by an amount equal to one-half the percentage of unappropriated public land in the state. Before any funds can be paid to a state, the state must appropriate money, under the direct control of the state highway department, to match the federal allotment, and for the maintenance of federal-aid highways.

All highways in the interstate system must have a surfaced width of at least 18 feet, unless a narrower width is deemed permissible by the secretary of agriculture. In case a federal-aid highway is not properly maintained by a state, the state will be given 90 days' notice by the department; at the end of that time if the highway is not in good condition of maintenance the secretary of agriculture will maintain it [illegible] of the state's allotment and refuse to approve any new projects until reimbursement is made by the state.

What the new appropriation will mean to the country can be judged by the use to which the $275,000,000 previously appropriated has been put, according to officials of the United States Department of Agriculture. Practically $200,000,000 of that money has been put to work in projects which are either entirely completed or now under construction. The exact amount was $199,823,427 on October 31. To match this amount the states have appropriated $265,529,000, making a total of $465,352,517.

Mileage Sufficient to Encircle Earth.

The roads to be paid for by this money, if placed end to end, would encircle the earth and extend from New York to San Francisco on the second lap, the total mileage of the roads under construction and completed being reported by the bureau of public roads as 27,000 miles on October 31. Of this mileage, 9,555 miles is in projects which are entirely completed and the contractors discharged. The balance of 17,445 miles is in projects which are still under construction, but which were 69 per cent complete on October 31. In these projects there is therefore the equivalent of 12,000 miles of completed road, so that the completed road to date totals over 21,000 miles.

The average cost per mile of the roads built with federal aid has been between $17,000 and $18,000. More than half the money has been spent for roads with the highest types of surface, such as concrete, brick, and bituminous concrete, but a very large mileage of roads of the cheaper type, such as gravel and sand-clay, has been built where such types would withstand the wear of the traffic.

Prior to five years ago the federal government took no active part in the road construction of the country. Today about one-half of all the roads that are being built are being aided by the government financially, and the construction is subject to the inspection and approval of federal engineers.

Work for Quarter Million Men.

It is estimated by engineers of the United States Department of Agriculture that the federal-aid roads under construction on October 31 were giving employment to about 250,000 men, either directly on the actual road construction or indirectly in the production and transportation of the materials which enter into the construction.

IF YOU CARE FOR CALVES

Don't slaughter or sell a heifer calf from a profitable cow. Raise it.

Don't keep your cows in a dark, damp, dirty pen.

Don't overfeed them.

Don't feed milk at 100 degrees temperature one time and 80 degrees the next time.

Don't feed sweet milk one time and sour milk the next time.

Don't feed from dirty buckets and never from a trough.

Doing any of the last five things is apt to cause "scours" and "stunted calves."

Don't feed the grain in the milk; feed it dry. Chewing it aids digestion. Mixing it in milk means more scours.

Don't feed the foam that forms on milk as it comes from the separator, nor that on whole fresh milk. Foam is bubbles—bubbles are full of gas and gas causes colic and sometimes scours.

Don't expose young stock to cold, bleak weather, nor allow them to drink very cold water in winter.

DAILY REQUIREMENTS OF COW

Food Used for Milk Production Must Be in Addition to That Necessary for Body.

A cow weighing 1,000 pounds needs every day, for the maintenance of her body, an amount of food equivalent to that supplied in eight pounds of clover hay and twenty pounds of good corn silage. She must have this food regardless of whether she produces any milk. Food used for milk production must be in addition to that required to maintain the cow's body.

MAKE MONEY IN PRODUCING BEEF

Herd of Good Cows and Purebred Sire of Prime Importance in Making Start.

SELECT BEST HEIFER CALVES

No Method Adapted to All Farms and Conditions as Much Depends on Pasture Available and Nearness of Market.

(Prepared by the United States Department of Agriculture.)

We are a nation of meat eaters. The average American eats more than 140 pounds of this concentrated food each year. The importance of meat, particularly beef, is nowhere more emphatically brought out than at the great central stockyards, some of which cover nearly a square mile of ground. To keep the supply of animals moving through these yards, necessary to feed the millions of people, requires the raising of cattle, hogs, and sheep on hundreds of thousands of farms and ranches.

Improve Each Generation.

In profitable beef production a herd of good cows and a good purebred bull are of great importance. Each generation of cattle raised should be better than the preceding one. This can be accomplished by selecting the best heifer calves each year to take the place of barren, shy-breeding, and old cows, and buying a better bull each two or three years. All other calves produced may be sold either as weanlings at six or eight months old, as stockers or feeders at one or two years, finished as baby beef at sixteen to twenty months, or as fat steers at an older age. The system employed depends largely upon the pasture and feed available, transportation costs, and the market price of milk and cattle.

A High-Class Beef Breeding Herd.

The systems of handling beef-breeding herds which are most extensively practiced are "beef," "baby beef," and "dual-purpose." In the first two systems calves run with their dams until weaned, the cows not being milked. They differ in that cows intended for producing calves for baby beef generally receive better care because their calves are to be fattened shortly after weaning, which makes it necessary to give them a good start on milk.

The straight beef system is primarily adapted to the range country of the West and South, which is too rough, dry, or sandy for cultivation. Where the climate permits, pasture is depended on the year round. Some cottonseed cake may be used during unusually bad weather or periods of feed shortage. Where snow covers the range a part of the year, hay is put up for winter feeding. Little grain is fed, except where grain sorghums can be grown. From southern ranges the cattle are usually sold as stockers at every age from weaning time to maturity. Recently many fat calves have been going to the slaughterhouses. From the North and West a large part of the cattle go to market grass-fat as three-year-olds.

Baby-beef production is a highly specialized business and is adapted to regions where there is a plentiful supply of fattening feeds together with good pasture for the summer maintenance of the breeding herd and nursing calves. The corn belt is the best place for this system, but it is practiced to some extent in other places.

When to Finish Baby Beef.

If spring calves are to be finished as baby beeves, they should be taught to eat grain before they are weaned. They should go into the dry lot at the end of the pasture season and be ready for market by June or July. If possible, they should have good pasture for a couple of weeks after weaning. Fall-born calves should be kept on grain when they are turned on pasture in the spring. The quantity of grain should be gradually increased throughout the summer and fall so that they will be finished for market in December or January. When the pasture fails, hay and silage should be supplied.

Stocker calves require some meal or grain during their first winter to keep them thrifty and growing. They can utilize to advantage much more roughage, such as stalk fields, meadows, silage, and straw than baby beeves. As yearlings and two-year-olds they may be wintered on roughage alone, some clover or alfalfa hay being given if available.

JERRY'S TOMBSTONE

By MILDRED WHITE

Copyright, 1922, Western Newspaper Union.

Gail's first glimpse of her fiance's homestead was not encouraging. Jerry had taken her there to visit his mother and become acquainted with the surroundings which might later be the girl's future home. Jerry ardently hoped that it would be. His mother had been satisfied and happy on the old farm through many years of her marriage; and as Jerry's business would still oblige him to travel, he knew that he would be able to do so with a free mind, if Gail were but comfortably established under his mother's roof. True, the girl of his heart was accustomed to a city home, but Jerry, with anxious eyes, noted lately her growing paleness and slenderness, even while he laughed at her fears.

"The doctor says I ought to be in the country," she had told him. "The doctor says I must try to grow strong."

So Jerry and his mother talked the thing over with their usual sympathetic understanding, and decided that the farm would be the place for Gail.

But when Jerry took his beloved to visit, it was winter. And while she loved the tree-bordered grounds, and the rambling, picturesque old house, Gail's first and unpleasant impression was of the cemetery close by.

"Why, dearie," said Jerry's mother, wonderingly, "I never mind the cemetery. Sort of think of it—when I do think of it at all—as God's Acre. Nothing there to harm one, dearie; just peace and restful quiet." Jerry actually laughed.

"Mother would feel lonesome away from those tombstones," he said, "especially she would miss old Jerry's."

"Jeremiah was my brother," Mrs. Holcomb explained, "used to live with me here long after Jerry's father died and the boy had gone to the city. Jeremiah was particular about his tombstone, left money for it, and he wanted it in reasonable distance from the house. They's a queer niche cut down in it to hold a statue, but we haven't been able to afford the statue; so in summer I fill up the niche with flowers."

"I am not superstitiously afraid, or anything like that," Gail defended. "It's just that I feel the location would make me morbid."

Jerry was disappointed; there was no hiding it; also discouraged. He had so wanted his little sweetheart to like his home. He agreed, after the evening meal, to drive his mother down to the village doctor. She was ailing and wished professional advice, and Gail, while she was too tired after her journey to accompany them, insisted that she would be content to remain alone by the fireside.

"I shall be glad to look around this quaint, big parlor, and I'll not be a bit lonesome," she assured her lover.

So they drove off in the car, and she went first to bid them good-by, slipping back to the house between the stretching shadows of the pines. It was very still there, and with city-bred apprehension, she wished that Jerry had not left the firm's money, in its leather bag, so carelessly in his bedroom.

Then, just as she stood in the upper bedroom, resolved to slip the money bag beneath the mattress, a sound came to her of a suddenly halted automobile and she saw its occupants alight among the shadows of the pines and come slowly toward the house.

One man had silently assisted his companion over the sill, before she decided to act; then slipping into her cloak, which lay on a chair, Gail caught up the valuable leather bag which she was sure the invaders had followed, and crept shakingly down the back stair. The tombstones shone ghostly through the back hall window, but she did not hesitate.

Easily, the girl climbed over the fence and into the dreary cemetery. It was to her now a sure refuge, for who, she thought in strange calm triumph, would seek hidden gold in that place of silence. Above all others, Uncle Jeremiah's tombstone beckoned, and as she made her way in the deep shadow toward it the niche opened invitingly. Into its depths was slipped the younger Jerry's bag of trust.

Then Gail waited.

Perhaps the men, armed, were going to make a bold assault as Jerry entered his home. She would walk on to waylay and warn him. At the bend of the road his car came to a stop. At sight of the small, familiar figure Jerry leaped from his seat and gathered her into his arms.

"Why, Gail, darling!" he cried, and tremblingly she told her story. But neither Jerry nor his sensible mother could be impressed or warned. "There is some mistake," they said, and rode steadily homeward. And when, upon their arrival, it was found that the trespassers were Jerry's own cousins, come hospitably to call on his intended bride, Gail could not join in the laughing account of their entrance.

"We knew you'd be back soon," one said, "so rather than get chilled out in our car, we climbed through the old convenient side window." Jerry did not laugh when he went out later to recover his bag of gold.

"You were brave, Gail," he admired, "mighty brave with your fear of the cemetery and all."

"I will not mind the cemetery again," Gail said, and smiled. "I never felt more safe than when guarded by old Jerry's tombstone."

THE SERVICE

By JULIA A. ROBINSON

©, 1922, by McClure Newspaper Syndicate.

The short December day was drawing to a close. A pink glow shone in the western sky. From the distant steeple, chimes rang out through the frosty air, calling to the midweek service of prayer. The shops down town, brilliantly lighted and filled with a gorgeous display of Christmas gifts, were thronged with buyers, hurrying, bustling, jostling against one another in their eagerness to find the best bargains and the latest novelties. Still the bells pealed forth and the busy shoppers did not hear.

The minister entered the chancel and bowed his head in prayer, then glanced about the church. His heart sank—a few women scattered here and there, a lone man in the corner. On a seat in front a child, with dirty hands and torn dress, sat curled up. He wondered vaguely for a moment how she had happened to stray in, then she passed out of his mind as he cast a troubled thought on the empty pews.

The organ played more softly and stopped. The minister rose and began the responsive readings, but the responses were scarcely audible. Then he offered prayer and read the Scripture lesson. Again the organ played, sending out rich peals of music, rolling away among the rafters, then slowly falling away into silence. The minister rose to speak the message of comfort he had prepared, but his heart was faint and sad. The words came slowly. Would that there were more present to hear the message he had to bring. It was the Christmas thought of love and hope. In a few simple words he told of the peace and joy that comes from the Christ Child, then warming into earnestness with his theme, he told of salvation and of the home above where the Heavenly Child, the King, was waiting to welcome the redeemed. He paused and the organ played again, swelling and dying away as the few who had listened passed out into the gathering darkness.

"It is no use to keep up the service longer," said the young minister that evening to one of his helpers. "We have tried; the people do not come; they do not want it. We might as well give it up."

It was two days later. The minister sat in his study writing; he must have a strong sermon for the next Sabbath, there would be many present; the church was always full on Sunday.

There came a knock at the door. He was surprised, for it was distinctly understood that he was not to be called while writing his sermon.

"I'm sorry to disturb you," said his wife, pushing the door open, "but really I couldn't help it, the case seemed so urgent."

"You know I can't stop for anything now, May," he returned. "I was about to develop a thought and must not be interrupted."

"But, Carl," insisted his wife, "it is a case of life and death. I should not have disturbed you otherwise."

"What is it?" he asked.

"It is a child—there was an accident. She was run down by an auto and they took her to the hospital. They say she cannot last long, she may die any moment. She says she can't die till she has seen you—the minister who preached at the church on Tuesday, she said, and she will not be put off. Do go, Carl."

"Why, it must be the little girl who sat on the front seat—I had forgotten—she was in rags, but kept her great eyes on me all through the service. I'll go, May."

He accompanied the messenger to the hospital. His face was troubled as he approached the cot where the little sufferer lay dying. He bent over her and took her hand.

"My child," he whispered, "do you hear me—I have come."

She opened her eyes, looked up into his face and tried to smile.

"Oh!" she gasped, "tell me more about Him—the Christ child—will He take me there? I asked Him that day—when you told about—it in the church—it seemed to me He said yes—and when the organ played 'twas like the angels singing. I never knew before—about the child. Will He take me—sure—for I'm going . . ."

Tenderly the minister told the story again, holding the frail hand in his. The big, blue eyes of the child were fixed on his face and into them there came a light that was not of this earth.

"I'm so happy!" came the faint cry from her lips, "and I never should o' known—if I hadn't seen the lights—in the church—and heard the bells—I was cold—I wanted to get warm and hear the music—I'll tell Him about you—when I see Him—up there—"

The voice ceased.

"And I thought it didn't pay—that vesper service—because there were so few," said the minister to one of his elders, the tears streaming down his cheeks. "That little child was worth it all many, many times over. We'll keep the church open for the vesper service."

Elephant Graveyards.

Most of the ivory we use is obtained by digging, and not by shooting.

Elephants have their own code of customs. One of these is that no member of the herd must die amongst his fellows. When an old elephant feels that his course is run, he separates himself from the herd and makes for its graveyard—for each herd has a burial ground of its own.

This is always a swampy tract of land overgrown with trees and rank vegetation. Here he dies, and his great body buries itself by its own huge weight in the soft soil.

Many of these elephant graveyards are known to the African natives, who make journeys to them each year for the purpose of digging out the ivory tusks. Few white men have ever seen one, for the natives keep their whereabouts a close secret, knowing that an elephant graveyard is as valuable as a gold mine.

Beautiful Cuban Tree.

The rose apple is one of the little known but very beautiful fruit trees of Cuba. Although it has been grown there for more than 100 years it is never found in orchards, but only in gardens.

Few trees have such exquisite leaves, blossoms and fruit, attracting at once the attention of all travelers in the tropics. The foliage is dark and lustrous; the fruit only about two inches long, pear-shaped and tinted yellow and bright rose. At several experimental plant-breeding stations in Brazil they are cultivating the pomarrosa.

What Really Counts

It is not what you spend, that's sure. Men have spent fortunes and have finished much worse off than when they started. Here is the answer. It is the amount you save that counts.

Therefore, decide how much you intend to save. Then each month, each week, each day, deduct the sum from what you make and deposit it in our bank. Spend the rest if you care to or need to, for you are still on the safe side and making progress. We will safeguard your savings.

DISPOSITION OF SURPLUS SEEDS

Replies to Questionnaire Show That Biggest Part Is Sold to Neighbors.

LOCAL SHIPPERS GET SHARE

Some Growers Get Good Results by Advertising in Nearby Country Newspapers and in Various Farm Periodicals.

(Prepared by the United States Department of Agriculture.)

The farmer who has produced a surplus of seed may sell it to any one of the following: His neighbors, other farmers through such means as advertising and correspondence, local shippers, traveling seed buyers, distant seedsmen by mail, and by advance growing contract. In reply to questionnaires sent out by the bureau of markets and crop estimates, United States Department of Agriculture, 2,400 growers scattered throughout the country submitted data showing that the farmer sells most of his seed to neighbors. A considerable quantity, though, is sold to the local shipper. Distant seedsmen by means of their traveling buyers and correspondence also buy large quantities of seed direct from farmers.

Although the Farmer Sells Most of His Seed to Neighbors, a Considerable Amount Is Sold to Local Shippers or to Distant Seedsmen.

Seed Grown on Contract.

Although probably most of the vegetable seeds are produced on advance growing contracts entered into between large commercial vegetable-seed dealers and farmers located in more or less well defined areas, only a small percentage of field seed is disposed of by farmers in this way.

Some farmers obtain good results by advertising in nearby county newspapers and in agricultural periodicals which circulate in sections of the country that consume relatively large quantities of the kind of seed offered for sale.

Various federal and state publications and, within recent months, county newspapers and agricultural periodicals publish current information relative to the supply, demand, movement, and prices of the important kinds of field seeds when the principal movement of each kind from the farm is taking place. The farmer who makes use of this information has a better understanding of the worth of his seed and can meet the dealer on more even terms than in the past, when the dealer was almost alone in his knowledge of what was going on in the seed markets.

Early Selling Advisable.

There is no one best time at which to dispose of seeds. The general rule of selling when the buyer is anxious to buy holds as true in seed transactions as in others. Ordinarily seedsmen are eager to buy seeds as soon after thrashing as possible, especially if the carryover of that particular seed from previous years is less than normal.

Most large seedsmen buy the bulk of their grass and clover seed before February 1 and make purchases after that to fill open orders or to replenish low stocks. Frequently higher prices may be received after February 1, but the grower runs considerable risk in not being able to dispose of his seed to seedsmen as late as that, and consequently of being compelled to carry it over until the next planting season or to sell it to some seedsman who is willing to speculate on it at a price usually considerably below current prices.

By keeping in touch with the established seed market information for the entire country and not focusing all of his attention on local conditions, which may be just the opposite from those prevailing elsewhere, the farmer can determine pretty well for himself when it is advisable to sell his seed.

GOOD BULLS RAISE AVERAGE

Improvement From Use of Meritorious Sires Forcibly Suggested by Tabulations.

According to tabulations made by the dairy division, the use of 11 purebred bulls on purebred cows resulted in an average improvement in the annual production of the daughters as compared with their dams of 50 pounds of butterfat each. This forcibly suggests the improvement that is likely to come in an ordinary herd from the use of meritorious bulls.

SUPPLY BASE FOR BIRDS

The air forces can be concentrated against the enemies of orchard and garden by setting up a base of supplies for winter birds. This is the suggestion of A. C. Burrill of the Missouri College of Agriculture, who further states that suet trimmings, warmed and mixed with bread crumbs, make an excellent food to attract birds and help them survive the worst storms of winter.

Suet molded into a ball and enclosed in a loosely woven mesh of twine can be hung in a tree so that the English sparrows will not touch it. These suspicious birds fear to alight on a pendant object, but the native winter birds will eat readily from such a supply. They will supplement this food with numberless hibernating insects.

SUNFLOWER GOOD AS SILAGE

Crop Regarded as Successful and Profitable by Many Farmers in Canadian Provinces.

Many Canadian farmers are growing sunflowers for ensilage and the crop is said to be very successful and profitable. This movement was started experimentally a few years ago and proved such a great success that many hundreds of acres were planted last spring and the acreage will be much greater next year. Silos are being erected in large numbers all over Canada for storing the material.

Sunday, Feb. 5. English services at Erie at 10 a. m. and at Neptune at 3 p. m.

H. LUTZ, Pastor.

School Notes

At the general assembly hour on Wednesday morning the Fourth grade pupils demonstrated their skill in spelling. An old fashioned spelling contest was conducted under the direction of their teacher, Miss Vaughan. Augnsta Harms came out victorious. The next three, who held their own to the very last, were as follows: Leona Olson, Wesley Ferdinandsen and Floyd Olson. It may also be added that this was the first time Theodore Kusmak failed in spelling this year. He holds a very enviable record in that study.

The school is now in possession of the ninth edition of the Encyclopedia Britannica, containing twenty-five volumes. These books are well bound and in excellent condition, and will prove a very valuable addition to our library. This set was donated to the school by Miss Vaughan.

This marks the first week of the second semester. A great interest is manifest in the new subjects started this week, as follows: Civil Government, Commercial Law, Manual Training, Zoology and Mechanical Drawing

Next week the eighth grade pupils will take up a course in Citizenship. According to a late ruling of the State Department of Education this is now a required subject for admittance to high school.

Last week was designated as Thrift week throughout our nation. For a home project the pupils were asked to refrain from buying candy and gum for one week. When the roll was called Wednesday morning approximately 65 per cent had saved their nickels otherwise spent for these luxuries.

Co. Supt. Geo. M. Gunderson visited school on Thursday. In the afternoon he addressed the high school on the subject of good citizenship. Mr. Gunderson expressed himself very favorably of the work that is being done by the teachers and pupils in this school.

A Satisfactory Arrangement

At a meeting of patrons of the electric light plant Saturday evening the new schedule of rates prepared by the council was read and after considerable discussion pro and con a vote was taken and it was decided to adopt the plan of a flat rate to be in force througout the year, with an extra charge of $1.00 for flat irons and 50 cts. for washing machines. It is a difficult proposition to arrive at a scheme of rates that will be absolutely just, but the plan seemed to give nearly general satisfaction. It was decided that contract be drawn up and signed by all the patrons agreeing to use the light throughout the year at the flat rates per month as per schedule adopted, to take effect January 1.

THE GOODRIDGE BANNER

VOLUME XVI, No. 1. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, FEBRUARY 3, 1922. $1.50 PER YEAR.

ERIE EPIGRAMS

Oscar Thoreson and son were in Goodridge Saturday marketing grain.

Sup't Gunderson recently made a tour visiting the schools of this neighborhood.

Ludvig Johnson and Christ Amundson were guests at the Z. J. Hole home last Monday evening.

H. C. Iverson embarked on a canvassing trip throughout the eastern part of the county soliciting subscriptions for a leading farm publication.

"It's no more planning with me any more. It's a sure go now; I'm going to build that silo!" Thus spoke Zacharias Hole the other day, and one could see by his looks that he meant it. Mr. Hole is already at work with the preliminaries, though he has not as yet placed his complete order for building materials.

Mrs. Myrtle Rouze and Miss Ose, the "east side pedagogs," attended the Teachers' Progressive League session held in Dist. 56 school house Friday evening.

C. [illegible] Elg was a Goodridge business visitor Saturday, bringing a load of merchandise for the Erie store on his return.

H. O. Folkedahl returned the first part of the week from Northwood, N. Dak., where he had consulted Dr. Kirby in quest of relief for his throat troubles, and reports appreciable improvement.

[illegible] visited Goodridge on a business mission Saturday

A surprise party in honor of Mrs. [illegible] took place at the hovet home [illegible] Sunday and was largely attended

"[illegible]" Dahlen visited with his [illegible] H Iverson.

Quite a Wolf Chase

"It was a sight to see, nothing but a cloud of snow dust the last mile and a half of the chase," was part of Ludvig Johnson's comment on the wolf hunt which took place Tuesday afternoon. Johnson, who had taken part in the chase to start with, had been left far behind, as he was out on skis. Theodore Hyland and Gust Iveraon were mounted on their "bronchs" and in the thickest of the fray. The varmint had been seen first in the vicinity of the Brown ditch and was followed in wild pursuit through thickets and across wide meadow flats until bagged about two miles in on the reservation. Hyland was the man who did the shooting and killing, having the swiftest horse. The chase was not without its tumbles and tumblers in getting over rough or uneven places; but the boys were lucky, no one hurt. Of course the coyote was "injured beyond recovery," getting a front and hind leg broken and two shots thru the body.

Electric Line to Grygla Asked

J. [illegible] Opsahl, Bemidji promoter and politician, held a meeting in this city last Thursday evening, attended by a number of citizens, to discuss the matter of railroad facilities for the Grygla territory. Mr. Opsahl recited the predicament of the settlers, harassed by a high tax rate, and stated that unless definite assurances could be furnished the people of that country that transportation facilities would be forthcoming within the near future, many of them would be compelled to abandon their farms. He stated what had been done by the Bemidji promoters, but asserted that everything had now been abandoned in favor of extending the Northwestern Electric line from Thief River Falls. He asked favorable consideration for a legislative program in advance of bond selling for the extension, the farmers having signified their willingness to assist by a further bond issue of $1.25 per acre to be used for construction purposes.

The local business men decided to give all possible assistance to the project, and for the purpose of getting something under way. Mr. W. J. Brown was authorized to appoint a committee of five to investigate the entire proposition.—Thief River Falls Tribune.

Your Income Tax

For the purpose of assisting taxpayers in filing their income tax returns for the year 1921, a deputy collector of internal revenue will be assigned to Thief River Falls from February 28 to March 4, 1952, inclusive. To avoid penalty income tax returns must be in the hands of collectors of internal revenue on or before midnight, March 15, 1922.

Sold Bonds

Commissioner A. W. Hanson returned Tuesday morning from the county seat, where he attended a meeting of the county board. He informs us that at this session the board sold a $50,000 bond issue at a premium of $450.00. The bonds draw 5½ per cent interest.

That $1.50 Subscription Money would help out on Expenses.

THE SCAR

By GRACE O. WEATHERBY

©, 1922, by McClure Newspaper Syndicate

It all started that beautiful summer night in 1916, when the little clubhouse was filled to overflowing with merry, laughing young people whose minds had not yet adjusted themselves to the dark shadow of the war that was looming over them. The music was throbbing plaintively, and it strangely affected the tall youth leaning against the porch rail, puffing a cigarette. Something within him made him long for a vague something that he could not define. He was lonely, very lonely, and still he had no need to be, for with his money, position and good looks he had a host of friends. But tonight he kept away from them, strangely disturbed. Gay figures flitted past the open door of the clubhouse, swaying gracefully to the music.

Suddenly the slouching figure of the boy stiffened as a girl whisked by the door on the arm of a tall young man. Who was she? Surely he had never seen her before. He hurried inside the dance hall, and looked in vain for her. She was gone. For over an hour he searched, until at last he found her, standing by the porch rail in the very spot he had occupied a little while before. Her gown was of some soft, sheer white stuff—the skirt full and fluffy, her white shoulders and arms were bare, her shining brown hair piled high. Never had he seen such loveliness. His longing was no longer vague.

Later he managed to dance with her, and his heart thumped madly as the brown eyes smiled up into his. That same week he learned she was an artist, and to his unspeakable delight she wished to make a sketch of his head. The afternoon was one never to be forgotten. He was an admirable model, and under her slender, clever fingers the sketch took form—his clear-cut features, his dark, waving hair—almost unreal in its perfection.

"You have a wonderful face," she said dreamily, when it was finished. "Don't let anything ever mar it! Keep those eyes as clear as they are now, that chin as firm—that mouth as sweet!"

All the rest of that year—through the winter, till the spring—they were inseparable. He loved her with all his young heart, and still he never told her so. How could he? He didn't dream she cared for him! There were so many, and while she was always kind to him, still she was always kind to everybody! Then, in the midst of their happiness came the war! The boy's young blood was hot with anger, and he was one of the first to go. In his trim uniform he was unspeakably handsome, and the slim girl in white trembled as she saw him go. There had been no word—no promise—only that they would write. She had kissed his cheek very softly when he said good-by, and that was all.

Christmas, 1921! The little clubhouse was gayly decorated with evergreens and holly. Little twigs of mistletoe were hung in out-of-the-way places—snares for pretty, clever maidens. High on a stepladder, perched the girl—a little older—a little wiser—lovelier than ever. Before her on the wall hung a picture—the boy in his uniform, gazing steadfastly at her with solemn, pleading eyes. She felt a tightening about her heart, and her straight shoulders sagged a little.

"Come, come, Jeanie—don't give way now. We've far too much to do!" The girl at the foot of the stepladder was very practical.

"I can't help it, Mary—he was so perfect! Why did it have to be the one I loved best in the world?"

But the girl at her feet wasn't listening. She was busy directing the hanging of a huge bell. Then she hurried out. It was late afternoon, and the final decorations were carefully placed. The others were ready to go.

"Coming, Jeanie? Or, are you going to sit there on the ladder mooning over Carlos all night? Poor Carlos! He'd give his life again to see you thus!" And they were gone. The sun, almost set, cast a last glory of pale sunshine through the window, setting all the holly berries glowing. The girl on the ladder sobbed unheeded.

Suddenly her figure stiffened. An uncanny feeling that she was not alone crept over her, and she lifted her face from her hands. There at the foot of the ladder was a man. His face bore a horrible scar across the left cheek—a lurid crimson scar! But the eyes were the same clear eyes—the chin as firm—the mouth as sweet.

"Jennie!" he whispered, brokenly to the staring girl. "I just couldn't help coming. They wanted to wait until tonight, but I couldn't. I wanted to see you so!" His hand crept to his cheek. "I'm horrible to look at, Jennie . . ."

The girl crept down the ladder, and grasped the man by his shoulders. "Where have you been all this time? Way back in the fall of 1917 you were reported missing. Where did you go? Why didn't you come back to me? I've waited so long!"

But, the sad story of the German prison camp and hospital, and the reluctance to shatter the girl's ideal of himself were not told then—but later—when the sun had entirely set, and the last sunbeam had departed, leaving the two by the ladder close together, the girl's lips against the scar!

BUMPUS

By CLARA C. HOLMES

©, 1922, by McClure Newspaper Syndicate.

Martha stood at the window of her "blueberry" cabin, watching the fire-blackened skeletons of pine trees being shattered in the December gale. It was only four days before Christmas, yet Martha's heart was as desolate as that forbidding wasteland stretching acres to the eastward.

Beside her upon the windowsill purred Bumpus. She stroked him and confided to him her troubles.

"It might have been very different with us, Bumpus, if someone had not erred so fearfully."

Co-incidentally, the words, "To err is human," flitted into her mind. Her face brightened.

"I'll do it, Bumpus! Anything is better than living a useless existence because one hates somebody. But oh, Bumpus, Anne did wrong me so spitefully! She may not have invented the unreasonable falsehoods; but she encouraged—she persuaded Carlton Burns into believing them. Because I was sensitive, I was hurt terribly; so I ran away to free Carlton—yes, Bumpus, I ran away from him," she concluded, bursting into sobs.

"Anyway, I'll send Anne a Christmas greeting," she continued, clinging to her purpose, "and I can't buy anything out here. What am I to do, Bumpus?"

A moment after Martha had asked the question, the cat jumped down from the windowsill and ran for the loft stairs and Martha followed him.

Bumpus stationed himself vigilantly at the eaves. As Martha glanced around, her attention was caught by a trunk which had not been opened since her sister had died more than a year before.

"Poor Lina's gowns used to fit Anne Grant. Anne has become impoverished; it seems as if she is being punished for her jealous [illegible]," reasoned unsophisticated Martha.

"I can't bear to wear these pretty things; I wonder if I can bring myself to give Anne this silk [illegible]," she faltered, lifting a beautiful gown from its place.

Then she sat down to write a note, but her hand trembled and tears fell on the script.

"Dear Anne Grant—The [illegible] News says you have had [illegible]. I want you to know that I am sorry. I am mailing you a Christmas remembrance—the kimono Lina never was able to wear. Lina was fond of you.

"I presume you guessed why I turned cynic—I tried to be kind to grandmother—it crushed me completely when folks gossiped, after she had gone, saying that I had abused her. I suppose I was over-sensitive, too, in regard to Carlton; but I assert now, as I did then, that I liked Carlton for himself alone and not for his heirship to the mill property, as Carlton was led to believe was true. I am staying on my blueberry farm. In memory of Lina—and Christmas—and our own early friendship, I am truly wishing you, and all the old friends, a happy Christmas-tide.

"Your once confidante,
"Martha Bradwell."

Martha courageously went out into the storm to carry her letter and parcel to her mail box, which was nearly a mile away. When she returned, she passed long hours in suspense, wondering how Anne would accept the gift. By noon the postman came, having put himself out of his way in order to deliver a letter. The message was from Anne.

"My dear old chum—We are so glad to hear from you—no one knew whether you were living or dead. You mention some gossip. Will you kindly reflect that there were others ambitious for Carlton's friendship as well as myself? We are sorry you were so deeply hurt. Do you mind if we plan a sleighing party, and drive over when the road gets good?

"I am sure you never will regret having shown so genuine a Christmas spirit. That this may be your happiest, merriest Christmas, is the wish of
"Anne Grant."

"Happiest Christmas!" Martha's eyes filled with bitter tears; the words were filled with hollow mockery. Suppressing her anger, Martha watched the snow begin to fall. When Christmas morning dawned, Martha wept again in loneliness.

Suddenly she sprang up. Someone was knocking loudly, and she dare not open the door to a stranger. The intruder came to the window.

"Don't be afraid, Martha; for Jupiter's sake, let me in!" he commanded.

She was soothed by the familiar voice; mechanically she opened the door.

It takes something more than a northeast blizzard to deter a Yankee.

"Hello, Martha," he greeted, "aren't you going to welcome a fellow who has wallowed miles to get to you?"

She let him seize her almost inanimate hands.

"Martha," he bantered to dispel her bewilderment, "honest, I am real and human, even if I am covered with icicles. Anne sent for me to tell me you were here. She was trying to tell me something about somebody's grandmother, the great Jupiter knows what, I don't."

Martha forced back a flow of tears and flashed Carlton one of her winsome smiles. She thought just then about her memory gem: and, looking down to the furry bundle on the floor, she effused:

"Bumpus, isn't Anne Grant—divine?"

[illegible]

Natalie raised her arms above her head, and the jeweled bracelet that Kenneth had brought her, flashed in the sun.

Kenneth had spent the last ten months in Europe. Kenneth was always traveling about, spending money in a lordly manner. Natalie frowned, and her pretty face was drawn into lines of despair. The rich widow who had come on to visit Natalie's mother, sighed.

"My dear," she exclaimed, "this is a world of trouble. Sitting here, and reflecting on my own recent sorrow, I could almost wish myself in the place of the carefree Russian girl, in your kitchen. Her horizon, no doubt, is chiefly bordered by the aluminum coffee pot, her greatest concern, keeping it ashine. Do listen to her voice, Natalie; really such boisterous singing shocks my ear drums."

Natalie shrugged.

"And the girl understands so little English, that it would be useless to tell her to moderate her joyous tone. She would probably think I was complimenting her instead, upon its range."

Mary is good and willing, but like most commendable people, disappointing.

Natalie jumped up and went over to the window. Then for an instant her frown vanished, while a smile of eager sweetness curled her lips. A young man was coming up the walk—a man of earnest face and purposeful bearing. As his dark eyes met Natalie's, he bowed gravely without returning her smile.

While he waited for the maid to respond to his ring, the widow turned to the girl.

"My dear Natalie," said said, "how long do you intend to allow that masterful young Stewart to hope on in his "fool's paradise?" You know well—your mother and I have discussed the subject—that you could never be satisfied as a poor man's wife. Don Stewart is unmistakably poor, with no promising future ahead. With your good-natured father supplying your every whim, how could you later be content without decent clothes to wear?—with odious housework to do?"

Natalie suddenly laughed.

"Maybe," she retorted, "I'd be singing over the washing of a coffee pot, like Mary."

But when Don Stewart came into her presence she received him coldly. "Love is all right," she kept telling herself, "but love alone will not carry one over the rough places of life. She must be firm, she told herself resolutely against the sincerity of Don Stewart's charm.

When Don Stewart had gone again down the garden path, his head bowed and his eyes shadowed by sorrow, Natalie went out to the kitchen to hush Mary's song. Mary greeted her adored lady with disarming affection, hastening to touch her soft lips to Natalie's palm. "You like—my song?" she asked in happy misunderstanding. "My man, he like it, too, cause it's 'bout lofe, it gives, he say, 'lofe's in the giving.'"

Slowly Natalie repeated the words. "Love is in the giving."

"So you, too, had a lover, Mary. Tell me about him."

"He come to dis country," Mary said stolidly. "Then he send back for me to come marry him. I come. Leave nice home in Russia—beeg kitchen, clean. No nice here. My man, he get seek, poor. I no care, I happy. 'Lofe in the giving.' Then my man die quick. Me and the baby all alone in strange land. Woman take care of my baby. I work. I earn money. 'Lofe in the giving.' I see my baby Thursdays. I wash, iron his little clothes."

Mary stretched wide her roughened hands.

"Baby so beeg," she said proudly. Natalie rushed forward, the arm with the jeweled bracelet caressed the foreign girl's neck.

"Oh, Mary," she cried, "and still—you can sing."

"Sure I sing," Mary answered. "I make happy for my baby, for him—gone."

Natalie was at the telephone.

"Don," she said, tremulously sweet, "I will go with you for that drive today. And Don—I want always to be with you—anywhere. There's your answer."

BOB'S GIRL

Little old Mrs. Abbott knelt before the hot stove and tenderly basted the sizzling brown-crusted turkey that reposed within the oven. She lifted the lid of the warming oven and noted with satisfaction the sugary coated mince, the shoulder-strapped cranberry and the deep, luscious squash pies. Next she inspected the neat rows of goodies on the pantry shelves; jellies, chow-chows, celery, nuts and candies—everything to tempt the appetites of her numerous family, which gathered yearly at Christmas time.

There was graham bread for Mellissa, who did not care for white, and there were Bobbie's raspberry tarts, without which, to him, a Christmas dinner would be incomplete.

The old lady's smile faded as she gazed at the tasty tarts. Although twenty-four years old, Bob was her baby, and now for the first time in his life was causing her much worry. All of the remainder of her large brood had married well.

Bob had set aside all of the traditions of his family and was "keeping company" with a slim, delicate little city girl, partial to shiny, dark, plain satin dresses and wearing the style of bobbed hair. Such, to a family like the Abbotts, spelt the stage or a questionable character. The dear little old-fashioned mother wiped away a tear with the back of a gnarled hand. Today this unreal [illegible] creature was to take Christmas dinner with the family, and although she felt unfaithful to her boy for thinking of such a thing, she hoped with all her heart that Miss Ainslie would sense the difference between herself and Bob's own rosy-cheeked sisters. Perhaps even Bob himself would be brought to a realization of the difference.

"It's all for Bob's happiness," she told the raspberry tarts huskily, as a long line of family ancestors swept swiftly before her vision.

Why, even Bob himself had a horrid dent in his side where shrapnel had ripped him open. No! This little nondescript nonentity could not enter their family of brave traditions.

Later, around the creaking, festive board, she looked them all over; big, stalwart men and gay, plump, rosy-cheeked women, all happy in the joy of family reunion. Truly the slim, satiny figure, between Mellissa and Bobby, looked out of place, though she smiled bravely and chatted quietly with Bob.

They were in the midst of the steaming plum pudding when the door bell pealed merrily and Bob ushered in a cousin who was too far from his home to get there in time for Christmas dinner. "Hope you don't mind me dropping in on you this way, Aunt Lil?" he asked, knowing full well what the answer would be.

"Bless your heart, no," she made haste to reply, and promptly set about to make the unexpected guest comfortable.

In the general confusion of greetings it was some time before the newcomer was introduced to little Miss Ainslie, but when Bob did the honors, to the amazement of everyone, the late comer just stared.

"Letty Ainslie! Can it be possible?" In an instant he was around the table, holding tight to two slim white hands.

"They told me Bob had a sweetheart, but they didn't say who she was," John was explaining eagerly. "To think that Letty Ainslie of 'soap kitchen' fame should become a member of our humble family. What do you think of her, Aunt [illegible]?"

"I don't understand them," she answered meekly.

"I didn't tell them, captain," came tremblingly from little Miss Ainslie's quivering lips.

"Didn't tell them. Oh, boy, what a Christmas story. I'm too starved to tell it all now, but later— Look." He lifted back the despised bangs of the Dutch clip and disclosed an ugly, jagged scar. "Her memento of the 'big fight,' ladies and gentlemen. Some brave kid, I'll say; right there with the hot stuff and the comforting words when we needed them most."

"Please, captain," came a small voice from Letty's corner. "Mayn't we finish Mother Abbott's delicious plum pudding in peace?"

Something welled up in the old lady's heart. "Yes, let the dear [illegible] [illegible] afterwards she [illegible] [illegible] Bobbie's favorite tart."

BELOW ZERO WEATHER Is Here

And it is time to buy what wearing apparel you need for the extreme cold weather.

Our stock of heavy underwear, caps, mittens, mackinaws, socks, felt shoes, overshoes and other winter goods is the best we could buy, and we are selling it RIGHT. MANURE SHOULD BE KEPT DRY

In Process of Fermentation Ammonia, Which Contains Nitrogen, Is Washed Away.

Manure when it must be kept for a few weeks should be kept dry. It must be remembered that the nitrogen in manure is very easily washed away. Nor should manure be allowed to ferment. In the process of fermentation ammonia, which contains the nitrogen, is given off and this valuable constituent of a fertilizer is lost. Never use lime on manure as this also drives off the [illegible] hence destroys [illegible] large measure [illegible] measure.

IMPROVE FOWLS EVERY YEAR

Man Breeding for Egg Production Should Pick Out Best Layers for Breeders.

The poultry raiser who does best is almost always the one who carefully and closely picks out each year only his choicest specimens and breeds from these exclusively. As a natural result, his flocks become better and better each year. By the same token, the man who is breeding for heavy egg-production should pick out his very best layers to be used exclusively as breeders, and in the course of a few generations the habit of prolificacy will become firmly established in this family.

WATER FOR COWS IN WINTER

If Possible It Should Be 15 or 20 Degrees Above Freezing—Steam Boiler Is Handy.

During the winter, when cows are stabled the greater part of the time they should be watered two or three times a day unless arrangements have been made to keep water before them at all times, says the United States Department of Agriculture, in Farmers' Bulletin 743, "The Feeding of Dairy Cows." The water should if possible be 15 or 20 degrees above freezing, and should be supplied at practically the same temperature every day. When water well above freezing temperature is stored in tanks and piped directly to the cow, there is probably little occasion to warm it. When it stands in a tank on which ice often forms, it usually pays to warm it slightly. This can be done by a tank heater, by live steam or by hot water from a boiler. If a boiler is used for running a separator or for heating water to wash and sterilize utensils, steam from it can readily and cheaply be used to warm the drinking water.

BEST DISTRIBUTER OF WEEDS

Oat Crop Put in Carelessly and Without Cleaning Seed—Noxious Plants Result.

One of our best weed distributers is the oat crop. Oats are naturally partial to weeds, and to add to the problem we usually put the oat crop in carelessly, often on weedy ground, frequently without cleaning the seed. The result is that smartweed, wild oats and pigeon grass dispute with the oat crop for the water and fertility in the soil. Were the same care given the oat crop that is now accorded wheat, our returns per acre would be more and our weed problem measurably less.

BIG VALUE OF WHEAT STRAW

Ton of Material Carries Large Amount of Nitrogen, Phosphoric Acid and Potash.

The average of many analyses shows a ton of wheat straw carries about 10 pounds of nitrogen, 2.6 pounds of phosphoric acid and 14.8 pounds of potash. This amount of plant food in the more available commercial forms would cost some $5.48, valuing nitrogen at 30 cents a pound, phosphoric acid at 10 cents and potash at 15 cents. From the standpoint of actual plantfood, then, it would appear that $8 will buy more than the wheat straw carries, and in a more readily available form. More labor will also be involved in handling the straw as proposed than in using the commercial fertilizers.

FARM NAME REAL ASSET TO OWNER

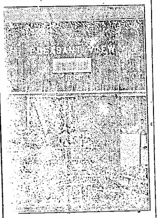
Can Be Used to Good Advantage in Connection With Marketing of Products.

OF MUCH VALUE TO BREEDERS

Acts as Sort of Guaranty That Anything From That Particular Place Is All That Is Claimed—Can Be Registered.

(Prepared by the United States Department of Agriculture.)

Many farmers throughout the country are finding it to their advantage commercially to give their farms attractive names that can be used in connection with marketing their products. Provided the quality of the product is kept up, a reputation is quickly established for the farm and the commodity that makes the name of real worth in dollars and cents when it comes in competition on the market with other products. The name becomes in time a real asset to the owner and has a money value much like the good-will in other kinds of business.



Farm Name Has Money Value.

Breeders Recognize Value of Name.

In England many farms have borne distinctive names for years, which have become famous in connection with various products. This has been especially true in the case of certain breeders of cattle. The name of the farm passes current among cattle breeders as a sort of guaranty that animals from that farm are all that is claimed for them. The practice is coming into vogue in this country, and with it a desire to be protected against others adopting the same name and thereby benefiting by the reputation already established for it.

The United States government, through its patent office, which interprets the trade-mark and label copyright laws, is prepared to give this protection within certain limits. Some of the states have laws authorizing the registration of farm names with the state authorities, and no one else in that state is allowed to use the name. This is merely for use within that particular state. The United States patent office, however, is prepared to register farm names as trademarks if they meet specified requirements. This will protect the owner against their use by others anywhere in the United States. There are certain requirements, however, that must be met, as in the case of other sorts of names used as trade-marks under the federal trade-mark law. The farm name, for one thing, must be used by the farmer as a trade-mark on his products that he ships to points outside his own state; in other words, a commodity that moves in interstate commerce. It must be printed, stamped, or otherwise attached to each parcel. The federal law makes no provision for the registering of names used as trade-marks on commodities that are shipped only within the state.

Common-Law Right in Name.

Although it is thought advisable, it is not necessary that the name be arranged into any distinctive design. Under the trade-mark act of 1905, it was not possible to register a name that is merely geographical, or merely descriptive, or is merely a surname not displayed in some particular or distinctive manner. Such marks, however, can be registered under the act of 1920, if they have been in use by the applicant in interstate commerce for not less than one year. In this way congress sought to give recognition to a common-law right in a name used as a trade-mark on the ground of its use.

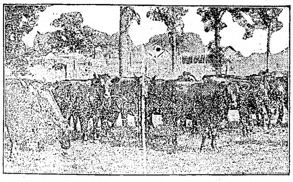
BOVINE TUBERCULOSIS YIELDS TO ACTIVE TESTING CAMPAIGN



Accrediting a Herd as Free From Tuberculosis Increases Its Value to the Owner and the Community.

(Prepared by the United States Department of Agriculture.)

For many years after the agitation regarding bovine tuberculosis began, there were very few people who entertained the hope that it would ultimately be eradicated. Now, after many years of effort, first unsuccessful, but now giving great promise of success, there are many who firmly believe that the time is coming when this scourge of live stock will be conquered.

Tuberculosis May Be Banished.

This change of attitude has been brought about largely through the efforts of the bureau of animal industry of the United States Department of Agriculture, co-operating with the various state officials, which have been so successful that within a period of four years, during which the work has been directed toward ultimate elimination, several thousand herds have been accredited as being free from the disease and a number of sizable areas in different states contain practically no tuberculous cattle. These results have demonstrated conclusively that, if sufficient funds are made available, this menace to human health and to the success of live-stock farming may be done away with in a practical manner.

Tuberculosis of cattle is one of the few farm problems that appeals with almost equal force to city people, for the healthfulness of milk and meat is of vital importance to them. This fact ought to make it easier to get the support necessary for putting through such a country-wide program against the disease. The cattle resources of the country are of the utmost importance, and measures to reduce the risk of loss represent nothing more than common sense.

Insurance Feature Appeals.

There are more than 66,000,000 head of cattle in the country worth nearly [illegible]. Aside from the health aspect of the problem, the insuring of this vast amount of wealth against loss ought to appeal to all classes of people as a necessary measure for the good of the nation.

At the present time various state and federal agencies are testing about 150,000 cattle a month and eliminating those that are found to be tuberculous, but it is expected that in the near future probably [illegible] head will be tested annually by the combined forces. On that basis it is easy to see that great progress will be made toward getting rid of the plague, for the evidence obtained shows that the methods now in use are practical. When the campaign began most of the stress was laid on cleaning up individual herds, and this was the only practical thing to do as not enough sentiment had been aroused to make it possible to get general support for a campaign in any locality. But the advantage gained by cattle breeders who were able to advertise tuberculosis-free herds was so great that skeptics were convinced, and now many localities have taken up the problem and are rapidly cleaning up all herds within their boundaries. In fact, at the present time this method of cleaning up circumscribed areas is the predominant one.

Nine counties in the United States have now completed one or more official tuberculosis tests of the cattle within those areas, and about 50 counties are now either engaged in this work or are getting ready to take it up. In some of the counties the supervisors appropriate funds to employ inspectors who help the state and federal officials. In others the farm bureaus have taken the job in hand.

Hillsdale County a Model.

One of the best examples of what a county can do in getting rid of this destructive disease is found in Hillsdale county, Mich. On October 24 a campaign was launched with the idea of cleaning out all the diseased cattle. A force of 30 county, state, and federal inspectors was organized. They divided up the territory, giving a part of a township to each man. The county farm bureau furnished automobiles that were driven by the farmers who were leaders in the communities and had influence with the live-stock owners. By November 5 every herd in the county had been tested.

There were 2,339 herds, containing 15,77[illegible] cattle, and 375 reactors were found. This means that about 2.4 per cent of the cattle in the county had the disease, a rather low percentage. In sections where the disease is no more extensive than this, the cost of clean-up is almost negligible when compared with the good that must ultimately come from it. In this county the farmers, purebred breeders, and in fact all the people of the county, were enthusiastic, which helped a great deal toward getting the work done in such a short time.

Other Counties Become Interested.

Some of the most progressive live-stock counties in various parts of the country are now taking up this prob-

The reputation thus established enables the association to fix its price at several cents a dozen above the regular market quotations. This association, in common with many others, co-operates in buying chicken feed and other supplies.

Attractive Package Is Important.

One of the very important considerations in getting a good price for eggs thus marketed is an attractive package. Some of the most successful shippers have done away with dirty, wooden cases, and use a heavy fiberboard case which will hold from 15 to 20 pasteboard cartons of 12 eggs each. Advertising is printed upon both the cartons and the case. Some of the circles market by parcel post within the first and second zones; that is 150 miles. When eggs are sold in this way, special care must be given to packing.

Another marketing method that has been developed with a good deal of success in dairy sections is to sell through the creamery. Eggs can be delivered to the creamery with the cream or milk, and the creamery officials are often able to work up a fancy trade with those who buy their butter.

The objects of such organizations, as given in the sample constitution compiled by the Department of Agriculture, will give a good idea of what most of these circles attempt to accomplish. They are: The securing of better strains of poultry; to produce more eggs of good color and size; to handle eggs more carefully in order to be able to guarantee them, and thus create a reputation; to market some more directly to the consumer; to purchase supplies in a co-operative way; and to do such other things as may prove of benefit to members of the community.

Now Is Good Time to Organize.

The winter months, when there is usually more leisure for farmers to get together and talk over their problems, should be the best time to make the first move in organizing an egg circle. Marketing eggs is not such a problem at this season, but when the hens begin to lay heavily in the spring it will be a great convenience to have an organization already in working order.

Detailed information regarding the organization of egg circles may be obtained from the Department of Agriculture.

EXPERIMENTING WITH HOGS TO FIND MERIT

Scrubs, Crossbreds and Purebreds Are to Be Used.

Animal Husbandry Division of Department of Agriculture Endeavoring to Clear Up Points on Feeding and Breeding.

(Prepared by the United States Department of Agriculture.)

Although there is a higher percentage of purebred hogs in the country than of any other class of live stock, there is still much room for improvement. And there is much to be known concerning the relative merits of scrubs, cross-breds and purebreds. To make some of the points clearer the animal husbandry division of the United States Department of Agriculture is starting a breeding and feeding experiment that will contrast the results of using scrub, crossbred and purebred boars on scrub and crossbred sows. If appropriations provide sufficient money it may be that the effect of using crossbred and scrub boars on purebred sows will be studied.

Ten crossbred sows, of various breed mixtures, and ten scrub sows of the razorback kind will be used. Half of each of those groups will be bred to a purebred boar; half of the first group will be bred to a crossbred, and half of the other group will be bred to a scrub. This same scheme of breeding will be carried on from generation to generation. Some of the offspring will be fed out and some of them will be kept for breeding before being fed out. Shoats from the different lots will be put in feed lots together and fed alike so that a fair comparison can be made. Some of these scrubs and crossbreds will be compared in feeding trials with purebreds raised on the department's experimental farm at Beltsville, Md. Some will be put into different experimental lots on various feeds.

Nearly everybody thinks the purebred is superior to the scrub, but there is disagreement among farmers about the merits of purebred and crossbred feeders. The department hopes that in due time its experiments will give results that will answer any doubts.

RURAL BUILDING AIDS COMMUNITY

Many Advantages Are Outlined in Financing Proposition by Popular Subscription.

STUDY MADE BY SPECIALISTS

By Far the Greatest Number of Structures Are Erected Through the United Effort of People Most Interested.

(Prepared by the United States Department of Agriculture.)

To assist rural organizations in working out ways of financing and maintaining community buildings, the United States Department of Agriculture has just published Farmers' Bulletin 1192, The Organization of Rural Community Buildings. This is the third of a series of bulletins on rural community buildings, based on an intimate study made by specialists of the department of more than 200 such buildings in all parts of the country. The first, Department Bulletin 825, Rural Community Buildings in the United States, gives a history of the movement, treats of some of the general principles involved, and tells the story in detail of the erection, financing, management and use of a few representative types; the second, Farmers' Bulletin 1173, Plans of Rural Community Buildings, gives the floor plans of 21 buildings of the better class, illustrating various types.

Public Reading Room, [illegible] (Mass.) Community House—This Is but One of Many Attractively Furnished Rooms in This Building.

Methods of Financing.

It is pointed out in this third bulletin that though community buildings are financed in a number of ways, as individual donations, local industry, well-established social or fraternal organizations, by far the greatest number are erected through the united effort of interested people and various organizations of the community. When the latter plan is employed the necessary money is obtained either by voluntary contributions or by the sale of stock. Subscriptions are paid in the form of money, labor or materials.

Financing a building by general voluntary contributions is suggested as perhaps the simplest, quickest and most elastic way, while incorporated stock associations furnish more of the elements of financial permanency. The community method of financing has a number of advantages: (1) People are devoted to that to which they voluntarily subscribe; (2) this method develops community co-operation, promotes union, and decreases antagonisms through the necessity of different organizations and factions working together in a financial campaign; (3) as the money is voluntarily given from private funds, the people are enabled to make experiments in the building which they would hesitate to make with public funds or those of an individual or club; (4) those who pay, control. Only a high type of citizenship subscribes to an institution of this kind and thus public spirit at its best is in control.

Community Buildings.

In recent years there has been a growing movement in the erection of community buildings by the municipality through taxation. This method also has its distinct advantages.

Maintenance expenses of community buildings are met by dues, fees, rentals and receipts from entertainments, profits and concessions. Some of the best organizations maintain their buildings entirely by annual dues. In the case of buildings financed by an individual or by an industrial concern, a community association is generally formed which guarantees the maintenance of the building as a condition of the donation.

Most community associations which finance their buildings by issuing stock, incorporate under the state laws in order that they may have a more effective instrument for buying, selling and holding property. To guide such associations, copies of articles of incorporation, constitutions and by-laws now in use by a number of well-established organizations are included in the bulletin. State laws relating to municipalities and counties erecting buildings are also given. Copies of the bulletin can be obtained free on application to the United States Department of Agriculture, Washington, D. C.

Taste is a matter of tobacco quality

"They Satisfy"

THE UNUSUAL MAID

By AGNES G. BROGAN

Copyright, 1922, Western Newspaper Union.

He was a very rich old man. Old, before his time, with the business of making dollars and keeping them. Sometimes I think that the "keeping" was his more anxious labor. And I, the elderly housekeeper who had been long in James Ivor's service, used to sigh over his loneliness and the lack of pleasure that gold brought him. In his pretentious mansion were costly furnishings and priceless tapestries, the latter alone could arouse his interest. And of all the house servants who catered to his comfort, Kall, the butler, and I, the housekeeper, were the only one's known to him.

The new maid was one that I, with all my experience, could not understand. She was unusual.

"Why does he set up himself as emperor?" she asked one day when Kall had flown to the blue room in answer to Mr. Ivor's summons, the "throne room," the girl flippantly called it. She had appeared at the house in response to our newspaper "Help Wanted" advertisement, requesting the vacated place of second maid and receiving it.

"Why should you desire to wait upon Mr. Ivor at the table?" I asked her impatiently, "or take his mail up to him? Kall and his secretary attend to these matters."

Then one day the girl was taken ill. I was for sending "Fran," as she called herself to the hospital; but our physician, whom I conscientiously sent for, smiled and said that Fran would get along very nicely in the house and advised that I had better let her talk the matter over with Mr. Ivor.

Perhaps it was a "state of mind" which made Fran merely smile as Kall or I ordered her about and which made her insistent to see our employer. Several times I had been obliged to take the mail from her hands as she was trickily hastening with it up the stair. She may be an anarchist, I reflected, one of those terrible people who are rebellious against men of great wealth. So to settle all quickly I took it upon myself to discharge Fran, and she refused to go. Openly, and still smiling, refused.

I had no recourse but to see Mr. Ivor. "This is a new departure of yours," he said, testily, "troubling me with your servant problems. If this maid is ill send her to a hospital. If she is unsatisfactory, discharge her."

"I have tried both measures," I answered him, "and she refuses to leave the house."

For the first time he turned an interested glance toward me.

"What did Doctor Struthers advise?" he asked.

"That she talk the matter over with you," I replied, perplexedly.

Mr. Ivor stared. Then before either of us could speak the unusual maid came into the throne room—the blue room, I mean. She appeared not abashed by her own boldness nor dismayed by Mr. Ivor's cold dignity.

"How do you do?" she greeted my white-haired employer. "I am so glad to see you at last. I have been second maid in your household for weeks."

"Which does not," answered Mr. Ivor, "concern me at all. I learn, however, that you have been ill and—"

"I am better," she brightly interrupted.

She was examining a tapestry on the wall. All eagerly she turned back to the frowning owner.

"Why," she exclaimed, "the tapestry is a genuine—"

The name she gave it escaped me, but immediately Mr. Ivor was at her side, eager as she, in pointing out the beauties of that tapestry hobby of his. Then all at once he stopped and fired a question at her: "How are you so well informed regarding tapestries?" he asked her, and "who are you, anyway?"

Fran laughed. She has a pretty note of laughter.

"That is the very question I wished you to ask," she triumphed, "and you will be surprised at my answer. You had best be seated. You look frail—closeted too much in your tapestried room. You must spend more time hereafter out in your beautiful gardens. You need the fresh air and sunshine, which may not be bought. I am Allan's wife," announced the girl, "your son Allan's wife. You have been lonely without him, I know, as lonely as I should have been if I had mistakenly refused a love that was mine, because I happened to have no wealth or know it's ways. What is wealth after all but love. The love of a son for his father, of a women—for her own. When you disowned Allan because of his loyalty to me, when you refused to give either of us welcome to your home, or heart, I determined to force my way. And it was for your sake as well as for ours. So, I answered your advertisement, and as housemaid I found my way into your home. Now," cried the girl, her blue eyes wet with sudden tears, "now that I have come this far, can you keep your heart closed against me?"

They had forgotten that I was there sitting back respectfully. And I saw that for all my years of service I had not known the man before me as this girl had learned to know him in an instant. But that may have been because she read with her heart, while I had been but reading with my eyes. James Ivor reached out his arms:

"Daughter," he said, "come in!"

PRINCE OF PEACE

By GRACE R. OLIN

©. 1922, by McClure Newspaper Syndicate.

Little Mrs. Burton pinned a stray white curl back of her ear securely.

"I declare," she whispered, pulling her shawl around her shoulders with an excited little gesture, "if Miss Taylor ain't outdone herself this year in decorating her winders."

"Merry Christmas, Mrs. Burton," Mrs. Tucker, the landlady, advanced into the room. "Ain't it cleared off right pleasant now? Did you ever see so many stars, or such a moon?" Her round face beamed with joy, for little Mrs. Burton was a favorite with her.

"Mrs. Burton," she continued, lowering her voice. "Mr. Burton don't suspect nothing, and I thought I'd take this chance, before he comes in, to tell you I sent Joe up with wood and coal, and he'll have a fire going so as it will be warm when you get there.

"And the pies and things you baked yesterday, along with the groceries you ordered, I had him take along. Ain't Miss Taylor's winders gorgeous?"

"I was just admiring 'em when you came in, Mrs. Tucker," answered little Mrs. Burton happily. "And I wish you a Merry Christmas, too," she added. "I don't know now I can ever begin to thank you for all your kindness to me." The wrinkled old hand patted the other woman's shoulder tenderly.

"Making it possible for me to spend Christmas in my old home, and sending Joe to get it ready for me. Why, I don't know what to say, Mrs. Tucker, I don't. Seems as if everything is going to come out all right after all, don't it. If," (little Mrs. Burton's chin trembled for a moment) "if only the Prince of Peace can come into David's heart.

"There, there, now," Mrs. Tucker drew the slender little form close to her for a moment. She knew as well as the whole town knew the sorrow that filled the gentle soul of little Mrs. Burton. She knew that Mary, the shy, sweet little daughter of David Burton, had slept this many a year 'neath the maple trees, and Tom, gay laughing Tom, had run away supposedly to war, and that nothing had been heard of him for nearly two years.

Rumor had it that Tom was in prison and finally that report had spread all over town.

"Mother," the firey old man had told his wife, "Tom is dead to us forever. Let us never mention him again."

And the mother, knowing his wounded pride, had kept her silence, hard though it was. When the winter days had come, David Burton, alarmed at her frailness, had closed the little white house on the hill, and taken her to the friendly shelter of Mrs. Tucker's home.

He had hoped the rest and companionship of others would help her forget, but David Burton did not reckon the depths of a mother's love.

She wanted her own little kitchen, all the dear familiar things that were hers. So at last, when the glad season of Christmas was come, she could stand it no longer. David would never consent she knew, so with the encouragement and aid of Mrs. Tucker, she planned the event that was to satisfy the longing of her heart; she would spend Christmas at home.

She was almost happy as she baked her pies in Mrs. Tucker's spacious kitchen.

"There, there, now." Mrs. Tucker wiped a tear from her own eye. "We ain't got no time to feel sad, honey. Mr. Burton is likely to be here anytime.

"Lou won't be needing my company, Mrs. Burton," she said, and for a moment a strange light shone on the ruddy features of Mrs. Tucker.

"And Mrs. Burton," she added, "it's going to be the happiest Christmas you have ever known."

By the table David Burton stood, his wife's note in his hand.

"Dearest David," said this note, "I can't stand it any longer. I am going home to spend Christmas with the memories of my children, and you, my husband, you will come, too?" David Burton had slipped into his great coat, his fierce old eyes wet.

"I didn't know it was as bad as that, dear," he said under his breath.

Half way up the hill he overtook her.

"I'm sorry, Ellen," he told her, but she stopped him with a glad little laugh.

"We're going home, David," she reminded him, "and we mustn't be sorry for anything."

Little Mrs. Burton stood quite still, her hand reaching out for David's. For suddenly, every window of the little white house was ablaze with light.

"David," she said, and her voice sounded strange to her own ears, "see, in Tom's room, the three candles burn." And out of the glory two pairs of dim eyes saw a door open, and out of it came the trim figure of a young man—a young man in khaki, with a stripe or two on his sleeve, and a medal on his breast.

"Merry Christmas, mother," cried a glad young voice as little Mrs. Burton was swept into his arms.

"Merry Christmas, dad." He wrung the old man's hand. "You see, I was in prison, but it was a German prison, and they just let me out." With an arm about each he passed with them through the merry cheering group into the little white house.

Out on the midnight air rang the holy, glad bells of Christmas. The Prince of Peace had come!

Common Folks

The same thing is true of common folks that Abe Lincoln said about poor folks. He said: "The Lord evidently loves them or he wouldn't have made so many of them."

We like good, everyday, plain, honest people. Many folks who attempt to "put on airs" are not the equal of the plain, unassuming sort. We are all pretty much alike under the skin. The fellow who gets to holding his head too high often takes a tumble. Our bank is a people's bank where all receive courteous treatment, no matter what their station in life.

OF GOODRIDGE

EGG CIRCLES AID FARMERS [illegible] SOLVING MARKETING [illegible]

An Egg-Circle Pay Day Gives Opportunity for Exchange of Experiences.

(Prepared by the [illegible] States Department of [illegible])

When it is [illegible] that the value of the poultry [illegible] crop is equal to that of eith[illegible] or wheat crop, and that there is [illegible] annual loss of nearly 8 per [illegible] of the eggs marketed, it is [illegible] that many producers would [illegible] by a change in the methods [illegible] and marketing eggs. Inv[illegible] by the United States Department of Agriculture have shown that a [illegible] of this big loss occurs as [illegible] of improper handling betw[illegible] farm and the market, and [illegible] careless[ness] is attributed to [illegible] of considering eggs a by-[illegible] and, consequently, giving [illegible] poor care.

Organize a [illegible] Producers.

In many comm[illegible] the problem of getting better [illegible] for eggs has been satisfactor[illegible] by the organization of [illegible] farmers or farmers' wives in little associations known as egg circles. These organizations have been [illegible] in improving the quality of e[illegible] various ways in addition to [illegible] methods of marketing. Some of the[illegible] given much attention to selecting standard breeds that lay more or larger eggs. They have also made [illegible] study of better care, feeding, and shelter.

To improve the quality of the poultry stock, one of the most successful egg companies has a large incubator house of 12,000 eggs capacity, where early chicks are hatched for the members at low cost. This is done in order to obtain early maturing pullets, thus securing eggs during the fall when they are usually scarce and high priced. This company also has a receiving room for eggs where they are candled, sorted to weight (about 24 ounces to the dozen), packed in cartons, and shipped on contract orders. The eggs are all guaranteed to be true to grade; they advertise the fancy grades on their cartons or cases, and market prices are paid to the members.

Twice a year dividends are paid each member in proportion to the number of eggs marketed through the company and the time of year eggs were brought in, a larger dividend being paid per dozen for eggs brought in during the fall and winter than for those brought in during the spring and summer. A regular trade is established with discriminating consumers, with city clubs, with the best class of hotels and restaurants, and with fancy grocers for a supply each day or week.

[illegible] lem of getting rid absolutely of tuberculosis. They have decided that it is the most feasible and practical way of carrying on the work. What was accomplished in Hillsdale county is being carried on at the present time in more than 20 other counties of the same state. Similar work is being done in New York, where 10 counties are engaged in area eradication.

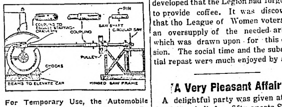
Detailed information regarding plans for tuberculosis eradication may be obtained free from the department of agriculture, Washington, D. C.

MAKING USE OF AUTO ENGINE

Outline Given of Plan for Connecting Car With Circular Saw Will Be Found Handy.

An arrangement whereby an automobile may be coupled to a circular saw for occasional use, is shown in the drawing. The saw frame for this equipment should be quite low, in order to obtain alinement with the engine shaft, or the car may be elevated on a runway.

The couplings are made either of pipe with the necessary slots cut in the ends, or a solid bar may be used, with sleeves pinned to the ends; the latter arrangement is the better, as the sleeves can be made somewhat larger than the bar and shafts, and thus, to some extent, compensate for lack of accurate alinement. For continued use, the pin in the engine shaft should be replaced with a larger one, and a slight enlargement of the hole in the frame may be necessary with some cars.—Popular Mechanics Magazine.



For Temporary Use, the Automobile May, With Very Few Fittings, Be Applied to Drive a Circular Saw.

Mrs. Vake visited school Wednesday morning

Mrs. O. S. Kirklie, accompanied by her niece, Miss Tanem, and her cousin, Miss Tanem, both of Thief River Falls, visited school on Tuesday afternoon.

The snow storm and blizzard on Wednesday did not keep any of the bus [illegible] at home. They all made record time.

Annual Creamery Meeting

At the annual meeting of the Goodridge Cooperative Creamery association held Jan. 28, 1922, the secretary reported that during the ten months the creamery had operated it received:

Pounds of Cream	329,247
" Butterfat	62,819.9
" Butter Shipped	77,434
" " Sold Patrons	1,004
" " Locally	2,188
Total Rounds of Butter Made	80,626
Pounds of Shrinkage in Transit	350
" Overrun	17,806.1
No. of Tubs Shipped	1,206
Received for Butter Shipped	$26,113.14
" Buttermilk	
Sold to Patrons	409.63
Received from Local Sales	1,007.10
Paid Patrons for Butterfat	20,729.46
Unpaid Butterfat	1,249.58

Article 4 of the articles of incorporation was amended so as to make the limit of indebtedness which the association can incur $8,000 instead of $1,000 as at present.

The following directors were elected for the coming year: L. P. Poppenhagen, John Miller, Stuart McLeod, A. Feragen and M. Vaughan.

The board of directors are to meet with the directors of the Thief River Falls Cooperative Creamery company February 4 to see if satisfactory arrangements can be made to lease the creamery to them for this year. Owing to present conditions it was thought the best plan, if they could keep our creamery in operation the whole or the greater part of the year.

J. M. Bishop, president of the Farmers State bank, was present and made a statement that the bank would refund all the outstanding indebtedness of the creamery, providing the articles of incorporation were amended so as to legalize the indebtedness and a satisfactory lease was made with the Thief River Falls Creamery company.

The directors elected the following officers for the coming year: L. P. Poppenhagen, pres.; John Miller, vice pres.; Stuart McLeod, secy.; M. Vaughan, treas

HISTORICAL
SOCIETY

THE GOODRIDGE BANNER

VOLUME XVI, No. 2. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, FEBRUARY 10, 1922. $1.50 PER YEAR.

Farm Bureau Causes $400,000 Price Cut

Prices of farm machinery to be put on the market this year by the Minnesota state prison have been slashed $400,000, to meet demands made by the farmers through the Minnesota Farm Bureau federation.

The state board of control, following conferences with the new farm bureau leaders, reduced market prices 15 to more than 25 percent on farm machinery made at Stillwater. Reductions on binders amount to nearly $50 on a single machine, the state federation says in an official report prepared for the county frm bureaus.

One of the first acts of the new farm bureau administration was to urge the board of control to bring machinery prices down. As a result of the reduction which followed this demand, the executive board of the state federation, in session last week, passed a resolution urging all farmers who are planning to purchase machinery to buy it from the prison plant.

Dairying Course Offered

In response to inqniries that have come to the Northwest School of Agriculture at Crookston for a short course course in dairying and potato culture, the announcement is made that if a sufficient number enroll such a combined course will be offered The course will be offered if at least fifteen students apply for the training. On account of the interest in dairying and potato raising it is expected that the course will be given.

The work in this course will begin February 20 and close March 18. Those attend may board and room at the school. The entire cost for the month, including board and room, will be $24. Those interested should communicate with the Agricultural School, Crookston, as early as possible, in order that proper plans for the course may be made.

Court Adjourned

On account of Judge Grindeland being temporarily indisposed, the term of court which was to have opened at Thief River Falls Tuesday has been postponed to a later date. The grand jury will now meet on the morning of Friday, February 17, and the calling of the petit jury will take place on Monday, February 20

New Institute Annual Now In Cirulation

The new Minnesota Farmers' Institute Annual, a booklet of 158 pages, all devoted to the consideration of the Minnesota home and farm conveniences, is now being circulated. "The annual is dedicated," say the authors, "to the farm men and women who have kept alive the vision of the farm home life as it should be and who are striving the best they can to realize that vision in their surroundings."

Only the cost of postage, six cents for each copy, is charged for this valuable publication. Requests should be sent to the Office of Publications, University Farm, St. Paul.

Republican County Convention

A republican county convention has been called to meet at the conrt house in Thief River Falls on March 18, 1922, at 1 o'clock p. m The election precincts of the county are allotted delegates as follows: Bray, 1: Black River, 1: Clover Leaf, 1; Deer Park, 1; Goodridge, 1; Highlanding, 1; Hickory, 1; Kratka, 1; Mayfield, 1; North, 2; Norden, 1; Numedal, 1; Polk Center, 1; Rocksbury, 2; River Falls, 1; Reiner, 1; Smiley, 1: Sanders, 1; Silverton, 1. John Smith Dead

Ga-Be-Nah-Gewn Wonce, Minnesota's oldest citizen, is dead at Cass Lake at the reputed age of 137 years, after a week's illness with pneumonia. He was also known as John Smith. Smith, whose Indian name meant "Wrinkled Meat," had been very active in late years. A year ago he became totally [illegible]d, but his mind remained clear to [illegible] last, and he often recalled the days when he was a scout for the Chippewas in the wars with the Sioux. He also remembered events of the war of 1912. One of his boasts was that he had never fought against the white man.

ERIE EPIGRAMS

"The qualities all in a bee that we meet
In an epigram never should fail;
The body should always be little and sweet
And a sting should be felt in its tail."

Mrs. Bergit Danielson returned the first part of the week from an extended visit among friends at Edinburg, N. Dak.

A large number of scholars attended the spelling contest which took place in the Grams school house Friday evening.

Mr. and Mrs. H. A. Dahlen and children, Olaf, Alice and Erling, were guests at the Ole Tharaldson home Sunday.

Oliver Tommerdahl sawed up a goodly supply of wood for Ludvig Johnson and Iver Iverson Wednesday and Thursday with his gasoline power rig.

Masters Henry and Melvin Hovet were pleasant callers at Camp Sub-Urban Sunday afternoon.

Elling Ramsey and H. Iverson transacted business in Goodriege Friday.

We hear the deplorable news of Gilbert Manderud's dwelling house burning to the ground last Saturday and nothing of the contents saved, it is reported. The fire is thought to have started from the stove pipe or chimney.

Rev. Hoium of Esplee preached in the Clover Nook school house Sunday afternoon.

George Hovet visited with his fellow "nimrod," Gust A. Iverson, Sunday.

Z J. Hole was a caller at Ole Tharaldson's Tuesday.

MENDETS—Quickly repair all cooking utensils, rubber goods, etc., without heat. So simple—a child can apply 'em. Durable. Outlasts article applied to. 12 for 25 cts., coin or stamps, postpaid. —H. C. Iverson, Erie, Minn., Box 95.

The Gummer Trial

The trial of William Gummer, charged with the murder of Miss Marie Wick on the night of June 7, 1921, was resumed at Volley City on Monday morning, after having been adjourned for two weeks on account of the illness of Sttae's Attorney William Green.

The state closed its case and the defense began presentation of evidence yesterday.

The conditions surrounding the case case and the reputation of the defendant make the canduct of the defense a delicate and difficult problem.

YELLOW STREAK

By MARY J. HITCHCOCK

©, 1922, by McClure Newspaper Syndicate.

The town hall at Townsend presented a brave appearance in the morning sunlight. An ordinary red brick on other days, the monotony of its everyday dress was broken now by the brave splendor of red and white and blue.

It was the eleventh day of the eleventh month, and across the square the groups of khaki-clad figures gathered in numbers, all interest was centered, however, in one who stood apart, yet seemed to be the object of general interest. More! Affectionate regard was manifested in the clasping of hands, the glances of many eyes.

Came the sound of footsteps behind me, and turning, I stood face-to-face with one I knew more than passing well.

"Do you supose I could dig up a story among that crowd?" I asked, and waited expectantly.

"There's the story of the "Yellow Streak," was the slow answer. "We have an hour or two before anything starts, and up in the hall—"

To the hall we went. Presently we were sitting on the wide window sill, looking down into the square.

"Was he really a coward?"

The man looked at me, and smiled faintly. "We said so, but, maybe we were wrong. But, wait—there's a way to tell his story:

"It was a year, seven months and a day after, Shefford's marriage to Colonel Chilton's daughter, that the President's message to congress took some of us chaps that had never dreamed of soldiering by the shoulders, as it were, and made of us soldiers, overnight. From the first, Maurice kicked at the idea of leaving the peaceful life.

"We had got into the sub-zone before it struck me that he was talking too much for his own good. Some of the boys hinted that maybe he was scared; that, when the time came to go in he'd turn and run to save his skin.

"But I was sorry for him, too. His wife had been my schoolmate and believed in him so entirely that she had come to me just before we left and asked that I look out for Maurice. Somehow, she felt that he would be brave.

"And then we moved up. We were really in at last! It grew worse, instead of better, and by the time we left the training area there were more than a dozen bets being laid, for by that time everyone of the old crowd was calling him the 'Yellow Streak'; and the things they bet he'd do were —well, no part of this story.

"But maybe telling you about the night when I'd made up my mind to have it out with Maurice belongs in here. There was something doing every minute—one way or another—and right in the middle of what the papers would call 'a quiet night,' a bunch of the fellows tumbled into the trench, carrying a wounded youngster between them.

"Maurice was near me, and the way he turned away as they went on to the relief station made me promise myself that I'd talk some stiffness into his backbone if it could be done.

"So that's why I waited in the dugout after things simmered down a little. They told me he had gone out with a bombing squad, and when the hours slid along I just naturally drowsed and slept.

"Of course, I can't say how the rest of it happened. The bombing party came in just before daylight almost drunk for need of sleep. I'd seen them often—been one of them myself and so I could guess that their steps were none too sure—their nerves pretty raw, as they stumbled into the dugout.

"Afterward, they agreed that Maurice was the last to come in—that he had not started to empty his pockets of the remaining bombs when it happened—

"It was a frightened, hysterical oath that wakened me—I hadn't heard the bomb strike the floor, but it was plain enough who had dropped it. No, it wasn't Maurice, but he knew, as did all the rest that, five seconds—a heartbeat or two—was all we could count on from that minute.

"I shut my eyes, praying that the end would be mercifully complete, so I did not see that Maurice had thrown the bomb straight toward the open doorway just as a second bombing party came around the corner of the trench and paused outside.

"But I heard the shout of warning that he gave as he jumped; heard, too, the muffled explosion, and the cries that followed."

"Don't tell me any more," I pleaded. "I can supply the rest—"

My narrator grinned. "You think you can, but I'd better finish, seeing that I've told the story so far—

"You're thinking that it killed him? [illegible] It didn't! Of course, it did things to him—mussing him up pretty general—but the American surgeons and his American grit pulled him around after a spell."

"But, the 'Yellow Streak?'" I questioned. "Where—"

A long, lean finger pointed to the interesting figure that had stood apart most of the time.

"Not much of a mixer, but gold clean through! Yes, that's him, and we call him 'The Yellow Streak' even now, though he's proved to us that sometimes what men take to be yellow is really gold. In his case it goes clear through!"

THE BEAST

By ADELAIDE BROWN

©, 1922, by McClure Newspaper Syndicate.

Dusk softened the outlines of the sordid mill town; vague lights pricked the darkness here and there like dim fireflies. The dreary, dusty little city became, for the moment, austerely beautiful. Dusk deepened also in the "third-floor-back" of Mrs. Gammage's third-rate rooming house. In the room a girl sat crouching in a broken chair and shivering in spite of the heat. The shiver came because for the first time in her eighteen sheltered, coddled years, Betty Martin sensed the approach of a Beast. The name of the Beast was Fear.

It all came about because John Martin had a flash-in-the-pan temper, because Betty had inherited the same —and most of all because a quiet mother rested in a quiet grave on the hillside with only clumps of pale harebells for company. Had she been with them it never would have happened.

Seventeen years and eleven months of having one's own petted, pampered way does not somehow prepare one for a father's apoplectic rage and harsh sundering of love's young dream. To Betty, the young man in question seemed passing fair, but not to be taken seriously—oh, no, not yet—until that same father's foot was put down with thunderous emphasis. Then —well then, daddy had ordered her, mind you—and Betty's quivering lips straightened. In the darkness as she lived it over for the two hundredth time—to choose between Billy Devine and getting out to earn her own living, or being a nice and obedient little girl. Betty got out. Betty also left behind the check for $800 which her father had deposited stealthily on her dresser.

With the change she had on hand, Betty started out for the nearest city, head held high and courage in her heart. Two weeks later, as she sat in her stuffy little room, her courage had evaporated her heart (she thought) was broken, but her pride still held. Sixty-seven cents and her landlady had ordered her out of the house with one week's rent unpaid. For Betty had not yet learned a single move in the grand game of bluff. After all, she was only a child.

She did not know how to get work. She did not know, of "uncle" who would have cheerfully advanced her $50 on her rings. She did not know why Mrs. Gammage eyed these same rings and her beautiful clothing so queerly; she did not know that this same girlish finery had already "queered" several jobs for her; she did not know where to go to find kind hearts. In fact, the only things she knew how to do well were to make delicious fudge and wheedle checks out of daddy. But go back to him? Not she. She'd spend the night on the park bench first—which she proceeded to do.

Policemen were few and far between in this little town, so no one said her nay when she dragged herself and her suitcase to a bench in a dark corner of the park. She had decided to go without supper. The town clock struck nine. The town clock struck ten, and with each succeeding hour it seemed to boom more solemnly. She crouched closer to the friendly shadow. Fear, the Beast, crouched beside her. Would —would daddy find her starved body hid away in some park corner? How long did one live without eating? Was it very painful to die that way? Eleven o'clock, and how tired and—hun-g-r-y she was! Footsteps sounded on the nearest path and she held her breath. A man, alone, walked past. She could not know that he was the kind-hearted father of four girls. So the Beast, snarling a bit now, drew a step closer. Suppose, in the middle of the night, some man should come—! She stilled a scream with both hands pressed against her lips. She lived a year for every hour of that slow-passing night.

And for exactly thirteen days and ten hours, John Martin had been tearing his hair and rushing frantically from one city to another, from police station to police station. He had come home to lunch, with a peace-offering under his arm, to find Betty gone and the check where he had left it. And from that moment peace knew him no more.

As a last resort, he had come to the little city nearest home (for he had felt sure that Betty would feel the lure of distance) and he had spent two days tracing Betty to Mrs. Gammage's rooming house. That evening he had said things—terrible things—to Mrs. Gammage which that worthy was never to forget. Then he hunted the streets, the lodging houses, the hospital, the morgue, hour by hour, aided by a corps of detectives.

By one o'clock Betty had fallen into an uneasy doze. Her handbag dropped to the pebbled walk with a thud. A furtive shadow slipped nearer, grinned wolfishly as he laid a possessive hand upon Betty's arm. The breath of the Beast fanned the girl's white, terror-stricken face. No escape? The kindly gleams of searchlights dotted through the park and—

"Daddy!" One choked cry.

The Beast, snarling viciously, slunk into the shrubbery. But the shadow of the shadow of Fear never quite left the soul of Betty.

New Parachute for Planes.

A parachute of enormous dimensions has been invented, which, in case of accident, will lower the entire cabin of a passenger-carrying airplane to the ground in safety.

FURS

By NINA EPPS.

Glancing over a fur-clad shoulder, Alice Gaynor again saw the man was following!

His eyes fastened upon her, he came on at a skipping trot, worming in and out of the crowds. His face was eager and glistening with sweat.

She walked faster; so did he.

The persistence of this dark-skinned little tormentor filled her with terror. For the past two weeks he had been continually bobbing up, always to proceed after her in hot pursuit. Once he had stopped her; stammering and gesticulating wildly—but she had broken away, hailed a taxi and driven rapidly off.

What he wanted with her she had no idea. Probably one of those common flirts who accosted girls on the streets when the policeman was far off.

But she would fix him this time, she concluded grimly. She would lead him a merry chase until some policeman hovered into sight, then——

Her mental resolve was at this point interrupted by the dark, undersized stranger who, running ahead, had suddenly turned and blocked her way.

He tipped his derby in a flashy manner, then laid a hand on her fur-clad arm.

"Lady, I got something I should like to say to you. I want you to listen, to your own advantage. A swell girl like you——"

Alice gasped. "How dare you?"

They were at the entrance of a building. She shrank back against a pillar, at bay. How she wished Hal was here to protect her. Hal was general manager for a firm that manufactured novelties. She was cashier for the same company.

After they had taken in dances, parties and quiet strolls together, their acquaintance had blossomed into something deeper than mere friendship. To her Hal was the unattainable, big, honest Hal! He could soon teach this insulting ruffian a lesson.

A man turned out of the pushing crowd and swung toward them. His heavy hand fell on the pursuer's shoulder and spun him around.

"You little runt! Annoy a lady, will you? Speak up, now, and apologize."

It was Hal Strong and his honest face blazed with wrath.

In his bear trap grip the little man wriggled and writhed. "I should not apologize," he cried, and his voice was thin and tearful. "No, sir! No wrong did I do this lady. Only I tried to speak with her—again and again. I tried! Always she gets away. I will not apologize. It is business, it—"

"You say you're sorry before I kill you!" Strong growled.

"No, no, no! I would talk business, nothing more. You let me go." He slipped from under Strong's hand, then faced them, panting, outraged, mad "All right," he cried. "All right, then, the deal is off. I make no proposition. I hope you're sorry, that's all—"

"You get, quick, or—"

"Sure, I'll get. Only I explain. Many times I seen this lady in that fur coat. She looks fine—like a queen, with such lovely blue eyes and golden hair, to match—you understand? Swell! Even on a hot day she wears the coat like a regular A-1 duchess. It makes a hit with me. Her manners and her looks.

"I am a furrier, a manufacturing furrier, you understand? I need such a girl and I was ready to pay good, too. Yes, sir, I needed such a girl—a girl that can make Hudson seal, and Kolinsky, and such look like the genuine article. A steady job!

"All right, that's all. My card—here, I guess that proves it. A job, I was going to give her, but now—I hope you're satisfied!"

With something close to a sob, the dark-skinned little man threw a card at their feet and flung himself into the passing crowd.

Strong picked it up and handed it mutely to Alice. It bore the name: "Savoy, Dunn & Co., Furs. Kolinsky, Hudson Seal, Electric Seal, etc. Our prices defy competition."

"Now look what you have done," exclaimed Alice tearfully, her anger rising at the thought of losing such a wonderful offer. "I've just lost a perfectly good job, you—"

But Strong had her by the arm. "Listen," he said sternly, "stop being a little fool. You don't want that job —haven't you one now?"

"I was getting tired of grinding away at that old cashier job. I—"

"I say you don't want that job—posing in fur coats! You have a job and you're going to stick to it. Peterson Brothers need you. And I need you. I need you most. You hear, Alice? You're going to marry me, because I love you. You hear? Got to!" He shook her roughly, whispering his message through clenched teeth.

Suddenly meek, Alice glanced up at him.

"All right," she nodded. "All right. Only, for the love of Heaven, take me somewhere where I can get out of this coat. It's smothering me."

Keeping Counsel.

"You don't always disclose your motives freely to your political assistants."

"No," admitted Senator Sorghum. "Of course, I try to keep all hands at work. But I don't necessarily let my right-hand man know what my left-hand man is doing."

START EGGPLANT IN WARM, SUNNY PLACE

Rich Soil and Good Cultivation Is Necessary.

Occasional Applications of Very Weak Liquid Manure Is Beneficial—Little Flea Beetle Is Most Troublesome.

Eggplant, so called because the great fruits are about the size and shape of an ostrich egg, is closely related to the tomato and pepper and requires very much the same treatment as do peppers, say garden specialists of the United States Department of Agriculture. The eggplant is very easily injured by cold and the plants must be started indoors throughout the greater part of the country. Start the seed in the house by sowing in a small box filled with good soil. The small plants should be transplanted to pots or to a shallow box or tray filled with soil and kept in a warm, sunny place until the weather is quite warm. Eggplant requires a rich soil and good cultivation. Occasional applications of very weak liquid manure also benefit the plants greatly.

Eggplant Is Prolific Yielder.

Eggplant is attacked by several kinds of insects, the most troublesome of these being the little flea beetle which works upon the leaves, filling them full of small round holes. As a remedy, dust the plants thoroughly with air-slaked lime or very fine tobacco dust. By removing the fruits of the eggplant as soon as they attain good size the plants can be kept fruiting until killed by frost. Black beauty and improved large purple are among the leading varieties.

Vociferous Gift.

Walter Gray's Rival

By CLAIRE SMITH

Copyright, 1922, Western Newspaper Union

Walter Gray had never understood the depth of a woman's love until he was engaged to Molly Purvis. There was some discrepancy in their ages—he was thirty and she only twenty-one; it was not enough to count, but enough to make a difference in their outlook upon life. Molly was a sprite—lively, mischievous, and merry—while Walter was serious beyond his years.

Perhaps an unhappy love affair in his earlier days was now having its wholesome reaction.

He soon learned that Molly's lightness of manner only served to conceal a depth of nature of which he had never believed any woman to be capable. Their love was mutual and almost immediate. Their engagement was warmly welcomed on both sides of the family.

"Walter," said Mollie one day, "did I ever tell you about my chum, Elsie Manton? She was at school with me, you know. Her brother and she are coming to pay us a week's visit. He used to admire me a good deal," continued Molly.

Walter took her by the arms.

"And you admired him?" he demanded sternly.

"Well, a little," Molly confessed. "But of course not since I have loved you."

That was all Walter could get out of her.

Elsie arrived alone, however. Her brother, who had been detained on business, was to arrive the following day. Elsie proved to be even more vivacious than Molly. The girls were so absorbed in their discussion of the good times they had had together that Walter found himself out in the cold.

The wedding day had already been set, and Walter spent every evening at Molly's house. Paul Manton was to arrive the following evening, and Molly had insisted that Walter be there to welcome him.

The girls being still as engrossed with each other as ever, Walter had retired to the library, where he awaited Paul Manton's arrival. When at last the front door bell rang it took him a full minute to recover his equanimity, and by the time he had stepped into the hall he saw the visitor on the threshold.

He saw him enter, and Molly go out to meet him. Then he saw him open his arms and fold the girl in them. And suddenly he bent his head and kissed her, and Molly began to—to giggle.

Hatless, coatless, Walter left the house. He must have walked half way to the station when a hack came crawling up the road. In it sat a young man, hugging a suit-case on his knee. Walter stared at him in astonishment. It was Paul Manton. He knew him by the photograph Elsie had shown him.

Bewildered, Walter turned homeward. His brain was dizzy, and he could not understand the situation at all. If Paul arrived and kissed Molly, how could he now be coming up the hill in a hack? But his sense of indignation was too strong to permit his mind to work clearly. He reached his home and—

And on the step stood Molly, hatless and wrapless, and crying desperately. She turned as he approached and ran to him and threw her arms round him.

"Walter!" she sobbed. Listen to me. It was Elsie. I didn't know until she kissed me."

"What do you mean?" demanded Walter, holding her at arm's length and looking into her woeful, tear-stained face.

"It was a trick of Elsie's to surprise me and make you jealous," Molly faltered. "It was your overcoat and hat. Didn't you see that? She put them on inside and went outside and then rang the bell and came in. I thought it was Paul until—until she kissed me."

A light dawned upon Walter's bewildered brain. Ashamed and humiliated, he stood there, while Molly's arms wound themselves lovingly about his neck again.

"Molly," said Walter, "I've been a confounded fool. I'll believe in you always after this lesson."

New and Interesting Room.

A new room which has been added to some of the newer house plans is the "hobby" room. It is a studio and work room, usually planned next to the bedroom. There the owner can keep the materials needed for his work at home. In this room he is undisturbed by other members of the household while he is at work. Things may be left in some disorder there without interfering with the artistic sensibilities of visitors or members of the family. The room need not be large. In fact it is better if it is not too large. It is one room which bespeaks the individual's taste. It caters to the long

GLUTEN FEED FOR FALL PIGS

Corn Is Not as Satisfactory for Swine as It Is for Sheep and Dairy Cattle.

It has been found that corn gluten meal is not extremely satisfactory as a feed for fattening fall pigs. It is not nearly so good a feed for hogs as for cattle and sheep. It brings better results with dairy cattle than with beef steers. It seems that the most satisfactory returns are made from corn gluten feed for hogs when it is fed in a self-feeder alone with corn self-fed in another feeder and tankage in a third feeder. The results are improved if this feed is fed in connection with good pasture.

PROVIDE DUCKS WITH WATER

Where Supply Is Lacking Fowls Gum Up About Eyes, Become Listless and Die.

A duck must have water about its head and eyes daily or it will not thrive. However, if a tank of sufficient depth is provided for the ducks to sink their heads in the water clear out of sight when they drink, then they can do without a pond or stream of running water. When they have no water at all, ducks often gum up about the eyes, become listless, sit about, don't eat and soon die.

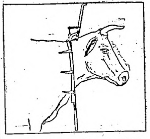
SIMPLE AND EFFICIENT POKE

Device Recently Invented to Prevent Animal From Forcing Itself Through Fences.

The Scientific American in illustrating and describing an animal poke, the invention of H. Gerdes of Benkelman, Neb., says:

An object of the invention is the provision of a poke of simple and efficient construction which is formed with spurs mounted to automatically engage the neck of an animal when he attempts to force his way through a fence; by means of a lever the spurs are so held that they will not engage the neck of the animal under normal conditions.



Showing the Invention as Applied.

CLEANING AND GRADING SEED

No Other Single Farm Operation Which Gives Larger Returns in Producing Crops.

There is no single farm operation so easily and cheaply done, which gives larger returns than the thorough cleaning and grading of all seed sown. Besides cleaning out the weed seeds, the light weight seeds are taken out when the job is properly done, thus preventing the reproduction of the poorer plants. This practice carried on year after year permits the increase of the best and kills out the poorest. Thorough cleaning and grading of all seeds planted is the first step toward a successful crop. There is no time like the present to put the seed in proper shape for planting.

HIGH PRICE FOR CORN CROP

Much Depends Upon Kind of Stock It Is Given to—Purebreds Make Best Returns.

Despite the low corn prices, there are many farmers disposing of all they raised at good prices, while others are getting less than market prices. It all depends upon the kind

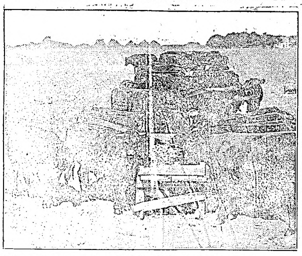
FEEDING CATTLE IS GOOD PLAN FOR MARKETING VARIOUS CROPS



Summer Fattening in Corn Belt on Grass, With Corn as a Supplement.

(Prepared by the United States Department of Agriculture.)

Although corn belt cattle feeders have lost money the last two years, yet on the average for five years or more the industry has been profitable on many farms and is a line of production which will continue to be an important branch of American agriculture.

The bureau of animal industry, United States Department of Agriculture, has recently issued Farmer's Bulletin No. 1218, "Beef Production in the Corn Belt," which contains valuable suggestions to the corn belt feeders on the economical production of beef.

The investigations on which the bulletin is based were conducted by the department on 906 farms of the corn belt and every phase of the problem, from raising calves or buying feeders to the marketing of the finished steer, is treated in considerable detail.

The general tendency in the corn belt to plow up permanent pastures and produce more cultivated crops caused a decline in beef raising, but the keeping of cows to raise calves has continued to be profitable on land too rough, too wet, or too infertile for cultivation. The reduction of pasture has been compensated for to some extent by the greater use of clover, alfalfa and corn silage. However, since 1905 there has been some increase in feeder production in the corn belt due to the breaking up of western ranges for dry farming and irrigation.

The investigation, which was carried on for three years, showed that the feed cost of keeping a cow was 69 per cent of the entire cost of maintenance for a year, while 31 per cent represented interest, labor, equipment and incidentals. The total number of cows on the 906 farms was 23,258, an average of 25 to the farm. The per cent of calves raised was practically 85. It was found that costs could be reduced through three factors—increasing the credits from the cows, improving the herd, and economy in feeding.

Early Fall Buying of Feeders Best.

When feeders are not raised on the farm buying and selling ability plays an important part. In some seasons certain weights and classes of cattle may be purchased more economically than others. Ordinarily early fall buying is preferable, as competition between packers and feeders usually increases as winter approaches.

The higher the quality of the feeder steer the better use he will make of his feed, though he usually eats more of it. But this consideration should not cause the buyer to lose sight of the price. Fleshy feeders can often be used to advantage on short feeds, and when there are very good prospects for higher prices. The older the animal the quicker it will fatten, as it will use less feed for growth and more for fat production.

Mature feeders fatten in three to four months, two-year-olds in 5 to 7 months, yearlings in eight to ten months, and calves in ten to twelve months. Older cattle use roughages more advantageously, but in general young animals make more economical use of all feeds. Mature cattle require from nine to eleven pounds of digestible nutrients to make a pound of gain, whereas yearlings use six to eight pounds, and calves only four to six pounds.

Feeding cattle for the market is simply one method of marketing the crops. On 287 farms in the corn belt an average of 35 per cent of the 1919 crops was fed to cattle. Fully 90 per cent of the fattened cattle in this area are dry-lot fed and are marketed before July 1. The various methods of feeding and the feeds used are fully discussed in the bulletin.

Feed Alfalfa and Clover Hay.

Alfalfa and clover hay are by far the most popular dry roughages, as they take the place of commercial protein concentrates to a large extent. Grass hays, with the exception of timothy mixed with clover, are very little used. The use of stovers and straws has a direct bearing on the economy of gains, and all such feeds should be used on the farm.

The most popular protein concentrates in the corn belt are cottonseed meal and cake and linseed meal. Corn, oats, and barley are the carbohydrate concentrates most used. Molasses feed and other miscellaneous concentrates are in much demand in some

ration because it is usually purchased.

Cottonseed meal, while it is used more extensively throughout the corn belt as a whole, is no more popular than linseed meal. Most cattle feeders prefer linseed meal, but it is not used so largely owing to its somewhat higher cost. Corn makes up 90 per cent of the carbohydrate concentrates. Oats are frequently used in the latter part of the feeding period to put cattle in better shipping condition. Barley is used only in a small way, although in Illinois it made up 10 per cent of the grain ration.

Purchase Price Is Half of Cost.

In fattening a steer the combined operating expenses usually more than equal the original purchase price of the feeder. The factors considered in operating expenses are feed, labor, building and equipment, interest, marketing, insurance and taxes. Feed usually constitutes about 80 per cent of this expense. All the other items are generally balanced by the manure and pork credits.

The preceding paragraphs are a very brief outline of the investigation of beef production in the corn belt. Those interested in a thorough study of the various operations and cost figures should secure a copy of the bulletin, which can be obtained free from the department of agriculture.

CREOSOTE TREATMENT IS MOST ECONOMICAL

Treated Posts Are Sign of Sound Judgment.

Large Saving Is Made in Replacement Where Short Lived Timber Is Used—Decay Is Less Rapid in Northern States.

(Prepared by the United States Department of Agriculture.)

Although more expensive at the outset, creosoted posts are generally more economical to use than many kinds of untreated, short-lived woods, because of their much greater lasting qualities, the forest service of the United States Department of Agriculture has determined. The exceptions would be in remote localities with cheap wood and labor, and where it would be expensive to obtain creosote. The large saving in the replacement charges, which ordinarily mount up so high in maintaining a fence, and the use of cheap and inferior kinds of woods in the first place, much more than offset the increased cost of thorough treatment with creosote. Treated posts are a good investment, and their use where lasting woods are scarce or expensive is a sign of sound judgment in farm management.

The best treatment is that which results in the deepest penetration into the wood with the least absorption of creosote. The butts of the posts should be placed for one to two hours in creosote heated to a temperature of 180 degrees to 220 degrees F. It is important to treat the wood to a height of a foot above the proposed ground line. In the southern states the entire post should then be submerged into oil, at 80 degrees to 100 degrees F., for one or two hours, or for such a time as is necessary to get good penetration. In the North, where decay is less rapid, the hot treatment is applied only to the butts, which are allowed to remain for two or three hours in the cooling process, the tops being treated by painting or dipping in creosote.

Further information on creosoting fence posts will be found in Farmers' Bulletin 744, Preservative Treatment of Farm Timbers, available upon request from the Department of Agriculture.

STARTING TREE PLANTATIONS

Cottonwood and Willow Do Best With Cuttings of 12 to 14 Inches—Avoid Bruising.

Cottonwood and willow plantations are most easily started with cuttings. These are simply from 12 to 14-inch sections taken from the one or two-year-old twigs of living trees. The cuts should be made with a sharp tool, to avoid bruising the bark. Cuttings should be collected during early

---

QUEER LINGO OF CATTLE MARKET

Sheep and Hogs Also Come in for Their Share of Weird and Slangy Expressions.

"SLUNK" CALF UNMARKETABLE

"Butcher Hogs" Are Most Popular and Must Be of Right Weight and Quality—"Mutton Sheep" Are Fat Ewes and Wethers.

In the marketing of cattle, sheep and hogs, often queer terms are used. Reporting the markets daily causes many a weird term to be coined and eventually adopted into the language. Here are given a number of common terms used in the course of live stock marketing. Even their users, in some instances, will be enlightened as to the full meaning:

Cattle Terms and Classes.

"Beef cattle" are the heavier, older, heifers or bulls, largely bought by the bigger slaughterers.

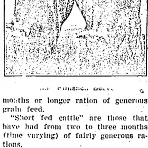
"Butcher cattle" are usually trim weight stock, either cows, or steers or heifers, carrying good flesh weighing 550 to 1050 pounds and highly desirable for the city butcher trade.

"Prime finished" beeves are those that have been made strictly fat, generally of 6 to 12 months liberal feed on grain, cake, molasses or other tried rations. "Ripe" is a similar term.

"Fancy" beeves are those that have the prime or ripe finish referred to above and in addition carry full quality due to being high grade or pure bred stock.

"Good," "fair," "medium," "plain," "common" and "inferior" are terms applied to livestock in varying degrees of flesh, condition and quality as they range down the line under the grade of prime.

"Corn fed" beeves usually refer to cattle that have [illegible] months or longer ration of generous grain feed.



[illegible] Finished Beeves

"Short fed cattle" are those that have had from two to three months (time varying) of fairly generous rations.

"Warmed up cattle" are those that have been fed for a very brief period, generally three to six weeks—time varying.

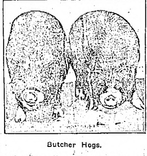
"Grassers" are cattle presumably fitted for market on the range or pasture alone.

"Canners" are poor thin animals, furnishing only low grade meat suited only for marketing in the form of canned product.

"Cutters" are animals one grade better than canners, but yet not carrying enough flesh to class as beef types.

"Scalawags," "shells," etc., refer to emaciated stock.

"Heretics" is a term mostly applied to inbred southern cattle between the veal and yearling stage, weighing generally 150 to 300 pounds.



Butcher Hogs.

"Slunk" is a prematurely born calf—unmarketable.

"Yearlings" refer to cattle beyond the calf and under the two year class.

"Heavy yearlings" (southern) are stock generally weighing 275 to perhaps 450 pounds.

"Light yearlings" (southern) are cattle generally weighing 150 to 275 pounds.

"Muley" cattle are those that are without horns.

"Dogey" catle are fine boned, trim southwestern stock, usually susceptible to quick finish on feed.

A "quinine" steer in the trade parlance is a poor, inferior animal having every appearance of disease, usually extremely inbred.

"Sausage" or "bologna" bulls are those not carrying flesh enough to be classed as beef types.

"Stocker" cattle are those suited to go back to the country primarily for further growth before being ready for feeding. Weights vary as to conditions, often reaching up to 850 pounds.

"Feeder" cattle are those with suffi-

"They Satisfy"

THE DIFFERENCE

By MILDRED WHITE.

Copyright, 1922, Western Newspaper Union.

When Carlton met Izzie, she was working in a city law office, the very office in which he, himself, found employment.

It had been Carlton's boyish ambition to become the respected lawyer in his own home town when old Judge Lambert should give up practice.

In Hillcrest Lawyer Lambert was a great personage; Carlton, the youth, had looked up to him with reverential awe. But here in the big bustling city it was different. "'Lambert,' did you say?" queried his new employer, "don't believe I've heard the name."

Carlton thought longingly of his old home so unlike the city boarding place. The village home had not been given over to strangers. He wanted to keep it as long as he could, with things just as his mother had left them; the blue-rimmed teacups that she had placed in the old cabinet, the very evening of her sudden call, to the Great Beyond.

Carlton hoped to go back there some day, when he could get over this dull feeling of loneliness and when he could save enough money to take the vacation. Then he came to know Izzie. She had formed a habit of stopping at his desk to say good-morning.

"Isabel" Ware was her name.

"We never had a garden," laughed Izzie, "never wanted one. The little high-up balcony is good enough for dad and mother and me. How could you endure living in the country? Seems as if I'd die there."

Carlton looked at her bright eager face, her jaunty turban aslant over her dancing eyes. "Maybe," he said slowly, "you would."

Kind heartedly Izzie invited him one evening to her home. "I've told mother about you," she confided, "and mother says it's lonesome for a strange young man in a city, so come and see us whenever you feel like it."

The evening in pleasant Mrs. Ware's cozy apartment was such a comfort to Carlton that he did go again, and again. And so—he became engaged to Izzie. It happened in a most natural manner one evening as they walked to the theater together.

"I wish," said Carlton earnestly, "that we could be together, just you and I, Izzie, forever. I wish you would marry me."

"All right," cheerfully responded that young person, as she gave his arm a hug, "I will."

But even as Carlton sat blissfully holding her hand in the darkened theater, disappointment came to him. He had been picturing, half unconsciously, his Isabel moving about the old loved home in Hillcrest, while he, his diploma attained, sat in Judge Lambert's place, looked up to, depended upon by his own people—the kindly people of Hillcrest.

Isabel interrupted his thoughts with a low laugh. "Carlie," she whispered, "look at the contrast of scenery. The effect is pretty. On this side, tall lighted buildings of the city, the streets gay, thronged. On the other side the village, long lonely spaces, desolate houses with their intermittent lights. Some contrast! Give me the city every time to that wilderness."

Carlton stared steadily. He had loved the silent pictured street. It was there that his memories wandered, yearningly. Then with a start he put his dream aside. Izzie was to be his wife, Izzie must be happy; he would sell the house in the country

posing of my house. Would you like to go with me?"

"I'd love to," the girl responded eagerly.

He was proud of her, as he walked down the village street by her side; proud, too, that she should witness the welcoming smiles and greetings bestowed upon him.

Isabel was interested in the houses, some of them quaint, some pretentious.

When Carlton led the way down the deserted path to the white house that had been his home, she was silent, sympathetic. She picked a white rose from the porch vine to fasten at her breast, and she touched the blue cups reverently. Her eyes grew misty as she gazed on the picture of Carlton, a boy leaning against his mother's knee. And as the girl sat before the old square piano, the light coming through the window made a picture of her there—the picture of which Carlton had dreamed.

Out in the garden at twilight they walked together; then the man spoke abruptly: "Let's get away from all this," he said, "I—can't bear it. You don't understand."

Izzie sank down on a garden bench. Her smile was tender, maternal.

"But I do understand, dear, now," she said softly. "This is your home, a real home, Carlton. I am seeing the place tonight through your eyes, the eyes of love and so I love it, too. I want to live here, dear. I am realizing that I have always wanted a garden, your garden"—Izzie's voice halted tremulously—"and blue teacups, Carlton, I've wanted them too, and kitchen things to fuss over—"

Joyously he caught her in his arms and, because he was eager in voicing his happiness, he did not hear whispered words, "—for your sake."

JO

By JACK LAWTON

Copyright, 1922, Western Newspaper Union.

This is the true story of Jo; perhaps that is its only reason for being a story at all. Jo was the gardener of Meredith's estate, not a landscape gardener, but just a humble digger of dirt. I saw him upon a privileged evening when I was invited to the Merediths' for dinner. Joy was showing me the garden, and Joy was J. D. Meredith's only daughter.

I noticed Jo particularly, because of his fine build and handsome face.

Miss Joy prettily excused herself and left me to my own entertainment, I sought the young gardener in overalls, and drew him idly into conversation.

Over our cigars we talked as man to man, I giving personal confidences as I received them. And I learned that Jo had been born in a crowded, dingy locality of factory houses. Jo's father was one of the workmen. But his mother—Jo knew little of his mother, nor could remember her—had died in his childhood. And as I listened to his easy conversation, I, an old man, romanced over Jo's mother, and wondered if love for a former handsome Jo had led her far from a pleasanter home to the dingy one of her husband.

As days passed, and I accepted Mr. Meredith's invitation to bring my books at will to the silence of his gardens, I came to a realization of the big gardener's brooding discontent.

"Life is all wrong," he complained, "or else I'm in it wrong, some way. Can't seem to find pleasure in anything."

"Friends are good to have," I suggested.

Jo shrugged. "Mine don't measure

ly, "doesn't satisfy. I met Rosa two years ago at a dance. She's pretty and she loved me. We were engaged. She's gone back now to the old country to see her folks and tell them all about it and exhibit my picture." He smiled mockingly. "Then she will come back to marry me."

I stared surprise. "That ought to make you happy," I said.

"It doesn't," he responded quietly.

Suddenly Miss Joy came down the garden path. She nodded to me and went to Jo, falling on her knees beside him. "I'd love to do that," she said, "show me how."

When she had gone, Jo turned his earnest gaze on me. "Fine woman that," he said, "no sham about her."

I found them often in the garden together, she writing letters and throwing him a word now and then, or silently observing his work, while he, in turn, would come to her with a flower or a leaf for inspection.

Their understanding seemed perfect, as was big Jo's manner.

One day I heard him say to her bitterly, with a graceful motion toward a black earthly bed, "I was raised down in the mud like that." Joy had quickly answered, "All growing things are."

I was just beyond the arbor tree, engaged with my book, and I fancy they, in their preoccupation, were unaware of my presence. Jo suddenly and masterfully took Joy Meredith in his arms and she received his kiss. I felt it my duty to waylay her.

"My dear, my dear," I reprimanded, being old, and friendly enough with her father to take that liberty, "nothing can come of this reckless love affair. Your father would never hear of the union. You must give Jo up."

"I will never give him up," she replied, "without some better reason than just his poverty."

Then I told her of the girl—told her, because I hoped to spare her the future disappointment that the knowledge of Jo's faithlessness to another must bring.

Jo, when she called him, admitted miserably the truth, admitted also that Rosa Klein was even now upon her way across the ocean, in the expectation of becoming his wife.

"I will go away," Joy said quietly, "and see the world father has so long wanted me to see. You must marry your Rosa, Jo dear, and you and I will never meet again."

So it happened that the Meredith garden was a desolate spot thereafter. I missed the courteous gardener, as much as I missed the sweet Joy. She was having a triumphant time abroad, according to the papers. Jo I did not see for more than a year. Then he came to me one evening through the gates of the Meredith garden.

"Married?" I asked him. He nodded. "And I thought I couldn't go on living," he said presently, breaking a silence. "Rosa and I are different. No sympathy on her part, no patience upon mine. It's the old trouble; I have gotten in on life wrong. I had just determined to end it all, when I got this."

He took from his pocket a sheet of paper, spreading it on my knee. The envelope bore a foreign postmark, the last published place of Joy's stay. Across the paper was written: "Always, I think of you doing your bravest best. For I know you will grow out of your darkness into something worthy."

Jo smiled at the written words. "Well," he said, "I'm growing."

Common Folks

The same thing is true of common folks that Abe Lincoln said about poor folks. He said: "The Lord evidently loves them or he would n't have made so many of them."

We like good, everyday, plain, honest people. Many folks who attempt to "put on airs" are not the equal of the plain, nnassuming sort. We are all pretty much alike under the skin The fellow who gets to holding his head too high often takes a tumble. Our bank is a people's bank where all receive courteous treatment, no matter what their station in life.

THE
Farmers State Bank
OF GOODRIDGE

CORRECT NUMBER OF EGGS FOR HATCHING

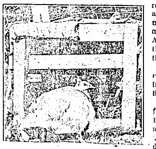
Poor Turkey Hatches Often Due to Crowded Hens.

Fowl Will Cover From 15 to 18 Eggs, and Sometimes More, Much Depending on Her Size—Incubators Are Successful.

(Prepared by the United States Department of Agriculture.)

Turkey hens and chicken hens ordinarily are used to incubate turkey eggs, although incubators are used where turkeys are raised on a large scale. During the early part of the laying season it often happens that there are on hand a number of eggs that should be set before the turkey hens are through laying their first litter, and become "broody." In such case, and also when it is desired to have the turkey hens lay a second or third litter, some of the eggs have to be incubated under chicken hens or in an incubator.

About a week before the poultry are to hatch a sufficient number of turkey hens should be allowed to sit to take all the poults hatched. They can be given a few eggs from the incubator or from under the chicken hens, and allowed to hatch the poults themselves, or at night a newly hatched poult can be slipped under each turkey hen that is to be given a brood of poults, and by morning they will take them, poultry specialists in the United States Department of Agriculture say.



Turkey Hens Are Close Sitters.

Turkey hens are close sitters, and if managed properly they are the surest means of hatching turkey eggs that can be used. Incubators are quite as successful with turkey eggs, however, as with chicken eggs. Poor hatches are a very frequent cause of complaint among turkey raisers, and this is quite often due to crowding more eggs under the hens than they can properly cover. One egg too many means that every egg in the nest probably will become chilled at some time during the four weeks of incubation. Turkey hens cover from 15 to 18 eggs, and in some cases more, depending on the size of the hen. Chicken hens of the general-purpose breeds cover from eight to ten turkey eggs.

The turkey-egg capacity of an incubator is approximately three-fourths of the chicken-egg capacity.

YIELD TO PROFITABLE COWS

Every Dairyman Should Weigh Each Milking and Have Sample Tested for Butterfat.

"Every owner of dairy cows should know if his cows are giving enough milk or butterfat to make a profit over the cost of feed," says A. C. Baer, professor of dairying at Oklahoma A. and M. college. "A scale to weigh the milk in the barn can be bought for $4. It takes only a few minutes a day extra time to weigh the milk from each cow ano write the weight on a milk sheet tacked up in the barn. Once a month a sample of milk can be tested. Any creamery, ice cream factory, or cream station will usually be glad to do this testing. Every schoolhouse can be equipped with a tester at very little expense, and the boys at school can do the testing.

"A profitable cow should produce 6,000 pounds of milk or 200 pounds of butterfat in 300 days. Are your cows all profitable? Why not find out? Is milking dairy cows a business proposition with you? If so, why not apply business methods?"

SWEET POTATO CROP DAMAGED BY WEEVIL

Outline of Successful Measures of Eradication.

Review of Work Done in Florida and Georgia Where Situation Was Worse—Use of Clean Planting Stock Is Urged.

(Prepared by the United States Department of Agriculture.)

A method of rendering negligible the heavy damage that would otherwise be inflicted by the sweet-potato weevil has been found by the United States Department of Agriculture. A review of the work done in Florida and Georgia is contained in department circular 201, bureau of entomology, United States Department of Agriculture. Measures successful in the eradication of the pest in that section are outlined briefly as follows:

The old field should be thoroughly cleaned over at harvest, the vines being fed to stock or burned, and the field hogged over.

The potatoes should be banked as far away as possible from the old field and from the site selected for the next year's potato field.

All potatoes on the farm should be disposed of early.

No potato or plants from the old crop should be used on the farm and no draw-bed should be planted.

Old potato banks should be cleaned as soon as empty.

Only draws from sources known to be free from the weevil should be used.

The Georgia-Florida location was selected for the test because the situation there was serious, the section inland, climatic conditions adverse, and many growers unused to ways of co-operation. No more unfavorable conditions, it was thought, were likely to be encountered anywhere in the country. All these, and other minor difficulties, have been surmounted, however, and the department, in its circular, announces the following conclusions:

"The results of the work offer convincing proof that the same methods, followed with painstaking care, will be successful in eradicating the sweet-potato weevil in almost any infested locality where abundant wild food plants do not offer a fresh and continuing source of new infestation. Careful sorting of the crop, the use of clean planting stock, and an annual change of location for the main planting, even in a continuously infested locality will reduce infestation of the tubers to a practically negligible quantity.

"There is no more reason for allowing a sweet-potato crop to be destroyed annually by weevils than there is for letting the weeds take it, and conscientious neighborhood effort in the application of the principles that have been outlined may free any district from a heavy annual tax."

A copy of the circular may be obtained free of charge upon application to the department at Washington, D. C.

American Legion Initiates New Members

On Wednesday evening the Legion men of the local Post had a "get together" meeting. At this time the following men, who have been active members of the Post for a long time, but who were not charter members, were duly initiated, Owen Olson, Victor McLeod, John Fpstul, E. J. Beithon, George Johnson and Elmer Peterson. The fellows enjoyed the stunts but regretted there was no come-back on the charter members.

School Notes

A Lincoln day program will be given next Wednesday morning.

L. P. Poppenhagen visited school Thursday forenoon. A good example for other fathers to follow.

The high school students assembled Thursday evening for a social time. The upper class men furnished entertainment, boys had charge of the program and the girls attended to the refreshments. The upper class men took advantage of the freshmen by subjecting them to several comical initiation stunts. After the committee in charge thought the freshmen immune from the contaminating influence received while in the grades, they were pronounced fall fledged high school students.

Obituary

Lars Bendickson, who died at his home on Jan 22, was buried last Saturday at the Germantown cemetery, Rev. E. O. Sabo officiating.

Deceased was born on April 7, 1851, in Sogn, Norway. He emigrated to America when 13 years old, and was married in 1882 to Sigrid Vrolson. Ten children were born to this union. Two of these died in infancy and in 1907 a daughter, Wilhelmina, passed away. The seven living celldren are Mrs. Christ Nelson, Bernard, Selmer, Mrs. O. G. Tharaldson, Genette, Esther and Silva. In 1904 Mr. Bendickson bought a farm in Grand Plain township, Marshall county, where he resided until the time of his death.

Deceasrd was a very hospitable and kind man, was an active member of the German Lutheran church.

OX-WARBLE IS COSTLY PEST

Loss Caused by Decrease in Milk Flow Destruction of Hides and Meat Wastage.

"The little ox-warble means an actual cash loss of $50,000,000 to the United States each year," stated F. C. Bishop, of Dallas, Tex., in an address before the American Association for the Advancement of Science, at their meeting in Toronto, recently.

"The loss comes," he said, "through falling off in the milk flow, illness among the cattle, due to irritation and worry; destruction of hides and wastage of meat when the beast finally goes to the block."

"When the grubs reach the back of the animal," said the speaker, "they make their presence apparent by the lump or swelling their body causes. Gradually they make their way out through the back of the animal and drop off, to begin all over again their life history. The only hope of dealing with the pest lies in energetic action by cattle owners in working out and destroying the warbles from the backs of their stock. The herd should be gone over systematically every 30 days, the grubs squeezed out and destroyed. Of course, even then, there is loss because of the holes left in the hide; five punctures of the back or sides by warbles reduce any hide to No. 2 grade."

Farmers' Institute and Potato Growers Rally

A Farmers' Institute will be held in the school house at Goodridge on Monday, Feb. 27. E. L. Eastgate and O. M. Olson of the University Extension division will be present at these meetings to discuss problems pertaining to feeding of dairy cows and raising and marketing of potatoes. A potato shipping association will be organized provided a sufficiently large number of potato growers will be interested in the venture Come in for the forenoon session and stay all day. It will be worth your while. Come to get all you can and can all you get.

Remember the day, Monday, Feb. 27.

Annual Seed List Issued

The annual seed list of the Minnesota Crop Improvement association is being mailed from the office of Secretary A. University farm. The list enumerates seed inspected and certified by the association, seed reported for sale by association members and by farmers of the state, and seed offered for sale by Minnesota experiment stations. Seed pointers and varieties of farm crops recommended for Minnesota, together with a short history of such varieties, are features of the pamphlet, which can be obtained on application to Mr. Haede [illegible] as compiler, University Farm, St

Year 1922 Should Be Better One for the Farmer.

Money Conditions Are Improving and Reduced Freight Rates Lighten Transportation Burden—Prices Hit Bottom.

(Prepared by the United States Department of Agriculture.)

When asked for a statement on the prospects of the farmer in 1922 Secretary of Agriculture Wallace said that no man whose opinion is worth considering would care to make any hard and fast prophecies. He added, however, that there are signs which indicate that the coming year should be a better one for the farmer and for those who deal with him than was 1921. Among these hopeful signs he mentioned the following:

Credit conditions are better both through regular channels and through the special agencies created to meet the farmer's needs. Interest rates also are softening.

Reductions already made in freight rates on farm products lighten by that much the transportation burden which the farmer has been carrying.

Cost of producing farm crops will be lower relatively in 1922 than in 1921.

Very likely there will be a reduction in the acreage of some of the grain of which we now have such a large surplus, and this should tend toward better prices.

The paralyzing effect of the sudden drop in prices last year is wearing off, and farmers will enter the new year more hopefully, believing that the worst is over.

Congress has indicated a willingness to enact such legislation as promises to be helpful.

Farmers are coming to see more clearly that the task of putting farming on sound business basis is really up to them and that through organization they can reduce marketing costs. In this they will have increasing help from the Department of Agriculture and the various state agricultural colleges which now see better than before that they must give the farmer the same sort of help in the marketing of his crops that they have been giving him in the production.

In the industrial and financial centers there is coming to be a better understanding of the important part the farmer plays in our general economic scheme, and consequently a decidedly more intelligent and sympathetic attitude toward him and his problems.

With prices of farm products falling and the future very uncertain, even those farmers who had money laid by—and there are a large number of such—have been restricting their buying to what they had to have. Now with the growing belief that prices have hit bottom, buying will be resumed and should increase in volume, and manufacturers and retailers who make or sell things that farmers need or want should have better business this coming year.

Everything considered, therefore, we can enter the new year in a spirit of hopefulness and good cheer. I see nothing which indicates boom times for the farmer in the near future, but there does seem to be promise of better times both for the farmer and for those whose business is largely dependent upon him.

ERIE EPIGRAMS

Mrs. Ostrom of Marshall, this sta has been here for an extended visit w her son-in-law and daughter, Mr. a Mrr. N. P. Larson.

Christian Amundson was a guest the Ludvig Johnson home Wednesd. evening.

A wild cat was seen crossing Brown ditch near the SE Star school house one day last week.

A large crowd attended the bask social held at Erie hall Saturday eve ing.

The Ladies' Aid society entertained at the Clover Nook school house Sund afternoon. A goodly number of gue were present.

Oliver Tommerdahl, Theo. Hyland and Gust A. Iverson joined in a hu after a red fox Tuesday. The de snow and "Reynard's" peculiar kna of getting over it put the hunters b hind, so they were out of luck this tim . They covered a score of miles and we at one time during the chase away o t east of the "Northwest Angle" Indi settlement on the reservation.

Mr. and Mrs. N. P. Larson and M Ostrom were pleasant callers at t Ludvig Johnson home last Sunday.

"Paddy" Iverson visited at the H. A D hlen home Friday afternoon.

Hilmer Iverson helped his friend, Sakarias Hole, shoeing the latte 's chickens Wednesday. Shod poultry is an idea which Mr. Hole brought with him from the central part of Norway, his native land; and it occurred to him that it might not be amiss to make an effort to introduce the stunt here in the north Star region.

North Star News

Mr. and Mrs. Ole Trontvedt and children visited at tde James Ramsey home Sunday.

Mr. and Mrs. Theo Hyland and family spent Sunday evening at Oliver Tommerdahl's.

Melvin Hyland called on Hans Walden one day last week.

Messrs. Knut Berg and George Hovet spent Saturday evening visiting at the Loyland home.

Messrs. George Tollefson, John and Martin Larson visited at John Bye's Saturday evening.

Theodora Loyland visited at Gram's home Sunday.

The following families were entertained at Ben Rindall's home Sunday: Mr. and Mrs. Carl Clementson and two sons; Mr. and Mrs. Henry Sunsdahl and son; Mr. and Mrs. Florence: Mr. and Mrs. C. Johnsrud.

Miss Gina Walder left for Goodridge enroute to Thief River, where she will be employed the rest of the winter.

Miss Tillie Ose spent Sunday afternoon with Miss Anna Knutson.

Miss Anna Knutson accompanied Anna Rindahl to Thief River Falls last Wednesday, where the latter will participate in the county spelling contest, having won out first in the sectional contest held on Friday.

Following are the names of pupils in District No. 5 who received perfect attendance certificates for the month end [illegible] ary 10. Theodora and Clara Loyland, Melvin, Verna and Henry Tommerdahl, Alvin and Melvin Hyland, Norris and Jeanette Trontvet and Gjerulď Sjulestad.

Melvin Hyland also received a large four months' perfect attendance certificate.

Martin Larson and Oscar Bye called at the Melvin Svare and Henry Bye homes Wednesday evening.

John Bye bought a new DeLaval cream separator last week.

District Court

The February term of the district court convenes this morning, the opening of the session having been postponed from the 7th. Judge Grindeland is recovered from his indisposition and will preside.

There are 28 civil and three criminal cases listed on the calendar, the largest number for a long time. It is also probable that the grand jury will add to the criminal actions to be tried, there being several alleged violators bound over by the municipal court and out on bonds awaiting action by the indicting body. There are also five personal property tax cases to be heard.

The calling of the petit jury will take place next Monday, February 20.

There will be no naturalization hearings at this term of court.

An Old Friend's Gratitude

By DOROTHY WHITCOMB

Copyright, 1922, Western Newspaper Union.

"Going, Arnold?" questioned Hal Daniels, as he stood in the suburban real estate office of Young & Og, addressing the manager of that branch of a big city business.

"I'll tell you in a minute," replied Arnold White—"four, six, eight, nine," and he flipped over the bank bills in his hand and then said definitely and withal quite disconsolately—"no."

"Why not?"

"Can't afford it."

"Nonsense! See here, I believe you are showing the white feather. And Miss Leila Morton is well worth the attentions of any young man!"

"No doubt of that," half sighed Arnold. "In fact, that's the trouble."

There was an interruption. A customer came driving up in an automobile, wishing to look at some houses listed for sale by the office and Arnold had to hurry away at once.

"Have you half an hour to spare, Hal?" he inquired of his friend.

"Sure—double that time, if I can be useful."

"Just keep the office open until I return, will you?"

"I'll do that, responded Hal.

Hal had not fully dropped into the luxuriousness of repose when there was a visitor. He was a bronzed-faced, big-framed man with all the marks of an outdoor life upon him.

"Mr. Arnold White?" he spoke inquiringly.

"No, sir—only his friend."

"Ah, then I will wait," said the stranger, seating himself. "Friend of Mr. White, are you? How is he getting along?"

"He is the best fellow in the world," declared Hal with unction, "and an up-to-date salesman. When he came here he made a two years' salary contract for a ridiculous sum. That expires soon. He'll get rich on his commissions, if they give him half a chance."

"That's promising," commented the visitor. "Contented, happy, I suppose?"

"Well, he's in love!" laughed Hal.

"Tell me about that," rather eagerly urged the stranger.

"No, I'm talking too much, I guess," dissented Hal, suddenly realizing that he was discussing his absent friend too freely with a stranger.

For nearly five minutes the stranger poured a strange tale into the ears of his amazed auditor. Hal looked startled, then delighted.

"Capital! famous! Arnold deserves it all!" he cried loyally. "Yes, you need to know all. You see, my sister—"

And this time Hal Daniels found a listener to what his sister, the fast friend of Leila Morton, knew of her preferences as to her many beaux, Arnold White especially considered.

"This gentleman wishes to look over your property," advised Hal, as Arnold returned.

"Ah, yes," bowed Arnold. "One word, Hal," he added, stepping to the side of his friend and speaking confidentially: "I wish you would get word to Miss Morton through your sister that I cannot attend the theater party to the city tomorrow evening."

"Nonsense!" began Hal stormily.

"No, it isn't. I haven't asked Miss Morton—"

"No, but I'll bet she expects it."

"I can't afford it just now, Hal," asserted Arnold seriously, and added briskly to his visitor: "Now then, sir, what can I show you?"

"I want you to pick me out the neatest, most convenient house you have on your list," was the reply.

The customer insisted on Arnold expressing his preference and judgment. Finally the stranger said:

"I'll take that house—it's a little palace."

"What name in the deed, please?" inquired Arnold, taking up a pen.

"Arnold White."

"What?" exclaimed Arnold. "Why, that's my name!"

"I know it is," bowed the stranger coolly. "I am following out my instructions implicity."

"But I don't understand—"

"You soon will. I am an attorney from Montana, representing Ernest Drake."

"What! my old friend whom I have not heard from for two years?"

"The same, and the man you loaned $200 to. Well, we went West and got in jail. Stayed there for two years, stubbornly fighting for a valuable land entry he had made. There was a technicality and he stood by his guns. I helped him. We beat the land sharks and he is rich today. There is the money you loaned him with interest."

Arnold was stupefied. Then his first thought was of Leila.

"By the way, Mr. White," said the stranger—"about this young lady Mr. Daniels told me about?

"Ernest Drake would think of your happiness ahead of anything else," he said. "As his representative, I give you this news, reliably acquired: Miss Morton is only waiting for you to ask her company to that theater party. You will ask her and she will go. At the theater party pop the question and she will accept you."

And Leila did.

How Vera Aided Cupid

By MALCOLM BROWN

Copyright, 1922, Western Newspaper Union

Two persons in Fairview were writing letters at the same hour; a graceful, lovely young woman of twenty-five, Marcia Westbrook; a grave-faced, handsome man of thirty, Rolfe Durward. Neither knew of the employment of the other, yet each was writing of the other.

Thus ended the letter of Durward to his close friend in a distant city: "As to your question of getting married and settled down, that is far distant. I do not think I am generally a favorite with the fair sex. There is a young lady here, a Miss Westbrook. I have not had her out of my mind since I first saw her, but she is rich, I am poor, and I am as a glow-worm coveting the star."

The letter of Miss Westbrook was, coincidentally, also to a close friend and it ended: "So, dear, do not think I have taken leave of my senses, but tell me just what you think of a face that presents to me a nobleness and attraction I cannot resist. His name is Rolfe Durward. He has a respectable position, and, like myself, I think, he has met with those buffets of fate that make the heart mature and likely to respond only to the real merits of life."

The grave strain in the missive had a basis. Marcia Westbrook had lost father and mother in a single year. She had been left in charge of three young children, her sisters. She had given her life to them and had seen little of social pleasure.

"I am going downtown, children, and will be gone about an hour," said Marcia, forgetting the letter to her girl friend which she had slipped into the pocket of her dress she had just discarded.

Little Vera clapped her hands in rare delight as her sister left the house.

"Now, then, we've got a whole hour to play 'company!'" she announced to her companion. "Come upstairs and we'll dress up like real full-grown ladies."

Inside of five minutes a queer procession came through the front door and crossed the garden. Vera led them past the garden, across a lane, and crept under the bars of a fence guarding a grazing field.

"Now, this is a fash'n'ble summer resort, on'erstan'?" said Vera, "I'll be a princess, sitting under that tree yonder."

Meantime Rolfe Durward with a half-day vacation before him pocketed his letter and proceeded to take a stroll. Of course the Westbrook home was a magnet, the way his thoughts ran.

A whimsical smile crossed his face as he passed by the field and caught sight of the mimic court scene in progress beyond the rail fence.

Arrayed in a red plush [illegible] and seated in great grandeur under the tree, Vera was receiving her company in true dignified style.

She had found the letter in Marcia's dress pocket.

"This is an invite from my friend, the queen," she was saying and ended the pretentious declaration in a scream of mortal terror.

Vera sprang to her feet. She grabbed her little companions one with each hand.

"Oh, hurry! hurry!" she cried. "It's the mad cow loose!"

In a flash Rolfe Durward took in the scene, turned suddenly from travesty to tragedy.

There was no question of the peril of the children; he saw that at a glance. He reached their side and tore the red cape from the shoulders of the terrorized Vera.

"Run—quick! Fast!" he ordered—"get past the fence."

Then he turned, waving the red token of defiance to the advancing animal. As he had hoped and expected, it diverted its course and came lunging towards him.

Just leaping the fence, Rolfe was grazed by the bulky head of the infuriated animal. One sharp horn tore a ridge clear up one forearm and he landed with a wrench on the ground beyond the fence.

Rolfe saw some neighbors take the children home and two men capture the mad animal.

The signet ring had slipped from Vera's finger and he secured this. An open letter and a photograph lay where she had abandoned it.

With a start of incredulity Rolfe recognized the portrait as his own. It must have been secured from the village photographer. And then his glance fell upon the open letter to view his own name, a few words only with it, but enough to instantly fill his soul with the most extravagant joy.

He was overwhelmed with expressions of gratitude as he reached the house where Marcia was coddling the frightened little ones.

"I also found these," he said, handing Marcia the signet ring and the letter, as he had discovered it, open.

"You—you—read," fluttered Marcia.

"I could not help but see my name and a few words with it, and—I am glad."

She flushed crimson. He thrilled.

"By a strange coincidence," he said, his voice trembling, I also wrote a letter today, still unmailed. It is only fair that you should see it."

Her hands shook as she glanced over it. Her eyes met his. They drooped, but glowed.

"Do not send it!" she whispered, and ran into the home in happy confusion.

Adrian Noble's Reformation

By WINIFRED DUNBAR

Copyright, 1922, Western Newspaper Union.

"I'm afraid we are going to lose our money, Abner."

"I hope not, Mary; I think not. When we decided to go into this business we agreed to stay by it to the last. It is a long way from a failure."

"Yes," sighed Mrs. Vance, "but the anxiety and slow worry is wearing you down."

It was a peculiar position in which the Vances found themselves. Two months previously they had sold out a little general store business that had given them a bare living for twenty years and enabled them to give their only daughter, Helen, an excellent musical education.

A relative in the South had been the cause of a sudden determination on the part of these worthy, credulous people that had altered the whole current of their lives. He had made a lucky investment in a motion picture show and was fast acquiring a fortune.

"We'll sell out, find a nice, respectable location in some pretty home town and go into the business," decided Mr. Vance.

So, pride and novelty carried the Vances away from their usual sober judgment and here they were now, discussing the results as proprietors of the "Palace" photo playhouse at Malden.

The Vances had arranged some cozy living rooms at the rear of the playhouse.

"What was that?" suddenly exclaimed Mrs. Vance.

"It's Helen!" cried her husband, and ran to the door, and his daughter burst into the room.

"What is it?" gasped her mother in alarm.

"I—stumbled over a man—maybe dead, I don't know!" shuddered Helen.

"A prowler or some one wandered up from those vile drinking dens on the river," decided Mr. Vance. "I'll go and see."

He returned in a few moments staggering under the great weight of a helpless human form.

"Oh, dear! dear!" exclaimed the motherly Mrs. Vance, after a glance at the white pulseless face of the unconscious stranger—"a young man, almost a boy! Abner, this is pitiful!"

Helen stood regarding the rescued wayfarer as though gazing upon some vivid camera scene.

They aroused the unconscious man through their own ministrations, but they discovered that one limb seemed broken. The doctor told them that it was a bad fracture when he was summoned by Mr. Vance.

They knew the next day all that the young man cared to tell about himself. His name was Adrian Noble. He had been turned away from his father's door on account of his drinking habits. He had wandered to Malden, in a muddled condition, had fallen from a high sidewalk and here he was—penniless, homeless and friendless.

"The penniless part of it needn't worry you, if you are resolute to work and reform," said Abner Vance in his blunt, practical way. "As to being homeless, you are welcome here till you are better and we will be your friends if you will let us."

In a strange, subdued manner, the young man grew into their family and business lives. They fixed up a room for him behind the playhouse stage and when he got so he could move around on crutches placed him in charge of the little ticket booth.

Adrian Noble would set his eyes upon Helen as she practiced the music for the entertainments.

When he could get around more freely, Noble began to take a rare interest in the business. He suggested improvements in the character of the films, he was the distributor of some unique advertising that brought in the audiences.

With brighter business prospects, Mr. Vance still longed for the big hall in the center of the town. He talked about it incessantly and it interested Noble. One day the latter came to Helen with a grave, earnest face.

"Will you write something for me?" he asked.

"Certainly—what is it?" inquired Helen, flushing a trifle under his clear, steady gaze.

"A temperance pledge. I am through with the old folly. I want your hand to inscribe the promise I shall never break."

Two days later Noble disappeared mysteriously from the playhouse. Helen never dreamed she could so miss him. He walked in upon them just after the entertainment Saturday night, a new being in apparel and manner.

"There is the lease of the hall for a year, all paid for and made out in your name," he said quietly, handing a folded document to his host.

"What does this mean?" stared the astonished Mr. Vance.

"I went to my father with that pledge and a truthful, manly story," replied Noble. "He bade me return to the true hearts of gold who had wrought the miracle of my reformation."

Mrs. Vance was crying in her motherly, sympathetic way. Helen's eyes beamed upon him, and in their glowing depths Adrian Noble read the sure promise of a lasting haven of loval

ADVANTAGE OF VELVET BEAN

When Properly Dried It Is Distinct Addition to Protein Concentrates for Cattle.

When properly dried before shipment, velvet bean feed is a distinct addition to the protein concentrates at the disposal of northern feeders, in the opinion of Dr. J. B. Lindsey, of Massachusetts station. It has proved slightly better than wheat bran for making milk. It may constitute as high as 40 per cent of the grain ration for cows; but 20 per cent for pigs and horses is considered enough. Doctor Lindsey recommends for cows a ration of 40 per cent velvet bean feed, 40 per cent corn or hominy meal or ground oats and 20 per cent cottonseed meal or some other high-grade protein concentrate.

BELOW ZERO WEATHER Is Here

And it is time to buy what wearing apparel you need for the extreme cold weather.

Our stock of heavy underwear, caps, mittens, mackinaws, socks, felt shoes, overshoes and other winter goods is the best we could buy, and we are selling it RIGHT. GROW[illegible] IN C[illegible]

Greater Variety and Larger Yield of Feed Is Obtained and [illegible] Easier to Cure.

CORN USED QUITE GENERALLY

Excellent Mixture for Silage and Is Being Extensively Used on Dairy Farms—Sorghums and Kafirs Also Favored.

(Prepared by the United States Department of Agriculture.)

Although the cowpea can be satisfactorily grown alone, it is more advantageously grown for hay in combination with other crops. When grown in this manner, not only is a greater variety and larger yield of feed obtained, but the mixed hay is much more easily cured and handled. Corn is used quite generally with cowpeas, but only to a slight extent for hay. The crop most widely used with cowpeas for hay is sorghum, both sweet sorghums and kafirs, although other crops, such as sudan grass, Johnson grass, soy beans and millet, are used.

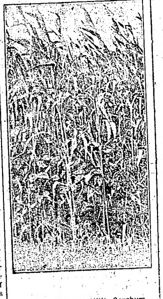
Cowpeas and Corn.

The cowpea is an excellent crop to grow with corn for silage, and it is being used extensively for this purpose on many dairy farms, especially in the northern part of the cowpea area.

If grown with corn for other than [illegible] purposes, cowpeas are allowed to ripen a fair percentage of pods which are gathered for seed and the remainder pastured. This method not only gives a crop of corn but also [illegible] cowpea seed for sowing the next season, and the residue makes either a hay crop or a fair amount of grazing for stock. In many parts of the South, especially in the sugar cane districts of Louisiana, cowpeas instead of being pastured are harvested for hay after the corn has been gathered.

Cowpeas and Sorghum.

Cowpeas grown in combination with sorghum make an excellent hay or silage crop. As a hay crop this mixture is more easily cured than cowpeas alone, constitutes a well-balanced ration, and is relished by all kinds of farm stock. Both the sweet sorghums and the kafirs are used. The Amber sorghum is most generally favored. When grown in rows, the Sumac and orange varieties of sorghum are fully as good as the amber since they grow larger and stronger plants. The whippoorwill, iron, unknown and clay varieties of cowpea require about the same time to mature as the sorghums and therefore should be used in place of the earlier sorts. Harvesting with a mowing machine is most satisfactory.



Cowpeas Growing With Sorghum.

When sown "broadcast" for hay, the sowing is best done with a grain drill on well-prepared land, the two kinds of seed being well mixed and sown at the same time. Usually the best rate to sow is about one bushel of cowpeas and half a bushel of sorghum seed to the acre. Where the grain drill is not available for sowing, the cowpea seed should be disked or harrowed in, and the sorghum should then be sown while the land is rough, the seed being covered with a drag harrow or weeder.

Excellent results are obtained [illegible]

BURY DEAD ANIMALS DEEP IN QUICKLIME

Many Outbreaks of Infectious Diseases Preventable.

Hog Cholera Is Most Dreaded Scourge and Jeopardizes Porker Population—Old Metal Wheel Useful as Pyre.

(Prepared by the United States Department of Agriculture.)

All farm animals that die from unknown causes should preferably be buried deep in quicklime. Many outbreaks of infectious diseases owe their origin to carcasses which were allowed to decompose in the open pastures or barn lots to which other animals had access. The United States Department of Agriculture advises every farmer who suffers mortality among his live stock from unknown causes to have a competent veterinarian make a postmortem examination and cremate the remains or bury them deep in quicklime.

Hogs, next to poultry, are usually the most numerous live stock on the average farm, and as hog cholera is the most dreaded scourge which jeopardizes the porker population, it is obligatory that the carcasses of hogs dying from unknown causes should be burned or buried deep in quicklime. An old metal wheel serves as an excellent base for the funeral pyre. The wheel should be raised five or six inches above the ground on three or four stones, so that a fire can be kindled underneath it. The carcass of the dead hog should be placed on this wheel. In order that the carcass will burn readily and thoroughly, it should be slashed deeply with a knife so that the flames may penetrate to the fat and all the carcass burn rapidly.

Where horses or cattle die, so much labor is involved in digging trenches of sufficient size and depth to accommodate them that it is preferable to dig deep a smaller grave and to dismember the carcasses so they will fit in the small space. These graves should be not less than five feet deep and the carcasses should be covered thickly with quicklime, which will soon consume the fleshy portions.

Rural Strategy.

"What's the idea of putting up the big sign reading, '40 Miles to the City?'"

"That's a little idea of mine," said [illegible] Perkins of Chiggersville. [illegible] motorist bound for the city [illegible] naturally wants

GROWING SEASON FOR MANY CROPS

Hotbeds and Cold Frames Enable Gardener to Protect Plants From Weather.

OPERATIONS STARTED EARLIER

Beds May Be Utilized Throughout Spring and Summer—They Are Inexpensive and Easily Operated—Ventilation Essential.

(Prepared by the United States Department of Agriculture.)

Hotbeds and cold frames enable the home gardener to lengthen the growing season for his crops. With them he can start his operations a few weeks in advance of the last chilly days of spring, before which it is not possible to plant out of doors. Throughout the spring and summer these beds may be utilized, and after the first fall frost they furnish protection for late vegetables. They are inexpensive and easily operated, say garden specialists of the United States Department of Agriculture.

Making a Hotbed Sash.

Standard hotbed sash are 3 by 6 feet, and it is customary to make a home garden hotbed with one, two, or more sash, according to the size of bed desired. Select a well-protected and thoroughly-drained spot, dig a pit 12 to 18 inches deep and a little larger than the bed is to be made. Throw the good top soil to one side. For a two-sash bed about one good wagonload of fresh horse-stable manure will be required. The manure should be thrown in a flat pile a few feet away from where the bed is to be constructed and the pile turned about twice at intervals of three or four days. As it is turned the outer portion of the pile is thrown to the middle and the inner portion to the outside, in order to get uniform heating throughout. Then put the manure into the pit, each forkful being shaken to break it apart and spread it evenly. It should be well tramped. Put in a layer about 3 inches deep, then another layer, treading each until the pit has been filled level with the ground. It should be just moist enough to pack reasonably solid, but springy under the feet.

The frame of the bed, made of wood, is then set on top of the manure and the earth from the bottom of the pit banked up outside of the frame to keep out the cold. The north side of the frame should be [illegible] inches higher than the south side. The good soil from the surface of the pit is spread on the packed manure. It is a good plan to mix a little well-rotted manure with this soil.

Preparing a Hotbed to Get Ahead of Jack Frost.

Put the sash on and leave the bed to heat for several days. First the manure will become very hot, then after two or three days it will gradually cool. The temperature will then remain more moderate. No seeds should be planted until the temperature of the soil has fallen below 85 degrees. Use a thermometer, the bulb of which is buried about 3 inches deep in the soil. Feeling the bed with the hand is not a reliable method of taking the temperature. Have a piece of old carpet or a burlap mat to throw over the sash for protection on extremely cold nights.

Care of Hotbeds.

Hotbeds must be watched during bright weather to prevent them becoming too warm, as the sun shining directly on the glass soon brings the temperature above that suitable for the growing of plants.

Ventilation is provided by propping the sash up at one side or the other according to the direction of the wind. Have the wind blow over the opening and not directly into the bed.

Cold frames are hotbeds minus artificial heat—simply sash-covered frames with no pit under them but banked up on the outside to keep out the cold. They are useful for growing plants that have been started in hotbeds, and for hardening plants to get them in condition to plant in the garden. Sometimes a bed about 12½ [illegible]

IMPORTANT—Dehorned cattle as a rule outsell those with horns. Cattle should be dehorned or horn tipped before put on feed, so buyers urge.

Hogs.

"Top" is the day's extreme high price for carload lots.

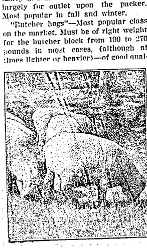
"Bulk" is a term meaning the preponderance of sales for the day or period.

"Dockage" is a specified weight deducted from sows and stags originally used for breeding purposes and are coarse and rough—on sows dock is 40 pounds, on stags 70 pounds.

"Prime heavy" hogs weighing 300 to 400 pounds, prime condition, form and quality. Usually 10 months to 18 months and are heavier as well as older than the majority of the hogs marketed.

"Medium heavy"—Good hogs weighing 240 to 300 lbs. Both the prime heavy and medium heavy hog depends largely for outlet upon the packer. Most popular in fall and winter.

"Butcher hogs"—Most popular class on the market. Must be of right weight for the butcher block from 190 to 270 pounds in most cases, (although at times lighter or heavier)—of good quality and proper condition. Nothing grading less than a good hog has a place in this class.



Mutton Sheep.

"Shipping hog."—Shipper is a hog of good form, condition and quality used to supply order trade. The requirements vary, but for the most part call for animal weighing 175 to 200 pounds.

"Lights" are hogs weighing 160 to 190 pounds, consisting principally of young light weight barrows or clear sows, graded good, common and inferior.

"Light-lights" weigh from 130 to 160 pounds; graded good, common and inferior.

"Pigs" are graded as choice, good and common, and are subdivided as follows. Strong weights, 130 to 150 pounds; medium, 110 to 125 pounds; light, 90 to 110 pounds.

"Pewees" young small pigs from 60 to 80 pounds. Usually sell at a considerably lower figure than the heavier pigs.

"Roasters" are pigs weighing 15 to 40 pounds. They are rarely seen, except around Thanksgiving or Christmas.

"Roughs" are throw-outs too common to grade, lack condition, form and quality.

"Stags" are male hogs castrated after maturity. As they are wasty in dressing dockge of 70 pounds is imposed.

"Boars" are not usually marketed until their days of service are over and therefore old and coarse. As most stockmen have found from experience that it does not pay to send boars, very few of them come to market. They sell for much lower price than stags.

"Mixed packers"—This class involves the heavy hogs that do not have the quality to grade as prime stock and the lighter weights that are not good enough for butchers or shippers. In short, it takes in all of the throw-outs of the aforementioned classes, except those too coarse.

"Singer"—A hog of narrow back and straight belly, particularly used for its lean bacon. Weight 160 to 200 pounds largely, although there is no standard weight. Must be of good quality, not necessarily fat, popular in Canada and England but not common in this country.

Sheep.

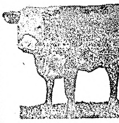
"Trimmed lamb"—One that has been castrated. Such sell to best advantage on the market.

"Culls" are inferior grade lambs or sheep thrown out of consignment by buyers and sold at a lower price than the remainder of the lot.

"Skip"—A light, trashy, common lamb. The plainest grade of cull lamb.

"Mutton sheep" are fat ewes or ewes and wethers mixed used for killing. Wethers are often sold separate as such.

"Choppers" are aged ewes in medium flesh, not good enough to grade as fat.



A Heavy Yearling.

"Canners" are very thin sheep, which as the name implies are used for canning purposes.

"Stocked lamb"—One that has had [illegible]

Grandpa Wakes Up Tilfield

By MARVIN ST. JOHNS

Copyright, 1922, Western Newspaper Union.

There were—let me see; there were Cousin Jasper Haynes, Cousin Maria Haynes, Cousin Thomas and Samantha Biggs, Lucy and Paul, and myself; not to mention Grandpa and Grandma Chittenden. They lived in Washington, but the rest of us inhabited Tilfield.

Grandpa Chittenden was a Civil war pensioner, and in the middle part of his incredibly long life he had found oil, I believe. Anyway, he was reputed awfully rich, rich enough to make all his grandsons and great-granddaughters, which means Lucy, wealthy for life. And he was eighty-seven years old, and Grandma eighty-five.

Tilfield was not the place that one would choose to live in. It was a little New England town, very Sabbatarian, amateur fire brigade—you know the style. Some folks might like it, of course, but, frankly, we Hayneses and Biggses and the rest of us lived there because we had been born there, and we were too poor to move away.

That is, till grandpa died. Every year each of us would receive a letter from him on the anniversary of the battle of Gettysburg, in which he lost a leg. "I'm growing very feeble," he would say, "and so is my dear wife. I hardly hope to survive the coming winter. God bless you, my dear—Paul, Lucy, Samantha, Jasper, Thomas or Maria, as the case might be.

We had reckoned that there ought to be at least ten thousand apiece and some of us were getting on in years and anxious to see the last of Tilfield. Lucy was twenty-seven and Paul two years older. Oh, why did Grandpa Chittenden hang on so?

Then an amazing thing happened. A brief letter came to each of us informing us that grandpa and grandma were going to pay us a visit.

The day arrived and the tribe was gathered at the station to welcome him. But grandpa wasn't on the train.

"I guess he wasn't feeling well enough to come," said Cousin Thomas meaningly.

Just then a smart touring car came to a standstill near us and an old gentleman, who was at the wheel, seated beside an old lady, turned and looked hard. It was grandpa!

"Welcome, grandpa!" we all shouted, eagerly.

"Ha, ha!" chuckled grandpa. "Fooled you young folks, didn't I? We thought we'd motor over instead of taking the train, and enjoy the country air."

"Motored from where?" we asked.

"From Washington," said grandpa, with a chuckle.

Grandpa fell in with our plan to have him one day at each house, and after he had made the round he made it again.

"I tell you young people, I'm falling in love with Tilfield," he said.

Everybody was pretty glum by now, for grandpa looked good for a dozen years or more. And then came the day of the state fair.

By this time, in spite of our disappointment, we couldn't help liking grandpa. He had told us that he was worth a hundred thousand dollars and was going to divide it up among us equally, or, if we didn't outlive him, among our heirs. But, as I was saying, the state fair came along and Howson in his new airplane, the new sort that turns somersaults in the air without upsetting.

"Where's grandpa?" I asked one of the assistants who had charge of the airplane fixtures.

"What, the old gent with the wooden leg?" he answered. "Why, he's up in the machine."

"What, up there?" cried Cousin Jasper, pointing to the airplane, which was doing the dip of death about a mile over our heads. "And where's grandma?"

"What, the old lady? Why—she's there, too!"

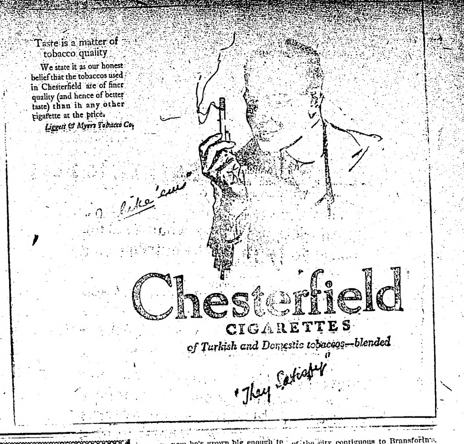
I heard a scream behind me. Cousin Maria was having hysterics. And then the cry was drowned in the delighted yells of the crowd as the machine, like a great bird, righted itself and came floating gracefully down and lit within twelve feet of where we stood. And out stepped grandpa and grandma.

"Boys," said grandpa, when they set him down, "that was a foolhardy thing to do. I ain't as young as I was—I'm going on for eighty-eight—and I'm a family man with responsibilities. No more airplanes for me. I stick to the good old-fashioned auto now and henceforward."

Now, the strange thing about it is, grandpa was such a good sport that, instead of wishing him dead, from that minute we began to think out plans for prolonging his life. And the things he did to Tilfield! Why, all the reporters in the state were out to see him, and we found out he was a famous manufacturer, and he was planning to carry power to Tilfield from Colne stream and erect factories and put up model houses and—

Well, grandpa is ninety-three now, and he bought a new auto last week, because grandma's getting pretty feeble and the old one looked out of date. As for Tilfield, what with the increasing value of real estate and the life of the town, we're going to hang on as long as we can do so.

Oh, yes, about that hundred thousand. What grandpa meant was that he had that to give away, besides [illegible] million invested. [illegible]



Taste is a matter of tobacco quality

We state it as our honest belief that the tobaccos used in Chesterfield are of finer quality (and hence of better taste) than in any other cigarette at the price.

"They Satisfy"

ON HIS OWN

By RUTH SONG

©, 1922, by McClure Newspaper Syndicate.

Mrs. Raymond regarded her youngest son with resignation. Yet she felt she would never be resigned to his impossible ways.

"Johnnie," she remonstrated for the third time, "I wish you'd sit straight in your chair and stop finger-combing your hair. You look a fright."

Vaguely, like a sleep-walker, Johnnie smoothed his sandy locks, upstanding by twisting fingers.

His mother sighed, thinking of his two brothers. She never nagged them. Trim and alert they were, both employed in a Boston bank. Such a comfort. As for Johnnie—hopeless! What he did down town where he worked, she couldn't imagine. Even if he emptied waste-baskets or swept floors, someone probably had to remind him, as she was endlessly doing at home.

These thoughts, audibly expressing themselves, urged Johnnie finally to go out, the parting injunction to take the key ringing in his ears.

Mrs. Raymond's taut nerves waited for the slam of the door, in spite of her caution to close it softly, then she settled down to sewing, a habit that had grown through colorless years of widowhood.

Later, the evening was brightened by a neighbor's visit. These friendly chats under the sewing-lamp, were welcome. They meant an unburdening of the day's grievances.

"Do you have to nag your boys endlessly, Mrs. Harst?" She was squinting toward the light in an effort to thread a fine needle with a coarse thread. "My Elmer and Alfred never bother, but Johnnie—" she paused, sighing. The subject engulfed her.

"Your youngest?" the neighbor inquired. "Bad company, maybe."

The mother bristled.

"Oh, no, Johnnie's a good boy. It's his habits. I'm always reminding him—his rubbers, his handkerchief, to wipe his feet—I don't know how he gets on where he works. I don't see him start for he goes early. It's a marvel he wakes up. He'll never amount to shucks."

"I haven't seen him lately," the neighbor temporized. "Where does he work?"

"At Jones, Allan & Company. Lawyers."

"What does he do?"

"Office-boy, I guess. It's all he's fit for. Untidy. Shiftless. Never talks about his work. It's discouraging."

A day or so after, this same neighbor had business in the building where Jones, Allan & Company's offices were. No harm to peek at the youngster for his mother's sake. She didn't remember him, now that he had grown up.

Impressed by the emblazoned door that confronted her from the elevator, she hesitated, looking around in hopes of seeing tousled-headed Johnnie with a waste-basket, or hiding in a corner reading a paper novel.

Seeing no one, she timidly touched the call-bell on the outer door.

With startling alacrity the door swung open, causing her to retreat a step or two, and a tall, straight, keen-eyed young man popped out to demand her business with said Jones Allan & Company.

So brisk and not-to-be-trifled-with was he, that Mrs. Harst regretted the errand which brought her.

She gasped, speechless, under the disconcerting scrutiny of this young [illegible]

I guess, now he's grown big enough to work—"

At her uncertain pause, the young man stepped out, closing the door behind him. He swung a chair under the astonished woman before she had time to see from whence it came. Having thus deposited her safely away from the business entrance, he inquired:

"Can I help you? We have a great many employed here and not everyone is always available. If the boy isn't too busy or isn't needed for the moment, I'm sure he'll be glad to see you. If you'll tell me his name, I'll look him up for you."

Having thus made the inquisitive neighbor feel that business hours were no time for social calls, the formidable medium between Mrs. Harst and her desire stood ready to receive information.

Crushed and ill at ease, she glanced timidly up into the pleasing, although unsmiling, eyes.

"I'm sorry I bothered about it, but now I'm here it can't be helped. If he's busy, never mind. His name is Johnnie Raymond. If it's any trouble"—

For the first time the serious face of the young man broke into a charming smile and his hand went uncertainly up to the sandy hair and came down again without touching it. He bowed rather splendidly.

"You see, it's no trouble at all," he informed her in his crisp, pleasant tones. "I am John Raymond."

An Empty Headed Boss

By CALVIN HENDRICKS

Copyright, 1922, Western Newspaper Union.

Luella Marston looked at Howard in a dazed sort of manner. She could not quite understand what he was saying; and she did not dare to understand.

"Ranger never liked me. . . . Old Bransforth took his side . . . had to support him . . ." The sentences were meaningless to her.

Patiently Howard, taking both her hands in his, repeated the story. He had held a position in Bransforth's company for six years, until Ranger was made head of his department. Ranger was an empty-headed man with the sole idea of being a good disciplinarian.

Bransforth had sent for both of them, and Ranger had stated positively that it was impossible for them to continue to work together. At last Bransforth had turned to Howard.

"I'm sorry, Mr. Gray," he said. "But of course you understand I must approve of Mr. Ranger's course."

"Then I'll send you in my resignation, sir," said Howard.

Bransforth certainly treated him very fairly. He gave him two months' salary and a cordial letter expressing his keen regrets at their separation. Only positions such as Howard had filled were almost impossible to secure. And Howard and Luella were to have been married that May.

"Never mind, dear. You will get a better position than before," Luella said consolingly.

Her fiance kissed her, but he knew the awful difficulty of the task before him. He had been getting eighty dollars a week, and the position had seemed so permanent that he had lived fairly well instead of trying to save money. He had only three hundred in the bank, for their first supply of furniture. The ceaseless tramp, tramp through the hot streets, with the constant rejection everywhere, wore on the young fellow's nerves. He [illegible] to see Luella now. [illegible]

of the city contiguous to Bransforth's. And then—perhaps it was the heat, which had been intense that week, or the result of the nervous exhaustion brought about by his despondency—but a curious lapse of memory overcame him.

Luella called it fate afterwards.

The events of the past three months slipped from his mind completely. Once again he was a salaried employee of Bransforth and company.

The spell was still upon him as he climbed the long flight of steps up to the main office.

The office was half empty.

"Any mail for me today, Rogers?" he asked the office-boy.

"I don't think so, Mr. Baldwin," the lad answered. "Gee, I'm glad to see you back, though."

A moment afterward Tait came up to him.

"We're mighty glad to see you back again, Baldwin," he said. "Mr. Bransforth said you were to go into his private office the moment you came in."

Howard looked up at Tait, and suddenly the absurdity of his presence there struck home to him.

Tait, mistaking his embarrassment for shyness, took him playfully by the arm and led him across the room to Mr. Bransforth's office. Mr. Bransforth looked up and, rising from his chair, gripped the young man warmly by the hand.

"I can't tell you how glad I am that letter found you," he said. "I hope you can come back to us, Mr. Baldwin. To think that after trying to locate you all this time the name of your old address should suddenly have come into my head!

"First of all," he continued, "I must apologize frankly to you for my treatment of you. The fact is, Ranger came to us with the best of credentials from his old place. I took the trouble to look them up after he left, and found that he had written them himself and signed the name to them, too.

"Well, it didn't take long after your disappearance for me to find out that he was absolutely incapable for the work. Well, I want you to take his position. The salary is one hundred dollars a week. I hope I can count on you."

"I can come," said Howard quietly, "on September the fifteenth."

Mr. Bransforth looked disappointed.

"Well," he said, "of course, if that is your ultimatum I must hold the position open for you. But if it is the matter of a holiday, perhaps a little later would do."

"No, sir," said Howard. "You see, I—er—well, I'm going to be married tomorrow."

And that was the best prophecy that Howard ever made.

PRODUCE HIGH-GRADE SEEDS

Many Farmers Are Not Careful to Prevent Mixture and Keep Out Harmful Weeds.

Even in communities where a single variety of a crop is raised almost exclusively there is a place for the production of pure seed for local sale, says D. W. Frear, extension specialist in field crops for the Missouri College of Agriculture.

Many farmers do not go to the trouble to keep their seed up to a high standard but allow it to become mixed, weed-infested and diseased and are glad to pay a good price every few years for high grade seed.

Those who are favorably situated can produce pure seed to meet this local demand. Seed produced for this purpose must be of high quality and considerably better than the average in the community, because farmers will not pay an advanced price [illegible]

Proper Treatment

SCRAP iron is worth about $50.00 a ton Mainspring steel for watches is worth about $22,000.00 a ton. Both are made from the same kind of ore. What makes the difference In price?

It's the TREATMENT the metal receives, that's all. The dollars you handle idly, spend foolishly, invest carelessly, are worth but little to you in the long run. The dollars you save and carefully invest increase in value and lay the foundation for a fortune. The dollars in each case are the same. It's the TREATMENT they receive that makes the difference. See the point.

THE

Farmers State Bank

OF GOODRIDGE

THERE IS MONEY IN FOX FARMING

Industry Is Rapidly Gaining Favor in Several of Northern States of Country.

MANY ANIMALS IN CAPTIVITY

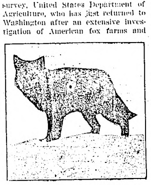
Best Location for Farm Is Where Winters Are Cold and Opportunity Offered to Develop Fur—Big Price for Pelts.

(Prepared by the United States Department of Agriculture.)

Fox farming is fast gaining favor in the United States. The industry, barely known a decade ago, is fairly common in some states of the northern tier, is represented in all states in this tier and in that next to it, and is growing rapidly. There is money in it for the raiser who starts modestly, learns the business, and then expands his holdings. There are losses in store for the type who starts with a big ranch, no knowledge of the business, and only a desire for quick profits. At the present time the industry is undergoing a process of stabilization: Most fox farmers raise animals for breeding purposes, and comparatively few have adjusted the business to a pelt basis. All told, there are between 10,000 and 15,000 silver foxes being grown in captivity on American fox farms at this time.

Many Animals in Canada.

Such are some of the conclusions of a representative of the biological survey, United States Department of Agriculture, who has just returned to Washington after an extensive investigation of American fox farms and the methods of their operation. In Canada, where the industry originated, and especially on Prince Edward island, where there are approximately 15,000 foxes in captivity, fox farming is conducted on a much more extensive scale than in the United States. Its promise of good financial returns to those willing to master its problems, give indication that within a comparatively short time in this country it will rival in proportions the industry in Canada.



A Silver Fox.

The best location for a fox farm is where the winters are cold and the fox may have opportunity to develop fur in keeping with the needs of the climate. The industry is thus confined by climatic conditions to the northern states. There the raising of foxes for breeding and for the fur markets flourishes. Most of the foxes raised in captivity are on farms, or "ranches," with pens for from 25 to 50 pairs, although in occasional instances the ranches are much larger, containing pens for as many as 150 pairs.

The foxes generally breed in January and February and the young are born within 52 days. A pair of foxes raises one family a year, the number of young varying from one to ten, though rarely exceeding five or six. Most of the fox raiser's troubles come when the young are a few weeks old and are peculiarly susceptible to attacks from worms. Great care is necessary to carry the young foxes through this period.

Most Foxes Sold for Breeding.

It is not advisable to kill a fox for the pelt before 18 months of age for at that time its fur is more valuable than at a younger age. Comparatively few of the foxes raised on American ranches are sold at the present time, however, for their pelts. Most of the ranchmen obtain higher values than the worth of the pelt by selling the live animals for breeding purposes. A good pelt may fetch as much as $600, though the average is much lower, approximating $250 to $350. The furs are comparatively little known because of their rarity. Silver foxes vary from those in which the color is entirely silver to those in which it is entirely black except for some white-banded hairs on the back and rump. In the black fox the white is absent from all parts except the tip of the tail, which is generally white in all phases of the animal.

Something Else.

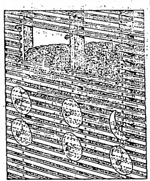
"Here's a man who found nine pearls in an oyster stew."

"Oh, fairly startling! I thought you were going to try to lead me to believe he found nine oysters."—Louisville Courier-Journal.

HOLD CORNCRIB DOORS SHUT

Disks From an Old Harrow Placed Over Corners of Sections Will Prove Efficient.

Most corncribs are built with detachable sections that are removed to provide a low opening, through which the corn is scooped until the crib is nearly filled. A satisfactory method of holding these sections in place is to put disks from an old harrow over the corners of the sections and secure them with bolts. This method is simple, as but little time is required to remove or replace the sections, and they are held firmly and without injury to the lumber.—S. E. Gibbs, Ames, Ia., in Popular Mechanics Magazine.



Disks Hold Corncrib Doors in Place.

ADVERTISING FARM PRODUCTS

Where Automobiles Pass Farms It Is Good Idea to Post Bulletin Offering Produce.

Do the autos pass your door? Why not put up a bulletin at the front gate and let folks know that you have some nice butter, honey, eggs, chickens, fresh pork, potatoes or other things for sale? The auto folks will pay better than retail prices for high class goods.

WEDDING

On Wednesday, February 15, occurred one of the prettiest weddings tbat has ever taken place in Goodridge, being the marriage of Mrs. Christina Kulseth Vake and Mr. Anton Lien. The ceremony was performed by Rev. H. Lutz at the Lutheran church. Miss Seren Tanem, a cousin of the bride, and Emma Grimley, a niece of the groom, were the bride's attendants, and Oscar Kulseth, a brother of the bride, and Louis Grimley, a nephew of Mr. Lien, were groomsmen. Mabel Rime, sister of the bride, acted as flower girl and train bearer. Mrs. Rime, the mother, gave the bride away.

At 4 o'clock the bride, with her attendants, marched to the altar to the music of the Lohengrin Wedding march, played by Mrs. Breen, where they met the expectant groom and the words were pronounced which made the two man and wife.

The bride was gowned in white georette over satin, with a net bridal veil, and carried a bouquet of roses and carnations. The bridesmaids were dressed in blue and yellow organdie. The church was beautifully decorated with sweet peas, streamers and white bells.

A three course wedding dinner was served at the bride's home for relatives and near friends of the parties. A reception and dance was given at the Goodridge hall in the evening and supper was served at the Stephenson cafe. Misses Violette Josephson, Maybelle Tweeton, Lillian Stephanson, Lillian Erickson, Guida Gilbertson and Myrtle Erickson were maids in waiting. A nice collection of beautiful and useful gifts was received.

Gonvick Newspaper Plant Destroyed

The building and plant of the Gonvick Banner was totally destroyed by fire which broke out about 5 o'clock Sunday morning. The publisher, W. W. Jones, with his family, lived over the office and so rapidly did the flames gain headway that nothing in the way of furniture or personal effects could be saved. The loss is $8,000 with insurance of $2,000.

Lutheran Church, Mo. Synod

Sunday, Feb. 19. English services at Thorhult at 10 a. m.

Sunday, Feb. 26. German services at Germantown at 10 a. m., and at Esplee at 3 p. m. English services at Grygla at 8 p. m. The Rev. H. A. Nueffer, visitor of this circuit, will be present at these services. All members should be present if possible and visitors are heartily welcome.

H. LUTZ, Pastor.

Notice

The annual meeting of the Red Lake-Eastern Marshall Farmers Telephone company will be held at the Goodridge hall Monday, February 20, at 1 p. m.

H. B. ROCKNE, Secretary.

Band Social

The Goodridge band will give a social in the hall Friday evening, February 24.

Promptly at 8 o'clock the band will render a number of selections, after which the sale of baskets will take place. Plenty of good hot coffee will be provided to go with the eats, and the lunch hour will consume the time between 9:30 and 10:30. Later in the evening an opportunity will be afforded for other amusements, including dancing.

The whole community is urged to attend, and the band promises an evening worth while.

School Notes

Tuesday was Valentine day. The primary, intermediate and grammar rooms each had a large appropriately decorated box, which contained a large collection of artistically designed valentines. These were exchanged among pupils and teachers at the close of the day.

The 6th and 7th grade pupils enjoyed a valentine party on Tuesday evening

An interesting Lincoln day program was given on Wednesday, as follows: Song, America, school; Biography of Lincoln, Tina Gaudland; Little Boy Abe, five boys; Lincoln's Letter to Mrs. Bixby, Stuart Ferdinandsen; Song, 6th and 7th grade pupils; Stories of Lincoln, Esther Ronken; Recitations, Donald Toomey, Thomas Mutnansky; Song, primary and intermediate pupils; Lincoln's Farewell at Springfield, Ruby Thempson; What Lincoln Said, four girls; No Excuse for Us, Esther Hanson; Reading, Inga Hanson; Gettysburg Address, Christina Bundhund; Song, America, the Beautiful, school.

Mrs. Thoreson visited school Tuesday afternoon.

Mr. Ronken gave an interesting talk to the pupils on Wednesday morning.

A farmers' institute will be held in the school house on Monday, February 27.

Mrs. Bennie Johnson and Mrs. Albert Halvorson attended the Lincoln day exercises Wednesday morning.

A George Washington program will be given next Tuesday morning. Parents and others interested are invited to attend these exercises.

Review work in history made interesting. The 5th and 6th grades held a history contest the first part of the week covering the exploration and colonization periods. The 5th grade pupils outclassed their senior grade in the final contest. The competition was keen and the winners were proud over their victory.

We are all glad to see Alvin Halvorson around again. He has been absent five weeks, due to illness.

Will Soon Know His Fate

The Gummer murder trial draws its weary way along. The defense has occupied most of the week. It is thought the case may go to the jury tomorrow.

Farmers' Institute and Potato Growers Rally

A Farmers' Institute will be held in the school house at Goodridge on Monday, Feb. 27. E. L. Eastgate and O. M. Olson of the University Extension division will be present at these meetings to discuss problems pertaining to feeding of dairy cows and raising and marketing of potatoes. A potato shipping association will be organized provided a sufficiently large number of potato growers will be interested in the venture. Come in for the forenoon session and stay all day. It will be worth your while. Come to get all you can and can all you get.

Remember the day, Monday, Feb. 27.

Land Foreclosures Called Bad Policy

Foreclosure of farm mortgages and contracts for farm land deeds is "the worst possible business policy for any creditor," the Minnesota Farm Bureau federation declared Wednesday in an official statement.

The federation has launched a vigerous campaign against foreclosures, warning creditors that wholesale closing out of farmer borrowers would do irreparable damage to Minnesota agriculture, and delay indefinitely the return of normal prosperity.

"The man who is actually on the land, fighting to hold his own against high freight rates, high prices of the things he buys and low prices for the things he sells, deserves every chance to make good," the federation said.

"The creditor who forecloses a mortgage against such a man is following a short-sighted and ruinous business policy. Minnesota farm mortgages are among the soundest securities on the market today; they are being sought for by investors. The creditor who follows a policy of foreclosing because he has the legal right to do so, is destroying his own future prosperity. The time will come when he can do no more business. Better times are coming. And when they come, the farm loan business will go to those investors who are lenient in this present crisis. The farm mortgage holder who is broad-minded enough to see that the permanent prosperity of the whole state depends on a prosperous farm population will not squeeze out any farmer who is doing his best. The mortgage holder, of the man selling farm land on contract, who closes out a hard working farmer at a time such as this, is isolating himself for years to come.

Neither prosperity nor confidence in the return of prosperity can be brought about by foreclosing on producers who are unable, through no fault of their own, to meet interest obligations.

Public welfare, as well as the best business interest of the individual creditor, demands that every sincere farmer borrower be carried by his creditor just as long as it is necessary, and humanly possible.

Child Welfare Board

The state board of control has announced the appointment of Mrs. J. M. Bishop and Mrs L. G. Larson of Thief River Falls, Peter C. Wold of Kratka, Supt Geo. M. Gunderson of Thief River Falls, and Com. Oscar J. Peterson of Hazel. The two latter are members ox-officio. There are now seventy child welfare boards in the state, with a total membership of 356, Minnesota being a pioneer leader in this form of organization and in the completeness and general excellence of its laws protecting children.

ERIE EPIGRAMS

Swen Swenson of Highlanding and Omund Lovrak have been assisting Mr Folkedahl hauling hay during the latter part of the week.

Misses Gladys Johnson, Evelyn Tharaldson and Bertha Folkedahl were pleasant callers at the Christian Amundson home Wednesday afternoon.

A sleighride party of young people drove down to Red Lake river visiting with friends in the vicinity Saturday evening.

Edward Dempsey was a business caller at Sub-Urban's Saturday.

Ole Nerhus called on his friend, Iver Iveason, Friday.

Mrs. Ida Johnson and Misses Thora Nerhus and Barbara Folkedahl were guests at the Paddy Iaerson home Sunday.

Ludvig Johnson and Iver Iverson were pleasant callers at the North Star homestead Thursday evening.

Wants Damages for Alienation of Wife's Affections

Judge Grindeland has started off the February term of the district court with what promises to be one of the most interesting cases on the calendar. Gunder Gnnderson, a resident of Deer Park township, is suing Ole Nereson, residing a short distance away, for $15,000, alleging the alienation of his wife's affections. The case was begun on Tuesday with F. A. Grady of Crookston appearing for plaintiff, and E. M. Stanton of Thief River Falls, Chas. Boughton of Red Lake Falls and Julius Olson of Warren, for defendant. —T. R. F. Times.

Was to Go to Jury Last Night

The case of William Gummer, on trial at Valley City, N. Dak., for the murder of Marie Wick of Grygla, was expected to go into the hands of the jury last evening. The general impression is that Gummer did not help his case by going on the witness stand. He and Brown between them declared that seventeen of the state's witnesses lied in giving their testimony.

START EGGPLANT IN WARM, SUNNY PLACE

Rich Soil and Clean Cultivation Is Necessary.

Occasional Applications of Very Weak Liquid Manure Is Beneficial—Little Flea Beetle Is Most Troublesome.

Eggplant, so called because the great fruits are about the size and shape of an ostrich egg, is closely related to the tomato and pepper and requires very much the same treatment as do peppers, say garden specialists of the United States Department of Agriculture. The eggplant is very easily injured by cold and the plants must be started indoors throughout the greater part of the country. Start the [illegible] by sowing in a small box filled with good [illegible] plants should

Eggplant Is Prolific Yielder.

be transplanted to pots or to a shallow box or tray filled with soil and kept in a warm, sunny place until the weather is quite warm. Eggplant requires a rich soil and good cultivation. Occasional applications of very weak liquid manure also benefit the plants greatly.

Eggplant is attacked by several kinds of insects, the most troublesome of these being the little flea beetle which works upon the leaves, filling them full of small round holes. As a remedy, dust the plants thoroughly with air-slaked lime or very fine tobacco dust. By removing the fruits of the eggplant as soon as they attain good size the plants can be kept fruiting until killed by frost. Black beauty and improved large purple are among the leading varieties.

How Vera Aided Cupid

By MALCOLM BROWN

Copyright, 1922, Western Newspaper Union.

Two persons in Fairview were writing letters at the same hour; a graceful, lovely young woman of twenty-five, Marcia Westbrook; a grave-faced, handsome man of thirty, Rolfe Durward. Neither knew of the employment of the other, yet each was writing of the other.

Thus ended the letter of Durward to his close friend in a distant city: "As to your question of getting married and settled down, that is far distant. I do not think I am generally a favorite with the fair sex. There is a young lady here, a Miss Westbrook. I have not had her out of my mind since I first saw her, but she is rich. I am poor, and I am as a glow-worm coveting the star."

The letter of Miss Westbrook was, coincidentally, also to a close friend and it ended: "So, dear, do not think I have taken leave of my senses, but tell me just what you think of a face that presents to me a nobleness and attraction I cannot resist. His name is Rolfe Durward. He has a respectable position, and, like myself, I think, he has met with those buffets of fate that make the heart mature and likely to respond only to the real merits of life."

The grave strain in the missive had a basis. Marcia Westbrook had lost father and mother in a single year. She had been left in charge of three young children, her sisters. She had given her life to them and had seen little of social pleasure.

"I am going downtown, children, and will be gone about an hour," said Marcia, forgetting the letter to her girl friend which she had slipped into the pocket of her dress she had just discarded.

Little Vera clapped her hands in rare delight as her sister left the house.

"Now, then, we've got a whole hour to play 'company'!" she announced to her companion. "Come upstairs and we'll dress up like real full-grown ladies."

Inside of five minutes a queer procession came through the front door and crossed the garden. Vera led them past the garden, across a lane, and crept under the bars of a fence guarding a grazing field.

"Now, this is a fash'n'ble summer resort, on'erstan'?" said Vera. "I'll be a princess, sitting under that tree yonder."

Meantime Rolfe Durward, with a half-day vacation before him, pocketed his letter and proceeded to take a stroll. Of course the Westbrook home was a magnet, the way his thoughts ran.

A whimsical smile crossed his face as he passed by the field and caught sight of the mimic court scene in progress beyond the rail fence.

Arrayed in a red plush cape and seated in great grandeur under the tree, Vera was receiving her company in true dignified style.

She had found the letter in Marcia's dress pocket.

"This is an invite from my friend, the queen," she was saying, and ended the pretentious declaration in a scream of mortal terror.

Vera sprang to her feet. She grabbed her little companions, one with each hand.

"Oh, hurry! hurry!" she cried. "It's the mad cow loose!"

In a flash Rolfe Durward took in the scene, turned suddenly from travesty to tragedy.

There was no question of the peril of the children; he saw that at a glance. He reached their side and tore the red cape from the shoulders of the terrorized Vera.

"Run—quick! Fast!" he ordered—"get past the fence."

Then he turned, waving the red token of defiance to the advancing animal. As he had hoped and expected, it diverted its course and came lunging towards him.

Just leaping the fence, Rolfe was grazed by the bulky head of the infuriated animal. One sharp horn tore a ridge clear up one forearm and he landed with a wrench on the ground beyond the fence.

Rolfe saw some neighbors take the children home and two men capture the mad animal.

The signet ring had slipped from Vera's finger and he secured this. An open letter and a photograph lay where she had abandoned it.

With a start of incredulity Rolfe recognized the portrait as his own. It must have been secured from the village photographer. And then his glance fell upon the open letter to view his own name, a few words only with it, but enough to instantly fill his soul with the most extravagant joy.

He was overwhelmed with expressions of gratitude as he reached the house where Marcia was coddling the frightened little ones.

"I also found these," he said, handing Marcia the signet ring and the letter, as he had discovered it, open.

"You—you—read," fluttered Marcia.

"I could not help but see my name and a few words with it, and—I am glad."

She flushed crimson. He thrilled.

"By a strange coincidence," he said, his voice trembling, I also wrote a letter today, still unmailed. It is only fair that you should see it."

Her hands shook as she glanced over it. Her eyes met his. They drooped, but glowed.

"Do not send it!" she whispered, and ran into the home in happy confusion.

Town of Men Only.

The Asiatic town of Malwatchi, on the borders of Russia, is peopled by men only. Women are forbidden entrance there.

THE BEAST

By ADELAIDE BROWN

©, 1922, by McClure Newspaper Syndicate.

Dusk softened the outlines of the sordid mill town; vague lights pricked the darkness here and there like dim fireflies. The dreary, dusty little city became, for the moment, austerely beautiful. Dusk deepened also in the "third-floor-back" of Mrs. Gammage's third-rate rooming house. In the room a girl sat crouching in a broken chair and shivering in spite of the heat. The shiver came because for the first time in her eighteen sheltered, coddled years, Betty Martin sensed the approach of a Beast. The name of the Beast was Fear.

It all came about because John Martin had a flash-in-the-pan temper because Betty had inherited the same—and most of all because a quiet mother rested in a quiet grave on the hillside with only clumps of pale hare bells for company. Had she been with them it never would have happened.

Seventeen years and eleven months of having one's own petted pampered way does not, somehow, prepare one for a father's apoplectic rage and harsh sundering of love's young dream. To Betty, the young man in question seemed passing fair, but not to be taken seriously—oh no, not yet!—until that same father's foot was put down with thunderous emphasis. Then—well then, daddy had ordered her, mind you—and Betty's quivering lips straightened in the darkness as she lived it over for the two hundredth time—to choose between Billy Devine and getting out to earn her own living or being a nice and obedient little girl. Betty got out. Betty also left behind the check for $500 which her father had deposited stealthily on her dresser.

With the change she had on hand, Betty started out for the nearest city, head held high and courage in her heart. Two weeks later, as she sat in her stuffy little room her courage had evaporated, her heart (she thought) was broken, but her pride still held. Sixty-seven cents and her landlady had ordered her out of the house, with one week's rent unpaid. For Betty had not yet learned a single move in the grand game of bluff. After all, she was only a child.

She did not know how to get work. She did not know of "uncle" who would have cheerfully advanced her $50 on her rings. She did not know why Mrs. Gammage eyed these same rings and her beautiful clothing so queerly; she did not know that this same girlish finery had already "queered" several jobs for her; she did not know where to go to find kind hearts. In fact, the only things she knew how to do well were to make delicious fudge and wheedle checks out of daddy. But go back to him? Not she. She'd spend the night on the park bench first—which she proceeded to do.

Policemen were few and far between in this little town, so no one said her nay when she dragged herself and her suitcase to a bench in a dark corner of the park. She had decided to go without supper. The town clock struck nine. The town clock struck ten, and with each succeeding hour it seemed to boom more solemnly. She crouched closer to the friendly shadow. Fear, the Beast, crouched beside her. Would—would daddy find her starved body hid away in some park corner? How long did one live without eating? Was it very painful to die that way? Eleven o'clock, and how tired and—hun-g-r-y she was! Footsteps sounder on the nearest path and she held her breath. A man, alone, walked past. She could not know that he was the kind-hearted father of four girls. So the Beast, snarling a bit now, drew a step closer. Suppose, in the middle of the night, some man should come—! She stilled a scream with both hands pressed against her lips. She lived a year for every hour of that slow-passing night.

And for exactly thirteen days and ten hours, John Martin had been tearing his hair and rushing frantically from one city to another, from police station to police station. He had come home to lunch, with a peace-offering under his arm, to find Betty gone and the check where he had left it. And from that moment peace knew him no more.

PRINCE OF PEACE

By GRACE R. OLIN

©, 1922, by McClure Newspaper Syndicate.

Little Mrs. Burton pinned a stray white curl back of her ear securely.

"I declare," she whispered, pulling her shawl around her shoulders with an excited little gesture, "if Miss Taylor ain't outdone herself this year in decorating her winders."

"Merry Christmas, Mrs. Burton," Mrs. Tucker, the landlady, advanced to the room. "Ain't it cleared off right pleasant now? Did you ever see so many stars, or such a moon?" Her round face beamed with joy, for little Mrs. Burton was a favorite with her.

"Mrs. Burton," she continued, lowering her voice, "Mr. Burton don't suspect nothing, and I thought I'd take this chance, before he comes in, to tell you I sent Joe up with wood and coal, and he'll have a fire going so as it will be warm when you get there.

"And the pies and things you baked yesterday, along with the groceries you ordered, I had him take along. Ain't Miss Taylor's winders gorgeous?"

"I was just admiring 'em when you came in, Mrs. Tucker," answered little Mrs. Burton happily. "And I wish you a Merry Christmas, too," she added. "I don't know how I can ever begin to thank you for all your kindness to me." The wrinkled old hand patted the other woman's shoulder tenderly.

"Making it possible for me to spend Christmas in my old home, and sending Joe to get it ready for me. Why, I don't know what to say, Mrs. Tucker. I don't. Seems as if everything is going to come out all right after all, don't it. If," (little Mrs. Burton's chin trembled for a moment) "if only the Prince of Peace can come into David's heart.

"There, there, now," Mrs. Tucker drew the slender little form close to her for a moment. She knew as well as the whole town knew the sorrow that filled the gentle soul of little Mrs. Burton. She knew that Mary, the shy, sweet little daughter of David Burton, had slept this many a year 'neath the maple trees, and Tom, gay laughing Tom, had run away supposedly to war, and that nothing had been heard of him for nearly two years.

Rumor had it that Tom was in prison and finally that report had spread all over town.

"Mother," the fiery old man had told his wife, "Tom is dead to us forever. Let us never mention him again."

And the mother, knowing his wounded pride, had kept her silence, hard though it was. When the winter days had come, David Burton, alarmed at her frailness, had closed the little white house on the hill, and taken her to the friendly shelter of Mrs. Tucker's home.

He had hoped the rest and companionship of others would help her forget, but David Burton did not reckon the depths of a mother's love.

She wanted her own little kitchen, all the dear familiar things that were hers. So at last, when the glad season of Christmas was come, she could stand it no longer. David would never consent she knew, so with the encouragement and aid of Mrs. Tucker, she planned the event that was to satisfy the longing of her heart; she would spend Christmas at home.

She was almost happy as she baked her pies in Mrs. Tucker's spacious kitchen.

"There, there, now," Mrs. Tucker wiped a tear from her own eye. "We ain't got no time to feel sad, honey. Mr. Burton is likely to be here anytime.

"Lou won't be needing my company, Mrs. Burton," she said, and for a moment a strange light shone on the ruddy features of Mrs. Tucker.

"And Mrs. Burton," she added, "it's going to be the happiest Christmas you have ever known."

By the table David Burton stood, his wife's note in his hand.

"Dearest David," said this note, "I can't stand it any longer. I am going home to spend Christmas with the memories of my children, and you, my husband, you will come, too?" David Burton had slipped into his great coat, his fierce old eyes wet.

"I didn't know it was as bad as that, dear," he said under his breath.

Half way up the hill he overtook her.

"I'm sorry, Ellen," he told her, but she stopped him with a glad little laugh.

"We're going home, David," she reminded him, "and we mustn't be sorry for anything."

Little Mrs. Burton stood quite still, her hand reaching out for David's. For suddenly, every window of the little white house was ablaze with light.

"David," she said, and her voice sounded strange to her own ears, "see, in Tom's room, the three candles burn." And out of the glory two pairs of dim eyes saw a door open, and out of it came the trim figure of a young man—a young man in khaki, with a stripe or two on his sleeve, and a medal on his breast.

"Merry Christmas, mother," cried a glad young voice as little Mrs. Burton was swept into his arms.

"Merry Christmas, dad." He wrung the old man's hand. "You see, I was in prison, but it was a German prison, and they just let me out." With an arm about each he passed with them through the merry cheering group into the little white house.

Out on the midnight air rang the holy, glad bells of Christmas. The Prince of Peace had come!

[illegible] ray's [illegible] val

Walter Gray had never understood the depth of a woman's love until he was engaged to Molly Purvis. There was some discrepancy in their ages—he was thirty and she only twenty-one; it was not enough to count, but enough to make a difference in their outlook upon life. Molly was a sprite—lively, mischievous, and merry—while Walter was serious beyond his years.

Perhaps an unhappy love affair in his earlier days was now having its wholesome reaction.

He soon learned that Molly's lightness of manner only served to conceal a depth of nature of which he had never believed any woman to be capable. Their love was mutual and almost immediate. Their engagement was warmly welcomed on both sides of the family.

"Walter," said Mollie one day, "did I ever tell you about my chum, Elsie Manton? She was at school with me, you know. Her brother and she are coming to pay us a week's visit. He used to admire me a good deal," continued Molly.

Walter took her by the arms.

"And you admired him?" he demanded sternly.

"Well, a little," Molly confessed. "But of course not since I have loved you."

That was all Walter could get out of her.

Elsie arrived alone, however. Her brother, who had been detained on business, was to arrive the following day. Elsie proved to be even more vivacious than Molly. The girls were so absorbed in their discussion of the good times they had had together that Walter found himself out in the cold.

The wedding day had already been set, and Walter spent every evening at Molly's house. Paul Manton was to arrive the following evening, and Molly had insisted that Walter be there to welcome him.

The girls being still as engrossed with each other as ever, Walter had retired to the library, where he awaited Paul Manton's arrival. When at last the front door bell rang it took him a full minute to recover his equanimity, and by the time he had stepped into the hall he saw the visitor on the threshold.

He saw him enter, and Molly go out to meet him. Then he saw him open his arms and fold the girl in them. And suddenly he bent his head and kissed her, and Molly began to—to giggle.

Hatless, coatless, Walter left the house. He must have walked half way to the station when a hack came crawling up the road. In it sat a young man, nursing a suit-case on his knee. Walter stared at him in astonishment. It was Paul Manton. He knew him by the photograph Elsie had shown him.

Bewildered, Walter turned homeward. His brain was dizzy and he could not understand the situation at all. If Paul arrived and kissed Molly, how could he now be coming up the hill in a hack? But his sense of indignation was too strong to permit his mind to work clearly. He reached his home and—

And on the step stood Molly, hatless and wrapless, and crying desperately. She turned as he approached and ran to him and threw her arms round him.

"Walter!" she sobbed. Listen to me. It was Elsie. I didn't know until she kissed me."

"What do you mean?" demanded Walter, holding her at arm's length and looking into her woeful, tear-stained face.

"It was a trick of Elsie's to surprise me and make you jealous," Molly faltered. "It was your overcoat and hat. Didn't you see that? She put them on inside and went outside and then rang the bell and came in. I thought it was Paul until—until she kissed me."

A light dawned upon Walter's bewildered brain. Ashamed and humiliated, he stood there, while Molly's arms wound themselves lovingly about his neck again.

"Molly," said Walter, "I've been a confounded fool. I'll believe in you always after this lesson."

New and Interesting Room.

A new room which has been added to some of the newer house plans is the "hobby" room. It is a studio and work room, usually planned next to the bedroom. There the owner can keep the materials needed for his work at home. In this room he is undisturbed by other members of the household while he is at work. Things may be left in some disorder there without interfering with the artistic sensibilities of visitors or members of the family. The room need not be large, in fact it is better if it is not too large. It is one room which bespeaks the individual's taste. It caters to the long felt need for an hour of work or thought which is undisturbed.

The
Harvester Company's Exceptional Offer

and contribution to the farmers, effective February 3 to May 1, 1922

The Harvester Co, makes this special offer to apply on all new Titan 10-20 Tractors purchased by its dealers on 1922 account. Each farmer purchasing one of these Tractors for delivery on or before May 1st, next, will be given by the company absolutely free f. o. b. Chicago a 3-furrow P & O plow.

$200 CUT in price of TITAN TRACTOR
New price $700 f. o. b. Chicago
and a P & O 3 Furrow Plow Free

These are not stripped tractors pared down to make a price, but complete with all essential equipment—Pulley, Fenders, Platform, Throttle-governor, adjustible drawbar, handle lugs, brakes. This equipment, worth more than $100 and necessary on any tractor to make it serviceable and safe, included in our price. NO EXTRAS TO BUY

OX-WARBLE IS COSTLY PEST

Loss Caused by Decrease in Milk Flow Destruction of Hides and Meat Wastage.

"The little ox-warble means an actual cash loss of $50,000,000 to the United States each year," stated F. C. Bishop, of Dallas, Tex., in an address before the American Association for the Advancement of Science, at their meeting in Toronto, recently.

"The loss comes," he said, "through a falling off in the milk flow, illness among the cattle, due to irritation and worry, destruction of hides and wastage of meat when the beast finally goes to the block."

"When the grubs reach the back of the animal," said the speaker, "they make their presence apparent by the lump or swelling their body causes. Gradually they make their way out through the back of the animal and drop off, to begin all over again their life history. The only hope of dealing with the pest lies in energetic action by cattle owners in working out and destroying the warbles from the backs of their stock. The herd should be gone over systematically every 30 days, the grubs squeezed out and destroyed. Of course, even then, there is loss because of the holes left in the hide; five punctures of the back or sides by warbles reduce any hide to No. 2 grade."

Review of Work Done in Florida and Georgia Where Situation Was Worse—Use of Clean Planting Stock Is Urged.

(Prepared by the United States Department of Agriculture.)

A method of rendering negligible the heavy damage that would otherwise be inflicted by the sweet-potato weevil has been found by the United States Department of Agriculture. A review of the work done in Florida and Georgia is contained in department circular 201, bureau of entomology, United States Department of Agriculture. Measures successful in the eradication of the pest in that section are outlined briefly as follows:

The old field should be thoroughly cleaned over at harvest, the vines being fed to stock or burned, and the field hogged over.

The potatoes should be banked as far away as possible from the old field and from the site selected for the next year's potato field.

All potatoes on the farm should be disposed of early.

No potato or plants from the old crop should be used on the farm and no draw-bed should be planted.

Old potato banks should be cleaned as soon as empty.

Only draws from sources known to be free from the weevil should be used.

The Georgia-Florida location was selected for the test because the situation there was serious, the section inland, climatic conditions adverse, and many growers unused to ways of cooperation. No more unfavorable conditions, it was thought, were likely to be encountered anywhere in the country. All these, and other minor difficulties, have been surmounted, however, and the department, in its circular, announces the following conclusions:

"The results of the work offer convincing proof that the same methods followed with painstaking care, will be successful in eradicating the sweet-potato weevil in almost any infested locality where abundant wild food plants do not offer a fresh and continuing source of new infestation. Careful sorting of the crop, the use of clean planting stock, and an annual change of location for the main planting, even in a continuously infested locality will reduce infestation of the tubers to a practically negligible quantity.

"There is no more reason for allowing a sweet-potato crop to be destroyed annually by weevils than there is for letting the weeds take it, and conscientious neighborhood effort in the application of the principles that have been outlined may free any district from a heavy annual tax."

A copy of the circular may be obtained free of charge upon application to the department at Washington, D. C.

GROWING COWPEA IN COMBINATION

Greater Variety and Larger Yield of Feed Is Obtained and Easier to Cure.

CORN USED QUITE GENERALLY

Excellent Mixture for Silage and Is Being Extensively Used on Dairy Farms—Sorghums and Kafirs Also Favored.

(Prepared by the United States Department of Agriculture.)

Although the cowpea can be satisfactorily grown alone, it is more advantageously grown for hay in combination with other crops. When grown in this manner, not only is a greater variety and larger yield of feed obtained, but the mixed hay is much more easily cured and handled. Corn is used quite generally with cowpeas, but only to a slight extent for hay. The crop most widely used with cowpeas for hay is sorghum, both sweet sorghums and kafirs, although other crops, such as sudan grass, Johnson grass, soy beans and millet, are used.

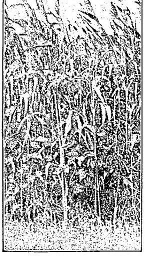
Cowpeas and Corn.

The cowpea is an excellent crop to grow with corn for silage, and it is being used extensively for this purpose on many dairy farms, especially in the northern part of the cowpea area.

If grown with corn for other than silage purposes, cowpeas are allowed to ripen a fair percentage of pods which are gathered for seed and the remainder pastured. This method not only gives a crop of corn but also sufficient cowpea seed for sowing the next season, and the residue makes either a hay crop or a fair amount of grazing for stock. In many parts of the South, especially in the sugar-cane districts of Louisiana, cowpeas instead of being pastured are harvested for hay after the corn has been gathered.

Cowpeas and Sorghum.

Cowpeas grown in combination with sorghum make an excellent hay or silage crop. As a hay crop this mixture is more easily cured than cowpeas alone, constitutes a well-balanced ration, and is relished by all kinds of farm stock. Both the sweet sorghums and the kafirs are used. The Amber sorghum is most generally favored. When grown in rows, the Sumac and orange varieties of sorghum are fully as good as the amber since they grow larger and stronger plants. The whip-poorwill, iron, unknown and clay varieties of cowpea require about the same time to mature as the sorghums and therefore should be used in place of the earlier sorts. Harvesting with a mowing machine is most satisfactory.



Cowpeas Growing With Sorghum.

When sown "broadcast" for hay, the sowing is best done with a grain drill on well-prepared land, the two kinds of seed being well mixed and sown at the same time. Usually the best rate to sow is about one bushel of cowpeas and half a bushel of sorghum seed to the acre. Where the grain drill is not available for sowing, the cowpea seed should be disked or harrowed in, and the sorghum should then be sown while the land is rough, the seed being covered with a drag harrow or weeder.

Excellent results are obtained by sowing cowpeas and sorghums together in cultivated rows 2½ to 3 feet apart. This method requires about 45 pounds of cowpeas and about one-third of a bushel of sorghum seed to the acre.

DEFECTIVE PAGE

INVENTORY AIDS FARM BUSINESS

Assists Farmer to Determine Whether His Operations Are Profitable or Not.

MAKE LIST WHEN CONVENIENT

Go Over Farm Carefully and Note Each Item as Found So Nothing May Be Missed—Classify and Appraise at Same Time.

(Prepared by the United States Department of Agriculture.)

Farming is a business, and like other business men the farmer should know which way he is going financially. To drift along year after year not knowing whether he is going toward success or failure is not the practice of successful business men, and it should not be the practice of farmers.

To guage progress by an increase in cash in hand or to measure loss by additional debts incurred without taking into account decreases or increases in the value of all property owned, often leads to false conclusions. The storekeeper is well aware of this, and his annual "stock taking" is nothing more or less than the making of an inventory or list of property, without which he lacks accurate information concerning his profits and losses. Inventories are not difficult to make, and the United States Department of Agriculture has found that they are of great value to any farmer who is striving to better his condition. They overcome obstacles and place his business affairs on a secure basis.

Make Inventory When Convenient.

There is no best time of the year to make an inventory for everybody and under all circumstances. Each one must decide for himself the date most convenient. In deciding, however, the most important consideration is to select a time of the year before the season's work in the field begins. It will save estimating large quantities of farm produce on hand if the inventory is taken as late in the spring as possible before field work begins.

Although any day will do, it is generally found best to select the first day of some month, and a fairly good guide in any section will be the date upon which tenants customarily change farms. The best inventory date may vary from January 1 in the cotton belt, to April 1 in New England and other northern states, and for special farms special dates are often required.

If no list of the farm property has ever been made, it is well to start preparations by going over the farm, field by field, and building by building, taking each item as it is found. In this way nothing is missed. The listing can be done in any memorandum book or on loose sheets of paper.

All property owned comes under the head of resources or assets. These may be subdivided into physical or tangible property, and financial, or intangible. The value of the physical property must be estimated and appraised. The financial property has a face value, which under any conditions ordinarily met with on the farm needs no appraisal. The physical property may be grouped under the following heads: Land, buildings, other permanent improvements, work stock, cattle, swine, sheep, poultry, machinery and tools, farm produce, farm supplies, growing crops. The financial items include cash on hand, cash in bank, accounts receivable, and notes receivable. By receivable is meant debts owing to the farm.

The County Agent Explains the Simplicity of Making a Farm Inventory.

Don't Overlook Debts Owed.

In no case should a list of liabilities—bills and accounts owed by the farm—be omitted from the inventory. Liabilities are an offset to the resources. When all the items with their valuations have been entered the work is finished by summing up the valuations. This is best done by adding each page separately and carrying the totals to the last page where they may be conveniently added to attain a grand total. The liabilities are summed up in the same manner. When the sum of the liabilities is subtracted from that of [illegible] resources the re[illegible] the [illegible] present worth.

An Old Friend's Gratitude

By DOROTHY WHITCOMB

Copyright, 1922, Western Newspaper Union

"Going, Arnold?" questioned Hal Daniels, as he stood in the suburban real estate office of Young & Co., addressing the manager of that branch of a big city business.

"I'll tell you in a minute," replied Arnold White—"four, six, eight, nine," and he flipped over the bank bills in his hand and then said definitely and withal quite disconsolately—"no."

"Why not?"

"Can't afford it."

"Nonsense! See here, I believe you are showing the white feather. And Miss Leila Morton is well worth the attentions of any young man!"

"No doubt of that," half sighed Arnold. "In fact, that's the trouble."

There was an interruption. A customer came driving up in an automobile, wishing to look at some houses listed for sale by the office and Arnold had to hurry away at once.

"Have you half an hour to spare, Hal?" he inquired of his friend.

"Sure—double that time, if I can be useful."

"Just keep the office open until I return, will you?"

"I'll do that, responded Hal.

Hal had not fully dropped into the luxuriousness of repose when there was a visitor. He was a bronzed-faced, big-framed man with all the marks of an outdoor life upon him.

"Mr. Arnold White?" he spoke inquiringly.

"No, sir—only his friend."

"Ah, then I will wait," said the stranger, seating himself. "Friend of Mr. White, are you? How is he getting along?"

"He is the best fellow in the world," declared Hal with unction, "and an up-to-date salesman. When he came here he made a two years' salary contract for a ridiculous sum. That expires soon. He'll get rich on his commissions, if they give him half a chance."

"That's promising," commented the visitor. "Contented, happy, I suppose?"

"Well, he's in love!" laughed Hal.

"Tell me about that," rather eagerly urged the stranger.

"No, I'm talking too much, I guess," dissented Hal, suddenly realizing that he was discussing his absent friend too freely with a stranger.

For nearly five minutes the stranger poured a strange tale into the ears of his amazed auditor. Hal looked startled, then delighted.

"Capital! famous! Arnold deserves it all!" he cried loyally. "Yes, you need to know all. You see, my sister—"

And this time Hal Daniels found a listener to what his sister, the fast friend of Leila Morton, knew of her preferences as to her many beaux, Arnold White especially considered.

"This gentleman wishes to look over your property," advised Hal, as Arnold returned.

"Ah, yes," bowed Arnold. "One word, Hal," he added, stepping to the side of his friend and speaking confidentially: "I wish you would get word to Miss Morton through your sister that I cannot attend the theater party to the city tomorrow evening."

"Nonsense!" began Hal stormily.

"No, it isn't. I haven't asked Miss Morton—"

"No, but I'll bet she expects it."

"I can't afford it just now, Hal," asserted Arnold seriously, and added briskly to his visitor: "Now then, sir, what can I show you?"

"I want you to pick me out the neatest, most convenient house you have on your list," was the reply.

The customer insisted on Arnold expressing his preference and judgment. Finally the stranger said:

"I'll take that house—it's a little palace."

"What name in the deed, please?" inquired Arnold, taking up a pen.

"Arnold White."

"What?" exclaimed Arnold. "Why, that's my name!"

"I know it is," bowed the stranger coolly. "I am following out my instructions implicitly."

"But I don't understand—"

"You soon will. I am an attorney from Montana, representing Ernest Drake."

"What! my old friend whom I have not heard from for two years?"

"The same, and the man you loaned $200 to. Well, we went West and got in jail. Stayed there for two years, stubbornly fighting for a valuable land entry he had made. There was a technicality and he stood by his guns. I helped him. We beat the land sharks and he is rich today. There is the money you loaned him with interest."

Arnold was stupefied. Then his first thought was of Leila.

"By the way, Mr. White," said the stranger—"about this young lady Mr. Daniels told me about?

"Ernest Drake would think of your happiness ahead of anything else," he said. "As his representative, I give you this news, reliably acquired: Miss Morton is only waiting for you to ask her company to that theater party. You will ask her and she will go. At the theater party pop the question and she will accept you."

And Leila did.

Something Else.

"Here's a man who found nine pearls in an oyster stew."

"Oh, fairly startling! I thought you were going to try to lead me to believe he found nine oysters."—Louisville Courier-Journal.

Grandpa Wakes Up Tilfield

By MARVIN ST. JOHNS

Copyright, 1922, Western Newspaper Union.

There were—let me see, there were Cousin Jasper Haynes, Cousin Maria Haynes, Cousin Thomas and Samantha Biggs, Lucy and Paul, and myself, not to mention Grandpa and Grandma Chittenden. They lived in Washington, but the rest of us inhabited Tilfield.

Grandpa Chittenden was a Civil war pensioner, and in the middle part of his incredibly long life he had found oil, I believe. Anyway, he was reputed awfully rich, rich enough to make all his grandsons and great-granddaughters, which means Lucy, wealthy for life. And he was eighty-seven years old, and Grandma eighty-five.

Tilfield was not the place that one would choose to live in. It was a little New England town, very Sabbatarian, amateur fire brigade—you know the style. Some folks might like it, of course, but, frankly, we Hayneses and Biggses and the rest of us lived there because we had been born there, and we were too poor to move away.

That is, till grandpa died. Every year each of us would receive a letter from him on the anniversary of the battle of Gettysburg, in which he lost a leg. "I'm growing very feeble," he would say, "and so is my dear wife. I hardly hope to survive the coming winter. God bless you, my dear—Paul, Lucy, Samantha, Jasper, Thomas [illegible] the case might be.

We had reckoned that there ought to be at least ten thousand apiece and [illegible] were getting on in years and anxious to see the last of Tilfield. Lucy was twenty-seven and Paul two years older. [illegible] Grandpa Chittenden hang [illegible] so?

Then an amazing thing happened. A brief letter came to each of us informing us that grandpa and grandma were going to pay us a visit.

The day arrived and the tribe was gathered at the station to welcome him. But grandpa wasn't on the train.

"I guess he wasn't feeling well enough to come," said Cousin Thomas meaningly.

Just then a smart touring car came to a standstill near us and an old gentleman, who was at the wheel, seated beside an old lady, turned and looked hard. It was grandpa!

"Welcome, grandpa!" we all shouted, eagerly.

"Ha, ha!" chuckled grandpa. "Fooled you young folks, didn't I? We thought we'd motor over instead of taking the train, and enjoy the country air."

"Motored from where?" we asked.

"From Washington," said grandpa, with a chuckle.

Grandpa fell in with our plan to have him one day at each house, and after he had made the round he made it again.

"I tell you young people, I'm falling in love with Tilfield," he said.

Everybody was pretty glum by now, for grandpa looked good for a dozen years or more. And then came the day of the state fair.

By this time, in spite of our disappointment, we couldn't help liking grandpa. He had told us that he was worth a hundred thousand dollars, and was going to divide it up among us equally, or, if we didn't outlive him, among our heirs. But, as I was saying, the state fair came along and Howson in his new airplane, the new sort that turns somersaults in the air, without upsetting.

"Where's grandpa?" I asked one of the assistants who had charge of the airplane fixtures.

"What, the old gent with the wooden leg?" he answered. "Why, he's up in the machine."

"What, up there?" cried Cousin Jasper, pointing to the airplane, which was doing the dip of death about a mile over our heads. "And where's grandma?"

"What, the old lady? Why—she's there, too!"

I heard a scream behind me. Cousin Maria was having hysterics. And then the cry was drowned in the delighted yells of the crowd as the machine, like a great bird, righted itself and came floating gracefully down and lit within twelve feet of where we stood. And out stepped grandpa and grandma.

"Boys," said grandpa, when they set him down, "that was a foolhardy thing to do. I ain't as young as I was—I'm going on for eighty-eight—and I'm a family man with responsibilities. No more airplanes for me. I stick to the good old-fashioned auto now and henceforward."

Now, the strange thing about it is, grandpa was such a good sport that, instead of wishing him dead, from that minute we began to think out plans for prolonging his life. And the things he did to Tilfield! Why, all the reporters in the state were put to see him, and we found out he was a famous manufacturer, and he was planning to carry power to Tilfield from Colne stream and erect factories and put up model houses and—

Well, grandpa is ninety-three now, and he bought a new auto last week, because grandma's getting pretty feeble and the old one looked out of date. As for Tilfield, what with the increasing value of real estate and the life of the town, we're going to hang on as long as we can do so.

Oh, yes, about that hundred thousand. What grandpa meant was that he had that to give away, besides a cool half-million invested. He divided up among us, and Paul and Lucy had their third baby last week.

Here's hoping he'll round out the century [illegible]

GROWING SEASON [illegible] CROPS

Ho[illegible] Frames En[illegible] Protect [illegible]

C[illegible] EARLIER

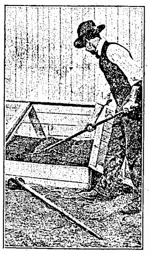
Be[illegible] oughout [illegible] Are [illegible]

(Pre[illegible] Department [illegible])

[illegible] the [illegible] growing [illegible] them [illegible] a few [illegible] chilly [illegible] is not [illegible] doors. [illegible] States [illegible]

S[illegible] 3 by 6 feet, [illegible] make a [illegible] two, or more [illegible] to the size of [illegible] well protected and [illegible] dig a pit 12 [illegible] deep and a little larger [illegible] is to be made. Throw [illegible] soil to one side. For a [illegible] about one good wagonload of fresh horse-stable manure will be required. The manure should be thrown in a flat pile a few feet away from where the bed is to be constructed and the pile turned about twice at intervals of three or four days. As it is turned the outer portion of the pile is thrown to the middle and the inner portion to the outside, in order to get uniform heating throughout. Then put the manure into the pit, each forkful being shaken to break it apart and spread it evenly. It should be well tramped. Put in a layer about 3 inches deep, then another layer, treading each until the pit has been filled level with the ground. It should be just moist enough to pack reasonably solid, but springy under the feet.

The frame of the bed, made of wood, is then set on top of the manure and the earth from the bottom of the pit banked up outside of the frame to keep out the cold. The north side of the frame should be 6 inches higher than the south side. The good soil from the surface of the pit is spread on the packed manure. It is a good plan to mix a little well-rotted manure with this soil.



Preparing a Hotbed to Get Ahead of Jack Frost.

Put the sash on and leave the bed to heat for several days. First the manure will become very hot, then after two or three days it will gradually cool. The temperature will then remain more moderate. No seeds should be planted until the temperature of the soil has fallen below 85 degrees. Use a thermometer, the bulb of which is buried about 3 inches deep in the soil. Feeling the bed with the hand is not a reliable method of taking the temperature. Have a piece of old carpet or a burlap mat to throw over the sash for protection on extremely cold nights.

Care of Hotbeds.

Hotbeds must be watched during bright weather to prevent them becoming too warm, as the sun shining directly on the glass soon brings the temperature above that suitable for the growing of plants.

Ventilation is provided by propping the sash up at one side or the other according to the direction of the wind. Have the wind blow over the opening and not directly into the bed.

Cold frames are hotbeds minus artificial heat—simply sash-covered frames with no pit under them but banked up on the outside to keep out the cold. They are useful for growing plants that have been started in hotbeds, and for hardening plants to get them in condition to plant in the garden. Sometimes a bed about 12½ feet in length covered by four regular hotbed sash is divided into two parts, one part being made into a hotbed and the other a cold frame. This is an excellent arrangement and one that is not expensive.

ON HIS OWN

By RUTH SONG

©, 1922, by McClure Newspaper Syndicate.

Mrs. Raymond regarded her youngest son with resignation. Yet she felt she would never be resigned to his impossible ways.

"Johnnie," she remonstrated for the third time, "I wish you'd sit straight in your chair and stop finger-combing your hair. You look a fright."

Vaguely, like a sleep-walker, Johnnie smoothed his sandy locks, upstanding by twisting fingers.

His mother sighed, thinking of his two brothers. She never nagged them. Trim and alert they were, both employed in a Boston bank. Such a comfort. As for Johnnie—hopeless! What he did down town where he worked, she couldn't imagine. Even if he emptied waste-baskets or swept floors, someone probably had to remind him, as she was endlessly doing at home.

These thoughts, audibly expressing themselves, urged Johnnie finally to go out, the parting injunction to take the key ringing in his ears.

Mrs. Raymond's taut nerves waited for the slam of the door, in spite of her caution to close it softly, then she settled down to sewing, a habit that had grown through colorless years of widowhood.

Later, the evening was brightened by a neighbor's visit. These friendly chats under the sewing-lamp, were welcome. They meant an unburdening of the day's grievances.

"Do you have to nag your boys endlessly, Mrs. Harst?" She was squinting toward the light in an effort to thread a fine needle with a coarse thread. "My Elmer and Alfred never bother, but Johnnie—" she paused, sighing. The subject engulfed her.

"Your youngest?" the neighbor inquired. "Bad company, maybe."

The mother bristled.

"Oh, no, Johnnie's a good boy. It's his habits. I'm always reminding him—his rubbers, his handkerchief, to wipe his feet—I don't know how he gets on where he works. I don't see him start for he goes early. It's a marvel he wakes up. He'll never amount to shucks."

"I haven't seen him lately," the neighbor temporized. "Where does he work?"

"At Jones, Allan & Company, Lawyers."

"What does he do?"

"Office-boy, I guess. It's all he's fit for. Untidy. Shiftless. Never talks about his work. It's discouraging."

A day or so after, this same neighbor had business in the building where Jones, Allan & Company's offices were. No harm to peek at the youngster for his mother's sake. She didn't remember him, now that he had grown up.

Impressed by the emblazoned door that confronted her from the elevator, she hesitated, looking around in hopes of seeing touseled-headed Johnnie with a waste-basket or hiding in a corner reading a paper novel.

Seeing no one, she timidly touched the call-bell on the outer door.

With startling alacrity the door swung open, causing her to retreat a step or two, and a tall, straight, keen-eyed young man popped out to demand her business with said Jones, Allan & Company.

So brisk and not-to-be-trifled-with was he, that Mrs. Harst regretted the errand which brought her.

She gasped, speechless, under the disconcerting scrutiny of this young guardian of the law offices.

"I—I beg pardon for disturbing you," she apologized, at a loss how to begin, "but a neighbor of mine has a boy working here. Being in the building I thought I'd drop in and say 'Howdy-do' to him. He wouldn't remember me, I guess, now he's grown big enough to work—"

At her uncertain pause, the young man stepped out, closing the door behind him. He swung a chair under the astonished woman before she had time to see from whence it came. Having thus deposited her safely away from the business entrance, he inquired:

"Can I help you? We have a great many employed here and not everyone is always available. If the boy isn't too busy or isn't needed for the moment, I'm sure he'll be glad to see you. If you'll tell me his name, I'll look him up for you."

Having thus made the inquisitive neighbor feel that business hours were no time for social calls, the formidable medium between Mrs. Harst and her desire stood ready to receive information.

Crushed and ill at ease, she glanced timidly up into the pleasing, although unsmiling, eyes.

"I'm sorry I bothered about it, but now I'm here it can't be helped. If he's busy, never mind. His name is Johnnie Raymond. If it's any trouble"—

For the first time the serious face of the young man broke into a charming smile and his hand went uncertainly up to the sandy hair and came down again without touching it. He bowed rather splendidly.

"You see, it's no trouble at all," he informed her in his crisp, pleasant tones. "I am John Raymond."

PRODUCE HIGH-GRADE SEEDS

Many Farmers Are Not Careful to Prevent Mixture and Keep Out Harmful Weeds.

Even in communities where a single variety of a crop is raised almost exclusively there is a place for the production of pure seed for local sale, says D. W. Frear, extension specialist in field crops for the Missouri College of Agriculture.

Many farmers do not go to the trouble to keep their seed up to a high standard but allow it to become mixed, weed-infested and diseased and are glad to pay a good price every few years for high grade seed.

Those who are favorably situated can produce pure seed to meet this local demand. Seed produced for this purpose must be of high quality and considerably better than the average in the community, because farmers will not pay an advanced price for seed that is very little better than their own.

A Certain Rich Man

JOHN D. ROCKFELLER ONCE said: "The first essential to building a foundation for business success is the establishment of credit."

John ought to know. He has established a pretty fair credit himself. A man's credit need not necessarily be backed by millions. He may be poor and still have credit, for credit is influenced by what a man really is; by what he does; how he uses his money, talents, time; by his social and banking relations. An account at our bank will help, too.

Farmers State Bank
OF GOODRIDGE

THERE IS MONEY IN FOX FARMING

Industry Is Rapidly Gaining Favor in Section of Northern States of Country.

[illegible] IN CAPTIVITY

Best Location for Farm Is Where Winters Are Cold and Opportunity Offered to Develop Fur—Big Prices for Pelts.

(Prepared by the United States Department of Agriculture.)

Fox farming is now gaining favor in the United States. The industry, [illegible], is fairly [illegible] of the northern tier, [illegible] in all states in this tier and in that next to it, and is growing rapidly. There is money in it for the raiser who starts modestly, learns the business, and then expands his holdings. There are losses in store for the type who starts with a big ranch, no knowledge of the business, and only a desire for quick profits. At the present time the industry is undergoing a process of stabilization. Most fox farmers raise animals for breeding purposes, and comparatively few have adjusted the business to a pelt basis. All told, there are between 10,000 and 15,000 silver foxes being grown in captivity on American fox farms at this time.

Many Animals in Canada.

Such are some of the conclusions of a representative of the biological survey, United States Department of Agriculture, who has just returned to Washington after an extensive investigation of American fox farms and the methods of their operation. In Canada, where the industry originated, and especially on Prince Edward island, where there are approximately 15,000 foxes in captivity, fox farming is conducted on a much more extensive scale than in the United States. Its promise of good financial returns to those willing to master its problems, give indication that within a comparatively short time in this country it will rival in proportions the industry in Canada.

A Silver Fox.

The best location for a fox farm is where the winters are cold and the fox may have opportunity to develop fur in keeping with the needs of the climate. The industry is thus confined by climatic conditions to the northern states. There the raising of foxes for breeding and for the fur markets flourishes. Most of the foxes raised in captivity are on farms, or "ranches," with pens for from 25 to 50 pairs, although in occasional instances the ranches are much larger, containing pens for as many as 150 pairs.

The foxes generally breed in January and February and the young are born within 52 days. A pair of foxes raises one family a year, the number of young varying from one to ten, though rarely exceeding five or six. Most of the fox raiser's troubles come when the young are a few weeks old and are peculiarly susceptible to attacks from worms. Great care is necessary to carry the young foxes through this period.

Most Foxes Sold for Breeding.

It is not advisable to kill a fox for the pelt before 18 months of age for at that time its fur is more [illegible] than at a younger age. Comparatively few of the foxes raised on American ranches are sold at the present time, however, for their pelts. Most of the ranchmen obtain higher values than the worth of the pelt by selling the live animals for breeding purposes. A good pelt may fetch as much as $600, though the average is much lower, approximating $250 to $350. The furs are comparatively little known because of their rarity. Silver foxes vary from those in which the color is entirely silver to those in which it is entirely black except for some white-banded hairs on the back and rump. In the black fox the white is absent from all parts except the tip of the tail, which is generally white in all phases of the animal.

Ever Unsatisfied.

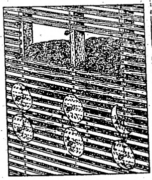
"This man will be highly indignant," remarked the private secretary, "if you don't get him a government job."

"We must be philosophical," said Senator Sorghum. "If we get him the job he will be just as indignant in a few months if we don't succeed in assisting him to a raise in salary."

HOLD CORNCRIB DOORS SHUT

Disks From an Old Harrow Placed Over Corners of Sections Will Prove Efficient.

Most corncribs are built with detachable sections that are removed to provide a low opening, through which the corn is scooped until the crib is nearly filled. A satisfactory method of holding these sections in place is to put disks from an old harrow over the corners of the sections and secure them with bolts. This method is simple, as but little time is required to remove or replace the sections, and they are held firmly and without injury to the lumber.—S. E. Gibbs, Ames, Ia., in Popular Mechanics Magazine.



Disks Hold Corncrib Doors in Place.

ADVERTISING FARM PRODUCTS

Where Automobiles Pass Farms It Is Good Idea to Post Bulletin Offering Produce.

Do the autos pass your door? Why not put up a bulletin at the front gate and let folks know that you have some nice butter, honey, eggs, chickens, fresh pork, potatoes or other things for sale? The auto folks will pay better than retail prices for high class goods.

Roy Brown, who bought the McLeod half-section last summer and sold it in a few weeks at a profit of over $1,500, was up from Illinois the first of the week and brought a land buyer, a Mr. Miller, with him. On account of the storms, they returned without seeing the place, but it is said that Mr. Miller has purchased a farm in this vicinity.

A Special Venire

A technical error in the drawing of the jury for the present term of court necessitated the calling of a special venire when court convened last Friday morning. There were three women members on the first panel drawn and nine on the jury which finally served. Two of these, Mrs. John Sheggrud of River Falls township and Mrs. H. T. Hauson of Hickory township, were unable to be present, so that there were seven of the fair sex answering to the roll call. It was the first mixed jury in the history of Pennington county and it took just one and a half days for the members to clear away the work before them. Mrs. J. M. Bishop of Thief River Falls and Mrs. Wm. Vaughan of Highlanding served on the grand jury and Jerry Hruby of Cloverleaf was drawn for the petit jury.

Lutheran Church, Mo. Synod.

H. LUTZ, Pastor.

School Notes

School was closed Wednesday, it being a legal holiday.

An interesting and appropriate George Washington program was rendered on Tuesday morning, as follows: Song, America, school; Welcome, Recitation, Fernley Josephson; Like Washington, Recitation, Casper Johnson; George Washington, Song, primary and intermediate; Personal and Social Traits of Washington, Frances Hincik; Reading, Washington, Hazel Thoreson; What Should We Do? Recitation, Selmer Anderson; Washington's Message to the American People, Kathleen Lang; Washington's Rules of Conduct, Mt. Vernon Bells, Song, Grammar room pupils; A Happy Thought, Recitation, Wesley Ferdinandson; George Washington and His Hatchet, seven girls, intermediate; Americanization, Herbert Nelson. George Washington, Recitation by eleven boys, intermediate; Flag Song, primary and intermediate rooms

The 3rd, 4th and 5th grade pupils, through the leadership of their teacher, Miss Vaughan, presented two large and beautifully finished portraits of Abraham Lincoln and George Washington to the school. Martha Olson, in a few well chosen words, told of their method of raising the necessary funds with which to pay for these pictures and then presented them to the school

The following people attended the exercises on Tuesday morning: Mrs. Sever Anderson, Mrs. Gilbert Gunderson, Mrs. A. G. Thoreson, Mrs. R. H. McDonald, Mrs. Julius Stephenson, Miss Resan, Roy Resan and L. F. [illegible]pennagen

Mrs. [illegible] visited school on Monday.

The Hero Grain Cleaner

Cleans and grades your seed. Will separate wild oats from wheat and barley. Also cleans flax, alfalfa, oats, timothy, clover and other grains to your entire satisfaction—with greatest ease and simplicity. Without question you have done everything to your soil which will enable you to raise a good crop, provided weather conditions are right. In order to insure a crop, however, you must have good seed, and it is impossible to have good seed without the use of a fanning mill or a good corn grader. The experimental stations have proven so often that light seed will not grow a heavy crop. The HERO is sold by the GOODRIDGE MERCANTILE CO., Goodridge, Minn. adv

The Telephone Meeting

The stockholders of the Red Lake-Eastern Marshall Farmers' Telephone company held their annual meeting Monday. Three directors were elected as follows: A. W. Hanson, Elev Aakre, H. P. Solberg. The secretary's report showed that there is about $3,000 outstanding for telephone service and rentals.

Robert M'Ginn, Jr. Dead

Robert Clifford McGinn, Jr., sixteen years of age, son of Mr. and Mrs. Robert McGinn of Thief River Falls, died last Friday morning of influenza with internal hemorrhages as a contributing cause. The funeral was held from St. Bernard's Catholic church on Saturday morning. The deceased was born in Thief River Falls on December 10, 1906; being a little more than 15 years of age at the time of his death.

THE GOODRIDGE BANNER

VOLUME XVI, No. 4. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, MARCH 3, 1922. $1.50 PER YEAR.

County Ahead $18,551 Under Babcock Plan

Pennington county owners paid $21,604 of taxes in 1921 on cars and trucks and $40,155 has been used to date on trunk highways within the county under the Babcock good roads plan put into effect last April. No county or town funds are included.

Charles M. Babcock, state highway commissioner, explained that the large excess of disbursements over automobile tax revenue was made possible in part by the use of federal highway aid reimbursement funds.

The figures are official, motor vehicle taxes being reported by Mike Holm, secretary of state, and highway figures approved by G. W. Brown, state public examiner. State trunk highway fund charges in Pennington county include $24,498 used in 1919 20 and $15,657 in 1921, all covering maintenance work, new construction, right-of-way, engineering and other expenses.

Charles M. Babcock, state highway commissioner; said that the general showing was made possible in part by the use of federal highway aid and reimbursement bond funds which totalled more than double the amount of the 1921 motor vehicles taxes.

John S. Mullen, deputy commissioner and chief highway engineer, added that the largest outlays, especially those for new construction, were in counties which voted reimbursement bonds and others where the trunk routes when taken over by the state were not up to the average.

The highway executives made this statement: "Department policies are designed to distribute new construction so that the largest number of localities may share in early, permanent benefits and also to build up weak stretches in long mileages of otherwise good roads. Their continuance will tend to bring up individual county totals to a fair average, traffic, mileages and other conditions considered. Those with small totals last year will be most likely to lead this year, local conditions being equal. Every effort has been and is being made to give every section fair and impartial consideration."

Would Exempt Co-Operatives

In order to make certain that co-operative associations in Minnesota and other states will not be called upon to pay income taxes on moneys received from patrons and on reserve funds, Senator Kellogg of Minnesota has introduced a bill to amend the prosent revenue act.

Under the present law it is more than likely that the treasury department will rule that a tax must be paid on such funds. Governor Preus made a personal protest some time ago but was informed that an amendment to the law would be the only way to remedy the situation.

It was stated that the farmers' co-operative associations would have to pay $1,000,000 in income taxes on surpluses set aside for future obligations, such as buildings and machinery. The co-operative creameries in Minnesota would be hard hit.

Secretary Mellon of the treasury department advised Senator Kellogg that the best way to protect the co-operative societies would be to have the law amended. For that reason the Minnesota senator has introduced the bill, amending the revenue act to include patrons with members in the matter of exemptions. In addition the following provision is suggested by Senator Kellogg as an amendment to section 231 of the act.

"Provided that reserves or surpluses, through assessments of members or patrons or by deducting or withholding a portion of the net proceeds payable to members or patrons shall not be construed as income on the part of the association for that reason be denied exempt status."

Senator Kellogg also introduced a bill to establish a forestry experiment station in the Great Lakes states region. A similar bill recently was presented in the house by Representative Mapes of Michigan. The selection of the site would be left with the secretary of agriculture. No appropriation is provided in the Mapes-Kellogg bill, which means that further legislation would be necessary before a station could be established, should the measure become a law.

MARRIED

Mr. John Sunsdahl and Miss Jennie Bakken were married Thursday, February 23, at the home of the bride's parents, Mr. and Mrs. Carl Bakken, southeast of Erie, Rev. H. Lutz of Goodridge officiating

ERIE ERRORS

Aslak Nerhus made the rounds of the community selling garden seeds during the week.

Ed Dempsey returned to his place in Hickory township after spending three weeks with his home folks at Thief River Falls, and at the same time undergoing dental treatment.

Scribbs begs the indulgence of occasional readers of items from this neck of the woods; it was decided to change the heading to "Errors" in order to be more consistent.

Mrs. Myrtle Rouze, teacher in district No. 14, spent the week end with relatives and friends in Goodridge.

Sub-Urban was an over Sunday guest at "Camp Dempsey."

G. A. Iverson drove to Goodridge Thursday receiving a new cream separator which he had recently purchased.

Verna Shannon and Theresa Thomason are numbered among the "prospective pedagogues" from Thief River Falls high school, arriving Saturday. Misses Shannon and Thowason will take up their duties with Mrs. S. Rouze in Dist. No. 14.

The "E. E." scribbler heartily thanks the North Star news correspondent for the fine grist of items appearing in last week's issue of the Banner. I confess that the "Epigrams" have fallen sadly short of covering the surrounding neighborhood, as they should have done; but the fact is I've been so busy "shoeing poultry," etc., lately, that there was little time left over for anything else.

The Farmers' Institute And Potato Maeting

The meeting Monday was attended by as large and interested a crowd of farmers as was ever got together at a similar gathering in Goodridge. It was evident that the farmers were much interested in the potato proposition. County Agent J. J. McCunn was present and presided at the meeting.

E. L. Eastgate of Larimore, N. Dak., was the speaker of the day. His first talk was on livestock. He mentioned four classes of livestock as being indispensable on almost every farm: Cattle for sure money, hogs for quick money, sheep for easy money and hores for big money. He said that sheep and horses were coming into their own again. They have been selling low for the past two or three years, but recently they have been on the advance.

Mr. Eastgate's talk on potato growing was instructive and practical. He laid particular stress on cultivation immediately after planting. He advised that a good practice would be to hill the potatoes about ten days after planting; then cross harrow until the ground is again level. Then from six to eight days later hill them again. Leave the potato vines covered two or three days. Then cross harrow again. This will have a tendency to check the weeds that will otherwise get a good start. It will not kill the potatoes, for the reason that the plant is still securing its nourishment from the tuber instead of from the soil.

After the close of Mr. Eastgate's address the meeting was opened for general discussion. The indications are that a fair acreage will be planted to potatoes in this vicinity next season. The general sentiment of the farmers present was to make preparations for marketing whatever crop was raised this season. It was decided that, rather than to build a local warehouse, we should try to market the potatoes in the fall. As a result a local shipping association, to be affiliated with the county potato association, was organized, with the following officers: H. I. Finstad, pres.; Wm. Vaughn, vice pres.; A. B. Mandt, sec. and treas.

It was also agreed upon to plant only the following varieties of oats in this locality: Early Ohio, Irish Cobbler and Burbank.

The Hero Grain Cleaner

Cleans and grades your seed. Will separate wild oats from wheat and barley. Also cleans flax, alfalfa, oats, timothy, clover and other grains to your entire satisfaction—with greatest ease and simplicity. Without question you have done everything to your soil which will enable you to raise a good crop, provided weather conditions are right. In order to insure a crop, however, you must have good seed, and it is impossible to have good seed without the use of a fanning mill or a good corn grader. The experimental stations have proven so often that light seed will not grow a heavy crop. The HERO is sold by the GOODRIDGE MERCANTILE CO., Goodridge, Minn. adv

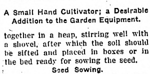
PROPER SOIL AND LOCATION FOR SEED BED OF BIG IMPORTANCE

When the Garden Is to Be Worked by Horses the Rows Should Be Long and Straight.

(Prepared by the United States Department of Agriculture.)

It is a good practice to reserve a small corner of the garden for a seed bed. Here through special preparation of the soil it is possible to produce better plants than could otherwise be secured. The gardener can transplant from the seed bed to the garden, thus making the plants more stocky. The location of an outdoor seed bed should be such that it may be conveniently reached for watering, and it should be naturally protected from drying winds.

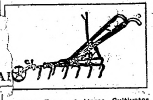
Good soil for a seed bed consists of one part of well-rotted manure, two parts of good garden loam or rotted sods, and one part of sharp, fine sand. The manure should be thoroughly rotted, but it should not have been exposed to the weather and the strength leached out of it. The addition of leaf mold or peat will tend to make the soil better adapted for seed-bed purposes. Mix all the ingredients together in a heap, stirring well with a shovel, after which the soil should be sifted and placed in boxes or in the bed ready for sowing the seed.



A Small Hand Cultivator; a Desirable Addition to the Garden Equipment.

Seed Sowing.

Garden seeds should always be sown in straight rows regardless of where the planting is made. If a flat or a window box is employed for starting early plants in a dwelling, the soil should be well firmed and then laid off in straight rows about 2 inches apart. The same method holds good for planting seeds in a hotbed, cold-frame or bed in the garden, except that the rows should be farther apart than in the window box. By planting in straight rows the seedlings will be more uniform in size and shape, and thinning and cultivating will be more easily accomplished. In all cases where the soil of the seed bed is not too wet, it should be well firmed or pressed down before laying off and marking for sowing the seeds. After the seeds are sown and covered, the surface should again be firmed by means of a smooth board. Lima beans, melons, cucumbers and other garden crops may be started in berry baskets, on sod or in paper bands indoors, and the whole transferred to the garden when the weather permits, thus gaining considerable time. Thirty to fifty hills of extra-early potatoes may even be had by starting as many seed pieces in a box in the living room or in a hotbed and subsequently handling the plants the same as tomato plants.



A Good Type of Horse Cultivator, Well Suited to Garden Use.

Depth of Planting and Distance Apart.

No general rule can be given with regard to depth of planting, as different kinds of vegetables and different soils necessitate different practices. The smaller the seeds the shallower the covering should be. In heavy soils the covering should be lighter than in light soils. The following table gives the depth of planting of the various vegetable seeds, as well as the quantity of seeds or number of plants required for 100 feet of row and the distance apart for the rows and the plants in the rows:

Gardeners' Planting Table.

Quantity of seeds and number of plants required for 100 feet of row, depths of planting, and distance apart for rows and plants.

Kind of vegetable	Required for 100 feet of row		Depth for planting seed	Distance apart		
	Seed	Plants		Rows: Horse cultivation	Rows: Hand cultivation	Plants in row
			Inches	Feet		
Asparagus	1 ounce	60 to 80	1 to 1½	3 to 4	2 feet	15 inches
Bean:						
Bush	1 pint		1½ to 2	2½ to 3	2 feet	3 to 4 inches
Bush Lima	½ to 1 pint		1½ to 2	3	2½ feet	6 to 10 inches
Pole Lima	½ pint		1½ to 2	4	3 feet	3 to 4 feet
Beet	2 ounces		1 to 1½	2 to 2½	15 to 18 inches	4 to 5 inches
Cabbage	½ ounce	65 to 90	½	2½ to 3	2 to 2½ feet	14 to 18 inches
Carrot	1 ounce		½	2 to 2½	15 to 18 inches	3 to 4 inches
Cauliflower	⅛ ounce	60 to 75	½	2½ to 3	2 to 2½ feet	15 to 18 inches
Celery	⅛ ounce	200 to 250	⅛	3 to 4	18 to 24 inches	4 to 6 inches
Collard	¼ ounce	65 to 100	½	2 to 2½	18 to 24 inches	12 to 18 inches
Corn, sweet	¼ pint		2	3 to 3½	2½ to 3 feet	10 to 12 inches
Cucumber	½ ounce		1 to 1½	4 to 5	4 to 5 feet	15 inches
Eggplant	¼ ounce	50 to 70	½	3	2 to 2½ feet	18 to 24 inches
Kale	¼ ounce		½	2½ to 3	18 to 24 inches	8 to 10 inches
Lettuce	⅛ ounce	125 to 200	½	2 to 2½	15 to 18 inches	6 to 10 inches
Melon:						
Muskmelon	½ ounce		1 to 1½	5 to 6	5 to 6 feet	Drills, 18 in. Hills, 6 feet
Watermelon	1 ounce		1 to 2	8 to 10	8 to 10 feet	Drills, 2-3 ft. Hills, 8 feet
Okra	2 ounces		1 to 2	4	3 feet	2 feet
Onions:						
Seed	1 ounce		½ to 1	2	15 inches	3 to 4 inches
Sets	1 quart		1 to 2	2	15 inches	3 to 4 inches
Parsley	¼ ounce		⅛	2	15 inches	3 to 4 inches
Parsnips	½ ounce		½ to 1	2 to 2½	15 to 18 inches	3 to 4 inches
Peas	1 to 2 pints		2 to 3	3 to 4	2½ to 3 feet	1 inch
Potato:						
Irish	5 to 6 lbs.		4	2½ to 3	2 to 2½ feet	12 to 18 inches
Sweet	3 lbs.	75 (slips)	2 to 3	4 to 5	4 to 5 feet	14 to 15 inches
Radish	1 ounce		½ to 1	2	12 to 15 inches	1 inch
Salsify	1 ounce		½ to 1	2	15 to 18 inches	1 inch
Spinach	1 ounce		1 to 2	2	15 to 18 inches	1 to 2 inches
Squash:						
Bush	¼ ounce		1 to 2	3 to 4	3 to 4 feet	Drills, 16 [illegible] Hills, 4 feet
Vine	⅛ ounce		1 to 2	7 to 10	7 to 10 feet	Drills, 2-3 ft. Hills, 8 feet
Tomato	⅛ ounce	35 to 50	½ to 1	3 to 4	2 to 3 feet	2 to 3 feet
Turnip	½ ounce		¼ to ½	2	15 to 18 inches	2 to 3 inches

The seed bed should never be allowed to become dry, but great care should be taken that too much water is not applied. Plants require the action of air upon their roots and an excess of water in the soil will exclude the air. Too frequent and heavy waterings will cause the damping-off of the seedlings.

Directors Meeting

The board of directors of the Red Lake-Eastern Marshall Telephone company met Monday and elected officers, as follows: Alfred Hammerstein, pres.; Hans C. Solberg, vice pres.; A. W. Hanson, manager; E. L. Kately, assistant manager.

A general discussion of the very serious matter of collections was had. The following resolution was adopted:

Resolved, That all rents and tolls must be paid every three months; this to take effect March 15, 1922.

All long distance calls will be discontinued after April 15, 1922, providing said rents and tolls are still unpaid.

All unpaid rents and tolls due company after June 25, 1922, will be turned over to an attorney for collection.

All service to patrons having unpaid bills after June 25, 1922, will be discontinued.

Life Sentence for Gummer

William Gummer was on Monday sentenced to life imprisonment in the North Dakota state penitentiary at Bismark. He was found guilty of murder in the first degree by the jury, which returned its verdict at 12:40 o'clock Saturday night after having been out since 5:20 o'clock the previous evening.

Andy Brown, Gummer's room mate, was arrested shortly after the verdict of the jury was returned.

UNSELFISHNESS

By FLORENCE MELLISH

©, 1922, by McClure Newspaper Syndicate.

They went upstairs sleepy and happy. Elsie's sister, Ida, and George, Ida's husband, had been with them. Their classmate, Agnes, had brought her violin, and Elsie and Edna had tried some of their old piano duets.

Elsie slipped into the guest room and perched on the bed. She was as pink and plump as a child, and very sweet in her new matronly dignity.

"Oh, Edna! It's lovely to have you here."

"It's lovely to be here, Elsie. Your home is exquisite, and you and Ernest seem perfectly happy."

"We are just that."

"And with Ida settled so near you! They seem happy, too."

Elsie took off her slipper and considered a crack in the toe. "I guess they're happy, but if I were Ida, I should be perfectly miserable."

"Why, Elsie?"

"Edna, did you see George looking at Agnes when she was playing? He looked as if she was something wonderful."

"But her playing is wonderful, Elsie, and Agnes is too, rather."

"I know, she isn't exactly beautiful, but she has what people call charm. And, Edna, I think that Agnes likes being wonderful and that she likes George to know it."

"But, Elsie, I don't think Ida is sensitive, and isn't George loyal to her?"

"Oh, yes!" Elsie returned, with an impatient upward tilt of her chin. "George is loyal; but think what a career Ida has sacrificed for him, and how she just breathes for him. And then to see him looking at Agnes with that adoring gaze, and to know it is only loyalty and duty that holds him to Ida! Edna, if I should ever see Ernest looking at anybody with such an expression as George had tonight, it would break my heart. You saw him look at her?"

"Perhaps I did once," Edna admitted.

"You went to the opera, Edna, when you were staying with the Vintons. Tell us about it."

Edna leaned back luxuriously, and talked as only Edna could talk. Edna could not see Ernest from where she sat, but raising her eyes to the mirror above the mantel, she saw his reflection.

Elsie came into Edna's room again. She was pale and a little sad, but very sweet and gentle.

"You were wonderful tonight, dear," she said, wistfully, as she kissed Edna. "You don't try to be, but you are."

For a long time Edna sat staring at a little opal brooch she had unfastened from her collar.

"Ernest didn't mean anything."

She turned the brooch and absently watched the play of colors in the lamplight.

"Who would guess how lovely an opal can be when the light strikes it?"

Then a new thought flashed in her eyes.

"Where is that hideous purple gown?"

She stood up before the mirror and held up the despised gown.

"It's fearfully unbecoming. I don't like to make a fright of myself, but for Elsie's sake——"

In the morning Edna experimented with her hair.

Elsie met her in the hall. "Why, Edna! You don't look like yourself with your hair all over your ears and down to your eyes. It doesn't suit you, dear."

"But it's the latest style. The Mortimer girls have adopted it."

"Oh, those Mortimer girls!" Elsie echoed with scorn. "But what is this gown? I haven't seen it before."

"You'll see it again," laughed Edna. "I'm going to give it an airing."

At breakfast Edna talked persistently of Mrs. Faxon, a rather overdressed member of the Amethyst club, dwelling on every detail of her costume. Ernest retired behind his newspaper.

"Your friend seems shallow and commonplace on closer acquaintance," he confided to Elsie afterward.

"But she isn't shallow or commonplace," Elsie insisted loyally. "It's just that you don't see the best side of her."

"Perhaps," he answered, indifferently.

The day came for Edna's departure.

"It's lonesome to see you packing," mourned Elsie. "I wish you hadn't [illegible] Pearsons. But you'll be the [illegible] on the train in that hat [illegible] Do put up your hair the old way. I've just heard [illegible] cousin Gordon Fletcher, is staying at the very next house to the Pearsons [illegible] tion, and I want you to look your [illegible]. And, Edna, that purple [illegible] you've been wearing so much—it's handsome. But it doesn't suit you. Do put it aside—and that Russian blouse with the broad stripes. You're so beautiful at your best. Oh, Edna! Must you really go today?"

"I must, Elsie, dear. The Pearsons are meeting me."

"Well, it's been like a bit of heaven having you here. I love to entertain; but your visit has been the dearest of all. You are always so unselfish, Edna."

"I've had a wonderful time, Elsie. It has been a constant delight to see you and Ernest so happy together."

"We are happy," Elsie answered with a little sigh of content. "And I don't think anybody will ever come between us. It's just as you said, Edna. Ernest is always so sensible."

FERTILIZER AIDS APPLE CROP

Fruit Production Increased 1,000 Per Cent, Say Experts at Michigan Conference.

Michigan and Ohio speakers at the annual convention of the Michigan Horticultural society agreed that fruit production can be increased greatly with the aid of fertilizers—sometimes to the extent of 1,000 per cent. Experiments showed that without fertilizer each tree produced 60.1 pounds of apples; with the use of four pounds of sulphate of ammonia per tree, the orchard averaged 233.6 pounds of apples per tree; with five pounds of nitrate of soda per tree, 209.2 pounds of fruit; with ten pounds of acid phosphate per tree, 209.4 pounds of fruit, and with a complete fertilizer, consisting of four pounds of sulphate ammonia, five pounds of acid phosphate and three pounds of muriate of potash per tree, 403 pounds of fruit per tree. The cost of apples per 100 pounds with four pounds of sulphate of ammonia per tree was 16.1 cents; with five pounds of nitrate of soda, 21.3 cents; with ten pounds of acid phosphate, 16.8 cents, and with seventeen pounds of complete fertilizer 20.6 cents.

GRASS AND WEEDS HARMFUL

Noxious Plants Consume Enormous Amount of Moisture Needed by Fruit Trees.

Grasses and weeds are enormous consumers of soil moisture, to say nothing of available plant food. The moisture content of the soil plays an important part in fruit production, an all-important part in fact. Unless there is an abundance of moisture, the quality of the fruit is certain to be affected, even though all other conditions are favorable. There are other reasons why the orchard soil should not be expected to maintain an intercrop to any large extent. Weeds and grasses often afford a hiding place for orchard pests at certain seasons of the year. Some forms of diseases may be propagated on them, even though kept off the trees during a majority of the year.

PUTTING SOW IN GOOD SHAPE

Animal Usually Needs to Gain About One-Half to Three-Fourths Pound Daily During Cold Months.

A sow older than two years, one that has completed her growth, usually needs to make a gain of about one-half to three-fourths of a pound daily through the winter to put her in good shape for farrowing. A gilt or yearling sow has to continue her growth besides producing a litter of pigs, and a pound a day gain is none too much if these young sows are thin at the beginning of winter.

The
Harvester Company's
Exceptional Offer

and contribution to the farmers, effective February 3 to May 1, 1922

The Harvester Co. makes this special offer to apply on all new Titan 10-20 Tractors purchased by its dealers on 1922 account. Each farmer purchasing one of these Tractors for delivery on or before May 1st, next, will be given by the company absolutely free f. o. b. Chicago a 3-furrow P & O plow.

$200 CUT in price of TITAN TRACTOR
New price $700 f. o. b. Chicago
and a P & O 3 Furrow Plow Free

These are not stripped tractors pared down to make a price, but complete with all essential equipment—Pulley, Fenders, Platform, Throttle governor, adjustable drawbar, handle lugs, brakes. This equipment, worth more than $100 and necessary on any tractor to make it serviceable and safe, included in our price. NO EXTRAS TO BUY

IN TAKING FARM INVENTORY

Miscellaneous Collection of All Kinds of Supplies Should be Listed Together.

On every farm at inventory time there will be found a miscellaneous collection of all kinds of supplies, such as purchased feeds, seed, fertilizer, twine, nails and lumber. These, together with the amount of manure on hand, are all listed under the heading "Supplies," according to inventory methods worked out by the United States Department of Agriculture. Nails, bolts, screws and the like can well be listed as one item, regardless of varying sizes and kinds, giving the approximate number of pounds. Where a definite system of carrying such shop supplies is in use, as is the case on some of the well-organized, large farms, the quantities of the different items of this nature are easily counted or weighed and appraised accurately.

This kind of property, like machinery and tools, has been bought by the farmer and should therefore be appraised at cost, plus any expense incurred in getting it to the farm. For example, if a ton of bran is bought for $44, $1.25 spent for freight on it, and 75 cents' worth of man and horse labor needed to haul it from the station to the farm, the appraisal should be made at the rate of $46 a ton.

IMPORTANT ORCHARD SPRAYS

Insecticides Are Made Use of for Killing Insects and Fungicides for Diseases.

Sprays for orchards are divided into two classes—insecticides and fungicides. Fungicide is the name denoting a spray used for diseases caused by fungi. Insecticides are divided into three classes, sprays being made to kill insects of different characteristics. Stomach poisons are for killing chewing insects, repellent sprays are to prevent insects from laying eggs, which hatch out detrimental larvae, contact sprays kill those insects that get their food by sucking. Bordeaux mixture and lime sulphur solution are the most important fungicide sprays. The most important insecticide sprays are arsenate of lead, paris green, tobacco, kerosene emulsion and soaps.

TEST OF SUNFLOWER SILAGE

Gave as Good Results as Corn in Washington—Crop Does Well in Dry Territory.

Sunflower silage fed to a flock of breeding ewes for sixty days before lambing, in feeding tests in Washington, gave as good results as corn silage, as far as condition and weight of ewes were concerned. Two lots of five lambs each were fed barley, cull beans and pea straw; one lot received sunflower silage and the other corn silage. The corn-silage bunch needed 442 pounds of grain, 187 pounds of pea straw and 526 pounds of corn silage to make 100 pounds of grain. The sunflower-silage bunch needed 660 pounds of grain, 310 pounds of pea straw and 811 pounds of sunflower silage for the same amount of gain. Extra grain needed by the sunflower-silage bunch was due to lack of grain in the sunflower silage, evidently. Quite a few feeders say sunflower silage is all right for sheep and cattle. One point in favor of sunflowers is their heavy yield. The crop grows well in dry sections, and in high altitudes.

PLANTING SEED IN GARDENS

Always Advisable to Use Excess Supply So That Damage to Plants Is Minimized.

It is always advisable to plant an excess of seed so that the damage to each plant is minimized. The young plants, when they first come up, can be readily protected from beetles by covering with an improvised cover of wire cloth or of thin cheesecloth. This measure is particularly practical in small garden patches.

ROOT CROPS ARE MOST IMPORTANT

Beets and Carrots Stand at Head of List From Standpoint of Food Value.

RADISHES NEED SMALL SPACE

Rich, Well-Prepared Soil Is Essential and Good Seed Should Be Used—Parsnips and Salsify Deserve Attention.

(Prepared by the United States Department of Agriculture.)

Root crops most commonly grown in home gardens are radishes, beets, carrots, parsnips, salsify, and turnips. Of these beets and carrots stand at the head of the list from the standpoint of food value from a given area of land, but it would be difficult to state which of the root crops really is the most important, say garden specialists of the United States Department of Agriculture.

Radishes are among the first garden crops to be planted in spring, and a very small space is required to produce all that is needed by the average family. The soil should be loose, mellow, and very rich, so the radishes will grow quickly and be crisp and tender. Radish seeds should be planted in a shallow furrow and covered about one-half inch deep. Two or three varieties should be planted in order to have a continuous supply. French Breakfast and Scarlet Globe Turnip are among those which mature in the shortest period, while Long Scarlet Short-Top and Long White Vienna or Lady Finger are good to follow the extra early varieties.

Plant Beets Early.

Garden beets can be planted almost as soon as the soil can be worked in the spring. Rich soil that is well prepared is essential. Commercial fertilizers and well-rotted manures are best to supply plant food, but should be very thoroughly mixed with the soil. Egyptian and Detroit Dark Red are among the leading varieties. Sow the seed in a shallow drill, 1 ounce of seed to 50 feet of drill, and cover about 1 inch deep. When the plants have become well established thin so they do not crowd. A little later thin a second time, leaving the plants standing 4 to 5 inches apart in the row. Use the thinnings as greens. The round or turnip type of beets mature in 60 to 70 days, while the longer ones require 100 to 120 days to complete their growth.

It is an old saying, "Carrots for beauty and beets for strength," and while this can not be taken literally it has a great amount of truth in it. From the standpoint of health, carrots are very important in the diet, and their culture is so simple that any gardener can grow them. Rich well-prepared soil is the first essential. Good seed is important, and the seed should always be that which was saved the previous year. Oxheart and Chantenay are the varieties most commonly planted. Space the rows 15 to 18 inches apart. One ounce of the seed is sufficient for 100 feet of row. Cover the seeds one-half inch deep and keep the crust slightly broken over the seeds until they come up. Thin twice, finally leaving the plants three to five inches apart in the row, those pulled during the second thinning being used as "baby" carrots on the table.

Radishes Are Among the First Garden Crops to Be Planted.

Parsnips and Salsify.

Throughout the northern sections parsnips and salsify are important as root crops for the garden. Their culture is very much the same, and they require a deep, rich soil, so the long roots will have a chance to develop. Plant the seed early, so the plants will get well started before the heat of summer comes, and keep them growing the entire season. The rows should be 15 to 18 inches apart and the plants thinned to stand four inches apart in the row. Parsnips and salsify may remain in the ground all winter until wanted for use. Hollow Crown is the leading variety of parsnip, while Mammoth Sandwich Island is the best known variety of salsify.

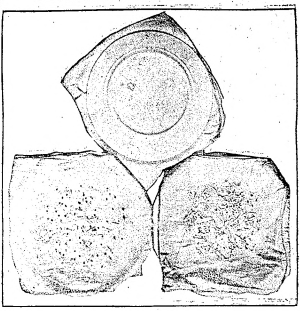
CONSIDERABLE CARE NEEDED IN SELECTING CLOVER FOR SEEDING



Simple Tester for Small Seeds.

(Prepared by the United States Department of Agriculture.)

Red clover has been styled the corner stone of agriculture in the North Central and Eastern states.

Many farmers begin laying the corner stone as early as February, when it is customary in many sections to sow red clover on the surface of the snow, so that it will sink into the soil with the first thaw in the spring. Red clover is hardy, and is not injured by ordinary cold; and the fact that it can be sown at a season when work on the farm is comparatively light adds to the economy of its cultivation.

The first important point to be observed is the selection of good seed, say specialists of the United States Department of Agriculture. Considerable care should be used in this respect well in advance of the time of seeding. This is particularly true at present, when a large proportion of the red clover seed used in the United States comes from abroad. If poor seed is used the expected crop may be a partial or total failure.

Good Seed Is Plump.

Good red clover seed is plump or well filled, bright with a slight luster, the color of individual seeds ranging from violet to light yellow. The individual seeds should be at least medium sized and fairly uniform, free of adulterants of any kind and from seeds of noxious weeds.

Home-grown seed is desirable, especially in the North, because it is almost certain to be adapted to local conditions. If it is not available, samples should be obtained from reliable dealers. These should be examined for adulterants, weed seeds and shriveled seeds. They should also be tested for germination before purchasing in quantity.

In the absence of more accurate methods an estimate should be made of the proportion of true red clover seed and of weed seeds and other impurities. From the red clover seed separated from all impurities, a counted number, as 100, should be taken just as they come. These seeds should be placed between layers of moistened cloth or paper or merely covered in a bed of sand or light soil. A dinner plate, covered with another, is a suitable germinating receptacle. It can be kept in the living room, at a temperature between 65 and 85 degrees. Between the third and sixth days the sprouting ability of the seeds should be shown.

It should be borne in mind that the sowing value of the seed is represented by the amount of true clover which will germinate with reasonable promptness. Thus, if four-fifths of a sample is pure clover, and only four-fifths will sprout, then only three-fifths, or 60 per cent, of the original seed as offered will grow. Thus, the germinating test has an important bearing on the worth of seed offered to the farmer.

Protects American Farmers.

A seed-testing service is maintained by the United States Department of Agriculture, where 29,638 samples of various seeds were examined and tested in the last fiscal year—16,442 in Washington and 13,196 in the five branch seed-testing stations. Similar service is offered by the various state experiment stations. The department also exercises a strict inspection service over field seeds brought from foreign countries, and last year 5,000,000 pounds of various seeds were rejected or held for cleaning before being allowed to be offered to American farmers.

Nevertheless, the closest scrutiny is necessary on the part of the farmer who desires a good stand of clover, either as a forage crop or to turn under for the improvement of his soil.

It is important that the testing of seed be done early enough that a sufficient supply of pure seed can be purchased in time for use; and if seed is to be sent to one of the government or state testing laboratories, at least two weeks should be allowed.

PRODUCE MOHAIR PROFITABLY

Breeders Are Gradually Increasing Qualities of Their Animals and Improving Hair.

Although the Angora goat is not very well known generally in this country, in spite of its popularity in certain regions in the West, one of its products, mohair, is used in the manufacture of many fabrics and is known to nearly everyone. The production of mohair has increased rapidly, and the annual clip is now about 6,000,000 pounds. Approximately an equal quantity is imported each year, but it is the opinion of the United States Department of Agriculture that with millions of acres adapted to goat raising, and with breeders gradually increasing the shearing qualities of their animals and improving the hair, American farmers can profitably produce all the mohair needed by our manufacturers. There has been a constant increase in the use of mohair for suit linings and for cloth for summer suits for men. It is still used to about the same extent as heretofore for car upholstering, portiere, robes, rugs, braids and artificial furs.

CURE PEA-SICK LAND BY PROPER ROTATION

Root Rot Is Present in All of Larger Areas.

Disease Lives in Soil and Becomes More Destructive Each Season—Varieties Resistant to Ailment Being Grown.

(Prepared by the United States Department of Agriculture.)

Where the crop of peas grown for canning or truck market purposes the past season has shown root rot, the United States Department of Agriculture advises planning for a long rotation of other crops, beginning with the next season, to rid the soil of the disease. A four-year rotation is sometimes effective, but cases have been met, both in the East and in the Central states, where even a longer rotation has proved insufficient.

Investigations by the department during the past three years have shown that root rot of peas is present in all of the larger pea-growing areas east of the Mississippi, and to some extent in Montana and Utah. The disease lives in the soil and becomes more destructive each year that peas are grown on infested land, soon reducing the crop to such an extent as to make it unprofitable. It is distributed by the custom prevalent in some sections of transferring soil from old fields to new ones to carry the nodule bacteria, and by wind and other means.

The area of pea-sick land is widening each year. It is particularly important that the large seed-growing regions of the West, which have remained free of the disease up to the present time, be protected from it by the practice of proper rotation.

The department is breeding varieties of peas resistant to root rot, but some time must elapse before there can be any assurance that the commercial growers' problem can be solved in this way.

WORK PLANS ARE IMPORTANT

Farmer Should Know Beforehand What He Is Going to Do and What He Is Doing It With.

Method in doing farm work is very important. The farmer who knows exactly what he is going to do in the morning when he arises, how he is to do it, and what he is to do it with, will always accomplish something worth while that day. The worker who has "hazy" ideas, indefinite plans and undecided steps will never do much.

Everything undertaken in farming should have serious attempts. Men and women who farm or keep the home in order must mean business, be businesslike and work in a methodical way. Half-hearted work injures the worker and ruins his character.

Plans are important. They should be made before the task is attempted. The worker must know what he is to do and then feel that he can do it well, even before the job is begun. Leave off the work that you dread till such time as you feel like doing it. When you like it, dispatch it promptly and well.

BEST ADDITIONS TO HOME GARDEN

Not Complete Unless Some Permanent Vegetable and Small Fruits Are Included.

DIFFERENT CROPS INCLUDED

Bulletin of Department of Agriculture Enumerates Various Plants to Be Selected for Supply of Small Truck.

(Prepared by the United States Department of Agriculture.)

A home garden is incomplete unless it includes some of the more permanent vegetables and small fruits in addition to the regular annual vegetables that are usually planted. A bed of asparagus, several hills of rhubarb, a few plants of horseradish, strawberries, raspberries, blackberries, dewberries, Logan blackberries, grapes, currants and gooseberries, according to locality and available space, are valuable additions to the home garden.

All of the above might not thrive in any one locality or on one type of soil, and care must be exercised in making the selection, says the United States Department of Agriculture in a new Farmers' Bulletin, No. 1242, Permanent Fruit and Vegetable Gardens, just issued, copies of which may be had free upon request.

The department says that about 90 out of every 100 farms in the United States have upon them some form of a home garden or source of supply of fresh vegetables. Many of these gardens include, in addition to the annual vegetables, small fruits and certain of the perennial or more or less permanent vegetables.

This bulletin gives brief instructions for the planting and care of the more important small fruits and perennial vegetables. More complete information may be found in the special bulletins of the Department of Agriculture and of the state agricultural colleges and experiment stations.

Currants are considered one of the most desirable fruits for jelly making, and when thoroughly ripened they make an excellent sauce and dessert, especially if mixed with raspberries. Jellies, jams and marmalades in plenty can be made from raspberries, dewberries and blackberries, to say nothing of the juices and various products that may be made from grapes. By having a collection of the different small fruits that are adapted to the region one can enjoy a continuous supply of good things to eat throughout the greater part of the summer and in addition have an abundance of preserves for winter use.

Home Garden Furnishes Supply of Fresh Vegetables.

Revive Small Fruits.

There should be a great revival in the planting of small fruits and grapes in connection with home gardens, especially in sections where home orchards are dying out or new ones are not being planted. The care of small fruits as regards spraying and other requirements is more simple than that of the orchard fruits, and the small fruits can be grown on a much more limited space.

When space is available a section of the garden may be set aside for the permanent vegetables and the small fruits. The location of these permanent crops, however, should be such that they will not interfere with the plowing of the garden or the cultivation of the annual vegetables. In no case should the small fruits be crowded, it being best to plant a limited number, selecting those best adapted to the region.

Weather for Berries.

Generally speaking, raspberries will not stand very hot or dry weather. Blackberries can endure hot weather, but not hot drying winds. Dewberries are grown mostly in the warmer parts of the country. In very cold sections the plants of these fruits should receive some kind of winter protection. Logan blackberries are grown only in the Pacific coast states.

Currants and gooseberries do best in a cool climate, but can stand quite warm summers if they have plenty of water. It is not permissible to plant currants and gooseberries in sections where the white pine is grown, because these plants harbor the blister rot, which is destructive to white pine trees. There are varieties of grapes for every section where any other fruits are grown. Strawberries will grow practically everywhere.

"They Satisfy"

COWPEAS GERMINATE SOON AFTER SOWING

When Seedlings First Appear They Are Tender.

Ordinary Machines Used in Corn Cultivation Are Satisfactory When Crop Is Planted in Rows—Culture Is Same.

(Prepared by the United States Department of Agriculture.)

Under proper soil conditions cowpeas will germinate quickly and cultivation may begin early. When the seedlings first appear above the ground they are very tender and are easily broken, so that care must be exercised in working them. Usually the crop may be cultivated in two or three weeks after sowing. Ground sown to cowpeas is sometimes packed by heavy rains soon after sowing. A harrow or weeder can then be used advantageously to break the crust unless the seeds have germinated, when much damage may result from harrowing. When sown in rows the ordinary implements used in corn cultivation will be found satisfactory, as the culture of cowpeas is essentially the same as for corn. About three cultivations at intervals up to the time the blossoms appear will usually be sufficient. If the ground is well cultivated and cleaned of weeds previous to sowing, broadcast sowings under favorable weather conditions grow rapidly and will smother any weeds which may start after sowing.

Cowpeas Grown With Corn Makes Good Feed.

CAUSE OF SORE SHOULDERS

Sweat and Dirt Chafing Skin, Making It Tender, Is Reason—Trouble Is Preventable.

During the first spring work many horses suffer from sore shoulders. Great care should be taken that these do not get a start.

Good collars and good care of them are essential. See that the collars are thoroughly scraped, and then rubbed clean and dusted with talcum powder or powdered borax. Rub the horses' shoulders with the hands, and, for the first few days of heavy work, bathe them each evening with cold salt water. Afterwards, bathe once or twice a week. Sore shoulders are first caused by sweat and dirt chafing the skin and making it tender.

This is an instance where an ounce of prevention is worth several pounds of cure.

BETTER GARDENS ON FARM IS IMPORTANT

Vegetable Supply in Many Instances Is Neglected.

On Account of Scarcity of Labor Women Have Been Compelled to Spade, Plant and Cultivate Crops for Home Table.

(Prepared by the United States Department of Agriculture.)

City or backyard gardeners have rather outdone the farmers in the past two or three years in the matter of raising good home gardens. It is true that these city gardens have been small and individually have not produced any great quantity of food, but collectively they have been of enormous importance in supplying vegetables for the families. Farmers, due to scarcity of labor, have in many instances neglected their gardens and there is need for a great awakening of interest on the part of people who live in the country in the matter of an adequate supply of fresh vegetables for their tables.

Who Wouldn't Smile With a Garden Like This Within 50 Feet of the Kitchen Door?

The old argument put forward by most farmers that it does not pay to putter with a garden is poorly founded. As a matter of fact, farmers who claim that they can grow an extra acre of corn or wheat and use the proceeds to buy their vegetables rarely have vegetables other than potatoes on their tables and subsist mainly on a bread and meat diet. Good home-cured pork makes fine eating, but it is much better if balanced by carrots, beets, tomatoes, cabbage and other good garden products.

In many instances the women folks have, with difficulties, spaded, planted and tended the garden. This has been an injustice and should not be expected of them. The ideal plan is to set apart a plot of ground for a garden, so arranged that it can be cultivated almost entirely with a horse, then devote a little time each week to taking care of it. If the women folks must do the work of caring for the garden, then let the men folks fertilize, plow and thoroughly prepare the land for planting and do the rougher and more laborious cultivation. There is no similar plot of ground, on the average farm in the opinion of the United States Department of Agriculture, that will yield as great returns as a good garden. In fact, 10 acres of wheat will not return as much as a half-acre garden.

LET TURNIPS FOLLOW SOME EARLIER CROP

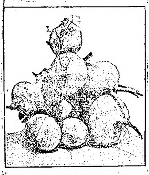
Good Stand Depends on Weather and Soil Conditions.

Customary Method Is to Sow the Seed Broadcast and Trust to Luck for Good Yield—Store in Pits or a Cool Cellar.

(Prepared by the United States Department of Agriculture.)

Throughout the greater part of the North, the old settlers say, "Plant turnips the 25th of July whether wet or dry." While this is not absolutely true, it is customary to plant turnips the latter part of July on land from which an early crop of potatoes, beets, or some other early vegetable has been removed. The securing of a good stand of turnips depends, first, upon having the soil in excellent condition and, second, on weather conditions at the time of sowing the seed. Either extremely wet or prolonged dry weather will greatly interfere with getting a good stand of turnips.

The usual custom is to harrow the ground to a smooth, even surface, then sow the seed broadcast, trusting to natural agencies to slightly cover it. If a light shower falls shortly after the seed is sown, this will not only cover the seed but give the plants a good start. Sometimes turnips are planted in rows with a seed drill and cultivated. This method is desirable, especially where the crop is grown in a small way, but the customary method is to sow the seed broadcast and trust to luck to bring a good crop.



Turnips Can Be Planted After an Early Crop of Potatoes, Beets or Some Other Vegetable.

Turnips may remain in the ground almost until it is cold enough to freeze the soil about them. If left too long, however, they become pithy. The usual method of saving turnips is to first pull them and throw them in piles, then with a sharp knife cut off the tops about one-fourth inch above the turnip. The turnips can then be stored in pits, being covered first with straw, then with earth, or placed in a cool cellar, the same as for Irish potatoes. Turnips in the pits will not be injured by moderate freezing, provided they are not disturbed while frozen. It is best, however, to place enough straw and soil over them to prevent them from freezing to any extent.

TO PRODUCE QUALITY FRUIT

Soil Must Have Most Careful Attention Where Trees Are Planted Close Together.

Close planted trees are going to need every favor possible in the way the soil is handled in order to continue to produce quality fruit. This means, for the most part, that intercropping is to be discouraged unless the soil is unusually rich or constant application of the proper fertilizers is made.

DEFECTIVE PAGE

A Certain Rich Man

JOHN D. ROCKEFELLER ONCE said: "The first essential to building a foundation for business success is the establishment of credit."

John ought to know. He has established a pretty fair credit himself. A man's credit need not necessarily be backed by millions. He may be poor and still have credit, for credit is influenced by what a man really is; by what he does; how he uses his money, talents, time; by his social and banking relations. An account at our bank will help, too.

Farmers State Bank

OF GOODRIDGE

THE SINGING GIRL

By MILDRED WHITE

Copyright, 1922, Western Newspaper Union.

Philip Langdon looked down the dusty road forlornly.

"And they expect me to stay in a place like this all summer," he said to his dusky helper.

"Well, I suppose its all in a lifetime, but it's going to be mighty hard. Not a decent house in prospect, not a companionable soul to take to. Why, this is a wilderness," further complained Philip, "without one rose."

"Oh, I dun'no," said black Jake, "restful like, it seems to me, with the road bakin' in de heat, an' de bugs out n' hummin'. Sides, youse got a big work to do, mistah Langdon, a big contract to fill up, you has."

"I know, "the young civil engineer answered gravely, "that's my one incentive. We have to bear all deprivation—what's that?" he stopped sharply. Down from the direction of a shabby old house on the hill, came a ripple of song, a merry, lilting happy song, that put expectation on edge, and mocked at desolation.

"Reckon," said Jake grinning, "dey's a song in de' wilderness, eben if dey ain't a rose."

The song continued. It was a charming voice.

"Find out," Phil said impulsively, "who she is."

Jake returned at evening with his information, the engineer was busy in his shack.

Jake showed his white teeth.

"Dat lady singer," he announced, "she's Lem Haskin's wife."

Philip turned away, in sudden, gripping disappointment. What difference did it all make to him, he wondered contemptuously. The next morning the song awakened him like a trill of bird music. He went up deliberately to the house under a pretense of buying milk. The woman who opened the door, had an old-young face, her eyes were wistful and her dress was faded.

"I have heard you singing," Phil said as he slowly drank the milk. "Your voice is wonderfully sweet."

The woman's face flushed with pleasure.

"I used to sing in church before I was married," she told him, "now I only sing about my work."

The engineer smiled grimly as he went up and down his dusty path of labor.

"Another illusion gone," he thought disappointedly.

Through the busy days that followed, snatches of song came to him; came, and influenced him to encouragement, or to sadness. He sat up abruptly in his musings. From the bough over his head came a low melody, a love song in actual words. Philip looked upward. A nymph of a maid, sat smiling down at him from among the tree branches. He stared, unbelieving, but the maid smiled on.

"Who are you?" Philip asked at length, smiling too, "a wood fairy?"

The girl shook her head.

"Far from it," she replied. "I'm a prosy school teacher, and my school being dismissed for the summer, I am playing at vacation. I sit up in this tree because it is cool, and if you will go away I'll come down. I've been waiting in the hope that you would go. Are you stationary?"

Her sauciness charmed him, her laughing eyes dared him, her curving lips were, he knew now, just made for smiling and song. "I will not go," he said decidedly, "until you sing for me."

The girl considered him sidewise and then down to the [illegible] from the hill top came a very volley of sound, a soprano hornlike note that shook and lingered.

"Do not be alarmed," said the girl in the tree, "that is merely Linda singing. She's Lem Haskins' wife." "I," added the girl, "board there."

Philip forgot his own surprise.

"Why, that's an awful place to board," he said, "desolate, barren."

"I know it," the girl answered cheerfully, "I am not going to stay there long. I happened to come out here with my father in hope of benefiting his health. When he died, I took the school. It was the only thing to do at the time. I have rented a cottage across the brook," she went on brightly, "and one of my little school girls will live with me there. We are going to have roses over the doorway and—"

The strange girl grew silently reminiscent. Phil watched her joyously, wonderingly. Then he spoke:

"I'd love a cottage beside a brook with roses over its doorway, and a little wife to meet me there when I came in all tired and muddy from the roads. A wife who could sing and swing on the bough of a tree and teach stupid children, and be happy in her exile as well."

The girl's eyes were round and large.

"Are you," she asked mischievously, "trying to ask me to marry you?"

"I am asking you," declared Philip.

The girl laughed shakily.

"It must be June that's the matter with both of us," she said.

"Come down," Philip commanded.

"I will," she agreed. "I have watched you from the tree long enough."

When she stood at his side, Philip leaned toward her.

"You are my song in the wilderness," he said.

But the girl ran swiftly toward the hill. Presently, as he waited a lilting, joyous measure came to him. Philip had his answer.

FEEDING VALUE OF GARBAGE

Affords Hogs Well-Balanced Ration and Supplementary Feeds Are Not Necessary.

Most garbage is of such variety that it enables a hog to balance its ration so that supplementary feeds are not required. In some cases, however, the animals are finished off on corn, barley, wheat middlings, and similar feed just before they are marketed. The feeding value of garbage, however, especially carefully selected garbage, is such that it is seldom economical to use any additional grain supplement. However, when grain is low in price, good results might be obtained by feeding garbage alone during the summer months, when ordinarily there is a large production, and finishing the hogs on grain. Greater gains per day can be made with a grain supplement, but at greater cost than when garbage is fed alone.

TEST CHARRED FENCE POSTS

According to Iowa State College Foresters Layer of Charcoal Is of Small Benefit.

Tests carried on by Iowa State college foresters with fence posts that have been charred before placing them in the ground shows that these posts do not last a great deal longer than those uncharred. Although the charring places a surface of charcoal on the post which is not pleasant for insects to penetrate, the post is destroyed and weakened so that the outcome in the end is doubtful.

MENDETS—Quickly repair all cooking utensils, rubber goods, etc., without heat. So simple—a child can apply 'em. Durable. Outlasts article applied to. 12 for 25 cts., coin or stamps, postpaid. —H. C. Iverson, Erie, Minn., Box 95.

A meeting of the stockholders of the Goodridge Co-operative Creamery association is called to be held here tomorrow. The business of the meeting is to make a final decision as to what action shall be taken in regard to the financial affairs and property of the creamery.

Miss Sarah Vaughan entertained the teachers, Mr. and Mrs. R. H. McDonald and Miss Gladys Wilson and Mr. and Mrs. Ole Kirklie at supper at the Kirklie restaurant Monday evening. The supper and the evening's entertainment were much enjoyed by all present.

School Notes

On Monday, the day of the Farmers' institute, a special assembly was called to give the pupils an opportunity to hear Senator Eastgate of Larimore, N. Dak., speak. Mr. Eastgate emphasized the fact that the children in the present age are receiving educational advantages over their forefathers and that the motive should not be to educate the children so that they would not have to work as hard as their fathers and mothers, but that they should be given superior educational advantages in order to work better and more effectively.

The Girls' Glee club rendered two selections as a part of the institute program on Monday.

E. O. Mostue visited school Monday forenoon and attended the Farmers' institute in the afternoon.

Miss Agnes Oftedahl and Miss Schuster called at the school on Monday.

Mrs. Breen visited at the home of Sigurd Anderson on Saturday and at Otis Ronken's on Sunday. Mrs. Breen made both trips on foot. Neither cold weather nor distance will stop her from taking the exercise. A good example for others to follow.

The senior class has decided to give a class play in the near future. More later.

Patriotic February calendars were made by the language classes in the intermediate grades last week.

This week the General Science class is studying the chemistry of dyes, which proves to be a study of intense interest. The varied uses to which dyed articles are put makes fastness of color absolutely necessary. The permanency of dyes is insured by adding to the fiber a chemical, such as ferric chloride, ammonium hydroxide, or solution of oxalic acid and potassium tartrate, until the material is saturated. These chemicals act upon the dyes and form compounds insoluble in water and hence "permanent." The chemicals used for dyes are, Congo red, logwood, picric acid and alizarin. Alizarin is the coloring constituent present in the roots of the madder plant.

The Band Social

The social given by the Goodridge band at the hall Friday evening, February 24, was well attended and turned out to be a very pleasant affair. The program was opened with a number of selections by the band. After lunch had been served the remainder of the evening was spent in dancing.

This event marks the first public appearance of the band this year. In the spring the band plana to give a series of open air concerts similar to those which were given last year.

Woth Thioking ABout

Look at this picture: It is estimated that the avarage Minnesots cow produces annually 4,000 pounds of milk containing 160 pounds of butterfat, which, at a valuation of 36 cents a pound, is worth $57.60. The cost of food based on cow testing records for average cows is $38.65, leaving a return over feed costs of $18.95.

And then on this: Average figures for eight cow testing associations reporting for 1921 to E. A. Hanson, dairy specialist with the agricultural extension division of the University of Minnesota, indicate that each cow produced 6,379 pounds of milk, containing 258 pounds of butterfat, which, at a valuation of 35 cents a pound, was worth $92.88. The average cost of feed was $46.89, leaving a return in excess of feed costs of $45.99, which is more than twice as much as the average cow returns.

Records of testing work by Mr. Hanson show that testing almost invariably results in increased yields of milk and butterfat.

Creamery Meeting

A large and enthusiastic creamery meeting was held at the school house Saturday, March 4.

Attorney E. M. Stanton of Thief River Falls addressed the meeting, setting forth its purpose, the final settlement of the present indebtedness of the association: and stated that in order to finance the business there must be the best of cooperation among all, and that it behooves every one to get behind the movement to keep the creamery in operation. Paul Engelstad, secretary of the Thief River Falls creamery, was the next speaker. He explained the agreement the board of directors of the Thief River creamery association had entered into with the board of directors of the Goodridge creamery accociation. They agree to run our creamery for three years without any profit. They pay us 2 cents per pound for butter manufactured at this creamery; 1 cent of this is to be used toward paying up the present indebtedness and it is expected the other cent will provide for the upkeep and maintenance of the creamery. The Thief River people will run this creamery at least 6 months in the year and longer if there is enough cream to warrant it. When there was not sufficient cream, they would maintain a cream station at the creamery. The question was then put to a vote of patrons and stockholders, and present was in favor of the leasing proposition as above stated.

The board of directors proposed for the butterfat still unpaid for, and to pay these off as soon as there is money to do so: these notes to be paid before the other indebtedness. The patrons were willing to accept these notes, payable in three or four payments, as fast as the board received the money, and to stay by and patronize the creamery.

A motion was made and carried giving authority to the board to enter into an agreement with the outside creditors to make the creamery patrons preferred creditors.

ERIE ERRORS

Z. J. Hole shopped in Goodridge Tuesday.

Tharald Tharaldson and H. Iverson were callers at the G. A. Iverson home Thursday evening. Violin music and whist games were indulged in to a late hour. Tharald and Jennie put it all over Gust and Herjus playing whist.

C. J. Eckwall sawed up a large supply of wood for H. A. Dahlen Wednesday.

Mrs. Sarah Woods, accompanied by her two little boys, departed Friday for their home in Montana.

The Teachers' Progressive league met in Erie village Friday evening.

C. J. Eckwall was a business caller at Camp Sub-Urban Sunday.

Misses Gladys and Myrtle Johnson and Christ Amundson were guests at Clover Nook Friday evening.

The Hero Grain Cleaner

Cleans and grades your seed. Will separate wild oats from wheat and barley. Also cleans flax, alfalfa, oats, timothy, clover and other grains to your entire satisfaction—with greatest ease and simplicity. Without question you have done everything to your soil which will enable you to raise a good crop, provided weather conditions are right. In order to insure a crop, however, you must have good seed, and it is impossible to have good seed without the use of a fanning mill or a good corn grader. The experimental stations have proven so often that light seed will not grow a heavy crop. The HERO is sold by the GOODRIDGE MERCANTILE CO., Goodridge, Minn. adv

Psychanalyzing Alice.

Andre Tridan, who is the extension of Freud's shadow over America, has been saying a few words about Alice of "Alice in Wonderland" fame. Alice, it seems, has grossly deceived us; she is, as her creator was, a dangerous paranoiac, and should not be allowed to play with nice little children. Tridon gives overwhelming arguments in proof of these assertions, their only weakness being that they apply with equal force to psychanalysis themselves, and he leaves us with the impression that Lewis Carroll should have been placed in an asylum and deprived of pen and ink. The creator of Alice has passed on, but the ouija board is very much with us; it would be delightful to have Lewis Carroll's candid opinion of the Wonderland created by Freud and Tridon.—Scientific American.

WHEN SHE WAS BAD

By WINIFRED KITTREDGE

©, 1922, by McClure Newspaper Syndicate.

"And when she was good
She was very, very good;
But when she was bad—"

Angelica Morn lived just outside Baltimore court. This was a thing for which the dwellers within that sanctuary thanked their lucky stars night and morning, and sometimes in between times, too, as on their way to work they furtively passed the little yellow cottage where she dwelt. They found it well to walk softly, and drive their cars quickly, past this small and unimposing domicile. Angelica had an unpleasant habit of making shining cars and new hats the targets for small, over-ripe crabapples, of which she had in her yard three trees, and Angelica's aim was remarkably accurate. Lovers often turned up the preceding street in their walks, and careful mothers sent their scrubbed little boys and girls to school the other way.

Frequently, when their well-kept poodle dogs came home with muddy coats and followed by a short length of twine, and their angoras nursed abbreviated ears and bloody paws, the Baltimore court housewives might be heard to make scorching remarks about their small neighbor. But complaints were made on the side, for Angelica's mother was none too easy at the best. And, too, it did make one feel a trifle foolish to be making unpleasant remarks about a demure little girl who had just brought a chair and now stood looking up with innocent eyes. Angelica's manners were, by spasms, unbelievably cherubic.

One day Angelica came from school unusually thoughtful. To her mother's inquiries she merely said, "O, there was a dentist came to the second grade to talk." But the thoughtful mood remained for the rest of the day.

The Misses Pebody rose early. The elder Miss Pebody went to raise the curtains at exactly half-past five. "Sister, I think we are going to be blest with rain," she said. Then her gaze fell to the front walk. "Jane Miranda, come here at once. What is that?"

In large letters lay this inscription. "Mis Pebody brush you teef."

Angrily the two ladies glared at each other. In unison they gasped one word, "Angelica."

Scarcely had they recovered from the first shock when the telephone jangled wildly. A wrathful voice shouted: "Has that young rascal been at your house, too? What did she write?" He shut off at once when they told him, and Jane was just quick enough to see their bachelor neighbor efface the remains of a large heart above an elongated toothbrush. The lower initials in the heart were "J. M. P."

"This is going entirely too far," said the elder Miss Pebody. "Something must be said to Angelica's mother. At nine o'clock we will go over."

But the Misses Pebody were not the only ones to whom had occurred the necessity of a visit to Angelica's mother. A little later they heard even through their closed windows the uplifted voice of the Court tale-bringer: "And if you'll believe it, Mrs. Gowing, that young imp had put it right on my front steps: 'Shut you mouth an' brush you teef.' And for her to say that to me! I could scarcely trust my eyes."

The Misses Pebody were at the door in time to hear the gentle voice of the minister's wife reply. "Yes, I really think something ought to be done. Angelica should have known better. She wrote on the front walk, right where the children could see: 'You are a devil. Did you no it?'"

The two listeners gasped. "Wait," they cried. "Are you on the way to Angelicia's? We will be ready, shortly."

Just as they were going down their walk their bachelor friend emerged from his house. "Guess I'll go too," he observed, grimly.

Mrs. Morn was ready to start work. "Angelica," she said. "Where's my tailor's chalk?" Angelica didn't know; didn't even know where it was now; hadn't seen it for a long time.

Just then a knock sounded. Angelica became irreproachably demure. But the combined utterances of five determined individuals prevailed over her innocence. Immediately after their departure, Angelica was sent to the court with a pail and sponge. Her return was markedly tearful, but Mrs. Morn was stern. "Not once may you go out of the yard today," was her sentence.

Angelica sulked, then as she looked up toward the court, grew surprisingly cheerful. A gentleman was approaching whose hat fairly radiated newness. She glanced toward the crab-apple trees, and grew positively radiant. The next morning several of Baltimore court's most prominent men stood bareheaded, waiting for the nearest haberdashery to open.

EXCHANGE VALUES

By ETHEL LYONS

©, 1922, by McClure Newspaper Syndicate.

"A penny for your thoughts, fair lady." Jack Leonard peered over the top of his newspaper at Celie, who was toying with her coffee spoon.

"Oh, Jack," she burst out. "I must have looked such a frump last night in that old white crepe! I know I spoiled every chance you had."

"Aw, Celie, don't talk that way." Jack's voice was filled with tender reproof. "My chances were pretty slim, anyway, and as for your spoiling them—I guess not. I didn't care about the job on my own account at all," he lied valiantly, "but I don't want my wife always to be obliged to wear made-over gowns."

"As if it mattered!" It was Celie's turn to be consoling now. "But—oh, Jack, wasn't Mrs. Fairchild just dear last night? I love those little gray curls over her ears. She's like the grandmothers one reads about, but seldom sees."

"Yes, she was great!" Jack nodded absently. "But, do you know, Fairfield never mentioned that managership. I thought sure he wanted to discuss it when he asked us up for dinner. Of course Manly has been on the road longer than I was. I suppose he's better entitled to it." He arose and went into the hall.

"Jack, dear," Celie's voice followed him, "don't you think it would be a rather nice thing to do to send Mrs. Fairfield some flowers today? I'd like her to know that we appreciated last night."

Jack groaned inwardly as he thought of the lone $10 bill reposing in his bill fold. But he acquiesced cheerfully enough. "To be sure. I'll send them when I go out for lunch."

At lunch time, remembering his promise to Celie, he went into a nearby florist's. A cluster of roses, so yellow that they were almost orange, met his eye. Celie's favorites! Just the thing.

On his way out, a glass case filled with wood anemones entwined with sprays of green arrested his gaze. By jove!

"Only 50 cents a bunch." The clerk was at his elbow. "Just in from the country this morning."

Jack did not hesitate. "Send a bunch to this address," giving him Celie's address.

He did not think of the flowers again until he was nearing home that night. He wondered if Celie would be pleased. Celie was.

No sooner had he entered the door than her arms were around his neck in a bear-like hug. "Oh, Jack, you darling! To think you remembered my birthday when I'd forgotten it myself. And those lovely, lovely roses!"

Roses! Jack gasped. It couldn't be! But, yes, there they were in a crystal bowl. What would the Fairfields think of that miserable little bunch of wild flowers?

In her ecstasy Celia did not notice his consternation, and with effort on Jack's part they spent a gay evening as befitted the occasion.

Mr. Fairfield nodded cheerfully as he passed Jack's desk in the outer office next morning. "Come inside in about half an hour, will you?"

The hands of the office clock pointed to 9:30 as Jack laggingly complied with the request.

"Well, Leonard, I congratulate you!" Mr. Fairfield rose and grasped Jack's hand. "Sit down now and we'll talk the thing over a bit."

In a daze Jack did as he was bid.

"Now, young man"—Mr. Fairfield's voice took on a confidential tone—"I'm going to be frank with you. Of course you know that I've been considering you and Manly both for general manager of the sales department. I don't mind telling you that the odds were mostly in Manly's favor. You are a bit young, you know, and somewhat lacking in experience. However—" a whimsical expression passed over his face—"I've had orders from higher up. Boy, that little bunch of wood anemones turned the trick. I found Bessie crying over them when I got home last night"— there was a suspicious moisture in his own eyes—"you couldn't know, but they were her favorite flower when we—oh, never mind.

"The upshot of it is this: She insists that a man of such keen perceptions and thoughtfulness is just the man for that vacant position. And another thing. Your wife made a great hit with her. Shake again, boy, I congratulate you! And, now, supposing you run home and tell Mrs. Leonard the good news. And, say, you needn't report for your new job until next Monday."

In a daze Jack left the office.

"The exchange value of anemones and yellow roses," he was thinking, "is just about equal in this case, I should say."

KIND HEARTS

By ADELAIDE R. REMP

©, 1922, by McClure Newspaper Syndicate.

Maizie was in a very absent-minded mood. She generally presided over the notion counter in Smith & Carter's stuffy basement with the air of a queen, but this morning her mistakes were many and varied. Her latest customer, a stout lady, after an unsuccessful attempt to match silk of an impossible blue had sailed indignantly away, when Maizie, glancing to the front of the store, saw something that brought the pinkest of roses to her pretty cheeks. A somewhat hulking young man in grimy overalls and flannel shirt was wending his way in her direction. He stopped for a few moments of low-toned conversation and then continued toward the hardware department.

"Who's your friend?" asked Annie, the blond girl.

"Oh, his name's Dan Blake," answered Maizie with a conscious blush. "I met him at one of the community socials. He works over in the machine shop. He just asked me to the movies tonight. Don't you think he's nice looking?"

"He might be if he cleaned himself up," agreed Annie.

This struck an answering chord in Maizie's heart. Then she glanced with admiration at the immaculately-clad floor-walker, Mr. Barker. Even as she gazed he turned and came over to her counter.

"Say, Maizie, you sure do bloom in the desert air," he said, looking with rather bold admiration at her pink cheeks and sparkling eyes. "There's a dandy picture over at the Paragon tonight. If you say so I'll meet you here at eight." Maizie accepted the invitation at once.

After that gloom seemed to settle over the basement like a dark cloud.

Of course she had not actually promised Dan, but she knew down in her heart she had fully intended to go with him when he had asked her. She had an uncomfortable tightening in the region of her throat. At that moment a bevy of high school girls came chattering down the stairway and over in her direction. Rich furs open at the throat showed georgette crepes, and short skirts displayed trim French heels and silk stockings. But they found no charm in Maizie's eyes.

"Did you see that good-looking floor-walker smile at me?" giggled one tall damsel.

"Oh, that's nothing," answered another miss, purchasing a paper of pins with a most patronizing air. "His mother keeps a boarding house on the corner of our block. He's an awful flirt and has a different girl about every night in the week."

After that Maizie's heart lightened in the face of a great resolve. When the big gong rang at half-past five she stopped on her way out of the store beside Mr. Barker who was arranging his splendid tie to a greater satisfaction to himself before a small mirror.

"I won't be able to go to the Paragon with you tonight, Mr. Barker," she said. "I have another engagement," and before the astonished young man could reply Maizie was gone.

That night, sitting side by side in the red plush chairs in the cinematographic resort, Maizie and Dan enjoyed the program to the fullest extent. Especially interesting was the little romance which showed the little apartment with a still prettier little wife getting supper and a fat baby lying in a crib. Dan reached over and took Maizie's hand in his. Out on the street they lingered in front of a brilliantly lighted furniture store. Ten dollars down and five a month furnished just such an apartment as they had seen in the movies. Dan pressed the warm little hand that he had tucked under his arm.

"Isn't it peachy?" Maizie began, then she checked herself and blushed with a good grace.

"We could have one just like that if you would, Maizie," whispered Dan. The quick, happy glance in her eye told Dan that Maizie would. "And," he continued, joyfully, after a moment's silence, "we won't have to get it like that, either. You see, Dad owns the biggest part of the shop, only he wanted me to know the business thoroughly, so I began at the foot of the ladder."

They walked on happily. Ahead of them Maizie could see the "swell" Mr. Barker, a shapely and stylish ornament. She only pressed closer to Dan with a happy heart and a deep gratitude that she had realized before it was too late that all that glittered was not gold.

A True Helpmate.

PREPARATION OF HAY FOR MARKET

roducers Have Suffered Great Losses Because of Use of Improper Methods.

VITAL INFORMATION LACKING

Product That Grades Highest and Brings Prices Is That Having Natural Green Color—Time of Cutting Counts.

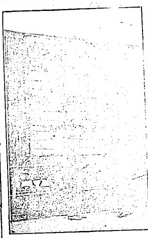
(Prepared by the United States Department of Agriculture.)

What to do with low-grade hay has ong been a vexing problem to the hay trade. Losses running into the thousands of dollars annually have been suffered by producers because of the difficulty encountered in disposing of hay that is improperly prepared for market, or is of a mixture that causes it to be regarded as of a low grade.

In Department Bulletin 977, "Marketing Hay at Country Points," recently issued by the United States Department of Agriculture, the failure to remedy this situation is ascribed to two chief reasons: The producer and the dealers do not yet agree as to what constitutes quality in hay, and many producers lack vital market information regarding the preparation of hay for terminal and consuming markets.

Color Counts Most.

Quality of hay is at present indicated largely by its color, which is used to gauge the stage of maturity at which it is cut. The hay that grades highest, and consequently brings the most money, is usually that having the best natural green color. Hay dealers can often tell from the color whether hay was cut early, medium, or late, and in their opinion the best hay is the early cut hay and the poorest that which was cut late.



Inspecting a Car of Hay.

The average hay grower, however, in some sections at least, does not agree with the terminal market theory of quality as indicated by color. Many producers prefer medium or late cut hay, especially for horses, because it is easier to cure and not as "washy" as early cut hay.

In some markets size and weight of bales is an important factor, since there is sometimes a difference of several dollars a ton in the same grade of hay in small or large bales. The reasons for the demand for certain sizes and weights are numerous and not always based on facts, it is said. However, as in many other kinds of trading, it pays the seller to aim to meet the desires of the buyer.

Undesirable Mixtures Cause Loss.

The production of undesirable mixtures for the market will cause a loss to the producer as long as the market does not want mixtures. Certain of these are discriminated against regardless of their true nutritive or feeding value. The producer may know positively that certain mixtures are palatable and contain more total digestible nutrients than the kinds now in greatest demand, yet he is powerless to make feeders realize their value. The introduction and general use of a new kind or mixture of hay is a very slow undertaking, as in the case of clover and alfalfa.

About the only way to avoid trouble with undesirable mixtures, says the bulletin, is for the producer to cease growing them and to produce only the kind in demand in the markets to which his hay is usually shipped. Copies of the bulletin may be had free upon application to the department at Washington, D. C.

In All Humility.

"You sometimes discuss subjects you don't understand," remarked the censorious friend.

"Yes," replied Senator Sorghum; "but in all humility. I'm perfectly willing to keep the conversation going so that the other fellow will have a chance to explain 'em to me."

Bring Us Your Work

LABOR SAVED IN HARVESTING HAY

Good Methods, Efficient Management and Proper Implements Are Essential.

USE HORSES FOR HEAVY WORK

Small Grower Need Not Make Large Investment in New Apparatus—Economical to Use Mowers of the Larger Sizes.

(Prepared by the United States Department of Agriculture.)

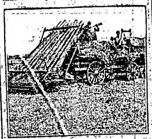
Much labor is wasted in harvesting hay, not necessarily because of idleness, but because wrong methods, inefficient management and improper or imperfect implements are employed, say specialists of the United States Department of Agriculture.

On farms where considerable hay is grown, they say, methods must be adopted by which the greater part of the heavy labor is done by horses. This will necessitate the general use of certain types of labor-saving machinery, some of them not so common in the East, which have been thoroughly tested and proved satisfactory in the western part of the United States. The small hay grower, however, need not make a very heavy investment in new haying apparatus, for, by rearranging the working of his crew, and using a little more horse labor for the hard work, he can add considerably to the efficiency of his crew.

Time of Mowing Is Important.

The time of day when the mower is started has a direct bearing on the amount of hay made per day and the number of men required. This is especially true on farms where it is the custom to haul or stack hay in the afternoon only. If mowing is done in the morning and raking in the afternoon, more men and horses than usual will be required, and if mowing and raking are both done in the afternoon, still more men and horses will be needed.

The five-foot cut is the most common size used in the East, but it will be economy to use larger mowers; six, seven and even eight-foot sizes can be used on a great many farms. Some idea of the time saved by using these larger sizes may be had when the difference in the amount of work done by each is known. Under average conditions, a five-foot mower will cut ten acres in ten hours, a six-foot mower will cut 12 acres, a seven-foot 14 acres and an eight-foot about 16 acres in ten hours. It should be borne in mind that more power is required for the wider cuts. Many alfalfa growers are using the eight-foot cut with good success, and make a practice of mowing early in the morning before the dew is off, or even during a light rain.



Loading Hay in a Field.

Mower Is Important.

It does not pay to wait until the dew is off before starting the mower if the tedder is used to "kick" the water out of the hay. The size of mower used and the time of day it is started are the most important factors in crew arrangement. The use of the tedder and rake are next in importance, and these three implements should be kept clearly in mind when attempting to solve the problem of how to make a small crew efficient.

THE THRILL

By MARY LOUISE CORMIER

©, 1922, by McClure Newspaper Syndicate

"Letty, what are you doing in the parlor all this time?" Mrs. Harriet Parsons addressed her daughter from the kitchen. Receiving no response, her sharp old voice took on a querulous note. "My kingdom, I shouldn't think you'd want to be in the parlor anyway. It's cold as an icebox in there. Ain't you going to brew my tea, Letty? What are you staring out of that window for?"

"Nothing, mamma," Letty jerked down the roll curtain and shut off a scene which, to say the least, was distracting. The sight of Will Spence's roadster with Will at the wheel and fluffy little Amelia Crews sitting beside him always stirred Letty's resentment. She stepped quickly into the kitchen, shutting the side door of the parlor behind her with unnecessary violence. Her mother stared curiously at the unaccustomed flush on her daughter's broad, freckled cheeks.

"You never can tell about men," she remarked, shrewdly.

"Well, well, I don't know," she continued, shaking her head ruefully.

"Don't know what, mamma?"

"I don't know who you take after, Letty."

"Perhaps," said Letty, humorously, "it's because I was such a pretty baby. You know the saying, mamma, about pretty babies growing into homely daughters."

"Well," sighed her mother. "It's a blessing that you can be so good natured about it."

As she walked jerkily along the elm-lined avenue on her nightly trip to the postoffice, Letty had plenty of time to think over the two short months she had lived in another world. No royal beauty could have been treated with more respect and homage. In her exaltation she refused to recognize danger signals until disaster was upon her. Then, in helpless anger, she watched Amelia, with her doll's face and pretty manners, deftly wean Will away from her.

Letty had now reached the stage when she expected to hear of their engagement at any moment. But she was scarcely prepared for the low car that drew up to the curb beside her, or for the familiar voice calling her name over the wheel.

"Letty," Will began, hesitantly, "if you're going to the postoffice I'd like to drive you down myself."

"Thanks, Will," Letty replied, as she climbed awkwardly into the machine.

"There's a social over at Long Meadow tomorrow," Will said, as the car sped along the quiet street. "You going, Letty?"

"Why, I guess not, Will."

"I was hoping you would go," he explained, talking hurriedly to cover his embarrassment. "I've got two tickets and——" Letty twisted around with difficulty in the narrow seat and stared at him.

"Ain't 'Melia going tomorrow," she demanded. Will frowned.

"No," he responded, curtly, "not tomorrow—or any other day."

"Then," Letty agreed promptly, "I'd love to go with you, Will."

Will's renewed courtship was scarcely two weeks old when, by the death of his uncle, he found himself heir to a small fortune. Immediately he was overwhelmed with congratulations.

"I'd like you just as well without all that money, Will," Letty told him, wistfully. "You see, I've always been poor. And I couldn't enjoy wealth—not the way 'Melia does, I mean."

"Oh—Amelia!" Will's lip curled and his voice grew hard. "Let's not talk about her any more." But from that night the visits of Letty's swain dwindled in number. Finally they ceased completely.

Being a comfortable, slow-moving sort, Letty never ceased to wonder at the rapidity with which things happen in this world. In the space of one breathless week, for instance, she had learned that Will's uncle had left a second will bequeathing his money to a public institution, that Amelia had promptly turned her back on young Spence, leaving him, in sheer desperation, to drive around all night in a chill rainstorm.

"Will's down with pneumonia," Letty explained to her mother. "I guess I'd better run over and see what I can do."

Mrs. Parsons stared.

"Letty, you're not! After the way he's treated you and all——"

"He's sick," Letty flung back, defiantly, "and that old housekeeper doesn't know anything about nursing sick people!" There was no question about Letty's ability. Only when little Doctor Cranson announced the passing of Will's crisis did Letty permit herself the luxury of tears. A few months later she became Mrs. Will Spence.

On the honeymoon trip to New York, Letty unburdened a matter that had weighed on her mind for a long time.

"I don't know what we'll do with all that money," she remarked.

"What money, Letty?" Will demanded.

"Why, the money from your uncle's legacy!"

"But there wasn't anything, you know. Uncle Dan——"

"I ought to have told you," Letty explained, smiling, "that there never was a second will. Your uncle's lawyer and I—well, we just sort of cooked up that story to test Amelia's character and——" She did not finish the sentence. Just then the train entered a tunnel and Letty experienced the one genuine thrill in the life of a homely girl.

A QUEEN ANNE

By ANNIE COLE, R. N.

©, 1922, by McClure Newspaper Syndicate.

Connie had caught the "society bug"—there was no doubt about it, in Joe's mind. And she had caught it from his own brother's wife, which made it a great deal worse. Every evening when Joe came home, he was forced to listen to Connie's praises of Martha—her ability to design and embroider her own gowns, run an apartment on B— street, attend whist clubs, entertain, and keep a maid—all on her husband's moderate salary.

"We're going to visit there this week end, Joe," said Connie, enthusiastically, "so don't make any engagement for tomorrow. Oh, dear, don't you think we could afford an apartment if we sold this place?"

"We might if we wanted to mortgage my salary for the rest of our lives," said Joe, dryly.

"Oh, hubby! and you know what a horror I have of debt." Connie's blue eyes were reproachful.

"Well, we're going there for Saturday anyhow. I think Martha's awfully clever and I'm going to try to be just like her!"

Joe groaned, and betook himself to bed.

The Saturday night dinner at his brother Jim's was apparently a success, though Joe did not seem to enjoy it. In the morning he couldn't get up. In terror Connie called a doctor, who pronounced the trouble pneumonia, forbade moving the patient, and advised a trained nurse.

Martha was very gracious, plans were made, the nurse engaged, and Connie donned a bungalow apron, prepared for a long siege. Everything went smoothly until Monday morning. Missing Martha at the breakfast table, Connie tapped on her bedroom door.

"I'm not going to get up this morning," her sister-in-law informed her. "Tell Mary I'll breakfast in bed."

The doorbell rang, and Connie answered it. A dapper little man stood in the hallway.

"Mrs. Barker?"

"Yes."

"I am from Leon's, the furrier's. We want you should pay something on this bill for a sable coat, or we will start to sue you."

"Oh—you mean the other Mrs. Barker," said Connie. "She's sick in bed."

"Well, I'll call next week," he said, and bowed himself away.

"Ice!" roared the ice man. "Twenty cents, please. I am ordered to collect cash in this house, every time! Thank you!"

Another man appeared in the doorway, as if by magic.

"Who are you?" demanded Connie.

"I'm the milkman. I'm collecting a dollar a week on this old bill—she said she'd pay it off that way." Then she turned to the cluttered kitchen and addressed the untidy maid.

"Mary, how will the nurse and I have lunch if these dishes are not soon washed?"

"I don't know, and I don't care," that young person exploded. "When Mrs. Barker's here alone we don't have lunch. I've got the three lodgers' rooms to look after——"

"Lodgers?" queried Connie, bewildered.

"Sure," explained Mary, and then she added maliciously: "D'you think she could live in a swell apartment if somebody didn't help her pay the rent?"

So this was how Martha managed! An agonizing race to borrow from Peter to pay Paul, accompanied by aching eyes and frazzled nerves. The nurse, on the way to the kitchen for a glass of milk, said:

"Your husband seems very much better today, Mrs. Barker—I don't think you'll need me tomorrow."

"Oh, impossible!"

"Well, we'll see what Dr. Kendall says tonight."

The doctor's verdict was a pleasant surprise.

"Humph!" he observed. "Very fortunate young man. What we call an abortive case; clears up suddenly, for apparently no reason. You can dismiss your nurse, and take your husband home in a taxi tomorrow—if you wish."

If she wished! She could hardly wait till they had gone to tell Joe how glad she'd be to get home and to hug him, regardless of germs.

"Connie," he said, a little weakly, from the bed, "I was talking to Jim Saturday night, and he says there's an apartment downstairs to rent if you think we could manage——"

"Not on your life!" exploded his wife, emphatically. "My tiny flat is good enough for me! I've heard an expression somewhere that just fits this place, Joe. It's this: 'Many a Queen Anne front hides a Mary Ann back.' I'm going to take you home!"

Never Too Late to "Bob."

The oldest inmates of the Daughters of Israel home at Newark, N. J., a woman of 110 years, has had her hair bobbed. The management of the home, says a Central News wire from New York, were much upset when the old lady requested that her style of hairdressing should be made to accord with the prevailing fashion. The matter was gravely discussed, and as there was nothing in the rules and regulations to the contrary they gave way to granny's insistent demand that her hair should be bobbed, "Just like the other girls." That done the happy centenarian said: "I am only 110, and I expect to break the record of my grandmother, who lived to be 125."

VALENTINE TRAIL

By RUBY DOUGLAS

©, 1922, by McClure Newspaper Syndicate.

"Oh, I'm so tired of lace paper hearts and Cupids made of chocolate, and boxes of violets that have been taken out of the ice-box! I almost wish there were no such day as Valentine's day."

The girl who made the remark had bobbed hair and a one-piece frock.

"What would you suggest, Jane?" asked her chum. "What is there left?"

Jane did not reply at once. "That's just it; I don't know what I want. All I know is that I don't want a lace paper heart!"

"Perhaps a real human heart, served up on a platter as in ancient barbaric days, would please you more, dear?"

"N—no. I think I just want to find some one original enough to give me something different," Jane explained.

The chum made audible signs of surprise. "Oh, Jane, you are funny, you, trying to get out of the conventional calf path!"

Neither of the girls knew that, as they sat talking thus over their little tabourette and tea table before the big log fire in the country club house a man had been sitting close by constantly reading a sporting paper.

"I think I'll be a sport myself," he concluded quickly. "I like that girl's voice. I like her looks. I think I'd like her philosophy."

Thereupon he set out to find out who she was, where she lived. He then set his brains to work to originate an idea for a valentine.

His mind had created a thought. "It depends on the snowfall, but I'm just sport enough to think that Cupid—though not of chocolate—will implore the gods to see that I have a snowy setting for February 14!"

Jane Hall lived in the community adjoining the country club at which she was having a tea the afternoon that Tom Hayes overheard her petulant remark about St. Valentine and his customs.

"The big idea," Tom decided, "is to let the girl guess who is her Valentine."

On the night of February 13 a wonderful carpet of white snow covered the ground.

Tom, feeling like a cut-throat or second-story operator, stole noiselessly through the virgin snow to the Halls' garden.

He had a garden trowel, a package of large red hearts cut from paper, some red fluid that looked like paint.

Underneath the window of Jane he dug out a heart-shaped hole and placed within it a great red paper heart. Then he walked on through the garden, dropping drops of red in the snow and every few feet hiding another heart. The trail wended off down into the woods in the rear of the Hall home and disappeared into space.

"If she's anything of a sport she'll follow this trail, and it leads straight to my heart," he said triumphantly. "I'll make her notice me, anyway," he thought, by way of excusing himself.

When Jane put up her shades to look out at the weather on the morning of St. Valentine's day she rubbed her eyes to see if they told her the truth.

Her heart thumped wildly as she dressed and went out of doors without waking the family. She had put on her rubbers and sport clothes, so she followed the trail of hearts to the woods. At the end she found a note hung to the limb of a tree.

"If you want to find your Valentine play golf in the snow this afternoon. The red golf ball I have placed beneath the last heart in the trail. I'll be waiting for you at the seventh hole, and when I see the red ball driven from the sixth I shall know that you are on your way."

Jane did not know at first what to do. Her conversation with her chum, Grace, at the country club, came to her mind with the natural association of ideas. At first she accused Grace of the idea, and then she knew that Grace would never have had either the energy or the originality to think of it.

"I shall go, anyway," she decided.

After lunch she surprised the family by announcing that she was going to the club for a game of golf.

"You're nutty, sis," said her brother. And off she went to the golf course, the red ball hidden in her pocket. She kept her golf clubs in her locker.

Her cheeks were the color of the ball she was playing with when she reached the sixth hole and told her caddy to go on ahead of her.

As she approached the seventh hole across the wonderful white fairway that led to it she saw a man in golf clothes awaiting her. Her excitement almost choked her, her daring somewhat stunned her.

"I'm afraid I'm not as pretty as a lace heart," the man began, extending his hand and himself a little embarrassed as he looked into the beautiful eyes of June.

Jane would have blushed if she had not already gathered sufficient color to be becoming. "You—heard my silly conversation?"

He nodded. "Yes—and I know your name and mine is Hayes—Tom Hayes. Please let me be your valentine, Miss Jane.

Jane liked him; she knew she liked him. "All right; you shall begin by being my valentine and—"

"Leave the end to me," he said. "The game's the thing now."

THE FORTUNE

By AGNES G. BROGAN

Copyright, 1922, Western Newspaper Union.

Years ago, when Duncan was an adventurous youth of eighteen, he had gone into the tent of a gypsy fortune teller, and the gypsy told him that his future success would depend upon the woman that influenced it.

"The woman you love shall rule your destiny," said Roma. "Beware, then, whom you choose."

Duncan, later, it seemed, had little to do with that choice. Love descended upon him suddenly, and he accepted it. Lola laughed up at him out of her care-free eyes.

"I must go to this dance," she said, "and to that play, and we must ride here in a taxi; and there I must carry rare flowers; and always, you shall pay the piper." Not in so many words did Lola make her demands, but as time passed, as imperatively. Duncan, striving and striving to make his bookkeeper's salary stretch to the dimensions of his sweetheart's desires, was at last, in desperation, driven to give it up. Then he lost his position in the big manufacturing concern—he was behind in his accounts. When at last the books were properly balanced Duncan was in his boarding place—jobless.

"You will never make any kind of a man," Lola said contemptuously. "You will always be poor, and going down. It's your lack of purpose." Lola had a new and prosperous admirer; but her words were prophetic.

Duncan, still jobless, grew poorer. In his discouragement, fighting against fate seemed futile. He grew purposeless indeed, and so poor that he packed his small belongings, and with a nomad instinct, made for the woods. The particular wooded country toward which he traveled was one rich in lumber manufacture, where great logs floated down stream and where numbers of workmen camped on the banks. Duncan did not join the workmen, he was convinced now of his own vagrancy. And so in a log hut with a fireplace, and his books against the crude walls, he made his home; passing the days hunting, fishing or even doing petty jobs for the settlers.

One day when he waited at the boat landing for Jo to come back with the mail, Duncan felt an unaccountable sense of excitement, surely not occasioned by the expected magazine for which he subscribed. And when Jo placed a white envelope in his hand, Duncan was scarcely surprised by this unusual happening.

"Some old sweetheart hunting you up," Jo remarked, while Duncan stared as he read. It was not exactly an old sweetheart, but an old schoolmate who after all the separated years sought him out in writing.

"You will remember Lily, I am sure," said the letter, "though I was only a fifteen-year-old school girl when we said our farewells at Hampdon. But I know you have succeeded to the heights of our class prophecy, and are now a rich and growing richer lumberman. At least I've been told that they all end that way—the men who go out to the great forests to study their work from its beginning. Lola Sanderson happened to tell me, when we met recently, that you were out in the very wilds that Brother Jack and I intend to visit on our motor trip, taking a circuitous route. He is professionally interested in forestry, and I am writing with the request that you will be kind enough to meet an old schoolmate, and give us the benefit of your escort through that section. I shall know you, undoubtedly, even though you have grown to man's estate. With best wishes for still further success, and hoping promptly to follow this note, I am,

LILY ORMAND DALE."

Across Duncan's face flashed an unaccustomed smile. Of course he remembered Lily Dale. Little Lily, grown up and coming to see him with her man-of-the-world brother.

"Success"; he laughed harshly. Then Duncan turned to Langdon, the overseer. Confusedly he made confession.

"You meet her, Langdon," he begged. "Hold her off, any way—"

The shrewd man smiled his affection.

"See here, Duncan," he said, "why can't you act the part for one day? Get a shave, get dressed, and—I'll put Katherine wise; she will let you use our bungalow to entertain your guests in. Probably she would like to serve tea to them; you can let on you board there. Katherine will be glad of the excitement. She's mighty lonely at times, poor woman, though she won't admit it to her husband. Go to it, Duncan. Act the part the girl thinks you are living."

And Duncan did. And when he had bidden Lily Dale goodby that evening, Duncan went, his heart and mind filled with dreams, to Langdon the overseer.

"I want a chance in your office," he said earnestly. "A chance to make good. I want to be what—that girl thinks I am."

And because Duncan was not alone in his dreaming, he did make good.

Lily, back in the shelter of her own white bedroom, lifted a framed snapshot from its place on the dresser, a place it had held through many years.

"Duncan has not changed his ambitions," murmured Lily; "he is just the same."

Roma, old and feeble, was still telling fortunes.

"Your destiny shall [illegible] influenced by the woman you love," she chanted.

HIS AWFUL HEIR

By EDNA BARNES

©, 1922, by McClure Newspaper Syndicate.

Sylvester Pelam, in the parlance of his fellow-townsmen, was a rich old crab. He surely was rich, even as fortunes are reckoned nowadays; he was old, if one considers three score and 13 as such. As to being a crab—well, it might be said that he walked backward, at least as far as his ideas were concerned.

But everyone has one inconsistency, and old Sylvester's pet hobby was this. He was interested in chirography to the point of its being an obsession. He was forever having to explain to his acquaintances that chirography was not the care of the feet, but a science by which one can read character in handwriting. Let him get hold of a neighbor's writing, and he advertised the poor unfortunate's faults all over the town. Never did he have anything commendable to report.

So far did old Syl's hobby possess him that rumor had it that he had willed that his entire estate be used to establish an institute to promulgate the truths of the science (as interpreted by Sylvester Pelam) to the end of dispersing a universal knowledge of chirography.

Now, there was none to dispute this will. His only son was dead—really dead—although to old Syl he had been dead from the moment he announced his intention of marrying Edith Melville. She was an actress. Old Syl wouldn't even see her. Thus, for 23 years, old Syl had heard of his son only twice—once recently when he died and on another occasion when his wife died at the birth of their little son, Melville.

Old Syl might have softened toward the child, had he not been branded with his mother's name. He had almost forgotten the existence of "the brat," when out of a clear sky came a letter from the youngster, now aged twenty-one. It was an ordinary enough letter, typewritten on the letterhead of a well-known brokerage concern in New York. Melville was applying for a life insurance policy and he wanted to know what his maternal grandmother died of.

Old Syl might not have read the missive but for the signature. Never had he run across such a specimen. It was clear-cut and bold, with just enough slant to denote ambition, but with no trace of unpleasant aggressiveness. So he was interested in life insurance—more prudent than his father, old Syl reflected.

Old Syl went to the phone. Finally came the report that Melville was not yet in. Old Syl retired to brood over the wonderful signature, assured by the operator that he would be summoned as soon as his "party" could be located.

It was nearly 9:30. The "party" was in a tawdry New York boarding house, leisurely attiring himself for the day. He emerged looking like an advertisement for a haberdashery, whistling nonchalantly and feeling quite positive that his lateness this morning would be the last straw. The manager would surely stand for no more. He was a rotten bookkeeper, anyway—he was clever enough to know that. However, he didn't care. Something would turn up. Something always did.

The reason for today's lateness was the usual one—up until all hours the night before dancing with Kathleen, the pearl of all womanhood.

Kathleen talked to Pel-Mel frankly. Let him get a decent income and she would consider matrimony.

Pel-Mel Pelam's conjecture was right: his doom was already sealed when he reached office. The manager was prepared to deal the blow. "Yes, sir," was all Pel-Mel had to say when told his services would be dispensed with. He hardly had a chance to realize he now belonged to the vast army of unemployed when Boston called again.

Pel-Mel emerged from the booth ten minutes later, warm and dazed. The gist of it all was that his grandfather—his mysterious old grandfather of whom his parents had told him almost nothing—was arranging for $100,000 to be placed to his credit in a New York bank that very day. "Don't want you to have to wait till I'm dead to be glad you have a grandfather," Old Syl had explained.

A more curious person than Pel-Mel Pelam might have wondered at this sudden interest, but Pel-Mel's mind was occupied only with the jingle of money. Why, $100,000 would buy Kathleen's consent, with some change left over!

Pel-Mel grabbed his hat and started to Kathleen. "Pel-Mel" was the right name for him, thought many a clerk, as he dashed through the office. The accommodating stenographer with the big, serious eyes, sat near the door.

"O, Mr. Pelam," she called to him, and then she gave him a prosy message. Awfully decent of her, of course, thought Pel-Mel, but why stop him, even for a moment? Couldn't she see he was in a hurry? All she had said to him was: "You were gone last night when I finished that letter to your grandfather, so I just signed it myself. I hope you don't mind?"

GOOD GRASS SOD ON ORCHARD

Trees Suffer From Lack of Moisture and There Is Temptation to Turn Stock in.

Where there is a good grass sod on the orchard, the trees not only suffer loss of moisture, but there is a constant temptation to turn stock into the orchard during rush times, or when the main pastures are short. This is always unsatisfactory, because the trees are going to be damaged more or less, even though average precautions are taken to protect them. If any stock at all is given the run of the orchard, poultry is the best, as being least injurious to the trees and fowls constantly enrich the soil in the elements particularly necessary for fruit production. But even then the advantage is very slight.

INSURANCE AGAINST DROUGHT

Well-Prepared Seed Bed Is Recommended and Early Work Will Increase the Yields.

A well-prepared seed bed is good insurance against drouth, and the best seed is none too good. A few cents or a dollar saved in the price of seed often costs many dollars in reduced yield. The cost per acre does not differ very greatly whether the yield be large or small. Work put in during the month of April has much to do with yields per acre.

BEST ORCHARD CULTIVATION

If Intercropping Is Practiced It Is Better to Grow Some Crop Like Strawberries.

The orchard should be kept clean. The best practice is to cultivate, not deep but shallow, in order not to disturb the roots, and not too close to the trees, for the same reason. If intercropping is to be practiced it is far better to grow some crop like strawberries between the trees, or small bush fruits, and keep the remainder of the ground cultivated, than to permit grass sod or weeds to get a start.

To every individual

A Certain Rich Man

JOHN D. ROCKFELLER ONCE said: "The first essential to building a foundation for business success is the establishment of credit."

John ought to know. He has established a pretty fair credit himself. A man's credit need not necessarily be backed by millions. He may be poor and still have credit, for credit is influenced by what a man really is; by what he does; how he uses his money, talents, time; by his social and banking relations. An account at our bank will help, too.

FIGURES

By ROSE BAKALAR

©, 1922, by McClure Newspaper Syndicate.

It was the first of August. The dingy little Boston office tucked away in a corner of the third floor of the Sumner building was suffocating. Wilting like a rose in a too hot house, Rita, bookkeeper, stenographer, salesgirl and telephone operator combined, at present filling the first and most important of her varied callings, toiled up the monotonous, seemingly endless, numerical columns.

The accounts receivable trial balance was 30 cents out of the way. The other balance sheets were not yet touched. A stack of charges had to be reckoned, bills made out and mailed. Her wearisome mental ascent was interrupted by the entrance of a finicky customer. Next, the switchboard claimed her attention. And between times she hunted for that 30 cents.

Noontime, her mind in a figured whirl, nerves on edge, utterly disgusted with life and herself in particular, she slammed the books on the disagreeing sum, stuck a notice of "Will Return at 1" on the door, and left for lunch. On the street she sniffed the sizzling dust-laden atmosphere and heartily wished it were closing time, so that she could go home. Home on the little hill, shaded by the trees, meant cool, fresh, health-giving air.

She directed her steps to a pie-plus-ice-cream dining place. Those detestable figures, successfully put out of sight, persisted in dancing a continuous tormenting jig within Rita's vision.

At the counter she shut her eyes for a moment, as if to banish those abominable numbered persecutors. She must—will—forget figures, at least during her short stay away from them. Unfortunately a male "jinx" near by grunted, "Yup! I'm FIGURING on the mortgage to help me out."

Rita gulped her coffee and left hastily. Couldn't she ever forget the word FIGURE even for a moment? She stopped to admire some hats in a window, hoping thereby to drive the figured invaders from out her mind, when an enthusiastic feminine voice jarred her senses with, "Aren't the FIGURES on that hat perfectly ducky!"

Was there no getting away from that devilish FIGURE? She hurried to the Charles River promenade. A faint breeze played tag with a little brown curl that had escaped from beneath her chic little hat. She took a deep breath as she seated herself. Ah! here was real solace.

"The glorious deep is too vast, too grand to be measured and bound by petty limited numbers," she murmured poetically.

Her relaxation, mental and physical was complete. But peace was murdered in its prime when she caught the words, "Yah! He cut a swell FIGGER at the dance and—" Rita fled. She waited to hear no more for obvious reasons.

On her way to the office she caught snatches of conversation. It seemed as if the whole world were talking in figures! "I'm FIGGRIN' it's goin' to rain." "—FIGURES cannot lie—" "FIGURATIVELY speaking—" "It sure was a FIGURE A cloth!" Everywhere joy, sorrow, diverse things and people were spoken of in harsh, calculating terms!

That night her dream world was FIGURES. Monstrous one-eyed elevens stalked stiffly about, glowering savegely. Enormous mouthed, roly-poly zeroes, gaping, weirdly employing rollicking methods of locomotion, relentlessly pursued her. Curved and curled giant eights, twisting and writhing the fantastic contortions attempted to strangle her. She awoke, gasping for breath. Sleep vanished that night.

At the breakfast table, in reply to her mother's solicitous query as to the cause of the black circles under the eyes, Rita burst into tears. After somewhat recovering her composure, she vehemently confessed: "I couldn't sleep all night on account of that bookkeeping. Those figures will drive me crazy. All day long everybody, everytime, everywhere it's FIGURES, FIGURES, FIGURES! And at night it's worse. I can't leave my job because it's hard to get another and I can't afford to loaf. Oh," she wailed. "I don't know what to do."

"Why don't you marry Joe?" chided her mother. "He's been after you for the last two years, and you keep putting him off because you got a silly notion of financial independence. You're 24 now and it'll take most a lifetime to get as much as Joe is getting. A girl is different. Meanwhile, you'd be wasting your whole life's happiness."

That evening a private conference was held and satisfactorily settled to all parties concerned.

Some years later we find Rita diligently cultivating her back yard garden. She figured how many rows could be laid out in that little plot and the amount of seed that would be required. In a local magazine she had won first prize for sending in the best planned housekeeping budget. Five-year-old Tommy was the pride of his mother. He could "figger" like "lightnin'" and "carry" in his head.

And her most cherished verse in her autograph album was "May your life be like arithmetic—happiness multiplied, cares divided, sorrows subtracted and children added."

Mrs. O. S. Kirklie was in Thief River Falls Thursday.

Rev Jensen visited friends in Thief River Falls Saturday.

Dr. Adkins was in town Monday on professional business.

Miss Rachel Baker is employed at the H. B. Rockne home.

R. H. McDonald was in Thief River Falls Monday on business.

John Nystul made a business visit to Thief River Falls Saturday.

Mr. and Mrs. P. Tvedt were Thief River Falls visitors Saturday.

Mike Tynick returned this morning from a visit to the cities.

Harvey Ferdidandsen was a Thief River Falls visitor Thursday.

John Farman was looking after business matters at Crygla Thursday.

Mr. and Mrs. Floyd Baird of [illegible] were in Thief River Falls Monday.

Mr. and Mrs. Elmer Olson were shopping in Thief River Falls Monday.

Mrs. O. S. Kirklie visited friends in Thief River Falls Friday and Saturday.

Nick Bundhund was looking after business matters in Thief River Falls Monday.

Mrs. Charles Breen and Mr. Elmer Beithon went on a hiking trip to Highlanding Sunday.

Mrs. R. H. McDonald and her niece Miss Mildred Argall, were in Thief River Falls Monday.

Morgan Christianson, the Strathcona banker, spent the week-end at the parental home in Goodridge.

Mrs. Peter Lovly, Mrs. E. K. Rice and Miss Olga Sigerud of Erie were Goodridge visitors Thursday.

Arthur Helgeson returned Monday to his home at Thief River Falls after a visit here with friends and relatives.

Floyd Ferdinanndsen goes today to Worthington, Minn., where he will be employed during the coming seasou.

Attorney E. M. Stanton of Thief River Falls was attending to professional business in Goodridge Saturday.

Mrs. T. J. Cummings returned Saturday evening from Detroit, where she has been caring for a daughter who has been ill

Halver Aomme returned Thursday from an entended visit to his old home and friends in Fillmore county, in the southern part of the state.

George M. Wilson, the eastern Pennington county bonanzr farmer, spent a few days in Thief River Falls looking after business matters this week.

The creamery people are unloading a car load of ice which they shipped out from Thiet River Falls in preparation for the re-opening of the creamery.

J. H. Rynerson and family came Thursday from Illinois with a car of livestok, farm machinery and household goods, and will move onto the former G. C. Gulrud farm, now owned by Dr. Schroeder.

Misses Olga Grimley, Cora McEnelly, Betsey Fjeld and Alice Coan attended a debate at the Reiner school house Tuesday evening. Leonard Gunderson and Ernest Bundhund acted as mule pushers for the party.

MENDETS—Quickly repair all cooking utensils, rubber goods, etc., without heat. So simple—a child can apply 'em. Durable. Outlasts article applied to. 12 for 25 cts., coin or stamps, postpaid. —H. C. Iverson, Erie, Minn., Box 95.

Mr. and Mrs. Tandberg, Mr. and Mrs. McDonald and Miss Mildred Argall, Mr. and Mrs. McLeod, B. O. Norby and Stuart McLeod made up a sleighride party that drove to the Vaughan home Tuesday evening and enjoyed an oyster supper.

The township and village elections will be held next Tuesdey, March 14, from the hours of 9 to 5. We bave not heard any talk as to who are candidates. Just now the interest seems to center on the republican delegate conventions.

Last Friday, March 3, a service took place at the John T. Coan home, during which John Jr., Lieberhus, Esther and Harry were baptized and thus joined the church. A number of friends and neighbors had gathered to witness the glad event. Rev. H. Lutz, the pastor, conducted the services.

M. J. Lysbakken is entertaining a boyhood friend from the old country, Gust Erickson, now of Bowden, N. Dak. Mr. Erickson has been a resident of the United States for many years and has served in both the army and navy, and was at the battle of Santiago in the Spanish war. He has recently returned from a visit to Norway.

Lutheran Church, Mo. Synod

Sunday, March 12. German services at 10 a. m., Sunday school at 2 p. m., English services at 8 p. m. at German town

English services at Erie at 10 a. m. Services and confirmation at 3 p. m. at Neptune.

H. LUTZ, Pastor.

School Notes

A Deal on Ducks is the name of the the senior class play which will be given in the near future. The seniors are rehearsing their parts regularly and are very enthusiastic about the play. They are all full of pep, spurt action and life, qualities which are essential to successful impersonators in a play. Watch the local paper for date of performance.

An appropriate Longfellow program was given by the pupils on Wednesday morning as follows: Biography of Longfellow, Mabel Johnson; Poem, Village Blacksmitd, Ward Thompson; Poem, Children's Hour, Edwin Olson.

The Minnesota Public Health association issuep prizes in the form of toy tops and buttons to pupils who were successful winners in the Christmas seal sale camnaign. The following received prizes, as indicated: Mabel Johnson, top; Fernley Josephson top; Harold Olson, top; Eddie Hanson, top; Ward Thompson, top; Gayheart Hagen, top; Eddie Kusmak, top; Ednar Farman, top; Edna Iverson, button; Luella Urdahl, top; Emma Gilbertson, button; George Resan, top; Esther Ronken, button; Genevieve Ferdinaadsen, top; Vera Larsen, top; Clinton Josephson, top; Wilfred Stephenson, top; Rosella Lovly, button; Donald Toomey, top; Myrtle Farman, button.

Miss Mildred Argall substituted for Miss Gieter on Tuesday, the latter being unable to teac, due to illness.

LIST YOUR LAND NOW. I am looking for some sales and trades this year. List and be ready. I am back on the job to try to do busineas.

WM. O. GAYLORD LAND CO.
Goodridge, Minn.

For Sale

One Fordson Tractor, good as new. One 14 inch John Deere Gang, with tractor hitch. One 16-32 doudle disc Tractor Harrow. One 16 inch Brush Breaker. Inquire of Theo. Gilbertson, Goodridge, Minn.

BUSH TYPE OF LIMA BEANS

Under Certain Circumstances Pole Variety is Preferred Because of Less Space.

Lima beans are not adapted for planting in all parts of the United States, but they thrive in the greater part of the Northern and Western states, and certain of the smaller podded varieties do fairly well in parts of the South. Two types of Lima beans are in general cultivation—the pole or climbers, and the bush varieties. Lima beans should not be planted until the soil is warm.

A Liberal Education.

Next to the study of language the study of good literature should be named. To read good books—the best books to read them, not always with that etymological thoroughness which Mr. Ruskin enjoins, but slowly and carefully, getting the full force of every sentence, and the full significance and beauty of every figure and illustration—this is a great aid in mastering the art of expression. In such reading one becomes familiar with the action of the strongest and brightest minds; with the choicest and most telling forms of utterance; and this familiarity is itself a liberal education.—Washington Gladden.

Goodridge State Bank

Brace Up

If you whine "I can't do this or that" --- you won't. But it's the one who "buckles right in with a bit of a grin, and does it" --- that makes a success in this world.

Integrity and unflinching determination will overcome any obstacle.

A bank account will help you cultivate these qualities and be your first step up the ladder of success.

THE GOODRIDGE BANNER

VOLUME XVI, No. 5. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, MARCH 17, 1922. $1.50 PER YEAR.

Electian Day Was Fine, But Vote Light

Tuesday was a fine day for the elections. There was much interest in the village election, although there were not as many votes cast as would naturally have been expected, there being but 85 votes cast. There were three tickets in the field and there was talk of a woman's ticket, but the latter failed to materialize. The following officers were elected:

Nick Bundhund, president;

Carl Edseth, A. S. Geudland and Sever Anderson, trustees;

M. G. Thoreson, clerk;

G. C. Gulrud, treasurer;

Theo, Tandberg, assessor;

Gilbert Gunderson, justice.

Owen Olson and Martin Anderson, constables.

The vote follows: For president, N. Bundhund 61, Carl Christianson 20; for trustees, Carl Edseth 64, A. S. Gaudland 61, Sever Anderson 36, M. G. Thoreson 25; H. A. Halvorson 18, Carl Lindstrom 18, M. J. Stephenson 18; for clerk, M. G. Thoreson 36, P. O. Tvedt 25, R. H. McDonald 18; for treasurer G. C. Gulrud 41, J. P. Jensen 38; for assessor Theo. Tanberg 47, A. B. Mandt 21; for justice, G. Gunderson 74, for constables, Owen Olson 61, Martin Anderson 52.

The justice and constables had no opposition.

For delegates to the county convention, Carl Lindstrom received 59 votes, Estella Josephson 55, B. O. Norby 25, Mrs. Theo. Tandberg 25.

Goodridge Township

The following officers were elected in Goodridge township:

Tupervison, Henry Lien.

Town clerk, Nick Urdahl.

Treasurer, Peter Lovly.

Justice, C. N. Urdahl.

Constable, Harvey Ferdinandsen

M. O. Seavey was elected as delegate to the county convention.

Reiner

The following town officers were elected:

Supervisor, Orlando Uglem.

Clerk, Frank Rase.

Treasurer, Gilbert Vraa.

Assessor, Christ Taagen.

Justice, E. Grimley.

Constable, Ole Olson.

Delegates to County Convention

Following are the names of delegates to the republican county convention from the precincts named:

Cloverleaf, Stuart McLeod; Geedridge, M. O. Seavey; Highlanding, H. I. Finstad. Kratka, K. K. Austin: Mayfield, W. H. Wilde; Reiner, Albert Erntz; Star, Emil Grams: Village of Goodridge, Mrs. Estella Josephson and Carl Lindstrom.

Senior Players Offer "A Deal In Ducks"

A modern comedy entitled "A Deal in Ducks" will be presented by the senior class of the Goodridge High school Friday evening, March 31. Rehearsals have been conducted every evening the past week and the class will be put through a series of intensive practise periods during the remaining two weeks. With one exception the six characters in the play are all represented by members of the senior class.

The theme of the play is modern. "A Deal in Ducks" is an excelleet comedy, replete with incident and mirth provoking episode and rapid in action. Around a very unique plot is woven a throbbing human story abounding in clean and clever comedy. There is not a dull moment in the whole play and in its final form a very effective bit of local color will be introduced. The actual playing time will be two hours, and arrangements have been made for entertaining stunts between the acts. The members of the senior class are very enthusiastic over the play and are concentrating every effort to make "A Deal in Ducks" one of the most delightful entertainments of its kind ever offered in Goodridge.

The Hero Grain Cleaner

Cleans and grades your seed. Will separate wild oats from wheat and barley. Also cleans flax, alfalfa, oats, timothy, clover and other grains to your entire satisfaction—with greatest ease and simplicity. Without question you have done everything to your soil which will enable you to raise a good crop, provided weather conditions are right. In order to insure a crop, however, you must have good seed, and it is impossible to have good seed without the use of a fanning mill or a good grader. The experimental stations have proven so often that light seed will not grow a heavy crop. The HERO is sold by the GOODRIDGE MERCANTILE CO., Goodridge, Minn.

ERIE ERRORS

Gilber Manderud sawed up a quantity of wood for G. G. Olson Wednesday.

John L. Radniecke, selling Dr. Koch's products, was calling on patrons in this neighborhood the latter pert of the week.

H. A. Dahlen has been busy putting in a supply of ice for the season.

Misses Shannon and Thomasson departed for Thief River Falls via Goodridge Friday.

The east end Ladies' Aid society meet at the Oliver Tommerdahl home Wednesday.

Henry Tiedemann was a caller at Camp Sub-Urban and H. Folkedahl's Tuesday.

Iver Iverson called on Knut Roisland anent business matters Thursday.

Faith is a strong factor in this world and presumatly in other worlds also. Anyway, acting in tnat belief, S. J. Hole and H. C. Iverson have entered upon an experiment and are hard at work perfecting a new mechanism in their newly established blacksmith shop. Their latest stunt is the making of "specks" for cows. These are to be fitted with green glasses, and when placed on bossy will make her take to straw or any kind of fodder of the lighter hue, with just as much relish as she would eat the greenest, most delicious new mown hay.

George Hovet departed the latter part of the week for Grand Forks to be employed.

Ludwig Johnson transacted business at Goodridge on Wednesday.

HORSE-RADISH DOES NOT REPEL ENEMIES

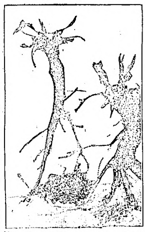
Pungent Qualities of Plant Do Not Discourage Bugs.

Entomologists Report New Pest in Form of European Webworm Which Also Attacks and Injures Turnips and Cabbage.

(Prepared by the United States Department of Agriculture.)

Even the pungent and tear-starting qualities of horse-radish are not sufficient to discourage insect enemies. In addition to two other specific and two incidental pests preying upon this plant, entomologists of the United States Department of Agriculture report a third specific enemy, known as the European horse-radish webworm and described in a bulletin of that title, Department Bulletin No. 966, just issued.

The caterpillar, which does the most destruction, is of medium size and is also known as the purple backed web-worm, as well as by its regular name. While favoring horse-radish, it is also known to attack turnip and cabbage, and after feeding on the lower surface of the leaves sometimes webs them together near the ground. When abundant, it attacks the stalks even down to the roots. It was first discovered in injurious numbers in Virginia, near the District of Columbia, in 1919, and occasional attacks have been noted in Massachusetts, New York, New Jersey, and Wisconsin. The moth of the species is rather a bright ocher yellow, with a wing spread of about 1 inch, peculiarly spotted. The eggs are deposited in compact masses containing from half a dozen to a score. They are a little brighter green than the leaf, and each egg is surrounded by an irregular ring of yellow spots.



Horse-Radish Root Showing Value of Deep Digging for Straight Roots—This Applies to All Root Vegetables.

The webworm may be controlled by arsenicals and by hand-picking on horse-radish, and more readily on other crops by fall and spring plowing and frequent cultivation.

SOME FERTILIZER IS REQUIRED BY ONIONS

Spading Fork Should Be Used in Preparing Soil.

Poultry and Sheep Manure Are Both Good for Crop, but Should Be Used Sparingly—Steel Rake Is Splendid Tool.

(Prepared by the United States Department of Agriculture.)

Onions require a mellow, rich soil; in fact, very few gardens are rich enough to grow good onions without some fertilizing. In preparing the soil break it up with a spading fork, working into the top three or four inches plenty of well-rotted manure, suggest garden specialists of the United States Department of Agriculture. Ten pounds of high-grade commercial fertilizer should also be spread over each square rod of ground and well raked into the soil a few days before planting the onion "sets." Poultry and sheep manure are both good fertilizers for onions, but must be used sparingly and well mixed with the soil to prevent burning the onion roots.

Onions grow very quickly and require frequent shallow stirring of the surface soil. The usual method is to plant the "sets" in rows about 15 inches apart and 3 to 5 inches apart in the rows, covering them just so the tops will be below the surface. A narrow steel rake is a good tool for working between the rows at first, but later as the onions attain some size a wheel hoe can be used. For the very first workings and for getting between the individual plants in the rows there is nothing better than a short piece of lath with three wire brads driven through it at one end, making what is known as a "scratcher." By and by the onion tops will get so large that they almost fill the spaces between the rows and hand weeding may have to be resorted to in order to keep the crop free from weeds.

Working in a Big Onion Field.

About the time the onions begin to enlarge at the base, or to "bottom," as the growers say, it is a good plan to scatter a very little nitrate of soda, not more than two pounds to the square rod, over the soil between the rows and work it in with a hoe or rake. This will stimulate the growth just at the time that the plants most need a little extra food and will usually increase the yield.

FINE SOIL FOR ROOT CROPS

Carrots, Parsnips and Salsify Want to Grow Straight, but Clods Work Injury.

Do you want long, straight carrots, parsnips, and salsify, or crooked, forked ones? Ask your wife; she has to peel them. All these roots have good intentions; they want to keep straight, but they cannot stand adversity nor withstand temptation. If they strike rocks or clods on the way down, they become forked or twisted, and if lumps of stable manure are in the soil, they bend toward these or send out branches in that direction. Dig extra deep, making the soil fine and mellow where these crops are to grow, and see that all manure is finely pulverized and all fertilizer thoroughly mixed with the soil.

GROW CROP OF LATE CABBAGE

Land That Has Been Utilized for Peas, Potatoes or Beans Is Usually Made Use of.

Late cabbage is usually grown on land that has been utilized for peas, early potatoes, or beans during the early part of the season. The seed should be sown in a seed box or a special outdoor bed four to six weeks before the plants are needed for setting. The seed should not be sown too thickly, and it is a good plan to thin the plants to an even stand in the seed bed, so they will develop uniformly. The land on which late cabbage is grown should be well fertilized, and the plants set 18 to 20 inches apart in rows three feet apart.

THE NEW FAMILY

By JULIA A. ROBINSON

(©, 1922, by McClure Newspaper Syndicate.)

The little village of Dunbar was filled with excitement. A new family was to move into the place, a rare event for that remote country town.

The Coney farm, as it was called, had long been vacant, and rundown. Now a new owner was coming, and interest ran high.

"His name's Jenkins," Mrs. Jones informed her neighbors. She had been making inquiries about the expected newcomers. "They've been living down in the city. He's got a wife but she's slim, and five children."

All were eager to see the new family arrive. Some of the women even went down to the small flag station.

The whistle sounded, the train came to a stop, and the new family alighted, all of them. A trunk, well strapped, was set down on the platform, a hoe and a buggy.

"He's got a buggy," whispered Mrs. True. "Ain't it fine? The rest of the things must be coming later."

Mr. Jenkins looked about on his new neighbors, a broad smile on his face that won their hearts. He seemed a jolly sort of man, good-natured.

"Any of you got a horse I can borrow?" he asked. "My wife here ain't able to walk. My buggy came, but I need a horse."

"You're welcome to take one o' ours," quickly responded Mrs. Choombs.

Mrs. Choombs soon returned. Mr. Jenkins, with thanks, harnessed the horse to his buggy, piled his family in and drove off.

Mrs. Bates, who lived nearest to the Coney farm, was preparing her supper when there came a knock at the door. There stood one of the Jenkins children.

"Dad says, 'could you lend him a bit of wood?'" she asked, "an' ma, she wants a saucepan and a little flour."

"To be sure, dear!" responded Mrs. Bates.

In the morning another child came with the request: "Could you lend me a loaf of bread and a few potatoes, and Dad, he wants a shovel."

After a few days the neighbors began to talk among themselves.

"It's about time them things of theirs came, I say," observed Mrs. Jones. "The things they've borrowed o' me and hain't never returned, I couldn't tell you."

"Why, I thought I was the only one who lent 'em things!" cried Mrs. Brown.

"The only one? Not much!" cried several voices. "I'm lendin' 'em things every day."

"Me, too," echoed Mrs. Gibbs. "They have borrowed my washboard and soap, baking tins, plates, even, and they never return a thing 'till I go after it. Not always then, especially if it's something to eat. I'm 'bout tired of it."

"He's borrowed my husband's shovel, his oxen and plough. Dan said he really couldn't refuse a newcomer, but he needed them himself," said another.

"It's too exasperating, but what can we do?" asked Mrs. Brown.

They talked the matter over for days. At last they decided on a plan they thought must be effectual to work a cure in the new family. Mrs. Jones was the first one to put it into effect. Mary Jenkins came over, as usual and asked: "Can you lend Ma six eggs and a cup of sugar and a little butter? She's making a cake."

"Certainly," beamed Mrs. Jones, bringing the desired articles.

In half an hour the child came back. "These eggs are all rotten; Ma can't use 'em," she complained, "and the sugar's got sand in it, and the butter don't taste good."

"Sorry!" exclaimed Mrs. Jones. "Those eggs were all I had. I remember the sugar got spilled an' the boys scraped it up. 'Spose they scooped up a bit o' sand with it. Can't be helped now. Ask your ma to please excuse it this time."

The scheme was working well with Mrs. Jenkins, but how were the men to manage Mr. Jenkins? That was a more difficult matter and far more serious.

"Good morning, Neighbor Jones," Mr. Jenkins accosted with his usual smile. "Just lend me your harrow. I've gotter go over my land."

It hurt Mr. Jones to take the screws from his new harrow, for he knew it would fall to pieces, and it would take a good day to repair it, but for the sake of the cause he did it.

In short measure Mr. Jenkins came back, not smiling this time.

"What's the matter with the old thing?" he blurted.

"Why—why—it's broken!" cried Mr. Jones. "An' 'twas a new one, too. Maybe I can fix it, but 'twill take a lot o' time."

It was the same with everything Jenkins tried to do. Everything he borrowed fell to pieces.

It went on for a few days. Nothing that the Jenkins family tried to borrow was in working order. At last they began to understand.

"Mebby we'd better go an' buy a few things for ourselves," said Mr Jenkins to his wife. "Folks seem to be tired o' lendin'."

"Ain't that what I told you?" rejoined his wife. [illegible] go to town an' buy in a stock of things, an' we'll give 'em back everything they've ever lent us. No [illegible]"

[illegible] we've cured 'em of the borrowin' [illegible]," chuckled Mrs. Jones [illegible]

THE DEAN

By MOLLIE MATHER

Copyright, 1922, Western Newspaper Union.

We girls had been the happiest little crowd until Celia Warren came among us. She was visiting the Livingston's when we met her, and after that, she and her snobbish old aunt came and rented the Bailie's flat, the Bailies were south for the winter. As a rule, we girls welcome a stranger, and try to make her enjoy herself. But if Celia Warren needed any one's assistance in enjoying herself, I hadn't noticed it. The trouble was, she let nothing stand in the way of her enjoyment; other people's hurt feelings or things like that did not give her the slightest concern. In fact, we learned later that hurt feelings were part of Miss Celia's enjoyment, yes, really. Else why did she walk Dora Barr's beloved Billy up and down before the Barr home, after she had unfairly taken him away from Dora?

That was why we heartily disliked Celia Warren when we knew her unfairness. Perhaps she reasoned that "all is fair in love and war." But she had not been with us a month before we were quarreling with each other—we who had been so peacefully chummy.

Dora and Billy were the first to separate. It seemed that Celia Warren told Billy things which he should have known true little Dora never said. And the last to drop each other's society were Ted and I, and I never would have believed that Ted could be such a goose.

When Ted started out in business, I wasn't a bit surprised that he asked me to marry him, while Dad agreed, cheerfully and resignedly, as a matter of course.

But like Dora and Billy, and Nell and her Jackie, Ted and I had decided not to announce our engagement until nearer the somewhat distant marriage time.

Then all at once Celia Warren blew in like a mischievous cyclone and mixed things all up.

"Sallie dear," Celia Warren said to me with her annoying, amused smile, "Why in the world do you let Ted Loring be so dead sure of your affection for him. If a man were as sure and conceited about his power over me, I'd show him, I would. Why, when he was talking to me at the party last night I said, jokingly, 'You'd better go and find Sallie or some other handsome man will take her to supper,' and Ted laughed, a queer sort of laugh it was and said, 'Oh, I will find Sallie alright, just where I left her.' That new Le Strange man has a bit of crush on you, too, Sallie," Celia added, "though it would be hard to make your Ted believe that."

So I did just what Nell and Dora had done under the same provocation—I, determined to show Ted Loring that he need not be so conceitedly sure of me, after all. I talked to that Le Strange man so long at our next gathering that he insisted upon taking me into supper, while Ted walked off laughing, with Celia Warren.

So she added another conquest—and and had another man, as days passed, leaning over the piano joking with her as she played, while we three deserted girls sat, like wall flowers, back on the divan.

"If Jackie only would not take in everything that girl says," lamented Nell. "He wouldn't attach himself to her train if it wasn't in pique against me."

Gentle Dora's tone was actually spiteful, "When Celia Warren talks about the wonderful places she has been and the noted people who entertained her and the great musicians whom she accompanies; well, I just wish I could face her with her lie."

Nell sat up.

"That's it," she exclaimed wrathfully, "if we could show those inbecile unhappy boys that she is untruthful in one thing, they might guess that she's been untruthful too, concerning us."

The music ceased abruptly and Celia Warren swung around on the piano stool.

"Fine," she praised my obtuse Ted, "you sing as well as Georger." Georger was being lionized in our town just then.

"Did you every hear the Dean of Hampdon sing, Miss Warren?" I suddenly asked.

Probably not. Hampdon was our college. Dora, Nell and I went through together.

[illegible] is really celebrated as a [illegible] took up music, I believe, [illegible] our Hampdon one year! [illegible] then, you know Dean Gordon?"

[illegible] yes," Celia Warren answered [illegible].

She looked up at the three boys impressively.

"I have often played for him," she told them. "And he was mighty good-looking. Such wonderful dark eyes. He used to take me around a lot, though it wasn't in accordence with college rules. You see, I had the happy excuse of playing his accompaniments."

It was then that I stood up dramatically.

"Which," I remarked clearly, "is all very strange, Miss Warren, [illegible] as the Dean of Hampdon college is a woman, a small blonde woman, Elizabeth Gordon."

It was mean and stooping to Celia Warren's level, too, but there are times when a lesson is necessary. And I must admit that there was no regret in our crowd when Miss Celia moved on to an adjacent town and we resumed our old happy ways.

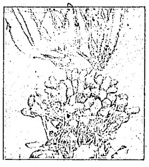
MANY WAYS IN WHICH PEANUTS ARE USEFUL

During Cold Weather Goobers Are Drug on Market.

Increased Consumption and Higher Prices Looked for With Coming of Spring—Fed to Hogs in Southern States.

(Prepared by the United States Department of Agriculture.)

Peanuts are a drug on the market just now. That's because they are not eaten largely in cold weather, but with the coming of the robin, which is a harbinger of spring, circuses and the opening of summer resorts, peanut shippers look for increased consumption, which may mean higher prices. In round figures, 900,000,000 pounds of peanuts are grown in the United States every year and 100,000,000 pounds were imported from Asia last year. About 5,000,000 pounds of roasted peanuts are consumed annually, say marketing experts of the bureau of markets, United States Department of Agriculture.



A Good Peanut Plant.

Few of the fond papas and mammas who buy Johnnie or Mary a bag of peanuts at the circus know that more than 100 different methods of utilizing peanuts, including the making of fancy dyes and wood stains, peanut milk, coffee, and ice cream have been devised, although few of these products are sold commercially. But peanut oil, peanut candy, peanut butter, salted peanuts, peanut cookies, roasted peanuts, and peanuts in a number of other forms run up the annual American per capita consumption to three and one-half pounds. Every time certain soaps are used the consumer is partaking of his three and one-half pounds.

Fully half of the peanuts grown in the Southern states are fed to hogs. Large quantities of peanuts are exported also, 1,074,007 pounds having gone out of the country during the month of January alone. Of this quantity, 78 per cent went to Canada, where the peanut enjoys copopularity with the clove. Cuba took 14 per cent, Jamaica 2 per cent, and Bermuda 1 per cent.

PUSHING ROAD CONSTRUCTION

Marked Improvement in Economic Conditions for Highway Building in United States.

Economic conditions for highway building in all parts of the United States have shown marked improvement. Railroad facilities for handling road-building material are much improved. Labor conditions have been such as to aid road building. The increasing number of unemployed men and the depression generally causing more men to be thrown out of employment, have been favorable to contractors in pushing road construction.

The Harvester Company's Exceptional Offer

and contri a t o the [illegible] effective [illegible] nuary 3 to May 1. 1922

The Harvester Co. makes this special offer to apply on all new Titan 10-20 Tractors purchased by its dealers on 1922 account. Each farmer purchasing one of these Tractors for delivery on or before May 1st, next, will be given by the company absolutely free f. o, b. Chicago a [illegible] & O plow.

$200 CUT in price of TITAN TRACTOR

MONEY FOR CONCRETE ROADS

Sum of $635,000,000 Recently Appropriated by States and Counties for Construction.

States and counties of the United States have recently authorized $635,000,000 bonds for road construction, much of it of concrete, $391,000,000 bonds are passing through the process of authorization and the federal government has appropriated $200,000,000 toward road construction, making a total fund of over $1,200,000,000 for good roads.

When Sown on Land Not Previously Planted to Crop It Is Advisable to Use Culture.

Natural inoculation now occurs quite generally throughout much of the area where soy beans are grown extensively. When sown on land which has not been previously planted to this crop, however, it is advisable to inoculate with the proper culture. Inoculation may be obtained, either through the use of a pure culture, a limited quantity of which can be procured from the United States Department of Agriculture free of charge, or by the use of inoculated soil from a field where soy bean plants have previously developed nodules. The inoculated soil may be drilled in at the time of seeding, using the fertilizer box, or by thoroughly mixing a gallon of the soil to a bushel of seed.

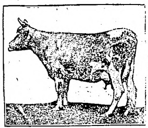
HASTY CONCLUSIONS SHOULD BE AVOID

All Angles of Farm Enterp Should Be Considered.

If Cows Were Sold There Would No Way of Using Roughage—Labor Also Would Be Lost, Adding Another Burden.

(Prepared by the United States Departmen of Agriculture.)

Hasty conclusions should be avoided in making use of the results of a year's cost accounts for improving the organization of the farm, warns the United States Department of Agriculture. All good farmers know that sometimes a positive decrease in profits may ensue if an enterprise be dropped because, taken alone, it has failed to pay. Cows, for instance, may not show a net profit, but if all the cows were sold there might be no other way of using the roughage which would become a dead loss. Labor devoted night and morning to milking and feeding cows, and charged to them, would be entirely lost if the cows were sold and nothing supplied to fill in the time. Thus an added burden for the maintenance of labor would have to be borne by the other enterprises.



Keeping of Cows May Be Responsible for Making Hogs So Profitable.

The fact that the hogs or the corn crop bring the most net money during the season is no reason for assuming that all the activities of the farm in the future should be devoted solely to hogs or corn. It may be that the keeping of cows is partly responsible for making hogs so profitable, or that the growing of wheat, clover, or other crops in rotation with corn makes the latter crop much more profitable than it would have been if grown alone.

Similar conditions will be met with on all farms and, therefore, no sudden changes should be made on the basis of what a single year's accounts may indicate. All angles of the enterprise should be taken into consideration.

SOME TIME

By LOUISE M. ADDELSON

©, 1922, by McClure Newspaper Syndicate.

Whatever misgivings other people may have had on the subject, Molly Hunter herself never doubted that she would be married—some time. At thirty she was officially dubbed old maid. But instead of giving way to despair, Molly bought herself a second hope chest, the first being filled to overflowing. With unimpaired courage she set about the task of filling the second hope chest, in spite of her brother's scowl, her neighbor's sneers, and her mother's censure.

"It would be far more sensible to sew dresses for your sister's babies," said Mrs. Hunter, sternly. "You are too old for such nonsense as hope chests."

"Hm!" commented Molly, placidly. "Maybe. And maybe not. But when I do get married I'll have more than most girls, because I've had a longer time to prepare."

No matter what was said she listened patiently, smiled serenely, and stitched composedly, with unvarying faith in the husband that was to be hers—some time.

Brother Edwin, in particular, had no patience with Molly, whom he looked upon as a good-natured, rather feeble-minded individual, forever stitching on what he contemptuously termed her "hope rags."

"I don't know," he was in the habit of saying, with deep gloom, "how Molly ever got into this family. She's certainly not like the rest of us."

"Don't worry, please," answered Molly, patiently. "I will get married, maybe sooner than you think. I know I will get married—some time."

To which her brother grunted unbelievingly.

One evening, the rest of the family, including the maid, being out, Molly sat before the library fire, looking thoughtfully into the coals. Molly was losing faith in the husband that was to be hers—some time. The bell rang. She sighed wearily, and opened the door. A gentleman stood there, with his arm in a sling.

"I wish to see Doctor Hunter," said he, in a pleasant voice.

"He's out," said Molly. "Please sit down, and while you're waiting you can talk to me. I am very lonesome."

"I'm lonely, too," he said. "I shall be glad when my arm is better and I can return to California."

"California!" exclaimed Molly, with interest. "I've been there, and I just love it!"

The stranger beamed. At the end of an hour, when the doctor interrupted, he was still holding forth about the glories of his native state. Molly left her new acquaintance with regret.

"What a wonderful man!" she said to herself, with shining eyes. "I—I could just love him!"

At dinner the following evening Molly was ill at ease because her brother stared at her in such a puzzled manner.

"I am considerably surprised," he told Molly, "and of course gratified, that you've met Mr. Channing—and that—that he seems so taken with you—"

"What are you talking about?" asked plain-spoken Molly. "Who is Mr. Channing?"

"Mr. Channing? Mr. Channing?" Her brother almost choked. "Mr. Channing," he finally announced, "is the gentleman you were talking to last evening. He is a millionaire business man of California. Last night he seemed interested in you, and when I saw him again this morning he said he thought you the finest young woman he'd ever seen. Wants to marry you. Queerest thing I ever heard of," went on Doctor Hunter, frankly amazed. "I never thought you'd—I mean, he's such a catch! That's him now, I imagine," as the bell rang.

Molly's brain whirled. As in a dream she heard her brother greet his guest; saw him leave the room; felt her hand gently clasped.

"I'm afraid, little girl, that I've frightened you. I know my methods are crude, even for a Californian. But I know also, since last night, that you are the woman for me. Will you marry me, and go home with me next week? I'm afraid somebody will steal you from me if I leave you here. What do you say, little one?"

Molly forced herself to look up, and met a pair of adoring eyes. "I'm—I'm afraid," she murmured. She was indeed afraid—that she was dreaming.

Mr. Channing, however, misinterpreted. "Afraid of me?" He took her in his arms. "You will have a week's time in which to get acquainted with me," he said, "and you will never be sorry."

As events proved, she wasn't. But then, she had always known it would be like that—some time.

STRAWBERRY ONE OF BEST FRUITS

Plants Are Easily Handled and Can Be Purchased at Small Cost From Nurseryman.

REQUIRE VERY LITTLE SPACE

May Be Grown in Hills or in Narrow or Wide-Matted Rows—Give Frequent Cultivation and Hoeing During Season.

(Prepared by the United States Department of Agriculture.)

Strawberries are so easily handled and require so little room, that if only one of the small fruits can be grown they should be the one selected. New plants may be purchased at small cost from a nurseryman, or perhaps may be obtained from a neighbor.

Strawberries may be grown in hills or in narrow or wide matted rows, says the United States Department of Agriculture. For very small areas, plants set in hills close together will no doubt produce the most and largest fruit, but will require more care than matted rows.

For hill growing, set the plants one foot apart in the row and have the rows just far enough apart to cultivate easily, say from two to three feet; or set rows a foot apart in double rows and have a space of two or three feet between the double rows. Keep all runners cut off and give good cultivation, so as to make extra strong plants. Some of the choicest varieties for hill culture are the Marshall and Chesapeake of the single crop kind and the Superb and Progressive of the everbearing varieties. The everbearing varieties will no doubt be most satisfactory for hill culture.

Starting for Matted Rows.

To start matted rows, set the plants 18 inches apart in rows from three to four feet apart. For a narrow matted row, train the first runners along the row, covering about a foot in width, and cut off all later runners. From four to six new plants from each plant set will make a narrow row. For wide matted rows, save enough new plants to make the row two feet wide, or more, as desired. Do not let the plants crowd each other; have them four to six inches apart.

Set strawberry plants early in the spring, if possible, so they will get the benefit of spring rains and make a strong early growth. Trim off the dead leaves and all but one or two of the live leaves and cut the roots to about four inches long. Spread the roots somewhat and set the plants just as deep as they were before they were dug. Be especially careful not to set them deeper and do not get earth over the growing tips, for this will probably kill the plants.

Everbearing Varieties Are Most Satisfactory for Hill Culture.

Give newly set strawberries frequent cultivation and hoeing during the entire season to keep down the weeds and make strong plants for fruiting the next year. Pick off all blossom buds which appear except in the case of fall-bearing varieties, on which blossoms may be left after August 1 to fruit in the fall. When the ground freezes cover the plants or the entire bed with about two inches of straw or other vegetable matter free from weed seeds. Coarse strawy manure, with the fine portions shaken out, is excellent for this purpose. The object of this winter covering is to keep the ground from freezing and thawing with each change in temperature, because this freezing and thawing will slowly lift the plants out of the ground.

Nitrate of Soda Helps.

In the spring when the plants begin to blossom spread nitrate of soda along each side of the row, using one pound to 80 feet of row. If the ground has not been mulched, cultivate and then mulch with vegetable matter between the rows, so as to conserve the moisture from the spring rains.

If the bed is to be saved for another year, rake off the mulch as soon as the crop is gathered, and hoe or pull out the older plants, leaving only enough of the younger ones to send out runners to make a new narrow or wide matted row, as desired.

Old beds may be cleaned up, as just mentioned, by hoeing or plowing the space [illegible] rows and [illegible] matted rows.

AT NACY'S DOOR

By EDITH M. LOCKETT

©, 1922, by McClure Newspaper Syndicate.

One moment the old screen door of "Nacy's Lunch Room" was closed. The next moment there sounded the peculiar little squeak of the door opening. Two hands met on the handle, a girl and a youth stared at each other, then the squeak of the little old door was drowned by laughter delightfully young. Strangers they were then, but when they met near the door of Nacy's the next noon and the next, they unconsciously felt that they were not strangers, and nodded to each other in amused recognition.

The girl liked "J. E. C.," as she christened him, because of some initials she had seen on a book he was carrying. There was something wholesome about him. So she did not resent it one day when she saw him making his way toward the table where she sat trying to enjoy a solitary lunch.

"It's good, isn't it?" he asked, indicating her pie.

"Yes; it's almost like some other apple pies I once ate." She smiled wistfully. She was thinking of her mother and an orchard, with rows and rows of apple trees in the sunshine. Presently she finished her lunch, and gathering up some books, rose abruptly. "I'll be late if I don't hurry," she said.

"Oh, so you go to school like the rest of us?" he asked.

She nodded, smiling, and hurriedly paid her check and departed. "You're a little fool, Ann Berry," she scolded herself. "You let 'J. E. C.' think you're going to school. You, a mere office clerk and he—well, listen to his enunciation and perfect English."

Still she made no effort to avoid him. Somehow, he always found a place at her table at lunch time at Nacy's.

They talked about books—that is he did. Ann listened mostly, for sometimes he talked of things she had never heard of.

Ann was boarding and sharing her room with a student named Rose O'Neil, who loathed attending the university almost as much as Ann would have liked it.

"I hate it. I want to get married, but my folks insist on my finishing the course. Ann, be a sport and help me with this," was her evening salutation.

"Rose, it isn't fair to you." Ann protested. But it ended, as it always did, in Ann's helping her.

Ann felt guilty; she knew why she was taking such an interest in Rose. She felt she was almost getting more out of the course than Rose was. The young man, her "J. E. C.", at Nacy's, was her inspiration. She wanted to understand the things he talked about.

Many of the themes Rose handed in had been written and typewritten by Ann and Rose had signed them. Rose would come home telling her of being commended by the English instructor for her original stories.

As the days passed along, there was a noticeable change in Ann. She was careful of manner and speech. She threw her whole self into her work. Yet Ann was swept from her feet when the president of the firm asked her if she would consider going to Chicago.

"We need someone like you," he said. "You understand what we're doing here; we want to put the same thing over in Chicago. We want you because we can depend on you, and you have no home ties,

That night Rose was quite persistent. Ann must write a story for her. Her sweetheart was coming to see her, so she wouldn't have time.

Ann wrote a story for Rose—her own. It was filled with loneliness, and yet with the hope of happiness—filled with apple blossoms and rows and rows of apple trees in the sunshine. Rose signed it and passed it at class next day.

It was lunch time at Nacy's. Ann nodded to her "J. E. C." She didn't want to acknowledge to herself that she loved him, would miss him in Chicago. "You're a little fool, Ann Berry. You had better go to Chicago and forget."

"Hello! Why so blue?" he asked, lightly.

"I'm trying to decide to go away, yet, somehow—" She stopped short! what was she saying? It passed unnoticed, as he handed her an envelope. There was a generous check inside, made out to her and signed by the editor of a large magazine.

"It's your story. I sold it, I took it to a friend of mine. He thought it was great. It's a wonderful piece of work," said "J. E. C.," eagerly.

But Ann, flushed and bewildered, said, "I don't understand."

"Heavens, I am telling the story backward. Ann Berry, look at me. I rather recognized that story. It was like you. You see, I got Rose O'Neil to confess. I rather bribed her. She told me everything she could about you. You see, I'm the English instructor at the university. You're not angry?" he questioned.

"No—but—oh, it's good of you, but it only makes things harder," she said. "You see, I'm going to Chicago. I suppose Rose told you that?"

He nodded. "Yes, she said something about your not having any home ties; but, Ann, I was hoping you'd hurry up and know me better, so you would consider some."

"[illegible]night," she said, smiling through a mist of [illegible], as they went [illegible] the door of Nacy's.

THE OTHER MAN

By JOAN M. GRAY

©, 1922, by McClure Newspaper Syndicate.

Marie wanted the man Harriet loved and Marie worked until she got him. Marie was Harriet's best friend and had all the opportunities in the world—and used them. Harriet had liked the man very much and they had been inseparable for years. He had been everything to her since her mother's death and she had taken it for granted that they would always be everything to each other.

She returned unexpectedly from a visit to a dance at the Country club and found them there together. She packed her things and went to live with Aunt Harriet.

Aunt Harriet invited her husband's nephew out for a week-end, knowing that a heart can be caught on the rebound.

Harriet met Richard and Richard fell in love with Harriet. She accepted it all with a maddening half-smile, plainly showing that she didn't believe it.

"Don't smile like that, Harriet," he pleaded. "You're too sweet to be cynical."

"I'm not cynical, I'm just very, very careful," she returned. "I do not intend to let you make me think you love me and then have you leave me for the first attractive girl who smiles at you."

"Look at me," he said. "Someone has done something to turn you against everything. It's not a pose and it's not a broken heart you're hiding. It's wounded pride. Harriet, give me a chance!"

"It's not wounded pride and I don't want to talk to you again."

"But you are going to Mrs. Herrick's dance with me?"

Dick was a wonderful dancer. "Well, ye-es," said Harriet, "but I don't want to see you again until then," and left him staring moodily at the fire.

When Harriet came down the stairs dressed for the dance, it was decidedly pleasant to have Dick waiting for her and to hear him say that she looked lovely in her crisp little rose frock. She shut her heart to all softness and kept the conversation on a safe basis.

They entered Myra Herrick's pretty living-room, now stripped bare for dancing, and greeted her. With a shock Harriet saw Marie and the man. She passed them with a little nod and introduced Dick to a group of friends amid the amused glances of many eyes. She would show them!

The evening wore on and Marie and the man were outcasts as far as Harriet and Dick were concerned.

Harriet suddenly became aware that Marie was smiling at Dick and that Dick was not aloof.

"Let's go out and sit on the stairs," she said to Dick. The stairs were shadowy. Dick's heart leaped.

"Would you like an ice?" he asked as she dropped down near the top. She nodded wearily and he went down to fetch one. She got up and walked along the palm-embowered balcony, looking down upon the dancers passing the door. Suddenly she stiffened. Richard was dancing with Marie!

She dropped into a chair, her face white. Suddenly the man stood before her. "Harriet," he said softly, "you don't think much of me, do you?"

"I did," she said dully.

"Dear little girl," the man exclaimed, "do you love this splendid Dick? It was I made him dance with Marie! I wanted this talk with you."

"You mean—he knows about us?"

"No. I had hoped you'd take me back—and tell him yourself. Harriet, think. I've missed you horribly. Won't you take me back?"

"No, no!" she cried. "They're coming up the stairs. Go and take Marie away."

The man looked at her strangely a moment and turned away and left her. She saw him laugh a moment with Dick and turn away with Marie. Dick came to her with white face and grim mouth.

"Harriet, what is that man to you?"

"Oh, Dick he—he—"

"Tell me, Harriet—"

"Dick, he's my father!" she said tragically.

"Your Father!" Dick answered.

"Oh, Dick, I loved my dad and he loved me, and he loved mother so. How could he let Marie take her place? He was the only dad I had and I was the only child he had, and yet he's let me be so lonely! Can't you understand?"

"Yes, dear. You're the one it's hard on, Your father and Marie seem happy."

"They are—selfishly."

"Marie, perhaps, but not your father. He wants your forgiveness terribly."

They sat together side by side.

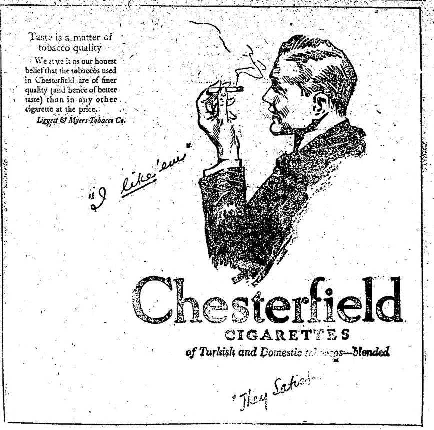
"Harriet," Dick said, "will you marry me?"

Dick had never seen this tremulous Harriet. They sat quietly side by side. Richard kissed her satisfactorily, and later she stirred and brushed her lips shyly against his cheek.

"Dick," she said with a little sigh, "will you come with me to find father? I'm going to tell him that bygones are bygones and that I shall try to be friends. I can't—do more than that. Do you think it will make him happier?"

Dick drew her to her feet. "Yes, it will. And think, dear, now that you are going to marry me, wouldn't your father be lonesome without Marie? As it is, he has her and you have me, and we are going to be very happy."

"Everything happens for the best, always, Dick," said Harriet bravely. "Let's tell father."



Taste is a matter of tobacco quality

We state it as our honest belief that the tobaccos used in Chesterfield are of finer quality (and hence of better taste) than in any other cigarette at the price.

SOCIAL CLIMBERS

By ETHEL I. STETSON

©, 1922, by McClure Newspaper Syndicate.

Malcolm Crane was the youngest and most brilliant dramatist of his day. After completing his play, "Social Climbers," he buried himself in the little town of Ashton for complete rest. Even there a note reached him from a Mrs. Drayton-Smith, who occupied a large villa in a near-by town. Would Mr. Crane honor her household by spending a week-end in its midst? Malcolm Crane disliked being feted; but since this Mrs. Drayton-Smith had discovered his proximity something must be done. She wrote:

"I shall meet you, personally, if possible, at Verndale Station. In case circumstances prevent, my daughter Eugenia, will be there in my place."

At this time the leading grocer of Verndale was planning to entertain a distant male relative from the west. Being a busy and a wise grocer he arranged to have his daughter, bewitching Genie, meet his guest. And so it happened that when the train which was to bring Mrs. Drayton-Smith's week-end guest pulled into Verndale Station a sweet country girl shyly came forward to greet a pretentious, but perplexed young man.

"We are so glad you wanted to come, Cousin Mack."

Perhaps her simple, warm greeting surprised him, as did the old barouche to which she led him. At any rate, both pleased him.

As the barouche rolled through country by-ways, what came puffing and stopped alongside but a huge touring car! "D. S." was beautifully inscribed on the door; and Miss Eugenia Drayton-Smith sat beautifully within.

With briefest nod to little Genie, she exclaimed:

"Mr. Crane, I owe you ten thousand apologies. There was trouble with the car and I was horribly delayed. Of course you know I am Miss Drayton-Smith. Do let us drive you to 'Fairview' as quickly as possible."

The young man seemed in nowise eager to haste from the barouche.

"Well, this is a situation," he laughed.

"I must ask you to make your adieus to the young lady, because mother is anxiously awaiting your arrival. In fact, some of the guests have begun to arrive for the garden party we are giving; and mother has arranged for one or two scenes from your wonderful new play, to be presented in the out-of-door theater at 4:30. So, you see, there is not much time to spare."

The young man twinkled. "I suppose Miss Genie, here, is one of the guests?"

"No, Mr. Crane, it happens that she is not."

"Then, as a special favor, allow me to extend to her my personal invitation. Let's drive over in the barouche, Miss Genie. We will meet you at 'Fairview' presently, Miss Smith."

Miss Eugenia Drayton-Smith ordered her chauffeur to drive on.

"You are an author, too, Cousin Mack? and write under a nom-de-plume? I never knew." Genie was delighted.

The horse which drew Genie's barouche was old and fat. The young man and maid arrived at "Fairview" when the guests were already assembled in the theater. All attention was drawn from the stage and directed upon the author and the lovely girl, whom Mrs. Drayton-Smith conducted to conspicuous seats.

When the curtain had been drawn on the last scene Mrs. Dayton-Smith made a studied and elaborate speech, introducing Mr. Malcolm Crane, the young [illegible] of [illegible] fame. The [illegible] rose amidst [illegible] applause.

"Isn't it wonderful? Such poise!"

"Notice his forehead and eyes!"

"Yes, unmarried. Perhaps—you know—Eugenia. But who is that perfectly exquisite girl with him?"

"S-sh, what is he saying?"

"Mrs. Drayton Smith, ladies and gentlemen, a mistake has been made. I am not Mr. Malcolm Crane. My name is MacMillan Jones, and much as it pleases me to accept your praises as the author of that renowned piece of literature, 'Social Climbers,' I can lay claim to a lesser glory only. Indeed, I am not even an invited guest at this party. I came through the extreme kindness of my cousin, Miss Genie Rangrin, whose father, my uncle, is, I believe, the leading grocer of this town. But, allow me to say, in case you have not already established in your household that much accredited scientific aid, I am here to introduce the MacMillan Jones Washing Machine, of which, as you might say, I am—the author."

* * * * * * *

As Mr. MacMillan Jones drove home beside Miss Genie Rangrin they met a boy with a yellow envelope in his cap, which he held in his hands, leisurely making his way up the "Fairview" drive.

Said MacMillan Jones:

"I'll bet that's that man Crane's telegram of explanations and er—regrets."

TEST SEEDS BEFORE SOWING

Of Big Advantage to Farmer to Determine Purity and Germination of Various Grains.

Whether the seed is for sale or for his own use on the farm, the farmer will find it to his advantage to test his seed, or have it tested, for purity and germination. In making a purity test, according to the United States Department of Agriculture, it is customary to determine the percentage of pure seed, inert matter such as dirt, chaff, and broken seeds, and foreign seeds, including weed and other kinds. A sample is taken varying in weight from 1 to 100 grams or more (a teaspoon for the clovers and small-seeded grasses, a tablespoon for the grasses, and a considerably larger amount for cereal grains), depending upon the size of the seed being examined. For the germination test usually two lots of 100 seeds each are placed on or between blotting paper, canton flannel, or such material, and kept in a room or chamber at a temperature of 60 degrees to 80 degrees F. for 3 to 28 days, depending upon the kind of seed being tested.

Samples for purity and germination tests may be sent to the seed laboratory of the United States Department of Agriculture at Washington, D. C., or to the nearest branch seed laboratory of the United States Department of Agriculture at Washington, D. C., or to the nearest branch seed laboratory located at Lafayette, Ind.; Columbia, Mo.; College Station, Tex.; Corvallis, Ore. and Berkeley, Calif.

Quaker Persuasion.

When Judge William Cooper, the founder of Cooperstown on Otsego lake, New York, decided to move into the wilderness from Burlington, N. J., his wife, says the author of "Legends of a Northern County," did not take kindly to the plan. Finally, when the moment came for them to depart, and the carriage and the wagons were loaded and at the door, Mrs. Cooper sat down in her father's library and refused to budge.

The judge was a Quaker, and not a man of contentious disposition; but he was both tall and strong. Without words he picked up his wife, chair and all, set her on one of the wagons and started on his way.

HIGHWAYS ARE FLEECE LINED

Because Cotton Is So Cheap, Ranchmen of California and Arizona Use It on Roads.

Fleece-lined roads for getting motorists over desert sands have recently made their appearance and have surprised a great many motor tourists traveling through certain sections of California and Arizona, says the Illustrated World. There is such a low market value upon cotton in certain sections that it scarcely pays to haul it to the railroad stations. Much that is raised, therefore, goes into the making of roads.

Ranchmen of the Salt River valley of Arizona are doing with cotton just what farmers in other sandy sections do with straw or brush. Cotton is simply thrown down upon the road over stretches where the sand is annoying. Traffic over the road then packs the cotton down into the sand until it forms a firm, smooth and resilient surface, over which motor-vehicles may progress with almost as much ease as over a paved street in a city.

WAY TO PLANT IRISH POTATO

Crop Not Particularly Adapted to Small Gardens and Requires Well-Prepared Soil.

While Irish potatoes are not adapted to growing in the extremely small garden, most gardeners prefer to include them in their list. One peck of seed Irish potatoes will plant about 300 feet of row. It seldom pays to plant home-grown seed and it is much better to use the home-grown potatoes on the table and purchase seed that has been produced in some locality especially adapted for seed growing. Potatoes require a well-prepared, rich soil, and it pays to use commercial fertilizer, well mixed with the soil of the hills or the rows. The seed should be cut two eyes to each piece, with plenty of potato attached. One piece should be planted in each hill and covered to a depth of about 3½ or 4 inches. The rows should be at least 30 inches apart and the hills 12 to 15 inches apart in the row.

Start Vegetables Early.

Hotbeds and cold frames give a chance to start vegetables earlier and gain on the weather and insects.

POTASH IN WOOL RECOVERED

Small Washer Has Been Designed and Is Being Tried by the Bureau of Chemistry.

A small wool washer made for recovering potash from fleeces in a solution of sufficient concentration to make the recovery of the potash profitable has been designed and is being tried out by the bureau of chemistry of the United States Department of Agriculture. It is said that the average fleece contains about 4 per cent of potash by weight, but in the ordinary method of washing wool it comes out in such dilute solution that it does not pay to recover the salt.

About 600,000,000 pounds of wool are secured in the United States each year, and if only 3 per cent of potash is recovered it would amount to 18,000,000 pounds of actual potash that would be available for use in fertilizers. Some nitrogen is also recovered from wool along with the potash.

INOCULATION OF SOY BEANS

A Certain Rich Man

JOHN D. ROCKFELLER ONCE said: "The first essential to building a foundation for business success is the establishment of credit."

John ought to know. He has established a pretty fair credit himself. A man's credit need not necessarily be backed by millions. He may be poor and still have credit, for credit is influenced by what a man really is; by what he does; how he uses his money, talents, time; by his social and banking relations. An account at our bank will help, too.

Farmers State Bank

OF GOODRIDGE

FARM LAND

For Sale or Trade

Imptoved and Wild Land. Good land at the right price. New is the time to buy. Easy payments and terms. Will take a good automobile in part payment for some quarters. Call or write

Wm. O. Gaylord Land Co.

GOODRIDGE, MINN.

P. S. I have a few good and very cheap quarters that have got to be sold.

A day in the life of a corset. Consider your corset! You lean over--it must bend. You curl up in a chair—it must yield to your comfy position. At night over the chair-back it fluug!

You want your corset to hotd in hips and smooth away bulky lines. You require that it wear well and hold its shape. You would scorn to wear it if it were discolored or soiled. And you insist on comfort.

All these are reasons for Warner's Rust-Proof Corset. Every Warner's Rust-Proof is double boned, which means that, without adding anything to tne weight, it is flexible enough to yield to each movement—strong enough to remain firm and straight.

The cloth, no matter how tight it is drawn, will not tear.

Because of all this, a Warner's Rust-Proof not only wears well, but also holds its shape, through the varied activities of more days than you thought a corset could last.

And you can keep your Warner's Rust-Proof fresh and clean as long as you wear it. Just wash it. Out it comes, dainty and fresh as new.

Warner's Rust-Proof Corsets

Very True.

X.—A bigamist is a man who has married one wife too many.

V.—And so is a monogamist at times.—London Answers.

Might in This Case.

"I thank my stars——"

"Stars have nothing to do with your success."

"I don't know about that. I'm a film producer."

Retirement.

"Do you not sometimes dream," said the sympathetic friend, "of dismissing all official cares and leading your life your own way?"

"That isn't a dream," said Senator Sorghum, a little irascibly. "That's a nightmare."

STRAWBERRIES ALL SUMMER

Popular Varieties Are Progressive and Superb—Resistant to Leaf-Spot Diseases.

Strawberry plants which will continue to produce strawberries until hard frosts occur may be grown in all of the northern United States and in the mid-western states. The two leading varieties of this type of strawberry, the progressive and the superb, are notable because they are exceptionally resistant to leaf-spot diseases. Another remarkable characteristic of these varieties is that if their blooms are killed by frost they soon flower again. Therefore, in sections subject to late spring frosts, which often destroy the crop, these varieties are particularly valuable.—United States Department of Agriculture.

THE GOODRIDGE BANNER

VOLUME XVI, No. 6. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, MARCH 24, 1922. $1.50 PER YEAR.

Convention Moved Smoothly After It Got Started

The republican county convention for the election of delegates to the state and district conventions developed into a lovely, harmonious gathering in spite of predictions to the contrary. Senator F. B. Kellogg and Congressman Halvor Steenerson received endorsements as candidates for re-election.

A proposition to appoint a nominating committee was voted down and on motion of Wm. J. Brown nominations were made directly from the floor. Things moved smoothly afterward.

The delegates to the state convention are: W. J. Brown, Mrs Edith Botterson and J. S. Arneson, Thief River Falls; Mrs. Estella Josephson, Goodridge; Wilhelm Michelet, St. Paul. The election of Mrs. Josephson came to her entirely unsolicited and unexpected.

The following were elected to attend the convention at Moorhead on March 30: Olaf Ramstad and Doniel Shaw, Thief River Falls, and Jorgen Eide of the town of North.

Mrs Josephson was elected vice president of the county committee and M. O. Seavey is a member of the committee from Goodridge township.

ERIE ERRORS

Myrtle Rouze was the guest Saturday of her fellow pedagog, Tillie Ose, in District No. 5.

Rev. Hoyum and Layman Halvorson conducted religious services in the school house in District No. 14 Sunday afternoon.

Iver and H. C. Iverson were callers at the Z. J. Hole farmstead Saturday.

Knut Danielson has been busy hauling wood these days.

Sub-Urban has put the finishing touches on the new garage which is to house his recently purchased "Roo" car. We may look for some riotous speeding during the coming automobile season when "H." gets to hitting the high spots.

The C. O. Odegard auction held Monday was attended by a large crowd and good prices were realized for nearly everything sold. [illegible] Odegard with his family are shortly to depart for their new home in the northwestern part of Wisconsin. Our departing pioneers have the best wishes of the Erie community for their future health and prosperity.

Aslak Norhus was a transient caller at the north Star rancho Saturday.

The "Ancient Order of Rough Roosters" met at the hamlet club room Friday evening. P[illegible] and Herjus applied for joining the lodge that evening but their applications were laid on the table pending disposition of earlier applications

Mrs. Ida Johnson and Mrs. Caroline Dahl[illegible] visited with Mrs. M. Iverson Monday afternoon.

E. Iverson was renewing acquaintance with old time pioneer friends in the [illegible] vicinity Tuesday.

Rev. and Mrs. Hoyum and Mrs. Halvorson were guests at the Ole Tharaldson home Saturday evening.

These Graduate

James Towle [illegible], Highlanding, Richard B. [illegible], Goodridge, Louis C. Kassa, Goodridge, Gerald H. Stephens, St. Hilaire, Oscar and John Jenson, Rhoda, [illegible] Pennington county, complete their school work in Crookston on March 20, when the fourteenth annual graduating [illegible] of the Northwest School of [illegible] will be held. Supt. C. [illegible], Crookston, will give the [illegible] address. Diplomas will [illegible] by Supt. Selvig to 45 seniors, [illegible] men and 15 young women. The [illegible] had a large enrollment [illegible] present year in spite of [illegible] farm financial conditions.

The [illegible] Grain Cleaner

Cleans and [illegible] your seed. Will separate wild oats from wheat and barley. Also cleans flax, alfalfa, oats, timothy, clover and other grains to your entire satisfaction—with greatest ease and simplicity. Without question you have done everything to your soil which will enable you to raise a good crop, provided weather conditions are right. In order to insure a crop, however, you must have good seed, and it is impossible to have good seed without the use of a fanning mill or a good grader. The experimental stations have proven s[illegible] that light seed will not grow a heavy crop. The HERO is sold by the GOODRIDGE MERCANTILE CO., Goodridge, Minn.

SILVIA DREAMS

By AGNES GRAHAM BROGAN

Copyright, 1922, Western Newspaper Union

The violin stood in a corner of the shed where shabby sweaters and faded hats of men who worked, hung, near by. This outer kitchen was a place where Silvia pared potatoes in summer time—and dreamed her dreams.

Silvia was not a child; stored in her quiet head were wise philosophies and happy beliefs. These beliefs she intended by faith and effort to bring true. But the summer boarders who flocked yearly to Mrs. Haskins' cheery home were unaware of Silvia's wisdom; her dreams had long been a source of general amusement. Mrs. Haskins, good natured and indulgent loved to enlarge upon Silvia's visions

"She sure is an odd piece," Mrs. Haskins would say, "and has been ever since I took her out of the orphan age, six years ago. She was fourteen then, and land knows why I fancied that she'd be a help to me, but I did. And Silvia is a great help with all her notions; that's the strange part. They called her Ann, there, for want of a true name, but as soon as Miss Ann comes here she looks at me decided, out of her big black eyes and says: 'From now on, Mrs. Haskins, I am Silvia. I always did want a pretty name, and I guess I've as good a right to choose it as the asylum. Silvia is the kind of name my mother would have chosen.'"

"What," asked a boarder, "did the child know of her mother?" "Nothing," Mrs. Haskins replied, "except what they told us at the institution. Silvia had been rescued when a baby from a deserted tenement room, where her young dead father lay with his cold hand on her tiny warm body. Silvia's mother had died in the same room at the child's birth. The two young people had come there just before, and no one knew a thing about them—except, that the man played a violin.

"Then," asked a sympathetic young woman, "that is her father's violin, which Silvia keeps in the shed?"

"Bless you no!" laughed Mrs. Haskins. "her father's violin was taken for debt. The one Silvia has, was a premium offered by a grocery concern.

"Do you think," asked the interested young woman, "that Silvia would play for us? After the dinner dishes are out of the way, I mean?" "I am sure," responded the smiling hostess, "that she would not. Silvia goes far into the wood to play her music."

"She is then a queer little thing," agreed the guest.

Tears filled the elder woman's eyes. "And a dear little thing, too," she said.

Silvia slipped down from the stool where she had been polishing kitchen faucets, then from beneath a farm worker's hanging green sweater, she drew her violin; and far in the wood where shadows were deepest, she raised it lovingly to her chin.

A man in a cabin flung his book quickly aside, and hastening through the doorway came noiselessly toward the player. Close to her he halted, his eyes filled with wonder; breathlessly he listened. And then, as the last bird note echoed and echoed still again softly across the strings of Silvia's violin, the man faced her. She gazed startled. "I thought no one was near," she reproved him. "Are you so selfish with your music?" he asked.

The dark eyes were suddenly alight. "Is it then, music?" she asked eagerly, "real—music? And do you understand?"

The man sat down beside her.

"I understand [illegible]," he replied, "that I am [illegible] here in the woods nursing the [illegible] of failure. For years [illegible] that all the skill I have [illegible] compensate [illegible]. Your music is genius."

Silvia looked down at him sorrowfully.

"Without skill," she s[illegible].

"See here," asked the man sharply, "who are you, where [illegible] come from? I have [illegible], in my shack for days, fearing [illegible] my presence might startle you [illegible] yet your playing played upon my [illegible] strings because it is such as I [illegible] hoped to create. Tell me—[illegible] yourself?"

So Silvia told him. He listened as others had not listened to her dreaming; understanding, believing.

"You are right," he said at last, "your father has bequeathed his gift to you. What are you going to do with it?"

"This," cried Silvia, and rose to her feet.

"This is the song that my father would have played when death called him."

Over the tree tops the enchanted melody rippled. Against the girl's round chin the violin sang wondrously of life, of joy, of sorrow. And when the song finished the man leaned tensely forward.

"You," he said, "must take that money which I intended to spend in study; you shall fulfill my—ambition."

And when later, a great ship started upon its voyage across the waters, little Silvia stood high on the deck waving her good-byes. She smiled cheerily into the rosy face of Mrs. Haskins; and then turned; that her last farewell might be to the man who watched her intently from shore. And into the eyes of Silvia flamed a sudden new dream. A dream of love come when both her purpose and this man's hope for her should be realized. And Silvia, has the faith of her dreaming.

THE WINDOW

By AGNES G. BROGAN

Copyright, 1922, Western Newspaper Union.

Jack Thorpe, hurrying along through the chill of an early spring day, glanced up at an old stone mansion and saw the window. The window seemed to typify that home he desired.

In crying contrast to its neighboring windows, the shining white curtained glass beckoned, while two potted geraniums flagged a welcome.

Jack was tired of hotels, tired of disappointing bachelor apartments, and though he had not passed down Cooper road with the intention of finding a lodging place there, that is exactly what he did, and for this was the gay little window responsible.

"Will you," he briefly asked a maid who opened the door to him, "let me know if the room on the second floor is vacant, the one with red flowers in the window? And may I see it?"

Jack ascended the gloomy stairway upon being told that the room was to be vacated the following morning. The maid inserted a key in a lock and left him.

The room was as inviting as its window promised. When Thorpe lighted the lamp and touched a match to the gas grate, he sank into a cretonne cushioned chair with a grateful sigh. Here was real home at last.

Mrs. Bickers came up presently for an interview. The bright place on the wall paper, she informed him, was where the former tenant's piano had stood. The piano had been moved that morning.

The room would be ready for renting tomorrow, Mrs. Bickers agreed, and he paid the advanced price asked.

"Just leave the key on the hall rack when you go out," Mrs. Bickers said, and left him.

He was enjoying a cigar before the glowing fire when a tap sounded at the door and in response to his questioning "Yes?" the door opened to admit a young woman. She was a pale-faced young woman and her big blue eyes were brimming with tears.

"What do you want?" asked Jack impatiently.

"I want to come in," she retorted. Uninvited, she drew a companion chair to the fireside and was, apparently, soon lost in thought.

"I," said Jack informingly, "have just rented this room."

The girl turned to look at him.

"Have you?" she asked. "I hope you will like it."

"I know that I shall like it," he replied. "I knew from the moment I saw those red geraniums in the window."

The firelight induced Jack's reminiscence.

"We used to have a window like that at home, when I was a boy. White ruffled curtains and all. It looked out on the side of the garden where a sun dial stood."

"Did you?" asked the girl eagerly. "We had a window like it, too, at Grandma's. Grandma raised us motherless children. But our window looked out from a sunny kitchen to where we could see birds hopping about on the trees, and in winter time, their little tracks all over the snow."

The man nodded understandingly. "I know, that all spells home."

"You won't like the meals here," the girl said. "Better go outside for them—it's too bad you have to."

"Oh, well, there must be some drawback. One does not find a home every day."

"Nor lose one, thank goodness," sighed the girl.

With new interest he regarded the strange visitor.

"I lost mine today," she explained ruefully.

"But why?" Sympathy was in his glance.

"Couldn't pay the rent," the girl told him. "If I can't make another home for myself there will always be grandma's to go to," she added.

"Tell me," he begged impulsively.

"Grandma educates her orphaned grandchildren and then turns us out of her over-full nest to make our own ways. My 'way' was to be music—fame, success, you understand, waiting in the world outside. I have just two dollars left. I'm going to stop at a 'Y. W.' tonight, and tomorrow go out and look for an ordinary job. The trouble is, I don't know a thing in the world but music."

"Your name?" the man asked, "won't you tell me your name?"

"Burnie," answered the girl, her sweet face grew wistful. "Back in grandma's cottage they call me Margot."

With a sudden gesture she tossed hat and cloak to a chair. "I'll get out my tea wagon and have tea. And you'll stay? It will be a sort of celebration, the old tenant deposes, long live the new."

Some new, inexplicable desire held Jack Thorpe longingly in the gayly cushioned chair.

"I'm installing a new music store right here in Cooper road," he told her later, "and with your experience along that line, I'd be glad to offer you a position in it. It might do for a time, Margot," the name came naturally, "and you could then continue on in this little home you have made. Your piano could be brought back tomorrow. The new tenant declines—reinstate the old."

And Margot happily agreed.

Now grandma, proud and gratified, tells the folks of Linden Village how Margot gave up her promised career for love, with the saving grace that "she married "a music man."

WHAT SHE FOUND

By NETTIE B. FANNING

©, 1922, by McClure Newspaper Syndicate.

Two days before the midwinter banquet of the Greeneville Literary society, Mrs. Fleming was finishing the decollete gown which she had planned to wear on that occasion. It was before the time of backless bodices and she was afraid she had been almost too daring in planning that kind of a gown when most of the ladies would wear a "V" neck, and their long-sleeved "undies" would probably show through their chiffon or crepe de chine sleeves.

Although not fashionable as to clothes, the club was very exclusive, and so old that its charter members had grown white-haired or bald-headed, according to their respective sex. It was composed of doctors, lawyers, ministers and their wives, school-teachers of varying ages and a few others. Mrs. Fleming was one of the others. There were two bachelors, Mr. Black and Mr. Tilden, the always immaculate principal of the grammar school, thirty-five, pink-cheeked and six feet two.

Young Mrs. Fleming sighed as she sewed. She wished she could do something to wake up the club. They were too smug and complacent. They had had the same president for 15 years.

A telephone call interrupted Mrs. Fleming's musings. It was the chairman of the banquet committee, who said that Mrs. Worden would be unable to [illegible] at the banquet and would Mrs. Fleming please fill in her place on the rostrum.

[illegible] promised to see what sh[illegible] on her things and s[illegible] library. On her way s[illegible] Davids, a club member, [illegible] with her. As they [illegible] of paper [illegible] Miss David's [illegible] Fleming's feet. She [illegible] them, then picked them [illegible] them into her [illegible] toward home, [illegible] in neatly [illegible] other, picture [illegible].

[illegible] banquet pro[illegible] tails to demi[illegible] were cleared [illegible].

[illegible] was called on [illegible] at Mr. Til[illegible] unfolded a [illegible] paper, laid it on [illegible] began gravely: [illegible] for the li[illegible] nothing to read [illegible] that I would [illegible] mystery [illegible] prominent club [illegible] I have been [illegible] aston[illegible] I have [illegible] emo[illegible] library I [illegible] Miss [illegible] I noticed [illegible] walk. They [illegible] her notebook [illegible] of the [illegible] exceedingly [illegible] showed blank [illegible]: "Now, anything [illegible] interesting, particularly [illegible] those with whom one is [illegible].

Several people [illegible] in their seats.

"It chanced [illegible] bits of paper had fallen with [illegible] sitting up. After a hasty glance I [illegible] had to know what it all meant and gathered up the papers. You will begin to understand why I did this when I repeat to you the words I saw in the order in which I first saw them on the ground. 'EXCEEDINGLY SHOCKING—TILDEN—ROCKING—MISS PENNY—OPENWORKED STOCKING—MISS ROSS—SAD."

Her audience was now listening breathlessly and consternation showed in the faces of the two middle-aged school-teachers mentioned. Mrs. Fleming went on:

"There were other scraps with words on them. After gathering them up I at once returned home and spent the afternoon in piecing them together."

She looked soberly at the paper on the table and all eyes followed her gaze.

"I thought at first I would say nothing about it; but as the matter so intimately concerns us all, I felt that you, too, should be told." Every eye was fixed upon her as she took the paper from the table.

"Listen," she said. "Could anything be more dreadful than this?"

'Said Miss Ross to Miss Penny, while
rocking,
I'm sure it's exceedingly shocking—
Indeed, it is sad,
But Tilden, poor lad,
Is wearing an openworked stocking.'"

"Pretty clever," murmured the judge in Mrs. Fleming's ear, as she sat down. "You certainly had our undivided attention all right."

"Someone else must have dropped those papers. I never wrote that," said Miss Davids a bit snappishly.

"Isn't that your writing?" Mrs. Fleming smiled innocently and handed the paper to her. Though elaborately pieced together, it was blank on both sides.

POTASH IN WOOL RECOVERED

Small Washer Has Been Designed and Is Being Tried by the Bureau of Chemistry.

A small wool washer made for recovering potash from fleeces in a solution of sufficient concentration to make the recovery of the potash profitable has been designed and is being tried out by the bureau of chemistry of the United States Department of Agriculture. It is said that the average fleece contains about 4 per cent of potash by weight, but in the ordinary method of washing wool it comes out in such dilute solution that it does not pay to recover the salt.

About 600,000,000 pounds of wool are secured in the United States each year, and if only 3 per cent of potash is recovered it would amount to 18,000,000 pounds of actual potash that would be available for use in fertilizers. Some nitrogen is also recovered from wool along with the potash.

The

Harvester Company's Exceptional Offer

and contribution to the farmers, effective February 3 to May 1, 1922

The Harvester Co. makes this special offer to apply on all new Titan 10-20 Tractors purchased by its dealers on 1922 account. Each farmer purchasing one of these Tractors for delivery on or before May 1st, next, will be given by the company absolutely free f. o. b. Chicago a 3-furrow P & O plow.

$200 CUT in price of TITAN TRACTOR
New price $700 f. o. b. Chicago
and a P & O 3 Furrow Plow Free

These are not stripped tractors pared down to make a price, but complete with all essential equipment—Pulley, Fenders, Platform, Throttle governor, adjustable drawbar, large lugs, brakes. This equipment, worth more than $100 and necessary on any tractor to make it serviceable and safe, included in our price. NO EXTRAS TO BUY

REMINISCENCES

By GLADIS F. PRAY

©, 1922, by McClure Newspaper Syndicate.

It is a common thing for middle-aged people to forget their youth and to condemn all the thoughts and acts of youth as folly. Sometimes, as these people pass middle age and reach the point where they see that even the history of families truly repeats itself, their judgment mellows and their sympathy with youth returns. This would have been brought home very forcibly to any person listening to the discussion that took place in the Armstrong farmhouse kitchen on a sunny morning last fall. I had it on the best authority, that of Granddad Armstrong himself.

Of course, there was a long introduction to his story. Then he rambled on to how he had the time and opportunity to observe how things were going between Anne and his grandson and namesake, William Armstrong.

Finally he reached the point where my story begins, the morning after the dance over at Rosedale, when William came down, sleepy-eyed and yawning, to find his father engaged with his favorite topic, the worthlessness of the present generation, especially on the farm, and his determination that his son must give up "lally-gaggin' round with that 'ere Anne Marshbanks and get down to brass tacks." As is usual with mothers, Mary Armstrong was trying to smooth things over, but was not succeeding very well.

As William reached the kitchen door his father was just delivering his ultimatum.

"I tell you, Mary, there's no use arguin'; I told the boy only last week he'd have to give it up, else he could get out and shift for himself and just find out how easy he'd find it to support himself, let alone two."

Here William spoke for himself.

"And I told you, pa, what I tell you now. I'd get out and glad to, except for mother. You've no call to make such a fuss over me takin' Anne to a dance now and again. I work hard for you all day, harder than any hired hand you ever had, and—"

"Hush, Willie!" from the mother. "Your father has worked hard for years that you might have this place clear of debt when you grow up."

"Yes, and small thanks I get for it, too."

"Now, don't you get to thinkin' I'm sidin' with you, pa, for I'm not," interposed Mrs. Armstrong.

"Anyway, as pa says, there's no use arguing about it, and as long as he feels the way he does the sooner I clear out and get a start for myself the better," said Willie. "I'll take just what I need in the suitcase and catch the 8:20 from the Center. I'm glad I saved the money grand-dad gave me for my birthday. That will start me, anyway."

"Yes, and once that's gone, you'll find that trees in city parks don't bear greenbacks, me lad—"

A low chuckle broke in from the corner, where granddad, who had puffed placidly on his ancient pipe during the debate, now raised his venerable head and regarded his son with a quizzical air.

"No, indeedy, money don't grow on the bushes in city parks, William, and no one knows that better than your father. Now, I wonder, did he ever tell you, how he learned that? Maybe it 'ud be a bit hard for him to tell you, but there's your mother knows all about it, and could say a deal if she dast. No? I can see by their faces they never did tell. Well, old people are forgetful, so p'r'aps I'd best remind them.

"N-o-w, John, don't int'rupt your father, nor you, Mary. You know, William, once on a time I thought your pa had summat better to do than to be squirin' a certain good-lookin' girl to dances, but he didn't think so. Lawsy, no! We had some words about it, and he packed his duds and started off for Boston on some money his grandma give him. He was goin' to show his dad what he could do. Yes, he showed me all righty," with an appreciative grin. "He resky'd a fair lady in trouble on the Boston train, and she resky'd his wallet, so the money trees on Boston Common didn't bloom for him that year."

As granddad subsided John rather sheepishly glanced at his wife, who suddenly needed something in the pantry. Then he cleared his throat, made a couple of false starts, and finally jerked out:

"Well, granddad, you would have your say, but I hope you'll forget that old yarn, if we agree to say no more about the party. If Billy promises not to be out ruinin' his health more than two nights a week, I guess the old farm won't go to rack an' ruin yet awhile—that is, if he makes the best of his chances, as I did, and persuades the girl to come and live where he won't have to be chasin' out nights. What do you say to that, Mary?"

Mary only smiled, but her husband did not notice the lack of an articulate response.

Fe From 15 to 18 Eggs, a imes More, Much Depending on Her Size—Incubators Are Successful.

(Prepared by the United States Department of Agriculture.)

Turkey hens and chicken hens ordinarily are used to incubate turkey eggs, although incubators are used where turkeys are raised on a large scale. During the early part of the laying season it often happens that there are on hand a number of eggs that should be set before the turkey hens are through laying their first litter, and become "broody." In such case, and also when it is desired to have the turkey hens lay a second or third litter, some of the eggs have to be incubated under chicken hens or in an incubator.

About a week before the poultry are to hatch a sufficient number of turkey hens should be allowed to sit to take all the poults hatched. They can be given a few eggs from the incubator or from under the chicken hens.

That you may know

ALFALFA SURPASSES FOR STOCK FEEDING

Good Qualities of Crop Enumerated in Bulletin.

In Addition to Advantages as Pasture and for Silage It Is of Great Value as Soil Improver—Other Possibilities.

(Prepared by the United States Department of Agriculture.)

"A nearly perfect forage"—that is the highest of praise heaped upon alfalfa by R. A. Oakley and H. L. Westover of the United States Department of Agriculture in a new farmers' bulletin, Utilization of Alfalfa, just issued. And when the good qualities of this crop are enumerated it is evident that some such description is warranted. As a hay it is unsurpassed for general feeding; as a pasture it has a high carrying capacity and produces large gains; as a soiling crop it is valuable with proper handling; it makes excellent silage; and when ground into meal it is a good and easily handled feed. In addition to these good qualities it is of great value as a soil improver. Attempts have even been made to introduce it as a human food and as a medicine, but it cannot compete with other staples as a food and it has no special medicinal properties.

Although not detailed enough to make laborious reading, each subject from haymaking on through to alfalfa meal manufacture, and a consideration of fake and fad alfalfa products, is treated so fully as to give the reader a thorough understanding of the possibilities of this great crop. Those who are inclined to be too enthusiastic over certain uses will find reason in the collected experience of many growers and feeders to modify their views, for alfalfa is not a panacea for all the troubles of the farm and feedlot. Consideration is given to the needs of dairy cattle, beef cattle, hogs, sheep, horses and poultry, and to the crop in various forms, including hay, pasture, silage, straw, soiling feed, tea and meal.

Those who are interested should write to the United States Department of Agriculture, Washington, for Farmers' Bulletin 1229 which will be sent free of charge.

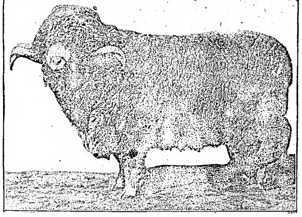
MAINTAIN FLOCK OF SHEEP IN ADDITION TO OTHER LIVE STOCK



A Grand Championship Prize Winning Rambouillet Ram.

(Prepared by the United States Department of Agriculture.)

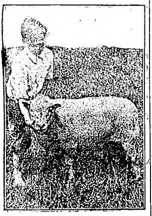
Recognizing the adaptability of sheep to a wide range of territory, extension workers of the United States Department of Agriculture and the state agricultural colleges have steadily encouraged the maintenance of a flock of sheep in addition to other live stock on the farm in sections where farm flocks can be profitably handled. The introduction of purebred stock and the establishing of breeding flocks has been an important feature of extension work in Connecticut and Pennsylvania in the East, and in Utah, Washington state, and New Mexico in the West.

Ram Club Comprises Three Flocks.

In Pennsylvania purebred ram clubs have been organized and are operating successfully. These clubs consist of three units of farm flocks each. A ram is purchased for each unit. He is used in each unit two years and then transferred from one unit to another until he has been used in all three units of the club. The county agent in McKean county [illegible] organizing three ram clubs during 1920, providing nine good [illegible] Shropshire breeding for the [illegible] of members of these clubs. [illegible] rams are grandsons of [illegible], one of the greatest [illegible] the International in [illegible] years. Rape pasture is [illegible] fatten lambs. These clubs [illegible] are purebred Shropshire [illegible] each member will eventually [illegible] purebred flock.

[illegible] given by the sheep [illegible] state agricultural college [illegible] clubs were organized in Pennsylvania during 1920; $3[illegible] worth of [illegible] sheep were selected and [illegible] by farmers in the state [illegible] connection. Supplementing [illegible] of these associations [illegible] introduction of [illegible] shearing, docking, and dipping demonstrations were held, attended by over 7[illegible] people.

Utah has made notable progress in making the farm flock a factor of importance in its live stock production. In Iron county, where practically all the rams are now purebred, the sheep breeders have concentrated on the Rambouillet and grow enough stock of this breed to supply largely the demand in southern Utah for purebred animals. An outgrowth of this work is the Rambouillet sheep show, which is annually the big feature of the county fair in Iron county and at which the competition among sheep breeders is exceedingly keen. The county agent in this county co-operates actively with breeders in selecting and improving the management of the breeding stock.



A Club Member and His Pet.

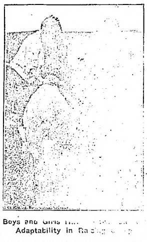
Market Wool in State Pool.

In a number of states county agents have urged successfully an increase in the number of farm flocks kept. Johnson County, Neb., where the number of farmers keeping sheep was more than doubled in 1920, is a notable example. Although the condition of the wool market was discouraging, one group of 16 farmers in this county shipped a total of 5,000 pounds of wool to the state wool pool. In Jasper County, Mo., a sheep breeders' association was organized through the activity of the county agent to encourage sheep growing, to pool the wool crop, and to fight the wolf menace. This organization took steps to encourage the introduction of purebred stock, and held a co-operative ram sale, at which all the grade rams owned by members of the association were sold and replaced by purebreds.

Boys' and girls' club members have been encouraged to form sheep clubs and grow sheep, with marked success. Local banks have helped to finance these clubs, accepting the notes of club members and letting them run from 2 to 2½ years in order to enable the club members to establish small flocks and sell wool and surplus lambs before settling their indebtedness. Representatives of these banks have shown much personal interest in the work and have co-operated with extension workers in giving club members encouragement and advice. In Lake County, Minn., the cashier of [illegible] state bank made a personal visit during the year to every boy and girl to whom money had been loaned for the purchase of sheep.

Boys Raise Orphan Lambs.

Orphan lambs in [illegible] county, Utah, were taken care of last year by boys and girls who could not afford to start flocks by purchasing ewes. [illegible] who could get milk or dried milk [illegible] given the lambs, and 19 boys [illegible] altogether, took charge of 1[illegible]. Only nine of these were lost during the entire season. Cows' milk was found to be the most satisfactory [illegible] dried milk was very convenient for use on grazing fields. One boy [illegible] 15 lambs at his home, all of which did well. The same problem was met in a different fashion at Padillas, Bernalillo County, N. Mex., where five club members secured from two to five orphan lambs each and raised them with a goat for a mother.



Boys and Girls [illegible] Adaptability in Raising [illegible]

The outlook for an increase in the number of farm flocks generally throughout the United States is promising. Adult farmers and farm boys and girls are finding the breeding of purebred sheep a profitable line of production, fitting in well with farm activities already established. Extension workers generally should feel encouraged in advocating the adding of flocks of sheep to live stock on farms where conditions are reasonably favorable to wool and mutton production.

SQUASHES IN HOME GARDENS

Small-Growing Plants Are Best Suited for Average Garden—Use While Young and Tender.

Two distinct types of squashes are commonly grown in home gardens—the summer squashes, the fruits of which are used while they are young and tender, and the fall and winter squashes, which are ripened and used during the winter months. The small-growing summer squashes are best adapted to planting in the average garden. The larger, or standard, varieties are better adapted to field culture, although one or two hills might be planted in a corner or along one side of the garden. The hills in which summer squashes are grown, should be fully four feet apart and a little manure and fertilizer should be worked into each hill as it is being made.

PLAN TO RAISE ARTICHOKES

Seed May Be Planted in Spring as Soon as Soil Is Warm—Use Well-Rotted Manure.

Deep, rich sandy loam, with a liberal supply of well rotted manure, is best suited for growing globe artichokes. Plant the seeds as soon as the soil is warm in the spring, and when the plants have formed three or four leaves they may be transplanted to rows three feet apart and two feet apart in the row. The plants do not produce until the second season, and in cold localities some form of covering will be necessary during the winter. This crop is not suited for cultivation north of the line of zero temperature.—U. S. Department of Agriculture.

JOHNNY

By MILDRED WHITE

Copyright, [illegible] Western Newspaper Union

Belinda settled her mother comfortably in a lounging wicker chair, then turned to the window.

"It's a glorious day," she said. "I'd like to go out and do something interesting."

The invalid mother sighed.

"I am sorry, my dear," she regretted, "to keep you tied to me like this, but you are my 'reliable.' What would I do without my little Busy Bee? Claire and Cleo are such gay and happy butterflies that I have not the heart to claim their attention. Do you, Bee dear, ever feel that your sacrifice is too great?"

"Sacrifice!" jeered Belinda. "Why, I dote on taking care of you, mother. Also, I am no social success. Too much precious time wasted, in my opinion, looking after the necessary things to make one continually presentable. But today tempts me out of this gilded summer inn; where shall I go, mother, while you are reading, and napping?"

"Horseback riding would be novel and interesting," mother suggested. "Why not try that? There is a reliable groom in the stables here, I am told, engaged for the purpose of teaching or accompanying guests."

"What a fine idea!" cried Belinda. "I'll go directly."

The gardens of the pretty summer hotel sloped back to terraced stables. Belinda noticed as she passed the garage that her sisters' automobile was absent. They were to drive today, she recollected, with a party, down the river road. A wealthy young Pittsburgher arrived at the fashionable summer settlement, and was being lavishly entertained.

Belinda stood in the barn doorway, looking about for the groom.

"Hello!" she greeted a youth seated near on an upturned pail. "I'd like to learn to ride horseback. Can you tell me where to find a groom?"

The man on the pail looked up, "I'll teach you," he agreed.

Belinda walked briskly past the stalls. "Pick a gentle pony," she ordered. "I will probably have a hard time hanging on, anyway. Where do we go to learn?"

"Meadow lane is the best place," said the young man as he was leading from its stall a black pony. Belinda considered the groom, as she waited. Mr. Butler, at that moment, entered the stable.

"I wish to learn to ride—" began Bee.

"And I have offered to teach her," interrupted the red-headed man. "Tell her that I'm all right at the job, Mr. Butler."

The manager smiled. "There is no more capable teacher, Miss Brownlee," he advised.

So Belinda mounted her pony.

"What shall I call you?" she asked the man walking at her side.

"Oh! Call me Johnny," he replied indifferently.

Johnny was a painstaking teacher. Meadow lane, with its sweet scents and shadowy paths, was a delightful lesson place.

"Johnny," she asked one day, "are you Irish? You say things in the funniest way, and you've got a lilt in your voice."

"No, I'm not Irish," answered Johnny, "but my grandfather was. Are you coming again tomorrow? You are doing fine."

"Yes, I'm coming tomorrow," said Bee, "and the morrow after that, if I may. Will you be busy soon, teaching someone else, Johnny?"

"Never," he answered promptly, "when I can be busy teaching you."

"But if Mr. Butler sends you out?" she questioned.

"I'll quit my job," declared Johnny, "unless he sends me out with you."

Belinda laughed, and the glow of her laughter was in her brown eyes when she sought her mother.

"I don't know," Belinda said, "when I have enjoyed anything as much as these riding days."

"Well, I am glad that someone has a good time," sighed the invalid, "for Cleo and Claire have come home disgusted. The same dull crowd at the drive again, they said, and the wealthy Pittsburgher still not in evidence."

Belinda chuckled. "Probably," she remarked, "the poor man had to run to cover, with so many fortune-hunting beauties on his trail."

"Johnny," she told the groom, some time later, "I am realy sorry now that I can ride so well. There is no excuse for claiming your services. You have been so jolly and kindly and nice altogether that—I'm going to miss you, Johnny."

"You are not going to miss me," said Johnny decidedly. "As long as those high Brownlee relatives of yours let you out once in a while to ride, I'm going to be there. That is," he added, "unless you don't care to have me, Busy Bee."

"Why!" Belinda exclaimed. "Why, Johnny! The Brownlee relatives are my very own mother and sisters." (He thought I was sort of maid to the family, she reflected.)

The two young people sat on the ponies and stared at each other. Then Johny slipped down from his horse and came to Bee's side.

"Well, I love you," he said huskily, "whoever you may be. And I know—that you love me. We can fix it up all right with the family," added Johnny complacently. "I happen to be that rich Pittsburgher."

---

ready for harvest. They feed chiefly on roots and attack especially potatoes, corn, and strawberries, but they are general feeders. White grubs, or "grub worms," are the larvae or young of the brown May or June beetles, with which most persons are familiar. The beetles occur in the North as late as August, while in the South they appear in April or earlier.

Control.—Deep plowing is the most effective remedy for white grubs. Cross plowing and deep disking are sometimes necessary, and the ground should be disturbed often and kept clean of weeds so that the grubs can be eliminated.

Rotation of crops, avoiding the planting of potatoes, beets, sweet corn, and other crops on land which has been for some time in the same crops or in strawberries, grasses, or weeds is advisable. Fertilizers, especially kainit, as a heavy top-dressing are of benefit. Gas lime is valuable. Hogs, if allowed the run of the newly plowed garden, or when the crop is off, will eat large numbers of grubs. Domestic fowls will pick up grubs on newly plowed land. See Farmers' Bulletin 543, "Common White Grubs."

Wireworms.

Wireworms, like white grubs, are common pests in the garden and are also general feeders. They are the offspring of snapping beetles, or "snap-bugs," and are of long oval form.

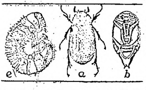
Their tastes are similar to those of the white grubs. They attack and often do great injury to potatoes and other plants bearing tubers, as well as to carrots, beets, sweet potatoes, and onions.

Control.—The remedies advised for white grubs apply also to wireworms, with due care in selecting land for planting and in fall plowing and crop rotation. Wireworms, however, are much more difficult to control than white grubs.

Blister Beetles.

Blister beetles are common farm pests and are very destructive to vegetables, especially beans, peas, potatoes, and beets. They travel in the same manner as army worms, and are sometimes called "army beetles" for this reason. They are hungry feeders and travel frequently in lines, eating everything in their path, chewing up apparently more than they need for food. They are slender in form, somewhat soft bodied, and colored variously. Some species are perfectly black, some are yellow with black stripes, others are of the same color with several light stripes, some are gray and others are gray spotted with black. Blister beetles are particularly abundant in the Southwest, but occur practically everywhere. Different species appear at different times, usually after the plants have made about one-third growth, and they continue until late in the season.

Control.—Lead arsenate applied at the very outset of attack is the best remedy. In some portions of the Southwest lines of men and boys go through fields driving beetles before them until they reach windrows of hay, straw, or other dry vegetable matter previously prepared along the leeward side of the field. The windrow is then fired and the beetles burned.



A White Grub or May Beetle—E, Larva or Grub; A, Beetle; B, Pupa.

Plant-Lice.

Practically all vegetables, especially cucumbers, cabbages, and peas, suffer considerable damage from attack by small, soft-bodied insects commonly called "lice" or "aphis," but better known as plant-lice. These work for the most part on the lower sides of the leaves, which become curled or otherwise destroyed by loss of their vital juices. They give off a sweet mixture called honeydew, which attracts ants, flies, and other insects. Plant-lice increase with great rapidity by the female giving birth to living young. The different kinds vary in color from light to dark green or nearly black, grayish, brown, yellow and red. They have comparatively long legs and have feelers attached to the head. Some forms have two pairs of transparent or clear wings. They feed by sucking juices of the plants through a beak. Familiar examples are the melon aphis, pea aphis and cabbage plant-lice.

Control.—If the plants are grown under glass, plant-lice may be killed by fumigation with a nicotine preparation. The form suitable for this work is paper soaked in nicotine which when lighted causes a smudge. Sprinkling plants with fine tobacco dust is of some value, especially if applied early in the morning when the dew is on.

SOY BEAN IN CROP ROTATION

Cash Value of Seed is Sufficient to Warrant Growing Beans as One of Main Crops.

The soy bean may be combined advantageously in many systems of crop rotation. The United States Department of Agriculture says it is especially adapted to short rotations, taking either an entire season or part of a season following some grain crop. The cash value of the seed is sufficient to encourage growing the beans as one of the main crops. When the whole season is thus devoted to soy beans, they take any place in a rotation system where corn can be used.

BURGLAR WANTED

By MABEL PARSONS

©, 1922, by McClure Newspaper Syndicate.

The social climbing Mrs. Hogg was heartbroken. The clever "second story worker" who had visited so many residences of the wealthy that the list might be that of the social register had for some reason forgot to call upon the Hoggs. There wasn't another home in Tylerville that contained so many costly furnishings, silver and jewelry—particularly jewelry—and yet Mrs. Hogg was denied a share of the limelight with the aristocracy.

"It ain't as if we ain't got nothing, Phineas," she sobbed, her many diamonds flashing in the morning sun as she poured the coffee. "There's the Joneses, and—"

"Stop right there!" exclaimed Mr. Hogg irritably. "Ain't I done all I can? Ain't I gone all over this house every night and opened the windows? Why, last night I even left the front door half open, and did any burglar come in? Did he, I ask you? No!" he continued, answering his own question.

What else he might have said will never be known, as the butler entered at that moment, and if there was anyone of whom he stood in awe it was Henry the butler.

Success had come to the Hoggs late in life, and while Mr. Hogg was inclined to lie back and take things easy, Mrs. Hogg was happy only when she was "among those present." But Phineas was a good sport and under her constant urge he ran her a pretty good second in their chase for social recognition. He affiliated himself with every club and every social affair she suggested, and gave her every blessed thing she wanted—but there; pause a moment.

There is one thing in which he had failed. Mrs. Hogg told him, in that heart touching, sobbing way of hers, that the Powells and Bentons had a family tree, and she didn't have one.

"Never mind, Lucy," he said soothingly, "we got money enough to get a front lawn full of them!" So you see, dear reader, his heart was in the right place.

Away from the eyes of Henry, they kissed in parting at the door.

"Cheer up, dear," said Phineas encouragingly, "we'll be robbed yet." And Lucy smiled faintly in hope and partly because Mrs. Powell, across the street, was looking on. Phineas waved his cane airily as he entered his motor, for the same reasons that Lucy smiled, and he was off.

Arriving at his office he immediately rang for his secretary.

"Mr. Dagget," said he, in his cute little pompous way, "do you know any good 'porch climber'? I mean, are you acquainted with any good crook? I mean—what I—that is—" Plainly, Phineas was confused.

Mr. Dagget doesn't know yet what his employer meant, but he was glad to get out of his sight, and for the rest of the day he went about on tip toe with a moist handkerchief in his hand, and a glassy look in his eyes. Now, while the Hoggs valued the notoriety of a burglary, let it be known that there was about $30,000 worth of jewelry, which was carefully concealed every night, that they had no intention of losing. That night, while preparing for bed, just at the moment that Mrs. Hogg had put all the jewelry in the case after a careful checking, a loud crash sounded through the house, and while they looked at each other, first in surprise and then in joy, that crash was followed by another.

"A burglar! A robber!" Mr. Hogg shouted enthusiastically, rushing out into the hall, Mrs. Hogg close in his wake.

Snapping on the lights in descent, they arrived upon the scene at the moment the policeman had subdued his prisoner. Subdued doesn't convey the picture at all; he was worse than that, and as he stood there in the light, it is no wonder recognition was delayed. Mr. Hogg was the first to wake up.

"Why, it's Henry!" he exclaimed in amazement.

He was right. He was the butler. It seems that Henry was not a real burglar—nothing like that—quite a duffer at it, in fact. It was simply a manifestation of his interest in his employers. He knew how anxious they were to be robbed, and as it made him nervous to sleep in a house that was open to the world, he had resolved to the end the suspense for both. Steal nothing, you understand; just make a noise to arouse the household. That done, the collected articles on the floor would lead to the belief that the burglar had been frightened away. Thus his employers could hold up their heads among the aristocracy of Tylerville.

As I said before, Phineas was a good sport, and after Henry had whispered this explanation, he swallowed his disappointment and gave the watchful, waiting patrolman a sign indicating that his services would not be needed further.

Mrs. Hogg was the first to enter their chamber, when with a sudden shriek she fell back into Mr. Hogg's arms.

"Oh! Phineas, we've been robbed!" she cried.

Mrs. Hogg was right! The case with its $30,000 contents, forgotten in the excitement, was gone! And, as it subsequently proved, so was Henry!

GROW CUCUMBERS ON FENCES

Plants Require Considerable Space, and for That Reason Are Not Suitable for Small Garden.

Two to five hills of cucumbers usually will produce enough for the ordinary family. Cucumbers require considerable space, and for that reason they may not fit into the scheme of small gardens. It is possible, however, to plant the cucumbers along a fence or near a building and train the vines on a support of wire or strings so that they will not encumber the ground or occupy the space required by other crops. In making the hills or the row in which the seeds are planted, a small amount of well-decayed manure should be mixed with the soil. A little fertilizer also helps, but it should be used carefully to prevent injury.—United States Department of Agriculture.

Lose Nearly Million Trees Yearly.

The Bell telephone system uses fully 500,000 cedar telephone poles a year, also 200,000 chestnut poles and 5,000 creosoted pine poles.

That is an achievement, measured in usual business terms.

But it means 785,000 trees chopped down yearly.

Why not use concrete or steel poles and conserve the timber? Forests are vanishing like snow on a hot stove-lid. The timber wolf is howling at the door.—Chicago Post.

Considerate.

"Would you mind driving a little slower, old man?"

"Not getting scared, are you?"

"Oh, no, nothing like that, but I'd hate to take an unfair advantage of my life insurance company."

Not a Hopeless Task.

He—You are Miss Coy's best friend. Tell me, do you think I will be successful in winning her love?

She—Yes; why shouldn't you, when so many others have been successful?

HOME TOWN PAPER

That is ~~our~~

Personal appeal

To every individual.

In Days of Old

Your grandfather walked when he went courting, and probably carried his boots in his hands part of the way to save wear on the leather.

Those were economical days. Times have changed. Your grandfather had but little money and what little he had he carried with him or hid it in an old tin can in the cellar. When short of money he traded coonskins for sugar. We have passed the coonskin stage long age. The modern way is to keep your funds in a bank and pay by check. Our bank is modern. The only exception is that we are old-fashioned [illegible] honest, courteous and neighborly. In every other way we are up to the minute.

IMPROVING SOIL AT LITTLE COST

Sweet Clover Is Admirably Adapted When a Decreased Corn Acreage Is Advisable.

CROP MAY BE SEEDED ALONE

Fair Yield of Excellent Hay May Be Cut If Conditions Warrant—Farmer Must Judge for Himself What Crop to Grow.

(Prepared by the United States Department of Agriculture.)

Where a reduction of corn acreage seems advisable and the land has lime enough, sweet clover will lend itself admirably to soil improvement at low cost. While the usual way of seeding is on winter grain or with spring grain, the United States Department of Agriculture advises that it may well be seeded alone on land that is now without a crop. Such land should be harrowed as early as possible and the seed harrowed in, or where the land dries slowly the seed may be scattered directly on the ground as the frost is coming out. There is no need to plow, and so practically the whole expense will consist of the cost of the seed which at present is low. Scarified seed should be used.

Small Cost of Seed.

The price of white sweet clover seed is today considerably less than half that of red clover. If the seed is on the ground early the plants will keep ahead of the weeds and, by September or October, a fair crop of excellent hay can be cut if conditions warrant the expense of cutting. The hay will have practically the same value as alfalfa or red clover hay. In the spring of next year the new growth can be turned under for corn if that crop is desired, or the field can be used for pasture.

Sweet clover is one of the best pasture plants known. If pastured heavily enough it will keep green and growing all through the summer when most grass pasture dries up. It must be kept closely pastured, however, since otherwise it quickly grows tall, blooms and becomes woody. If the field is left in sweet clover during 1923 it can be plowed that fall for grain or go into corn in 1924.

Do Not Improve Soil.

During the past few years large crops of small grain and of corn have been grown, but these have not always proved profitable, and, of course, have not helped to improve the land. The question of what to do under these circumstances is important. If cash returns are necessary the land not put into corn may be planted to soy beans. This crop will require as much labor as corn, however. Where the greatest possible economy in operation is to be combined with soil improvement the farmer will have to turn to grass or clover.

Every farmer must judge for himself whether to grow corn, whether to substitute soy beans or some other crop, or whether to rest the land and derive little or no income from it for one season. The above suggestion is offered by the Department of Agriculture as one way to improve the land while resting it, and to do this with the minimum of expense and labor.

Local News Items

J. P. Jensen has been on the sick list for a few days.

Just received a car of Corn at the Farmers elevator.

First and Most Important Step Toward Establishing Accounting System for Farm.

Getting a knowledge of accounting principles is the first and most important step toward establishing an accounting system suited to one's individual needs. There are many degrees in farm accounting, from the simple to the extended and complex. Farmers' Bulletin 511, copies of which may be had upon request of the United States Department of Agriculture, Washington, contains an outline of the principles of simple farm bookkeeping.

Lutheran Church, Mo. Synod

School Notes

A Devl in Ducks will be presented by the Senior class on Friday evening, March 41. Let's go.

An enthusiastic baseball meeting was held on Wednesday of this week, Eighteen boys gathered for the purpose of organizing a management for the coming season. Officers were elected, as follows: Joseph Christianson, captain; Alvin Halvorson, secretary and treasurer: Stuart Ferdinandsen, Daniel Payne and Roy Olson, custodian. Judging from the large number of boys who are interested in baseball, coupled with the experionce and training many of them received last year, it is safe to predict that the boys will make an enviable record the coming season.

Harvey Ferdinandsen attended the exercises on Wednesday morning.

Aside from the usual exercises given on Wedneaday morning, the following numbers were rendered: Song, primary pupils; Dramatization of the story of Little Red Riding Hood, by 2nd grade pupils; Announcement of the class play, by Roy Olson, president of the senior class; An enthusiastic boost for the senior class play from ths juniors, by Eunice Tvedt, their class president.

The Boys' and Girls' club has started to work again An enthusiastic meeting of former club members was held last Friday for the purpose of electing officers for the coming year The following were elected: Esther Ronken, president; Daniel Vaughan, vice pres.; Ctarice Anderso, sec. and treas.

State examinations in the 8th grade subjects will be conducted on Thursday and Friday of next week, March 30 and 31.

BEST MACHINE FOR BLASTING

Where There Are but Few Stumps to Remove Device Firing Ten Caps Is Satisfactory.

Electric blasting machines are small portable dynamos, so arranged that an electric current is generated by pushing down a rack bar, which extends through the top of the machine. They are made in several sizes, some firing up to 3 electric blasting caps, other sizes firing up to 10, 30, 60, and even more. For the farmer with but a few stumps to blast, the United States Department of Agriculture has found the size that fires 10 caps will be large enough to meet all needs, but the size that fires 30 caps is more generally used than any other in agricultural work.

Blasting machines, as well as all other necessary blasting equipment, can generally be obtained from local dealers in explosives, usually hardware stores, or they may be had by writing directly to any manufacturer of explosives. These machines seldom get out of order, but they should be kept in a dry place and should not be thrown about or handled roughly.

THE GOODRIDGE BANNER

VOLUME XVI, No. 7. GOODRIDGE, PENNINGTON COUNTY, MINNESOTA, FRIDAY, MARCH 31, 1922. $1.50 PER YEAR.

Annual Community Club Meeting

Notwithstanding the unfavorable weather there was a good attendance at the Community club's annual meeting last Friday evening. J. E. Gillespie, industrial publicity representative of the Minnesota prison, was the speaker of the evening. He explained how the most unfair tactics have been employed in efforts to destroy the utility of the prison twine and machinery plants. He made the assertion that dealers who handle the output of the prison plants are harassed and hampered in every possible way, and that dealers who refuse to handle state made machinery and twine are favored by the big dealers. The campaign among the farmers is a new departure on the part of the state board of control, according to Mr. Gillespie.

The band rendered a number of pleasing selections.

After the program business matters were taken up. Officers for the ensuing year were elected, as follows: Stuart McLeod, president; Mrs. Carl Christianson, vice president; M. G. Thoreson, secretary and treasurer.

It was decided that instead of appointing a program committee for the coming year, as has been customary the president appoint such a committee, for each meeting.

The treasurer's report showed that the financial affairs of the club were in such good condition that it was decided to waive membership dues for the coming year.

At the close of the session adjournment was taken to the Domestic Science room, where a most delicious lunch was served.

Big Sum Saved for Farmers of County

Prompt action by two farm organizations has saved the farmers of Pennington county $1,992 by forestalling an increase in freight rates on dairy products.

Railroads serving this territory proposed to make shippers of perishable products pay the cost of icing when shipments were in less than carload lots, according to information from the state farm bureau offices. It is estimated that this extra expense would have increased the cost of marketing the county's dairy products by approximately 12 per cent.

This county produces 830,195 pounds of butter every year. It is estimated that 80 per cent of the butter produced in Minnesota is marketed on the big terminal markets of the east, and that the average freight rate is 2½ cents a pound on less than car lots. On this basis the freight bill paid by this county on butter every year amounts to $19,921. An increase of 12 per cent on less than car lot shipments would have added $1,992 to this amount. In the case of the four cooperative creameries in the county it would have meant a direct reduction in net income and a direct loss to their patrons.

A hearing was held in Chicago before a committee of railroad executives early this month. Representatives of two of the biggest farm organizations in Minnesota were on hand to defend the interests of the dairy farmers. H. B. Nickerson, president of the Minnesota Cooperative Creameries association, Inc., spoke on behalf of the 300 cooperative creameries which have organized the new state marketing agency, and E. G. Heaton, director of dairy marketing, and O. W. Sandberg, traffic expert, of the American Farm Bureau federation, represented the farm bureau. They bitterly opposed any increase in transportation costs, declaring that an increase now is absolutely unjust and unwarranted.

Throwing the cost of refrigeration charges on the shippers, they said, would force the cooperative creameries of Minnesota to pay $204,000 a year to ship their butter to market.

The practical value of farm organizations was demonstrated this week, when the Minnesota Farm Bureau federation received a telegram from its national organization, stating that the railroads' committee had decided to abandon the proposed increase, at least for the present.

"Even if this proposed increase is revived and put into effect in 1923, the fact that it has been blocked at the present time means $200,000 to Minnesota dairy farmers this year," A. J. McGuire, manager of the creameries association, said. "That one case saved more money for the farmers of the state than the total cost of operating both the creameries association and the farm bureau the entire year."

Alexander Larson and Joseph K. Enebo were pleasant callers at Christ Amundson's Sunday.

Ole Hanson of Rhoda called on his friend, Ole Berg. Thursday,

Alf G. Iverson called on his uncle, Hilmer Iverson, Wednesday.

Gilbert Hanson is getting his saw mill in readiness for sawing operations and the farmers are hard at work hauling in their logs.

The east end Ladies' Aid is scheduled to meet with Mrs. Ida L. Johnson Wednesday, April 12, at 2 o'clock in the afternoon. Everybody welcome.

Ernest Peterson held an auction sale Monday and intends to engage in building and contracting for some time to come. "Farming has not been a paying proposition of late," says Ernest, and there are many who will agree with him,

H. C. Iverson assisted his brother Gust with the latter's hay hauling Thursday.

Mrs. Olga Danielson was taken to the Physicians' hospital at Thief River Folls Wednesday. Her mother, Mrs. John Tofteland of western Canada, is in Mrs. Danielson's absence.

Zakarias J. Hole was a guest at the M. Iverson home Sunday evening.

Will Count The Pigs

Minnesota is one of the states to be included in a pig census to be taken early in May. The enumerating will be done by rural mail carriers. The plan is to secure reports on simple card questionaires from not less than twelve farms on each rural route. This information will be collected by the carriers in the regular course of delivering mail and returned to the postmaster for forwarding to the department of agriculture at Washington for tabulation. A card can be filled out in less than two minutes. The information on the cards will be strictly confidential and is wanted only for its value to hog raisers throughout the country generally.

A Costly Farce

It cost the taxpayers in the city of Thief River Falls about two dollars for every vote cast in the primary delegate election held last week and the only reason the expense was not as great in the country was that it so happened township elections were held on the same day. Any way one looks at it the result fails to justify the expense.

If this election served any good purpose it has not yet become known. A number of delegates were elected to attend state and district conventions at their own expense for the purpose of placing in nomination certain candidates to be voted on at the primaries in June. Only one candidate for each office will be so placed in nomination and the primary will consequently serve only to ratify the action of state and district conventions. Any action taken by these conventions will be binding so for as the party organization is concerned and any one wishing to run in the primeries will be effectively barred. If this is not the case, of what value was the original convention?

There are almost as many election days in Minnesota this year as holidays in Mexico. Most people were satisfied there were enough with only the direct primary and the general election without adding this early spring farce to the list. Nothing was settled by it and but few knew exactly what it meant. The taxpayer simply foots another bill of expense without being in the least benefited. The understanding ones may have been mildly amused over the whole thing, but that is the extent of its value.

It is safe to say that not ten per cent of those who voted for a delegate at the caucuses preceding the convention had any idea of what that delegate would do or for whom he would vote when the time came for him to express the preference of the voters in the precinct he represented. He had no mandate from them to stand by any certain man or measure and was left to suit his own inclination in this respect, there being nothing to prevent his going diametrically opposite to the wishes of the majority of his neighbors if he so saw fit. Only by hearsay or direct questioning could his opinions be ascertained before his vote was cast in the convention, and as neither policy nor principle were involved in his selection in the first place there was no check of any kind upon his action. The whole thing is a joke.

It would seem as if legislators should have learned something from the presidential primary flasco and steer as far as possible away from anything which needlessly complicates the selection of candidates or the election of officials.

ROUND POSTS MOST DURABL

One Kind of Timber Will Last as Lo as Others if Amount of Heartwood Is the Same.

Is a split fence post as durable as a round fence post? This is a question frequently asked of the United States Department of Agriculture. The fact is, says the forest products laboratory, one kind of post will last about as long as the other if the amount of heartwood is the same in both. But if the percentage of sapwood is increased by splitting, the split post will be less durable and if the percentage of heartwood is increased it will be more durable than a round one. Posts of spruce, hemlock, or any of the true firs are exceptions to this rule because their heartwood and sapwood are about equally durable.

When posts are to be treated with creosote or other preservative, a round post is preferable to a split post, because of the comparative ease with which the sapwood can be treated. The heart faces on split posts do not, as a rule, absorb preservative well. Split red-oak posts will take treatment, because the wood is very porous, but the heart faces of split posts of many other species, notably white oak, red gum, and Douglas fir, resist the penetration of preservative, even under heavy pressures.

TOO MUCH MANURE INJURIOUS

Fertilizer May Burn Crop if Season Is Very Dry—No Fear of Harm if Worked In.

The claim that too much manure will burn up the crop is only partly true. It may if it is a very dry season and the manure is not worked well into the soil. But there is little likelihood of injury from a heavy application, if worked in right. Far more corn has been lost through too little than through too much manure.

PLANT ENGLSH PEAS EARLY

Seed Should Be Put Into Ground as Soon as Soil Will Permit—Some Good Varieties.

English peas should be planted just as soon as the soil will permit. Thomas Laxton, Alaska, Horsford's Market Garden, and Telephone are excellent varieties, and the Telephone late. The seed should be sown thickly in the drill in rows 3 feet wide and covered 5 to 6 inches deep.

PREPARE SOIL FOR GARDENS

Work Should Begin as Soon as Conditions Will Permit—Cultivate to Conserve Moisture.

In order to have a good garden it is well to prepare the land as soon as the soil conditions will permit, by first plowing the entire area to a depth of 8 to 10 inches, applying stable manure broadcast and harrowing thoroughly until a perfect seedbed is formed.

The surface of the unplanted as well as the planted land should be cultivated in order to conserve moisture.

ALSIKE CLOVER FOR FORAGE

Crop Is Particularly Well Adapted for Low, Poorly Drained Soil—It Adds Variety.

Alsike clover is especially well adapted for low, poorly drained land on which common red clover refuses to grow to advantage. It does not yield as much forage as red clover on soils that are well adapted for the latter, and, therefore, should not be grown in such places. It should, however, enter into every pasture mixture if for no other reason than to add variety.

Letter from Postmaster At Minneapolis

Mrs. Payne has just received a letter from Postmaster Purdy of Minneapolis, in which he says, among other things: Postmaster at Goodridge, Minn.

I am soon to step out of the ranks as I have told you before—not clear out, as I shall remain president of the National Association of Postmasters at the special request of Dr. Work—but away from the Minneapolis postoffice.

Your office has been splendidly conducted and you can tell the world through your newspapers or in any other way you see fit that I said so, and we certainly ought to know, transacting as we do so large an amount of business with you.

The simpler the proceeding is made the more likely it is to be free from objectionable features. The legislature should improve this primary delegate election law by repealing it entirely.—T. R. F. Times.

WILD BIRDS DESTROY INJURIOUS INSECTS

Worth at Least $400,000 Annually to Farmers.

Establishment of Community Refuges Throughout Country Is on Increase—Useful Suggestions Given in Bulletin.

(Prepared by the United States Department of Agriculture.)

The work of wild birds in the destruction of injurious insects is worth at least $400,000,000 annually to the American farmer and horticulturist, and in recognition of their valuable aid and charm, and to encourage their presence, the establishment of community bird refuges throughout the country, on farms, bird preserves, and elsewhere, is increasing. Useful suggestions for the establishment and maintenance of community bird refuges are contained in Farmers' Bulletin 1239, issued by the United States Department of Agriculture, a copy of which may be obtained free from the department at Washington, D. C.

The Blackbird's Coign of Vantage.

"On the average there are in the United States only about two birds to the acre, but where they are protected and encouraged it has been demonstrated that a very great increase over the normal bird population can be secured. No fewer than 59 pairs to the acre is the number reached in the most successful of these attempts reported. Valuing the services of birds at 10 cents each—an estimate ridiculously low, but used to insure a safe minimum—the birds of the United States prevent an increase in the annual damage done by insects of more than $400,000,000.

"A particular farm may not have so large a bird population as it should, and therefore may not be deriving the benefit which is its due. The most effective means of increasing the number of birds is protection, and protection in its best sense is afforded by the establishment of bird refuges."

A bird refuge may be established in a small way on a farm or through a co-operative bird preserve. In the latter case, the plan has proved popular and successful as a means of establishing colonies of game birds, such as pheasants.

"In creating a useful bird refuge," says the bulletin, "the first step is to insure adequate protection against all bird enemies; the second, to see that plenty of nesting sites suited to the needs of the various birds are available; and the third, to improve food and water supplies if necessary." Bird refuges also may be established along roadways and right-of-ways, with particularly attractive and beneficial results.

"Hardly an agricultural pest escapes the attacks of birds," says the bulletin. "The alfalfa weevil has 45 different bird enemies; the army worm, 43; billbugs, 67; cotton boll-weevil, 66; brown-tail moth, 31; chestnut weevils, 64; chinch bug, 24; clover-root borers, 85; clover weevil, 25; codling moth, 36; cotton worm, 41; cutworms, 98; forest tent caterpillar, 32; gipsy moth, 46; horseflies, 49; leaf-hoppers, 120; orchard tent caterpillar, 43; potato beetle, 25; rice weevil, 21; seventeen-year locust, 38; twelve-spotted cucumber beetle, 28; white grubs, 67, and wireworms, 168."

LIMITED SUPPLY OF MANURE

Behooves City Gardner to Secure Fertilizer Needed for Soil in His Garden Plot.

The supply of manure in cities is now quite limited, and it behooves the city gardener to secure enough somewhere to fertilize his garden plot, especially if his soil is heavy and lacking in organic matter. Where manure cannot be obtained, a number of crops, such as Irish potatoes, beans, peas, and tomatoes, can be grown fairly well by the aid of commercial fertilizers. Street sweepings are unsafe to use if they contain much oil or tar—United States Department of Agriculture.

THE INTERVIEW

By AGNES GRAHAM BROGAN

Copyright, 1922, Western Newspaper Union.

Geraldine Humphreys May had been interested and remarkably helpful in promoting child welfare, instituting leagues and working tirelessly herself in the lower parts of great cities. But her name did not become famous until she had, understandingly, written personal stories of various small foreign subjects. There was about Geraldine May's stories the charm of sincerity. One could almost see the pleading eyes of Pauline Traviski as one read the tragic story of the child's life, and one could laugh over the escapades of Tiny Tony Maghenos.

Geraldine Humphreys May was entitled to her fame. But newspaper men found her a difficult person in the matter of interviews. Club women all over the country were clamoring to hear this clever woman's views on certain vital questions, anxious to see her picture, to know something of her personality. In vain Miss May declined to be published in magazines, determinedly she refused all ambitious newspaper reporters.

And because of this the Daily Herald was more than anxious to make that conquest, so it was decided to send Bill Hampton out for the Geraldine May story.

He just went after his interview and got it. Everybody liked Bill. "The High Brow," as the office force jestingly referred to the difficult lady, was known to be stopping at a secluded inn off the Hudson. When Bill reached the adjoining village he learned that Miss May and her niece occupied an apartment at the rear of the beautiful summer lodge, and that Miss Geraldine May might be seen every morning walking in the rear gardens, while her niece camped on a high garden wall and watched for invaders.

Upon the approach of a stranger, the niece referred to as "Gerry," would slip down from the wall to give her aunt warning to retire.

Bill intended to waylay the niece herself upon one of her afternoon walks and endeavor to win her over to intercede for him. Miss Gerry May usually spent her afternoons with book or sewing on a bench-tree set back from the road. So Bill Hampton found her. As he was always frank in his methods, he presented to her his card with explanation.

But she shook her head at him. "It's no use," she said, "Miss May could not be persuaded to see you. She will not talk for publication. She is busy most of the time now with her new book of stories. I don't blame her for not wanting to be bothered."

"But you see," explained Billy dolefully"—he had seated himself at Miss Gerry's side—"this thing would mean a big scoop for me. And I'm after fame too, by way of advancement in my business. I sure do work hard for that. And if your aunt refuses to see me, couldn't you act as a sort of interpreter—get her to tell you her views and all that?"

Gerry laid down her sewing and considered the eager yet humble young man before her.

"Why," she asked slowly, "would it be, as you say, a great scoop for you? Would it really help you out in your profession?"

Bill seized his advantage.

"Your aunt has always been charitably inclined," he suggested. "I am sure the old lady has a kind heart. And while I am not exactly on the lowest step of the newspaper ladder—" Bill paused, then his eyes lightened in anticipation, "it certainly would be a big thing for me," he said.

"Well, go on with your questions," she invited, "I'll take a chance on answering."

His glance was grateful but disappointed. He hated to hurt the feelings of this obliging little creature, but Gerry's interpretation of her cultured aunt's views would, he realized, scarcely measure up to the reputation of that unusual woman.

"Couldn't you," he stammered, "get her to write out the statement for you—a statement ready for publication?"

The niece's eyes met his, brown eyes, sadly reproachful, then suddenly laughing eyes with golden lights in their depths. Bill's heart fluttered and the fluttering was not at all unpleasant. The girl laughed and then Bill laughed too; a laugh of pure enjoyment in life and his surroundings, a happy laugh in the companionship of this witching girl, whose fathomless eyes held and thrilled him strangely.

"No," the girl answered his question, "I could not get Miss May to write out a statement for publication, for you see, it's much easier to talk. I, myself, happen to be that hunted-down writer. And as you kindly suggest, being also a charitably inclined and kind-hearted old lady, I will help you with your scoop."

Bill Hampton stared.

"But," he began, then halted incredulously.

"Aunt Geraldine Humphreys May for whom I am named," Gerry patiently explained, "chaperones me about wherever I go; and I can talk intelligently upon the subject of child welfare," she added, "being vitally interested."

So Bill confusedly got out his pencil.

"Did you get the high brow?" the boys at the office asked him, but he did not hear their question. He was wondering how he would be able to get his work out of the way tomorrow in order to catch the 1:30 out to Hudson View Inn.

LIFE VS. FICTION

By GERTRUDE HIESTON

©, 1922, by McClure Newspaper Syndicate.

John felt bitter and discouraged as he banged the door of the pretty flat he had prepared so lovingly a few months ago for his bride.

"It's hard enough to get a living and win success, anyhow," he muttered dejectedly, as he hurried down the street, "but I just know I could if I had the least bit of encouragement at home. Lydia seemed so interested and kind before I married her—I thought she'd care—but now all she thinks of is her 'career.' The coffee's cold, biscuits burned, bacon raw, and everything in disorder.

"What if she did get five dollars for that silly story—maudlin stuff. I wonder editors are fools enough to accept it—I'm left to get along any old way. I suppose she sits and writes all day. I'm sure she does nothing for me. She won't even fix herself up so I'll have something good to look at. I guess the boys were right to laugh at me for putting my head in the noose."

At the office his employer looked critically at him many times that day, and frowned at careless, listless work. "Lucky I did not tell him I thought of promoting him. I'll have to look round for someone else," he said to himself.

At home Lydia yawned and stretched herself. Even the soiled wrapper and hair in curl papers could not wholly disguise the fact that she was young and pretty. Pushing the breakfast dishes one side, she got out her writing materials and became absorbed. The "divinely beautiful maiden with coal-black, starry eyes and raven curls, clad in shimmering golden tissue," had just fallen rapturously into the arms of the prince when the bell of the flat rang and Lydia reluctantly went to the door.

It was the postman, and she brought back to her table a pile of rejected manuscript. One after another she read the inclosed printed slips. "So sorry—unsuitable for our publications. This does not mean that they may not possess merit," etc., etc.

One kindly man had written a few hastily pencilled words: "From your story I judge you to be young. My advice to you is to get married and lose yourself in your husband's career; help him win success. You can write later and have something to write about."

Lydia angrily tore up the letter, but the words persisted in her memory. Her pen went more slowly and her thoughts turned from her heroine's starry eyes to the sad, disappointed brown ones of her own John. She tried again to write, but the story became hopelessly mixed in her thoughts with her own life.

"With the fainting maiden in his arms the gallant prince leaped upon his horse and dashed away." "Poor John, he couldn't drink his coffee, and the dinner last night was bum." She opened her wonderful eyes and gazed at him soulfully—"John always used to say I looked so dainty and pretty and now—"

She sprang up and looked at herself in the mirror.

"Well, you are a sight for sore eyes—you'd make them sore! I guess I'm a fool."

She hurriedly seized the manuscripts, tore them into pieces and crammed them into the scrap-basket. She then dragged off the wrapper and put on a trim working-dress. She was young and energetic, and housekeeping was a game—so it was not long before the whole place was spotless and in order. She went out and bought some flowers, and when John came home that evening his brown eyes opened wide and the light sprang up in them at the dainty, laughing little wife and the festive board.

"What's the matter?" he asked. "Sold all your stories? Made a fortune?"

"No," she laughed. "They all came back. I've decided it's more fun to live a romance. We ourselves will be the radiant lovers and our home the enchanted castle where everything is always beautiful and in order. Will it do for the princess?"

"Bet your life," he said gayly, as he bent and kissed her.

The

Harvester Company's
Exceptional Offer

and contribution to the farmers, effective February 3 to May 1, 1922

The Harvester Co. makes this special offer to apply on all new Titan 10-20 Tractors purchased by its dealers on 1922 account. Each farmer purchasing one of these Tractors for delivery on or before May 1st, next, will be given by the company absolutely free f. o. b. Chicago a 3-furrow P & O plow.

$200 CUT in price of TITAN TRACTOR
New price $700 f. o. b. Chicago
and a P & O 3 Furrow Plow Free

These are not stripped tractors pared down to make a price but complete with all essential equipment—Pulley, Fenders, Platform, Throttle-governor, adjustable drawbar, angle lugs, brakes. This equipment, worth more than $100, necessary on any tractor to make it serviceable and safe, included in our price. NO EXTRAS TO BUY

TRUCK GROWERS KEEP FEW COWS

Small Herds of Animals Being Maintained for Purpose of Obtaining Fertilizer.

SURPLUS MATERIAL UTILIZED

Practice of Keeping Live Stock Is to Be Strongly Recommended in Sections Where It Can Be Done Profitably.

(Prepared by the United States Department of Agriculture.)

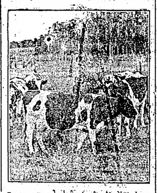
Truck growers and greenhouse men in the Eastern states are finding it increasingly difficult to secure a supply of stable manure, and some growers have adopted the practice of keeping a small herd of cows or other stock for the purpose of supplying manure, and as a means of utilizing surplus or waste material. The problem of maintaining soil fertility under present conditions was discussed at the recent meeting of the Vegetable Growers' Association of America, at Albany, N. Y., and it was the opinion of the vegetable growers and state federal workers present that the practice of keeping live stock is to be strongly recommended in sections where this can be done profitably.

Scarcity of Plant Food.

The head of the vegetable garden department of the Massachusetts Agricultural college reported that: "A study of the census shows that the decrease in horses in Massachusetts from 1910 to 1920 is such that 13,000 fewer acres can now be furnished with 20 tons of stable manure per acre than in 1910. To offset this loss in plant food, which was formerly obtained from stable manure, will require the expenditure of between $1,200,000 and $1,400,000. Even then we lack that all-important effect of the inoculated organic matter contained in manure and for which no equally efficient substitute has been found."

While this disregards the cost of the manure formerly used to supply the plant food, it is probable that it was much less than the cost of the fertilizer now purchased. This problem is not confined to any one state, but with a few local exceptions is being felt throughout the territory in which vegetable crops are grown for the markets.

At the Lexington (Mass.) field station, which is conducted under the direction of the State College of Agriculture as an experiment station, what are termed "manure economy investigations" are being conducted. In these tests the use of stable manure in moderate quantities is being supplemented by commercial fertilizers, soil-building crops, crop rotations and other means of maintaining soil fertility.



Problem of Keeping Live Stock to Maintain Soil Fertility Is Not Confined to Any One Section.

Waste Is Utilized.

Growers of canning crops such as peas and sweet corn have for years past followed the practice of utilizing the vines, fodder and other waste in the form of silage for the feeding of sheep, beef cattle, or dairy cows, this practice supplying them with large quantities of manure. Renewed attention is now being directed to this practice, and in sections where the European corn borer has made its appearance many growers have found it desirable to erect silos for the utilization of the surplus material, feeding this to their stock, thereby securing manure for their crops, and also largely controlling the corn borer. The United States Department of Agriculture strongly recommends these practices wherever conditions will warrant the keeping of live stock.

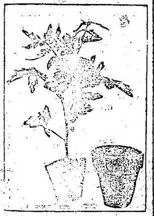
SUCCESSFUL TOMATO GROWING DESCRIBED

Bulletin Gives Different Methods Used in Industry.

Much Depends on Good Farm Practices, Seeds, Plants, Fertilizer, Planting, Cultivation and Thorough Spraying.

(Prepared by the United States Department of Agriculture.)

About 2½ quarts of canned tomatoes is the yearly per capita consumption in the United States, according to figures of the United States Department of Agriculture. How the tomato is grown, put up, and shipped, together with practices followed in communities where its cultivation is highly specialized, are given in Farmers' Bulletin No. 1233, recently issued, copies of which may be obtained free of charge upon application to the Department of Agriculture at Washington, D. C. The bulletin also contains valuable suggestions to growers as to methods which are profitably followed where the crop is most successful.



Hardy Tomato Plant Started in Pot.

The story of the tomato is that of a delicacy which has lived down a bad name and come into its own after years of effort. Of American origin, it attracted unfavorable attention first about 1800, and for a long time was regarded as poisonous and consequently avoided. Later, designated as the love apple, it found favor with a few lovers of delicacies and with growers. By 1887 the total pack of canned tomatoes in the United States was about [illegible],000,000 cases of 24 one-quart cans each. Now the commercial pack, exclusive of soups, purees, ketchup, and pulp exceeds 10,000,000 cases of 24 No. 3 cans. These figures do not include the millions of cans put up by housewives for home consumption or the fresh tomatoes which grace American tables during the growing season.

Chief among the states where tomatoes are raised for canning are, in order named: Maryland, Indiana, Missouri, Delaware, New Jersey, New York, Utah, Illinois, Kentucky, Ohio, Pennsylvania, Tennessee, Virginia, and West Virginia. The acreage planted in tomatoes for canning purposes only in 1920 was 244,745. The yield from that acreage was 1,003,358 tons.

The bulletin follows the methods used from the seed to the can, describes methods of planting; soils best adapted for the vegetable's growth, tells how the crop may best be harvested, and sums up the chief requirements for good results as follows:

"Successful tomato growing depends on good farm practices, good seed, good plants, proper fertilizer, careful planting, clean cultivation, and disease control through spraying and through the use of disease-resistant varieties. Growers who pay attention to these factors produce crops which give them satisfactory returns."

GOOD EMERGENCY FEED CROP

Sudan Grass Is Rapidly Replacing Millet in Many States—Useful Summer Pasture.

Sudan grass is admirably adapted for use as an emergency hay crop, and is rapidly supplanting millet in many states. It is being used successfully by thousands of farmers as a summer pasture. For this purpose there are few crops that give better returns and serve so well to supplement the permanent pastures and the feed lot.

FEED CROPS ARE CONVENIENT

May Not Bring in Much Money, But They Take Care of Animals Which Can Be Sold.

Feed crops may not bring much cash but they are very convenient to take care of the animals. The animals may be converted into cash or the products from animals such as milk, cream, etc. It is not an easy matter to produce too much feed. It is hoped that the money generally paid out for feed will be kept at home this year.

MOSAIC DISEASE HARMS POTATOES

Adequate Measures for Elimination of Ailment Must Be Taken Immediately.

TROUBLE SPREAD BY INSECTS

Situation May Be Somewhat Improved by Partial Weeding Out of Worst Cases—Yield Is Reduced About 30 Per Cent.

(Prepared by the United States Department of Agriculture.)

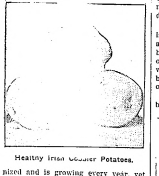
A survey of the Western states conducted during the past summer by pathologists of the United States Department of Agriculture shows that unless adequate measures for the elimination of the mosaic disease of potatoes are taken immediately the work of potato seed improvement in the West will soon become extremely difficult, if at all possible. Being of an infectious nature, the disease is spread in the field throughout the summer by means of insects which carry it from diseased to healthy plants, and it is also transmitted with the seed tubers from one generation to another.

There is no evidence that a plant once infected can recover and produce a healthy progeny at any time. On the contrary, the infected plants ordinarily under certain environmental conditions practically cease to produce tubers in the third or fourth generation. If only a partial weeding out of the worst cases is practiced, the situation may be somewhat improved, though not in all cases and by no means permanently. The [illegible] and the medium stages of the disease left in the stock serve as perpetual sources of infection, and eventually the entire strain becomes diseased and is apt to "run out" completely.

Reduces Yield 30 Per Cent.

It has been repeatedly demonstrated in the East that the average reduction of yield due to mosaic is about 30 per cent. Precisely the same effect of this disease was noted in the case of all the varieties grown in different Western states. Some remarkable instances were observed during the last two years of field [illegible] as carried on by the department [illegible] the reduction of yield in [illegible] hills was in direct proportion [illegible] severity of the infection.

The [illegible] to [illegible] certain irrigated [illegible] West has been increased [illegible] one-third as [illegible] the last year. [illegible] is only [illegible] many growers [illegible] sacks or more [illegible] in former [illegible] are obtainable [illegible] under good [illegible] growing good [illegible] freedom from [illegible] diseases. The [illegible] the strains in [illegible] principally a [illegible]. The need of good [illegible] is well recog-



Healtny Irish Cobbler Potatoes.

nized and is growing every year, yet only a meager quantity of even relatively good seed is obtainable.

There is very little, if any, hope of improving badly infected strains of potatoes, the department specialists think, therefore, prompt efforts should be made to locate the most healthy strains of the various important commercial varieties. Since there is no means at present of detecting mosaic on the tuber the search should be confined exclusively to the fields during the growing season. When the best strains are found they should further be improved by the annual elimination of all the diseased individuals.

Specialists Must Be Sought.

It is necessary to place this work in charge of highly trained specialists, since the identification of certain minute and peculiar characters of the disease requires a considerable experience and a great deal of pathological knowledge. Furthermore, manifestations of mosaic under the varied cultural and climatic conditions of the West are often very obscure and not yet fully understood.

BIG NEED OF BETTER ROADS

Engineers at Sea Regarding Highways Which Will Stand Up Under Modern Traffic.

A. R. Hirst, Wisconsin highway engineer, has declared that the best engineers today are at sea regarding the kind of roads which will stand up under modern traffic, or the traffic which will develop in a few years. Travel by air, to any considerable extent, is still a long way off, and for a good many years to come there will be urgent need for better and better highways.

INSECT ENEMIES OF HOME GARDEN

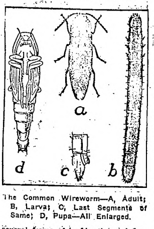
Some of Pests Devour Nearly Every Form of Vegetation and Do Immense Damage.

CUTWORMS INJURE TOMATOES

Arsenic and Paris Green Are Deadly Poisons and Must Be Handled With Great Care—Rotation of Crops Is Advisable.

(Prepared by the United States Department of Agriculture.)

From the standpoint of their food plants, injurious insects may be grouped roughly into two classes: First, those which are choice feeders and ordinarily attack only a single crop, or crops of a single class, although when they are extremely abundant they may resort to other crops or weeds. Examples are the asparagus beetles and asparagus miner and the large tomato worms, which confine their feeding to plants of a single family. Second, those known as general feeders—insects which are not particular as to their food plants. Some of those devour nearly every form of vegetable that grows in the garden. These include cutworms and other caterpillars,



The Common Wireworm—A, Adult; B, Larva; C, Last Segments of Same; D, Pupa—All Enlarged.

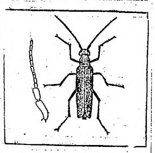
several forms of leaf-beetles and flea-beetles, plant-lice, thrips, blister beetles, and others. When abundant, some of these pests do great damage, sweeping over large areas and ruining entire crops before they can be stopped.

Cutworms.

Tomatoes, sweet potatoes, and other truck plants, particularly when started under glass, are likely to be injured by cutworms when transplanted. These appear in great numbers in the spring and early summer, and the injury is often complete before the gardener notices it. The chief injury is due to the severing of the stems of young plants at about the surface of the ground. One cutworm can destroy many plants in a single night by cutting off more than it can devour.

Control.—The best remedy is what is called "poisoned bait." For use in a small garden take 1 peck of dry bran, add 4 ounces of white arsenic or Paris green, and mix thoroughly with 2 gallons of water in which has been stirred half a gallon of sorghum or other cheap molasses.

For a large garden, use 1 bushel of bran to 1 pound of the arsenical mixed



The Ash-Gray Blister Beetle.

with 8 gallons of water containing half a gallon of molasses. This is enough for treating 4 or 5 acres of cultivated crops.

After the mash has stood for several hours, scatter it in lumps the size of a marble over the garden where the injury is beginning to appear and about the bases of the plants set out. Apply late in the day so as to place the poison about the plants before night, which is the time when cutworms are active. Apply a second or third time, if necessary.

It is advisable to keep young children, live stock, and chickens away from this bait.

Clean cultural methods and crop rotation are advisable, as are also deep fall plowing and disking, to prevent recurrences of cutworm attacks. Experienced growers become expert in detecting cutworms and remove them by hand. This often can be done with profit on small patches.

White Grubs.

When new land is used for planting vegetables, especially land that has been in sod or grown up with weeds, white grubs are almost certain to make their appearance, sometimes in large numbers, doing great damage to plants from the time they attain any growth until the fruit is

PLANT CORN FOR LARGEST YIELDS

Nothing Gained by Seeding Before Conditions of Soil and Atmosphere Are Right.

NEITHER EXTREME DESIRABLE

[illegible] Greatest Total Growth of Stalk Made From Planting in May or June—Experiments of State Stations Corroborated.

(Prepared by the United States Department of Agriculture.)

No gain is made in yield or maturity by planting corn before conditions of soil and atmosphere are right, in the opinion of the United States Department of Agriculture. Corn growers in localities with a long season have observed that early and late plantings of the same variety usually show wide differences in growth and number of days required to reach maturity. In general, corn which is seeded early requires a longer time to come up than that which is planted later. The plants also grow more slowly, are shorter, and bear their ears lower. These are commonly observed effects of the date of planting.

Best Yields From Early Seeding.

Studies recently have been made by the United States Department of Agriculture at the Arlington experimental farm near Washington, D. C., in order to obtain data which would supplement that obtained earlier at the various state experiment stations. Numerous experiments have been conducted by the state agricultural experiment stations to determine the influence of the different dates of planting on corn yields. The state experiments reviewed indicate that the best yields of grain may be expected from the early seedings and the most rapid development and greatest growth from the later seedings. Neither the extremely early nor the very late plantings are desirable.

The department investigations were directed more to a study of the effects upon growth and development than to determining the most desirable date of planting from the standpoint of yield. The results of these studies, which extended over a five-year period, are presented in Department Bulletin No. 1014, Effect of Date of Seeding on Germination, Growth, and Development of Corn, by E. B. Brown and H. S. Garrison, which may be had upon application to the department.
